PREFACE.

Four centuries ago, it was not known that the earth is round, much less that so vast an ocean awaited a Columbus and a new continent a Cabot. North America was then a wilderness, and its inhabitants were savages. The story of its marvelous development is now to open before us. It will be ours to tell it, not in a dull, dry-as-dust style, but with somewhat of the earnestness of the men who cut down the primeval forest, and the fire of the soldiers who first subdued the heathen possessor and at last drove out the British invader. We shall find every hard fact to be brightened with the romance of real life, than which nothing is more stirring, and every era of our history to be full of patriotic devotion and heroic endeavor. Looking back from our standpoint of the years, we shall see plain men of many nationalities working on, all unconsciously laying the foundation of a new empire; yet, under the guidance of a Hand reached down from above, building wiser than they knew, and establishing a home for liberty—civil and religious—its first in the wide world.

America was discovered just at the close of the fifteenth century. The sixteenth was spent in numerous explorations and attempts by the Spanish, the English, and the French to settle and get possession of this splendid prize of a continent. The seventeenth century was one of colonization. It witnessed the establishment of all the thirteen colonies except Georgia. Religious and political refugees flocked to this fair land of promise. The advance guard of civilization planted its standard from the "River of May" on the south to the "Great River of Canada" on the north. The Cavalier found a home on the Potomac, the Puritan on Cape Cod, the Huguenot on the Cooper, and the Quaker on the Delaware. With a strange misapprehension of the extent of the territory bestowed, and a curious jealousy of rival nations, all the English grants extended westward from the Atlantic to the Pacific, the French southward from the St. Lawrence to the Gulf, and the Spanish northward from the Gulf to the Arctic Ocean. Nearly three-quarters of the eighteenth century was occupied in crystallizing the scattered settlements into colo-

nies regularly organized and governed, and in the struggles of the English to get control of the continent.

This preparatory work was the ante-natal growth of the republic which was born July 4, 1776. It is therefore treated in Chapters I to IV as a necessary prelude to the Hundred Years of American Independence.

Chapters V to XI, embracing the Revolutionary War, begin the book proper. Here will be found a narrative of those years of waiting and sacrifice during which the nation achieved its independence.

Chapters XII to XVI cover the Constitutional History of the country, embracing the formation of the Constitution and the gradual development of the nation down to 1860. It has two great episodes: the war of 1812-1814, which secured for the young Republic the respect of foreign nations; and the war with Mexico, which gave to it New Mexico and California, and let the tides of emigration pour into the El Dorado of the West.

Chapters XVII to XXI treat of the Civil War, which resulted in the abolition of slavery and the centralization of the governing power.

Chapters XXII to XXVI narrate the important events which have occurred since the close of the Civil War.

In this history there is told, in convenient form, the story of our country from the prehistoric America of the Mound Builders to the Treaty with Panama, the preparations for the long-delayed Isthmian Canal, and to the opening of the second year of the Wilson administration.

With the completion of the Panama Canal, and through it the ascendancy of a master mind in the person of Colonel Goethals, who, by the way, at the time of this publication, is becoming a figure in national affairs to be reckoned with; with the tariff and currency bills causing widespread discussion; with the civil war in Mexico arousing the anxiety of the nations, and with the reform methods, boldly and frankly undertaken by President Wilson and his cabinet of able men, the times are indeed lively and progressive beyond measure.

It is hoped that this up-to-date edition of Barnes Popular History of the United States will afford a convenient, accessible and easily read story of our country's evolution, and in these crowded and strenuous days supply a means of gaining the necessary information in a concise and interesting form,

CONTENTS

PART I—*Introduction*

CHAPTER.	PAGE.
I. EARLY HISTORY OF AMERICA.....	9
II. EXPLORATIONS AND SETTLEMENTS.....	27
III. COLONIAL WARS	67
IV. COLONIAL LIFE	84

CHAPTER I.

EARLY HISTORY OF AMERICA.

PREHISTORIC PEOPLES.

THE authentic history of North America is comprised within four centuries. All back of that rests upon ruins and traditions, and is largely mythical. The Indians were not the most ancient inhabitants of North America. Through the whole length of the Mississippi Valley are found the remains of a numerous and civilized people which once occupied this country. This race is known as the Mound Builders, from the large number of mounds which they erected, seemingly as monuments to distinguished dead, or

as grand altars for religious purposes. Sixteen miles east of Little Rock, Arkansas, are two of these elevations, the larger of which is over two hundred and fifty feet in height. Its summit is crowned with a magnificent elm which has stood four hundred years. Near by is a sheet of water known as Mound Lake, three and a half miles long and a quarter of a mile broad, the result evidently of excavation for the mound material. The two mounds are encircled by a ditch which encloses an area of over ninety acres. Elsewhere are seen extensive earthworks constructed with considerable skill. They crown a steep bluff, or are carried across the neck of a peninsula formed by the bend of a river. If there is no access to springs or streams, they contain artificial reservoirs for holding water. Fort Hill, on the Little Miami River, Ohio, consists of an embankment nearly four miles in extent, and from ten to twenty feet high, varying

THE SERPENT MOUND.

according to the natural advantages of the ground. In Adams county, Ohio, is a curious earthwork, representing an immense serpent, one thousand feet long, holding in its mouth an egg-shaped mound one hundred and sixty feet in length, and having its tail twined into a triple coil. These mounds rarely contain more than one skeleton. Many tools and ornaments of copper, brass, silver, and precious stones, such as knives, axes, chisels, bracelets, and beads have been found; as also cloth and thread and vases of pottery. Near

Nashville, in Tennessee, an idol made of clay and gypsum was exhumed. Roman and Persian coins have been discovered; and in Western New York a silver piece, with the date A.D. 600, found far below the surface, furnishes a theme for many a speculation. The Mound Builders worked the copper mines about Lake Superior, and their old pits are now familiarly known in that region as the "ancient diggings." In one of these mines near Eagle Harbor, a mass of copper was found which weighed forty-six tons. The block had been separated from the original vein and the surface pounded smooth. About it lay stone hammers, copper chisels and wedges in abundance, as if the workmen had but just departed. Upon these mounds and mines the largest

forest trees are now growing. On one mound near Marietta, Ohio, there are trees which must have seen at least eight centuries. The age of the mounds themselves is a matter of conjecture alone.

"A race that long has passed away
Built them: a disciplined and populous race
Heaped with long toil the earth, while yet the Greek
Was hewing the Pentelicus to forms
Of symmetry, and rearing on its rock
The glittering Parthenon."—*Bryant*.

When the Jesuit missionaries first came to America, they found the Indians not only entirely ignorant of this people, but possessed of no tradition concerning them. Whence these unknown races came to our shores we know not. It is natural

THE MOUNDS NEAR LITTLE ROCK, ARKANSAS.

to suppose, however, that their home was Asia—the birthplace of man. Within the past century fifteen Japanese vessels have, it is said, been driven by storms across the Pacific Ocean, and wrecked on the American coast. Such events may have happened anciently, and the shipwrecked crews may have settled the new country. Formerly, too, as geologists tell us, before Behring Strait was cut through, the two continents were connected. Parties of adventurers may then have crossed, and finding a pleasant land on this side, may have decided to make it their home. All is conjecture, however, and we know not when nor whence the Mound Builders came, nor when nor whither they went.

Most curious of all the remains found on this continent are those of Arizona. Here are not only Spanish cathedrals dating back of the Revolutionary struggle, and ruins of Spanish towns indicating an early and extensive colonization, now disappeared, which must have been in its glory when as yet only a few woe-begone English settlers half starved in their rude cabins along the Potomac River and Plymouth Bay; but recent explorations have revealed other and prehistoric remains, belonging to a race which has left behind no tradition even of its name or origin. The Gila Valley alone, it is estimated, must once have been occupied by one hundred thousand inhabitants. In the great Tonto Basin, bounded by the rivers Gila, Verde and Black Mesa, and the White Mountains, nearly every hill within a range of ten thousand square miles is covered with broken pottery, so perfectly glazed that its bright coloring is still preserved. Here are ruins of pueblos four stories high, and with walls two feet thick; aqueducts, reservoirs, irrigating canals, and regular fortifications. Along the cliffs in many places are multitudes of caves dug into the solid rock, where the inhabitants seem to have taken refuge and made a last stand against an invading foe. These caves are often twenty feet deep, and closed by mason work of stone and cement still well preserved. These retreats are only accessible by means of ladders, or by narrow paths along the edge of projecting crags, where a single false step would plunge one to inevitable destruction. In the larger caves, the front wall is bastioned and loop-holed; while in the ceiling of the principal room is a man-hole enabling one to enter a series of chambers with which the whole mountain is honeycombed. In the thick deposit of bat-lime which now covers the floor, are broken pieces of pottery like those found so abundantly in the ruined villages along the river valleys. The timbers used in the various rooms were evidently cut with stone hatchets. The chambers are dark and the walls are yet black with the smoke from the fires of the ancient cave-dwellers.

One can but speculate on the fearful struggle which apparently forced this people to leave their fortified villages and cultivated fields, and to hew for themselves asylums in the rock; the long months and years during which they continued the contest in their mountain fortresses; the details of this final death-struggle; and when and how the last of this host yielded, and the nation was blotted out of existence.

THE NORTH AMERICAN INDIANS.

The first inhabitants of whom we have any definite knowledge are the Indians—so named because the earliest European explorers of this country supposed they had reached the eastern coast of India. The total number of these aborigines, at that time within the present limits of the United States, was probably four hundred thousand, of whom about one-half lived east of the Mississippi. They all had much the same look, and doubtless a common origin. They were, however, divided into numerous tribes and spoke different languages. Diligent study of these tongues has classed them all into, perhaps, seven great families—the Algonquin, the Iroquois, the Mobilian, the Dakotah or Sioux, the Cherokee, the Catawba, and the Shoshonee. These are the names by which they are commonly known to us, but not, in general, those used among the natives. The terms Huron, Iroquois, etc., are only nick-names given by the whites; Sioux is an Algonquin appellation. The various tribes were divided into clans, each with its own symbol, as a tortoise, deer, snipe, or hawk, often tattooed on the warrior's breast. Over the clan was a chief or sachem, who represented it at the grand councils and governed it according to custom and tradition.

INDIAN SYMBOLS.

The Algonquins dwelt along the Atlantic coast from Cape Fear northward, and were those with whom the Jamestown and Plymouth colonists alike came in contact. The Narragansetts, Pequods, Massachusetts, Mohegans, Manhattans, Delawares, Powhatans, Shawnees, Miamis, Illinois, Sacs, and Foxes, were tribes of this wide-spread family. Their memory is perpetuated by the histories of Pocahontas, Powhatan, Massasoit, King Philip, Black Hawk, Tecumseh, and Pontiac.

The Iroquois occupied a territory in the heart of the Algonquin region—a tract south of Lake Ontario, covering the headwaters of the Susquehanna, Delaware, and Ohio, which General

Scott well termed the "strategic centre" of the United States. Here was the home of the Five Nations, so famous in all the colonial wars. Here Red Jacket and Joseph Brandt figured as characters more like ancient Romans than wild forest Indians. In the time of their greatest prosperity this confederacy did not number over fifteen thousand, and it could not send out much over two thousand warriors. But they were fierce, bloodthirsty, and restless for conquest. Pushing along the valleys from their headquarters on the great watershed of Central New York, they carried their triumphant arms to the soil of Kentucky and Virginia. Their power was felt to the Kennebec on the east and the Illinois on the west. The Delaware tribe was triumphantly and ignominiously styled their "woman." Of the five nations, the Mohawk was the most dreaded. When, among the peaceful Indians along the Connecticut, a messenger stalked into their council-room exclaiming, "The Mohawks are come to suck your blood," there was no thought of safety except in flight or submission.

The Mobilians stretched along the Gulf from the Atlantic to the Rio Grande. They comprised within their limits the comparatively insignificant tribes of the Uchee and the Natchez. The Creeks, Seminoles, Choctaws, and the Chickasaws are interwoven with the later history of the country at the south, as the Sioux, Miamis, Illinois, Sacs, etc., are on the north.

The separate languages were completely organized, though no savage had ever attempted their analysis, or knew anything about sounds, letters, or syllables. The study of their speech by Europeans has shown many peculiarities. Thus the Algonquins had no *f*; the Choctaws no *d*; the Iroquois, except the Oneidas, whose tongue was soft and liquid, no *l*. The Algonquins loved consonants, while every word in the Cherokee ended in a vowel. They all lacked abstract or general terms. The Algonquins, for example, had no word for oak, but a name for each kind of oak. There was no word for fishing, but a specific name for fire-fishing, net-fishing, etc. They always compounded words so as to express new ideas. Thus, as the Indian never kneels, when Eliot, the famous New England missionary, wished to translate that thought, he was forced to use a definition merely, and the compound word is eleven syllables long—wutappessittukqussonnoowehtunkquot. The Indians never said "father" alone, but always included with it a possessive pronoun. Consequently the Doxology used by Christian Indians reads, "Our Father, his Son,

and their Holy Ghost." Their tongues were thus peculiarly synthetic, and often subject, predicate, and object were conjugated as one word. The Cherokee language had but eighty-five syllables, which were analyzed by an educated Indian known as George Guess, who assigned a character to each. Thus one may learn to read and write this tongue in a very short time. The Indians had no written language, though they used on occasions a species of hieroglyphics or picture-writing. A series of rude symbols scratched on a tree or rock gave any information desired. Schoolcraft gives the following, used by his Indian guides to inform their comrades that a company of fourteen whites and two Indians had spent the night at that point. Nos. 9, 10 indicate the white soldiers and their arms; No. 1 is the captain, with a sword; No. 2 the secretary, with the book; No. 3 the geologist, with a hammer; Nos. 7, 8 are the guides, without hats; Nos. 11, 12 show what they ate in camp; Nos. 13, 14, 15 indicate how many fires they made:

SPECIMEN OF INDIAN PICTURE WRITING.

The Indian was a barbarian. His condition was that known in geology as the Stone Age of man, since his implements and tools were made of that material. His stone hatchet was so rude that to cut down a large forest tree would have required a month's time. He had no horse, cow, or other domestic animal of burden. He had no knowledge of any metals except gold, silver, and copper, and these to a very limited extent. Labor he considered as degrading, and fit only for women. His squaw, therefore, built his wigwam, cut his wood, and carried his burdens when he

journeyed. While he hunted or fished, she cleared the land for his corn by burning down the trees, scratched the ground with a crooked stick or hoed it with a clam-shell, and dressed skins for his clothing. She cooked his food by dropping hot stones into a tight willow basket containing materials for soup. The leavings of her lord's feast sufficed for her, and the coldest place in the wigwam was her seat. He rarely spoke to his wife or children. He would sit on the ground for days, leaning his elbows on his knees in stupid silence. He was crafty and cruel. His word was no protection. False and cunning, he never hesitated to violate a treaty when his passions prompted him to hatred. He was hospitable, and the door of his wigwam was always open to any comer, who had but to enter, sit down at the fire, and to be served without a word. He would give up his own mat or skin that his guest or a passing traveler might rest thereon. He remembered a benefit and often saved his benefactor at the peril of his life. He loved to gain his end by stratagem and rarely met an enemy in fair fight. No victory was prized when the conquest cost the life of a warrior. He could endure great fatigue, and in his expeditions often lay without shelter in severest weather. It was his glory to bear the most horrible tortures without sign of pain.

An Indian wigwam at the best was only a temporary shelter. It was built of bark resting on poles, and had an opening at the top to let out the smoke and let in the light. The fire was built on the ground at the centre. The lodge was moved from place to place whenever fancy suggested. The most frequent reason was the scarcity of game or fuel. Indeed, it is said that when the whites first came to this country the Indians supposed it to be because they had consumed all the wood in their own land, and that they were in quest of fuel. The Iroquois built larger and more permanent dwellings. These were often thirty or forty and sometimes over two hundred feet in length, each inhabited by several families. Many of these were irregularly gathered in a town, on the bank of some river or lake, where they were fortified, perhaps, by a palisade and deep ditch. "A person entering one of these wigwams on a winter's evening might have beheld," says Parkman, "a strange spectacle; the vista of fires lighting the smoky concave; the bronzed groups encircling each—cooking, eating, gambling, or amusing themselves with idle badinage; wrinkled squaws, hideous with three-score years of hardship; grizzly old

warriors, scarred with war-club and tomahawk; young aspirants, whose honors were yet to be won; damsels, gay with ochre and wampum; and restless children, pell-mell with restless dogs. Now a tongue of resinous flame painted each wild feature in vivid light; now the fitful gleam expired, and the group vanished from sight as the nation has from history."

INDIAN LIFE.

The Indians married young, the girls at thirteen or fourteen, and the boys by eighteen. Meanwhile the latter were required to show their manhood by long endurance of famine and by bringing in plenty of game. A marriageable girl wore an advertisement of the fact upon her head. The marriage ceremony often consisted of nothing more than the bride's bringing to the bridegroom a dish of cooked corn and an armful of fuel.

War and the chase were the natural state of the Indian. The battle-field and the hunting-ground contained everything of special honor or value. The bow was placed in the boy's hands as soon as he could grasp it. His training henceforth was to shoot the arrow, to glide upon the snow-shoe, to hurl the tomahawk, and to cast the spear. To dance the war-dance, to sing the war-song, to go forth on the war-path, to lie in wait for his enemy, and to bring back the scalp of one whom he had slain, were

his highest delight. Two or three warriors roaming through the forest, with only a bag of pounded corn hanging at the side for food, would watch a hostile village or party for weeks, hiding in rocks or thickets, awaiting a chance for a surprise, to assassinate a defenceless man, woman, or child; then hastily cutting off the scalp, as proof of their prowess, would hurry home again in triumph. The war party marched in single file, the chief in advance, while the last one erased the tracks they had made. A captive was often brutally mangled before reaching the village of

AN INDIAN FAMILY MOVING.

his captors. Here he was obliged to run the gauntlet between a double row of its entire population, who turned out to receive him, each inflicting a blow as he passed. The council decided his fate. He might be adopted into some family, to supply the place of a lost member, or be sentenced to the torture. This was too horrible for description. The body was gashed with knives, the hair and beard were torn out, the fingers and toes were wrenched off, the flesh was seared with red-hot stones and punctured with sharpened sticks; and finally the bleeding, mangled body was tied to a stake and burned to ashes. While life lasted the victim of their cruelty uttered no groan, but sang the war-song of his clan, boasted of his exploits, told the names of those whom he had slain, and taunted them with their unskilfulness in devising tortures in comparison with those which he had himself inflicted on their kinsmen.

The religion of the Indian varied greatly in different tribes. Those of New England had no word for God, and there is no evidence of a religious ceremony among them. The Iroquois had faith in a Great Spirit, and in happy hunting-grounds where the departed warrior might hope to hunt and feast and be as lazy as he pleased. The Natchez had temples for the worship of the sun, and sacred fires which were never allowed to expire. The Indians believed in protecting spirits, who cared not alone for human beings but even for animals. They were cautious about giving them any offence, frequently offering them gifts to propitiate their favor. They handled carefully the bones of beaver, buffalo, deer, and other game, lest the spirits of the dead might inform those of the living, and teach them to escape the hunter's toils. They would often talk to animals as if they were human beings, and beg their pardon for having wounded them, explaining the necessity which compelled the attack, and exhorting the sufferer to endure the pain so as not to bring disgrace on his family. The Indian invoked the aid of these various powers, whose presence he acknowledged in nature, and implicitly relied on their protection. He was anxious to have such a guardian for himself. The young Chippewa, for example, retired to a solitary lodge in the forest, blackened his face, and fasted for days, that he might become pure and exalted enough to behold in a vision his protecting deity. Everywhere there was an idea of sin which was to be atoned for, of the duty of self-denial and sacrifice, and of rewards and punishments for good and evil. So prevalent was this sentiment that Le Clercq thought one of the apostles must have reached America and taught the Indians the sublime truths of Revelation.

DISCOVERY OF AMERICA.

As early as the tenth century, the Northmen settled Greenland, whence, according to the Icelandic Sagas, their venturesome sailors pushed westward, discovering Newfoundland, Nova Scotia, and Vinland or Vineland, which is generally supposed to be the coast of New England. After that, other adventurers repeatedly visited the New World, explored the country, and bartered with the natives. A rich Icelandic, named Thorfinn

Karlsefni, spent three winters on the coast of Massachusetts, where his wife bore him a son named Snorre, said to be the

NORMAN SHIP (FROM THE BAYEUX TAPESTRY).

first child born of European parents in this country. The Northmen, however, finally forgot the way across the ocean, and almost the existence of the Vinland their ancestors had discovered. They left behind them, so far as we know, not a trace of their occupation, and were it not for their legends, we should not have dreamed that they ever visited our shores. The old stone tower at Newport, Rhode Island,

long thought to have been erected by the Norsemen, is very like some which are still standing in the part of England from which Governor Arnold came; while the singular inscription on the rock at Dighton was quite probably made by the Indians.

Centuries passed in which no vessel essayed the forgotten passage across the far-stretching Atlantic. The shadows of the Middle Ages were dispersed, and Europe was kindling with newly awakened life. The Crusades had developed the maritime importance of such Italian cities as Genoa, Pisa, and Venice. A taste for luxury had grown and strengthened. The art of printing by movable types had just been invented, and books of travel were eagerly read. Marco Polo and other eastern travelers had told the most marvelous stories of Asiatic countries, of "Cathay" (China) and the goodliest island of "Cipango" (Japan), where the soil sparkled with rubies and diamonds, and pearls were as plentiful as pebbles. An extensive trade had been opened up with the East. The shawls, spices, precious stones, and silks of India

THE ANCIENT TOWER AT NEWPORT.

and Persia were brought to Europe, and sold in the Western marts. But the route was tedious. The goods were borne by caravans to the Red Sea, carried by camels to the Nile, and thence shipped across the Mediterranean to Italy. The problem of the age was how to reach the East by sea, and thus transport these rich products in ships directly to Europe. The earth was generally believed to be a great flat plain, washed on every side by one vast ocean. A few wise geographers had already conceived the novel idea of its rotundity. But, in their calculations the globe was very much smaller than we now know it to be, and Asia extended much further to the east; so, by sailing westward from Europe they expected, perhaps by a short voyage, to reach the eastern shore of their own continent, which was to them the only one in the world. "It is singular," says Washington Irving, "how much the success of this great undertaking depended upon two happy errors, the imaginary extent of Asia to the East, and the supposed smallness of the earth; both, errors of the most learned and profound philosophers, but without which Columbus would hardly have ventured upon his enterprise." Christopher Columbus, a learned navigator of Genoa, enthusiastically adopted these views. Many events conspired to confirm his belief. A globe, published by Martin Behaim, one of Columbus's friends, in 1492—the very year Columbus made his westward voyage—shows very clearly the current idea at that time. It is curious to notice how in this map the dry details of geography are enlivened by mermaids with golden tresses and azure eyes, sea-serpents, and various monsters supposed to inhabit these unknown regions.

A westerly gale washed on the coast of Portugal a piece of curiously carved wood. At the Madeiras, canes of a tropical growth were picked up on the beach, and once the bodies of two men of an unknown race were cast upon the shore. At last, Columbus determined to test the new theory by actually undertaking the perilous voyage. Eighteen years of weary waiting followed. He sought aid in Genoa, Venice, and Portugal; but in vain. Finally, after innumerable repulses, he obtained an audience

COLUMBUS.

THE EASTERN HEMISPHERE.—From Behaim's Globe, 1492.

with Ferdinand and Isabella of Spain. His demands seeming extravagant, he was refused. He left the court, and was already two leagues away, when Isabella, convinced of the grandeur of his scheme, called him back and pledged her own jewels to raise the necessary funds. This sacrifice, however, was not needed, as the court treasurer advanced money for the outfit. Three ships were equipped—the Santa Maria, the Pinta, and the Nina. The first only was decked, the other two being merely open boats, or caravels. The sailors were many of them impressed, the bravest seamen shrinking from this hazardous undertaking. Columbus sailed from Palos, August 3, 1492. Touching only at the Canaries, he struck out boldly to the west.

Forty days had come and gone. Fresh terrors were born in the hearts of his fearful crew. All the laws of nature seemed

THE WESTERN HEMISPHERE.—From Behaim's Globe, 1492.

changing. The needle no longer pointed to the star in the north, and they were alone, without a guide, in the vast, trackless ocean. The trade-winds blew them steadily westward, and there was no hope of returning against it. They came into the Sargasso Sea, and now they should certainly perish in the stagnant waters. At times, signs of land appeared, and their hearts revived as they saw in the distant horizon the semblance of a shore. But it was only the clouds which mocked their hopes, and which faded away, leaving them still on a boundless sea. Still the days came and went, and still their prows, westward bent, pointed only to

“Long ridgy waves their white manes rearing,
And in the broad gleam disappearing;
The broadened, blazing sun declining,
And western waves, like fire-floods, shining.”

COLUMBUS DISCOVERING LAND.

At last they became turbulent and clamorous. They exclaimed against Columbus as a wild fanatic. They thought of their far-away homes, and demanded a return from this hopeless

voyage. They even resolved to throw the admiral overboard if he persisted in a refusal. But his iron will beat down their feeble purposes, and he sternly reminded them that the expedition had been sent out to seek the Indies, and added that, happen what might, by God's blessing, he should persevere until he accomplished the enterprise.

The very next day brought new hope. Fresh-water weeds floated past their ships; a branch of thorn with berries on it; and, above all, a carved staff, which they eagerly examined. Not only land, but inhabited land was before them. In the evening, Columbus, standing on the prow of his vessel, saw a light faintly glimmering in the horizon. At two in the morning, a shot from the

A SPANISH CARAVEL.

(From a drawing attributed to Columbus.)

Pinta announced the joyful intelligence that land was in sight. The dream of Columbus was realized at last. On that memorable Friday morning, October 12, 1492, a shore, green with tropical verdure, lay smiling before him. The perfume of flowers filled the air, and beautiful birds hovered round singing, as it were, "the songs of the angels." Clad in scarlet, and bearing in his hand the royal banner of Spain, he stepped upon the land, kissing it in an overflow of joy and gratitude. Thanking God for His goodness, and planting the sacred cross, he took formal possession of the country in the name of Ferdinand and Isabella. He called the island San Salvador. Believing that he had reached

COLUMBUS TAKING POSSESSION.

the islands lying off the eastern coast of India, he named them the West Indies, and the simple natives who flocked down to the shore to witness his arrival he called Indians. Afterward Columbus visited Cuba and Hayti. He actually sent an envoy to a chief in the interior of Cuba, supposing him to be the king of Tartary. Hayti he thought to be the Ophir of Solomon.

On his return to Spain, Columbus was received with the greatest enthusiasm. He was accorded the rare honor of telling his story seated in the presence of the king and queen. When he dilated upon the plants, birds, gold, and, above all, the natives who might yet be converted to the true faith, the two sovereigns fell upon their knees, while the choir sang a hymn of thanksgiving.

Columbus afterward made three other voyages of discovery. In 1498 he reached the mouth of the Orinoco, which he considered the great river Gihon, having its source in the Garden of Eden. His good fortune, however, had long since deserted him. Malice and envy did their worst. He was sent home from Hispaniola in chains, and died at last a worn-out, disgraced old man, ignorant of the fact that he had discovered a New World.

TOMB OF COLUMBUS AT HAVANA.

Meanwhile, to other European eyes than those of Columbus had been granted the first sight of the mainland. John Cabot, a Venetian, sailing under a commission from Henry VII. of England, discovered Cape Breton, probably in 1494. He, however, like Columbus, was seeking the route to the Indies, and supposed this to be the territory of the "Great Cham," king of Tartary. Sebastian Cabot continued his father's explorations, and sailed along the coast as far south as Maryland. He became convinced that it was not the eastern coast of Asia, but a new continent, that had been discovered. As Vasco de Gama, a Portuguese, about this time (1498) rounded the Cape of Good Hope, and found the long-sought way to the East, little attention was paid to the discoveries of Cabot. "He gave a continent to England," says Biddle, "yet no man can point to the few feet of earth she has allowed him in return." The New World was not destined to receive its name from either Cabot or Columbus. Amerigo Vespucci, an Italian navigator, and a friend of Columbus, accompanied an expedition which reached the continent, and on his return wrote some letters describing his discoveries. These were published by a German geographer, who proposed that the new country should be called America, in honor of his hero. People liked the name, and it soon came into general use.

CHAPTER II.

EXPLORATIONS AND SETTLEMENTS.

DVENTURERS, thirsting for gold and glory, now flocked to America—the land of wonder and mystery. Spanish, French, and English were eager to explore this new and richer Cathay. Ponce de Leon, an aged cavalier, sailed in search of a miraculous fountain said to exist somewhere in the regions discovered by Columbus, whose magical waters, flowing over beds of gold and gems, would ensure to the old a second youth and vigor. He did not find the fountain, but he came in sight of a land blooming with flowers. It was Easter Sunday (1512), a day which the Spaniards call *Pascua Florida*, or Flowery Easter. So he gave the name Florida to this beautiful region.

The following year Balboa crossed the Isthmus of Darien, and from the top of the Andes first caught sight of the wide expanse of the Pacific Ocean glittering in the morning sun. Reverently kneeling, he thanked God for the wonderful vision. Descending to the shore, he waded into the water, bearing his drawn sword in one hand and the banner of Castile in the other, taking possession of the ocean, and all the coasts washed by its waters, for the crown of Spain.

Cortez, with a handful of followers, took possession of Mexico and all the fabulous wealth of the Montezumas. Pizarro conquered Peru, and revelled in the riches of the Incas.

De Soto, with a chosen band, explored the fastnesses of Florida, hoping to find “a second Mexico with its royal palace and sacred pyramids, or another Cuzco with its Temple of the Sun enriched with a frieze of gold.” Gay cavaliers with helmet

and lance, priests with holy vestments and vessels, marched through the wilderness for years. With the fluttering of banners and the clangor of trumpets, they followed the *ignis fatuus*

DE SOTO'S MARCH.

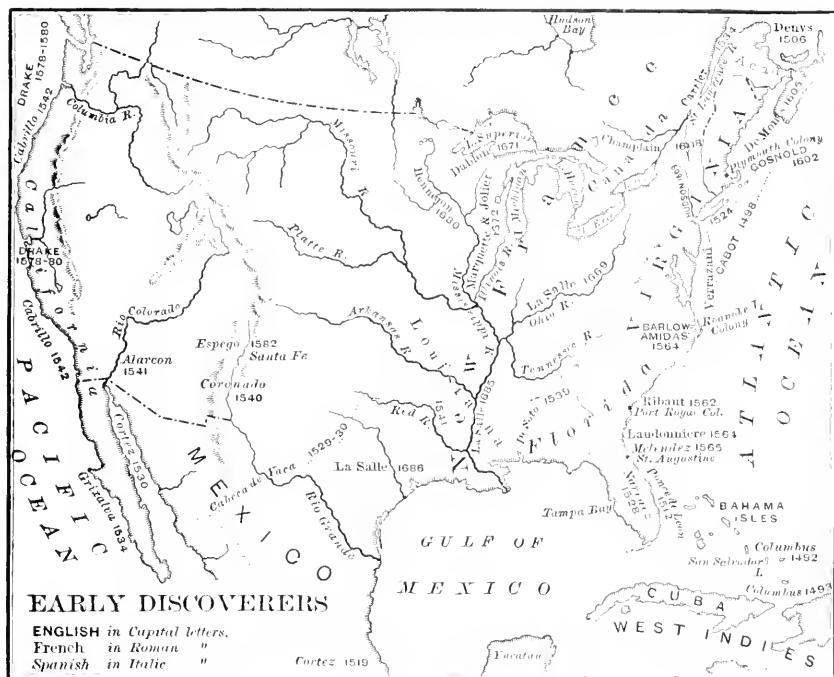

of gold and treasure they hoped to find. Thus they traversed Georgia, Alabama, and Mississippi. In 1541 they discovered the Mississippi River. Beneath its muddy waters De Soto himself found a grave. It was all the New World had to give its most knightly adventurer.

JACQUES CARTIER.

The French eagerly followed in the footsteps of the Spaniards. Verazzani, a Florentine in the service of Francis I., coasted along the shores of Carolina and New Jersey, and entered the present harbors of Newport and New York. He named the country New France, and claimed it all for his king. The report published on his re-

turn was the earliest account given of the eastern coast of the United States. He thought the savages were "like the people

in the uttermost parts of China," and that the country was "not void of drugs and spices and other riches of gold, seeing that the color of the land doth so much argue it." In 1534, Cartier discovered a magnificent river, which, the next year, he ascended to the present site of Montreal. In honor of the day, he named the part of the gulf he entered, St. Lawrence—a term that has since spread to the river and the rest of the gulf.

Coligny, the famous French admiral, formed a plan of founding an empire in the New World which should offer an asylum to the distressed Huguenots. It was to be a colony based on religious ideas. This was half a century before the Pilgrims

ADMIRAL COLIGNY.

landed at Plymouth. The attempt seemed full of promise, "but no Mayflower ever sailed from a French port." Jean Ribaut commanded the first expedition (1562). He landed at Port Royal. The company were delighted with the novelty of the wild forest scenes. The new land seemed to them "the finest, fruitfulest, and pleasantest of all the world." A fort was erected, and named Carolina, after Charles IX. of France. Thirty men were selected to remain, while Ribaut returned to France. This little party was now alone with the savage and the wilderness. They found no gold. Hunger came, and home-sickness. The green woods became a dismal prison, and the solitude a terror. They resolved to escape at every peril. Building a frail bark, they turned the prow toward France. A storm shattered their ship. At last, to avoid starvation, they killed and ate one of their own number, whom the lot decided should die for the rest. This horrible food only prolonged their lives for a new misfortune. After perils and sufferings untold, they had just come in sight of their own cherished coast when they were taken prisoners and carried to England.

Two years afterward a second attempt was made by Laudonnière, and a fort built on St. John's River, or the River of May, as they styled it. Here his company of adventurers, greedy of gain

and of gold, quarreled among themselves, fought with the Indians, and, too lazy to till the land, starved as easily and slowly as they could. But the Spanish were by no means willing to relinquish their claim to Florida—as all North America was at that time called by them.

THE OLD GATEWAY AT ST. AUGUSTINE, FLORIDA.

Melendez, a brutal soldier, was sent by Philip II. to occupy Florida and drive out the French. They sighted land on St. Augustine's day (August 28, 1565). The foundations of a town, now the oldest

in the United States, were soon laid and named in honor of that saint. Burning with zeal, Menendez, with five hundred soldiers, then hurried northward through the wilderness, and in the midst of a terrible tempest attacked the French fort and massacred nearly all the colonists.

Charles IX. did nothing to avenge the deed. A bold Gascon, Dominique de Gourges, however, equipped a fleet at his own expense, sailed across the ocean, stormed the Spanish forts on the River of May, and put the garrison to the sword, under the very trees where they had slaughtered the captured Huguenots. Thus ended, for a time, the French attempts in the New World.

During the reign of Queen Elizabeth, the English made repeated efforts to explore and colonize this country. Frobisher, seeking in vain to find the northwest passage to India, entered Baffin's Bay, and claimed the whole country for the crown of England. Drake, following in the footsteps of Magellan, rounded Cape Horn, ascended the western shore of America as far as the present boundary of Oregon, and, returning, refitted his ship in some harbor of California (1579). Sir Humphrey Gilbert sought to establish a colony in Newfoundland. Returning home in the *Squirrel*, a little bark of ten tons, it was overtaken by a fearful storm. Sitting aft, with a book in his hand, Gilbert was heard to cry out to his companions in the other ship, "We are as near Heaven by sea as by land." That night the lights of the *Squirrel* suddenly disappeared, and neither ship nor sailors were ever seen again. Gilbert's half-brother, the famous Sir Walter Raleigh, having secured a patent for a vast extent of territory which he called Virginia, in honor of the "Virgin Queen" of England, made several unsuccessful attempts to establish settlements therein. The first colony was planted on Roanoke Island (1585). Instead of tilling the ground, the settlers hunted for gold. Finding none, they were only too glad to return home with Drake, who happened to stop there on one of his buccaneering expeditions. They brought back with them the weed which the lethargic Indians used for smoking, and the custom of "drinking tobacco," as it was called, soon became exceedingly popular, in spite of the anathemas of the physicians, the Puritans, and even of King James himself, who wrote a tract against its use. It is said that one day, when Raleigh was sitting in his study privately practicing this new accomplishment, his servant entered with a tankard of ale. Seeing his master with a cloud of smoke issuing

from his mouth, the terrified domestic dashed the ale in his face as a partial extinguisher, and rushed down the stairs screaming for instant help, for Sir Walter would soon be burnt to ashes.

RALEIGH INTRODUCES TOBACCO
INTO ENGLAND

Another colony was now sent to Virginia. It happily consisted of families. The presence of woman brought cheerfulness and beauty, and in the prospect of home circles and influence it bade fair to be permanent. The "City of Raleigh" was founded on the site of the former settlement. A faithful Indian chief was here baptized and received the rank of a feudal baron—Lord of Roanoke. Here, also, was born the first child of English parents on the soil of the United States—Virginia Dare, grand-daughter of Governor White. The threatened invasion of the Armada occupying the attention of England, it was three years before supplies were sent out to the infant colony. When at last the long-delayed ship sailed into the harbor she found it silent as the grave. The homes were all deserted, and not a living thing remained to tell the fate of their once hopeful occupants. On the trunk of a tree was found carved the name of a distant island, Croatan. The lateness of the season forbade any attempt to seek the island, and, appalled by the desolation and ruin which they beheld, the fleet returned without leaving a settler behind. To this day the "Lost Colony of Roanoke" remains a mystery.

A century had now passed since the discovery of America, but as yet neither English nor French had planted a permanent colony, save in the graves of their heroic adventurers. The Spaniards had, north of the Gulf of Mexico, only a feeble settlement at

THE DESERTED COLONY OF ROANOKE.

St. Augustine and another at Santa Fé. The difficulties which attended the passage of the Atlantic, the perils of the wilderness, the treachery of the Indians, all conspired to prevent the rapid colonization of the New World. The experience of every attempt could be summed up in the quaint language of the English company under Captain Popham, "We found only extreme extremities."

Early in the seventeenth century, several successful trading voyages called the attention of English merchants and noblemen to the question of American colonization. King James I. accordingly divided the vast territory called Virginia, extending from Cape Fear to Passamaquoddy Bay, between two rival companies, the London and the Plymouth. The former was to have the southern, and the latter the northern portion; and, to prevent disputes, their settlements were to be at least one hundred miles apart. All the region south of this grant was known as Florida, and all north, as New France. A book of the time defines Virginia as "that country of the earth which the ancients called Mormosa, between Florida and New France."

SETTLEMENT OF VIRGINIA.

On April 26, 1607, a fleet of three vessels sent out by the London Company entered Chesapeake Bay. Captain John Smith, afterward called "The Father of Virginia," was on board, but in chains, a victim to the jealousy of meaner men. As they rode into that magnificent harbor, they passed two headlands, which they called Charles and Henry, after their young princes at home. The good anchorage inside suggested the name Old Point Comfort, and the noble stream they now ascended was styled James River, after the king. Their first settlement was

THE RUINS AT JAMESTOWN.

also loyally christened Jamestown. The crumbling, ivy-clad church tower still standing on the banks of the James, about fifty miles from its mouth, marks the site of the oldest English settlement in the United States. The colonists were poorly qualified for the work they had undertaken. There were no families, yet they were to establish homes in the wilderness. There were houses to build, yet they numbered only four carpenters to forty-eight labor-despising gentlemen. They were to lay the

foundations of a colony, yet they had but twelve laborers. The first year, the gentlemen spent their time in searching for gold, when they should have been planting corn. Food soon became scarce. Before autumn, sickness swept away half their number. Wingfield, the president of the council appointed by the king for their government, was unfaithful and avaricious, and even tried to escape to the Indies with the best of their scanty stores.

Smith, by the power of his genius, now rose to command. "He proved more wakeful to gather provisions than the covetous were to find gold; and strove to keep the country more than the faint-hearted to abandon it." He declared that "He who will not work may not eat." He was the first to clearly compre-

hend that nothing was to be gained by the colony except through labor. He taught the gentlemen to swing the axe until they became accomplished wood-cutters. Enforcing morality as well as industry, he kept an account of all profanity, and at night poured a cup of cold water down the sleeves of the offenders. Yet the colonists, we are told, "built a church that cost fifty pounds and a tavern that cost five hundred." Smith wrote home: "I entreat you rather send but thirty carpenters, husbandmen, gardeners, fishermen, blacksmiths, masons, and diggers-up of trees' roots than a thousand such as we have."

SMITH SHOWING HIS COMPASS TO THE INDIANS.

Meanwhile, Smith made many expeditions, cultivating the friendship of the Indians, exploring the country, and bringing back supplies of food for the colony. He went northward as far as Maine, and on one of his maps the names "Plymouth" and "Cape Ann" first appear. In an expedition up the Chesapeake, he was taken prisoner by the Indians. With great coolness he amused his captors by an astronomical lecture, exhibiting his compass, and showing them how "the sun did chase the night round about the world continually." They allowed him to send letters to Jamestown, and, having no idea of a written language themselves, were astonished at his making the paper talk to his friends of his condition. With commendable forethought, the gunpowder taken from him was carefully laid aside for planting the

next year. The illustrious captive was carried from place to place over the same peninsula since rendered famous by McClellan's campaign. On being brought to the great chief Powhatan, his good fortune seemed to fail him, and he was condemned to die. According to Smith's account, his head was laid on a stone, and the Indian's war-club was raised to strike the final blow, when Pocahontas, the young daughter of the chief, whose love the captive had won, rushed forward, threw her arms about his neck and arrested the descending blow. Powhatan, touched by this act of devotion, released the prisoner.

The little Indian maiden often thereafter aided the colonists, bringing them food and warning them of danger. She grew

up to be a beautiful woman and was converted to the Christian religion. In the little church at Jamestown she was baptized from the pine trough which was used as

a font, and in her broken English plighted her faith to a young planter named John Rolfe. In 1616 he took his dusky wife to England.

Lady Rebecca, as she was called, "the first Christian ever of her nation," by her naïve simplicity and goodness, won universal admiration. It is said, however, that King

James was jealous of Rolfe, fearing that, "having married an Indian princess, he might lay claim to the crown of Virginia." So high did the tide of royalty run in those days that Rolfe came near being called to account for having presumed, a private person, to marry into the royal family of even a petty Indian tribe. Owing to this same jealousy, Smith dared not allow Rebecca to call him father, as she had been accustomed to do. Just as she was preparing to return to her wilderness home, Lady Rebecca died, leaving, however, a son, from whom some of the most distinguished families of Virginia have been proud to boast their descent.

Meanwhile, Smith was wounded and forced to return to

POCAHONTAS.

England. He never received for all his services a foot of ground, not even the house he had built, nor the land he had cultivated. Deprived of his care, everything went to ruin. A winter of horrible famine—long remembered in their annals as the "Starving Time"—ensued. Thirty of their number seized a ship and turned pirates. In six months the colony was reduced from five hundred to sixty. These fled in despair from the terrible place—some even bent upon burning the town where they had suffered so fearfully. As, dropping down the river, they neared the open sea, they met their new governor, Lord Delaware, coming with supplies. A sudden revulsion of feeling followed. Overawed at the change in their condition, they returned to their deserted homes with a chastened joy. "It is the Lord of Hosts!" said they; "God will raise our state and build his church in this excellent clime."

Now came better times. A new charter was obtained from the king. The council in London, which had heretofore stupidly tried to govern the colony, was abolished. The settlers obtained "a hande in governing of themselves." July 30, 1619, the first legislative body was assembled in America. It consisted of the governor, council, and the house of burgesses, or deputies from the different boroughs or plantations. Every freeman had the right to vote. A written constitution was granted, and the foundations of civil liberty were laid in Virginia. A hardier and better class of men began to flock to the New World. New settlements were established and plantations lined both banks of the James River as far as the present site of Richmond.

Tobacco had proved a valuable article of export. It was cultivated so eagerly that at one time the gardens and even the public squares and streets of Jamestown were planted with it. The production of this staple greatly increased the demand for labor. At first "apprenticed servants" were sent over from England and bound out to the planters for a term of years; being often men who had committed some crime or had rebelled against the government. In 1619, twenty negroes were brought by a Dutch ship and were quickly purchased by the planters. From this small beginning sprang the institution of slavery, which afterward became so important an element in the history of the United States.

As yet, few of the feeble sex had dared to cross the Atlantic, but about this time the proprietors sent out a load of

industrious, virtuous young women, who were sold as wives to the planters for one hundred pounds of tobacco per head. So great was the demand that, as the records quaintly tell us, "one widow"

SELLING WIVES TO THE PLANTERS.

who was sent over in a subsequent lot went readily with the rest, and the price of the "faire maidens" ran up to a hundred and fifty pounds of the market weed. Domestic ties were now formed, homes established, and the permanence of the colony was insured.

During the life of Powhatan, there was peace with the Indians,

but after his death they resolved to exterminate the colony (1622). Distributing themselves in small parties, they entered the

houses and even sat down at the tables of those whose death they were planning. At a given signal they fell upon the whites in all the outlying plantations. Jamestown fortunately escaped, through the faithfulness of a converted Indian. A merciless war ensued. After a second massacre, some years later, the Indians were expelled from the region, and their rich lands along the York and the James occupied by the planters.

According to the idea of King James, the London Company was too willing to grant rights to the colonists. He therefore took away its charter and made Virginia a royal province (1624). Thereafter the king appointed the governor and the council, though the colony retained its assembly. The royal governors were oftentimes unprincipled men, who ruled for their own good and not that of the settlers, showing no sympathy for the province and no care for the people. The Navigation Acts passed by the parliament in 1660, which were intended to give

England the control of the trade of the colonies, pressed heavily on Virginia. They required that the commerce of the colony should be carried on in English vessels, all their tobacco shipped to England, and all their goods purchased in that country.

The colony contained few towns or centres of influence. The cultivation of tobacco, as the great staple, and the introduction of slaves, naturally led to the establishment of large estates. These often descended to the eldest son and were perpetuated in the family. The great proprietors were generally men of intelligence, accustomed to control. They became the magistrates and members of the council and assembly. A powerful landed aristocracy was thus growing up and obtaining rule in the province. Virginia was also intensely royal. During the civil war in England it sided with the king. After the execution of Charles I. many loyalists took refuge on the shores of the Chesapeake. There they found "every house a hostelry and every planter a friend." At one time there was even a possibility of the young prince coming to the New World. Cromwell, however, sent over a ship of war to Virginia, and the colonists quickly submitted.

Under the Commonwealth, the People of Virginia were allowed to elect their own officers and to enjoy all the privileges of an equal franchise. A change, however, was at hand. The news of the Restoration of Charles II. aroused transports of joy, but it was the knell to the political privileges of the common people. The next assembly (1661) consisted almost entirely of cavaliers and great landholders. The Church of England was made that of the colony. All had to contribute to its support. In each parish a board of vestrymen was appointed, with power to assess taxes and fill any vacancy in its body. Dissenters were heavily punished. A fine of twenty pounds was imposed on absentees from church. Baptists were declared to be "filled with new-fangled conceits of their own heretical invention." A member who was thought to be kindly disposed toward the Quakers was expelled from the Board of Burgesses. The right of suffrage was confined to freeholders and housekeepers. The vestrymen became a close corporation and imposed taxes at pleasure. The assemblymen remained in office after their term had expired, and voted themselves a daily pay of two hundred and fifty pounds of tobacco (about nine dollars in value)—an enormous salary for those days of poverty.

The common people, feeling themselves deprived of the

political rights they had so long enjoyed, were ready for an uprising. Little knots of men gathered in the gloom of the woods to talk over their wrongs. A young planter named Nathaniel Bacon, known in history as the "Virginia Rebel," sympathizing with the democracy, became its leader, July, 1676. Governor Berkeley not proving able to protect the frontier from the Indians, Bacon rallied the frightened yeomanry, put the Indians to rout, and then, returning, forced Berkeley to dissolve the old assembly and issue writs for a new election. The governor, however, failed to keep faith, and civil war broke out. Jamestown was burnt, patriots firing their own houses, lest they might protect the enemies to their liberty. Bacon died in the midst of success. Dis-

pirited by his loss, the people scattered their forces. The principal men were hunted down with ferocious zeal. Hansford, a gallant native Virginian, perished on the scaffold, the first martyr to the cause of American liberty. His last words were, "I die a loyal subject and a lover of my country." As

DRUMMOND BROUGHT BEFORE BERKELEY.

William Drummond was brought in, the vindictive Berkeley, bowing low, remarked with cruel mockery, "I am more glad to see you than any man in Virginia. You shall be hanged in half an hour." The patriot was condemned at one o'clock and hanged at four the same day. The gallows received twenty-two victims, and yet Berkeley's revenge was not satisfied. Charles II., when he heard the tidings, impatiently exclaimed, "The old fool has taken more lives in that naked country than I did for the murder of my father."

Berkeley was recalled. But the rebellion had been a century too early. The governor who succeeded ruled more arbitrarily than ever. The king appointed all officers of the colony. Even the members of the assembly were hereafter elected only by freeholders. Yet as the spirit of liberty spread, the people found means to thwart their oppressors, and in spite of adverse circumstances, the colony grew rapidly in wealth and population. "There was no need of a scramble; abundance gushed from the earth for all. The morasses were alive with water-fowl; the creeks abounded with oysters, heaped together in inexhaustible beds; the rivers were alive with fish; the forests were nimble with game; the woods rustled with coveys of quails and wild turkeys, while they rung with the merry notes of singing birds; and hogs, swarming like vermin, ran at large in troops. It was the best poor man's country in the world." In 1688 it had a population of fifty thousand, and exported twenty-five thousand hogsheads of tobacco, on which England levied a tax of one hundred and thirty-five thousand pounds.

SETTLEMENT OF MARYLAND.

Lord Baltimore (George Calvert) came to Virginia (1629), seeking a refuge for his Catholic brethren, who were then persecuted in England; but finding that persons of his faith were harshly treated, he secured from the king a grant of land north of the Potomac, on the annual payment of two Indian arrows and one-fifth of the gold and silver which might be found. This territory received the name Maryland, in honor of the queen, Henrietta Maria. Its charter, unlike that granted to Virginia, gave to all freemen the right of making the laws. All sects were to be tolerated, and there was to be no interference from the king, nor any English taxation.

The first colony was founded at an Indian town near the mouth of the Potomac. Religious liberty obtained a home, its first in the wide world, at the humble village of St. Mary's. The infant colony flourished wonderfully. The land had already been tilled by the Indians and was ready for planting. Food was plenty and contentment reigned. Tobacco became the staple; slaves

were introduced; and much the same manners and customs obtained as in Virginia. There was, for a time, serious difficulty

LORD BALTIMORE.

with a colony of refugees from Virginia under Clayborne, who refused to submit to the new government. The Puritans, coming in large numbers, obtained the majority over the Catholics. Two governors were elected; one Catholic and the other Protestant. Confusion ensued, and then civil war. Finally the Catholics found themselves disenfranchised in the very colony they had planted. In 1715, the fourth Lord Baltimore recovered the government, and religious toleration was again granted. Maryland remained under this administration until the Revolution.

SETTLEMENT OF PLYMOUTH COLONY.

One stormy day in the fall of 1620, the Mayflower dropped anchor in the harbor of Cape Cod. It bore a little band of one hundred and two Pilgrims. They had neither charter from the king nor the patronage of any company. They were exiles fleeing from persecution at home and seeking religious freedom in the New World. They had expected to settle the milder country near the Hudson, but instead were borne to the tempestuous coast of Massachusetts. Before any one landed, they assembled in the cabin and signed a compact agreeing to submit to such "just and equal laws" as should be enacted for the "general good." John Carver was chosen governor. They sailed about for a month seeking a good location for their intended settlement. Meanwhile, Captain Miles Standish and his soldiers, each armed with coat of mail, sword, and match-lock musket, explored the country by land.

SIGNING THE COMPACT.

The old chronicles narrate various incidents of their different excursions. One day they found "five or six people with a dogge, who were

savages," and who "all ran away and whistled the dogge after them." Then Bradford (the future governor) was caught in an Indian deer-trap, to the great amusement of the party; and afterward they stumbled upon some heaps of earth, in one of which were baskets of Indian corn. This they carried back to the ship in a great kettle left among the ruins of an Indian hut. It furnished them seed for their first crop, and the owners, being afterward found, were carefully paid. At another time having concluded their morning-prayers, they were preparing to breakfast, when a strange yell was heard and a shower of arrows fell in the midst of their little camp on the beach. They returned the salute with powder and ball, and their savage assailants fled.

The little shallop which was used for coasting along the shore encountered a furious gale, and lost sail, mast, and rudder. With great difficulty they brought it to land. Darkness was already upon them, and the rain froze on their garments as they stood. They kindled a fire out of the wet wood on the shore, and passed the night as best they could. The next day was spent in cleaning rusty weapons, drying drenched "stuff," and reconnoitering the place. Every hour was precious. The winter was rapidly closing in. The party in the Mayflower was anxiously awaiting their return, yet, being "ye last day of ye weeke, they prepared ther to keepe ye Sabbath."

On Monday, December 21, the Pilgrims landed at Plymouth. A grateful posterity has kept the day in honored remembrance, and "Forefathers' Rock," on which they first set foot, is still preserved as an object of veneration. It was probably the only stone large enough for the purpose of landing in all that bleak, sandy coast.

The cutting blasts of winter fell upon them. Half of the men were sick from exposure. Yet they resolutely set at work building

rude log-cabins. At one time there were only seven well persons in the colony. They "carried out the dead through the snow and the cold, and returned to take care of the sick." When spring came, the graves they had dug far outnumbered

PLYMOUTH ROCK.

the houses they had built. But the hearts of the survivors never misgave them. When the Mayflower returned to England she carried back not a single home-sick pilgrim.

The summer found them with flourishing fields of barley, peas, and Indian corn; fish, wild fowls, berries, and native fruits in abundance; nineteen log-cabins, each with a little enclosure for a private garden; a rude store-house, twenty feet square, for the protection of their common property; and a platform on the hill crowned with five guns as a means of defence. A little brook ran by the humble town, and springs of clear, fresh water were near. That "the birds sang in the woods most pleasantly," and the wild wood-flowers were "very sweet," is their own record, and testifies to their cheerful content.

The feeble colony met with no opposition from the Indians. A pestilence had nearly annihilated several tribes inhabiting that portion of the coast, and thus, providentially, as the Pilgrims devoutly believed, left a clear place for them to occupy. One pleasant morning they were startled by the coming of an Indian, who, in broken English, bade them "Welcome." He proved to be Samoset, a petty chief who had picked up a little of the language from the crews of fishing-vessels. He afterward brought Massasoit, the head chief of the Wampanoags. A treaty was made with him and faithfully observed for over half a cen-

WELCOME, ENGLISHMEN.—PLYMOUTH, 1621.

tury. In 1622, Canonicus, sachem of the Narragansett tribe, sent to Plymouth, as a token of defiance, a bundle of arrows tied with a rattlesnake's skin. The governor sent back the same skin stuffed with powder and ball. The superstitious savages, thinking it some fatal charm, passed it in terror from hand to hand till it came back again to Plymouth.

The first crop proved inadequate for the winter. A new body of emigrants arrived, but they were unprovided with food, and so only increased the privations and difficulties of the colony. Even at the end of three years we are told that "at night they knew not where to have a bit in the morning." At one time there was only a pint of corn in the settlement, which allowed five kernels to each person. Yet such was their pious content that at a social dinner, consisting only of clams, eaten off the lid of the same chest on which the compact was signed in the cabin of the Mayflower, good Elder Brewster returned thanks to God for having "given them to suck the abundance of the seas and of the treasures hid in the sand." The plan first adopted of working their lands in common failed, as at Jamestown, and a portion was assigned each settler. Thrifty, God-fearing, and industrious, the Pilgrims steadily gained in abundance and comfort. Cargoes of sassafras, then much esteemed in pharmacy, furs and lum-

ber were sent to England. After a time they raised enough corn to sell to fishing-vessels and to barter with the Indians.

For over eighteen years the government in church and state was a strict democracy—all the male inhabitants forming the legislature. The increase of population afterward caused it to be made representative, and each town sent a committee to the general court. The Plymouth colony remained independent till 1692, when it was united to that of Massachusetts Bay.

SETTLEMENT OF MASSACHUSETTS BAY.

The success of the Pilgrims greatly encouraged the establishment of other settlements. Large numbers of the best Puritan families in England were induced to emigrate. In 1628, five ship-loads landed at a place which they named Salem, from the Hebrew word meaning peace. Their circumstances were far different from those of the Pilgrims. It was June when they approached the coast. "What with pine woods and green trees by land," writes the old chronicler, "and yellow flames painting the sea, we were all desirous to see our new Paradise." They had a grant from the Council of New England, which had taken the place of the old Plymouth Company. They had a charter from the king, authorizing them to govern themselves. Moreover, their connections in England were powerful. They brought tools, cattle, and horses. They were not, however, exempted from the hardships incident to a settler's life. The winter was very severe and they were forced to subsist on ground-nuts, shell-fish, and acorns, so difficult to obtain at that season of the year. One of them wrote: "Bread was so very scarce that sometimes I thought the very crumbs of my father's table would be sweet unto me. And, when I could have meal and water and salt boiled together, it was so good, who could wish better?"

Other settlements were rapidly formed—Charlestown, Dorchester, Watertown, Lynn, and Cambridge. One thousand emigrants under the highly-esteemed Governor Winthrop established themselves at Boston—from its three hills first called Tri-Mountain—which became the capital of the colony.

The government was vested in a governor chosen by the

people, and a legislature elected in the same manner. None but freemen, however, could vote, and none but church members were eligible to citizenship. "Each settlement," says Hildreth, "at once assumed that township authority which has ever formed so marked a feature in the political organization of New England. The people assembled in town-meeting, voted taxes for local purposes, and chose three, five, or seven of the principal inhabitants, at first under other names, but early known as 'selectmen,' who had the expenditure of this money and the executive management of town affairs.

A treasurer and a town clerk were also chosen, and a constable was soon added for the service of civil and criminal processes." Each town constituted, in fact, a small state almost complete in itself.

It is a noticeable fact that what we now call Massachusetts grew up around two centres, separated not only by forty miles of wilderness, but by a great diversity of thought. Plymouth and the Bay were two little republics, that for sixty years maintained their independence. In England, the Pilgrims who settled the former were Separatists; that is to say, they had left the Church of England and set up churches for themselves. The Puritans, who came to the Bay, were Non-conformists; *i. e.*, they simply refused to conform to certain rules and usages of the Church of England, but remained, as it were, members under protest. Plymouth was weak in men and money; the Bay was strong from the first. The former was settled by plain, practical people, having only one university man—Elder Brewster; the latter had a superabundance of highly educated persons. In 1640, the Bay numbered seventy-seven clergymen; they dominated in all political action and engrafted on the Puritan colony the best learning of the Old World. At Plymouth all voted who were elected to the right of

FAC-SIMILE OF FIRST MAP ENGRAVED IN NEW ENGLAND.

citizenship; at the Bay, church membership was a *sine qua non*, so that not a quarter of the adults were eligible to that trust. At Plymouth were found quiet, peace, and contentment; at the Bay, the rush of business and the strife of parties, impelling the tides of life which set off to establish new centres in Connecticut, Rhode Island, and other colonies.

Religious toleration was rarely seen in those days. Indeed, those who were themselves cruelly persecuted were often the most intolerant in their treatment of any who differed with them.

The Puritans had crossed the sea to establish a Puritan colony, and they required everybody to attend their worship. A strict uniformity of belief was enforced. Religious disturbances soon arose. Roger Williams, an eloquent young minister,

had adopted the idea of "soul-liberty," as he expressed it, *i. e.*, the responsibility of every man to his own conscience alone. It

ROGER WILLIAMS RECEIVED BY CANONICUS.

was a novel sentiment in those days, and was especially unsuited to the Puritan method of government. Williams was accordingly expelled from the colony. Exiled by Christians, he found a home with Pagans. Canoncus, a Narragansett chief, gave him land for a settlement, which he gratefully called *Providence* (1636). Mrs. Hutchinson, who rebelled at the restraints placed upon women, and claimed to have special revelations of God's will, was also banished, and joined the new colony. The Quakers had come to Boston overflowing with zeal, and even courting persecution.

They received it in abundance. Several were hanged. Numbers were flogged and expelled. These, too, found a hearty welcome at the Providence plantation, the exiled Williams freely sharing his lands with religious refugees of every class. Thus were laid the foundations of the State of Rhode Island. Its fundamental principle was its founder's favorite one of entire liberty of conscience.

A union of the colonies of Massachusetts Bay, Plymouth, New Haven, and Connecticut, was formed in 1643, under the title of THE UNITED COLONIES OF NEW ENGLAND. This was a famous league in colonial times, and was the germ of the Federal Union of later days. The object was a common protection against the Indians and the encroachments of the Dutch and French settlers.

Massasoit, like Powhatan, was the friend of the whites. After Massasoit's death, his son, King Philip, as he was called, brooding over the constant encroachments of the settlers, the loss of game, and the usurpation of his favorite hunting-grounds, at last organized a confederation of various

tribes to drive out the intruders. The struggle began ere his plans were completed. Some Indians being tried and hanged for murder, Philip, in revenge, fell upon Swanzy, a little settlement near his home at Mount Hope (1675). Troops came, and he fled, marking his flight by burning buildings and by poles hung with the heads, hands, and scalps of the hapless whites whom he met on the way. All the horrors of Indian warfare now burst upon the doomed colonists of New England. The settlements were widely scattered. The Indians lurked in every forest and brake. They watched for the lonely settler as he opened his door

in the morning, as he was busy with his work in the field, or walked along the forest path to church. The fearful war-whoop, the deadly tomahawk, the treacherous ambuscade, filled the col-

KING PHILIP.
(From an Old Print.)

GOFFE AT HADLEY.

only with constant terror. In August, a company of eighty young men, "the very flower of the county of Essex," were returning from Deerfield with a train of wagons loaded with wheat,

which they had harvested. At a little stream, ever since that day called Bloody Run, they stopped to pick the grapes which hung in profusion from the trees along the road. Suddenly amid their glee, the Indians leaped upon them, like tigers, from the thicket. Only seven or eight of the entire party escaped. While the savages were plundering the dead, troops came to the rescue, and, in turn, cut down nearly one hundred of their number ere they could escape.

At Hadley, the Indians surprised the people during a religious service. Seizing their muskets at the sound of the savage war-whoop, the men rushed out of the meeting-house to fall into line. But the foe was on every side. Confused and bewildered, the settlers seemed about to give way, when suddenly a strange old man with long white beard and ancient garb appeared among them. Ringing out a quick, sharp word of command, he recalled

them to their senses. Following their mysterious leader, they drove the enemy headlong before them. The danger passed, they looked around for their deliverer; but he had disappeared as mysteriously as he had come. The good people believed that God had sent an angel to their rescue. History reveals the secret. It was the regicide Colonel Goffe. Fleeing from the vengeance of Charles II., with a price set upon his head, he had for years wandered about, living in mills, clefts of rocks, and forest caves. At last he had found an asylum with the Hadley minister. From his window he had seen the stealthy Indians coming down the hill. Fired with desire to do one more good deed for God's people, he rushed from his hiding-place, led them on to victory, and then returned to his retreat, never more to reappear.

All the long summer the cruel strife went on. But when winter came, and the forest was more open and the low ground frozen over, a large body of the colonists attacked the Indians in their stronghold, in an almost inaccessible swamp in South Kingston. After a desperate struggle the fort was carried, and the wigwams filled with stores were burned to ashes. A thousand warriors were killed. The next year Philip was left almost alone. Hunted from place to place, he was tracked to the centre of a morass, where he was shot by one of his own people. It was a sad fate for a brave man, who, under other circumstances, would have been styled a hero and a patriot. The war had cost the colony six hundred men and one million dollars. Every eleventh house had been burned and every eleventh soldier killed. No help had been asked or received from England.

The year 1692 is memorable as that of the Salem Witchcraft. This was a delusion which seems preposterous now, but which was then in accordance with the current belief of the times. It broke out in the family of Mr. Parish, a minister of Salem, where a company of girls had been in the habit of meeting with two West Indian slaves, to study the "black art." Suddenly they began to be mysteriously contorted, to bark like dogs, purr like cats, and scream at some unseen thing which was sticking pins in their bodies. They accused an old Indian servant of bewitching them. On being scourged, she acknowledged the crime. A fast-day was proclaimed. Cotton Mather, a distinguished minister of Boston, and a firm believer in the delusion, came to investigate the case. The excitement spread. Impeachments multiplied. A special court was formed to try the accused. The jails rapidly filled.

Magistrates were busy. On the most foolish charges—as being seen flying through the air on a broom—respectable people were condemned to death. It was dangerous to express doubt of a prisoner's guilt. Fifty-five persons suffered torture and twenty were executed. All these might have escaped if they had confessed themselves guilty, but, with noble heroism, they chose death rather than a falsehood. When the people awoke to their

THE OLD WITCH HOUSE—SCENE OF EXAMINATIONS AT SALEM.

folly the reaction was wonderful. Judge Sewall was so deeply penitent that he observed a day of fasting in each year, and on the day of general fast rose in his place in the Old South Church at Boston, and in the presence of the congregation handed to the pulpit a written confession acknowledging his error, and praying

“That the sin of his ignorance sorely rued,
Might be washed away in the mingled flood
Of his human sorrow and Christ's dear blood.”

The history of Maine and New Hampshire is almost identical with that of Massachusetts. The early settlements grew up out of various fishing stations along the coast. A story is told of an itinerant preacher, who, in his exhortations to the people of Portsmouth, reminded them that as they had come thither for the purpose of free worship, they ought to be very religious. “Sir, you are quite mistaken,” was the reply. “You think you are speaking to the people of Massachusetts Bay. Our main end is to catch fish.” Maine was not one of the original thirteen colonies, and did not separate from Massachusetts till 1820. New Hampshire was three times given to Massachusetts, either from its own wish or by royal authority. In 1741 it became a royal province, and had its governor, who was appointed by the king.

SETTLEMENT OF CONNECTICUT.

The valley of the Connecticut—a name derived from the Indian word for long river—was settled from Massachusetts. Rumors of its rich bottom lands early attracted the attention of the pioneers struggling for an existence upon the barren sea-coast around Plymouth and the Bay. In 1633 a company of traders from Plymouth sailed up the river and built a fort at Windsor. In the autumn of 1635 John Steele, one of the proprietors of Cambridge, led a pioneer company “out west,” as it was then considered, and laid the foundations of Hartford. They passed the winter in miserable cabins, half-buried in the snow, living precariously on corn purchased of the Indians. The next year the main band, with their pastor, Thomas Hooker, a most eloquent and estimable man, “the light of the western churches,” came, driving their flocks before them, through the wilderness. For two weeks they traveled on foot, traversing mountains, swamps, and rivers, with only the compass for a guide, and little beside the milk from their own cows for their subsistence. Mrs. Hooker being ill, was borne on a litter. They established Hartford, Wethersfield and Windsor, known as the Connecticut colony, giving the franchise to all freemen. New Haven was settled by a company of Puritans direct from England. Like the colony around Massachusetts Bay, they allowed only church members to vote.

The settlers had not been a year in their new home when a war broke out with the Pequod Indians. Roger Williams, hearing that this tribe was likely to obtain the aid of the Narragansetts, forgot all the wrongs he had received from the Massachusetts people, and, at the risk of his life, went to the Indian council, confronted the Pequod deputies, and, after a three-days struggle, prevailed upon the Narragansetts to take part with the whites. A body of ninety Connecticut colonists was now raised to attack the Pequod stronghold on the Mystic River. After spending nearly all night in prayer, at the request of the soldiers, they set out on their perilous expedition. On the way they were joined by several hundred friendly Indians. The party approached the fort at daybreak (June 5, 1637). The barking of a dog aroused the sleepy sentinel, and he shouted, “Owanux! Owanux!” (the Englishmen!)—but it was too late. The troops were already within the palisades. The Indians collected them-

selves and made a fierce resistance; but Captain Mason, seizing a firebrand, hurled it among the wigwams. The flames quickly swept through the encampment. The English themselves barely escaped. A few Indians fled to the swamp, but were hunted down. The tribe perished in a day. This fearful blow struck terror to the savages, and gave New England peace for forty years, until King Philip's war, of which we have spoken. "The infant was safe in its cradle, the laborer in the fields, the solitary traveler during the night-watches in the forest; the houses needed no bolts, the settlements no palisades."

The younger Winthrop, son of Governor Winthrop of Massachusetts and one of the most accomplished men of his time, went to England, and by his personal influence and popularity obtained from Charles I. the most liberal charter as yet given to the colonies. It was a precious boon to liberty. Twenty-five years afterward, Governor Andros, pompously marching from Boston over the route where the pious Hooker had led his little flock fifty years before, came "glittering with scarlet and lace" into the assembly at Hartford, and demanded the charter. A protracted debate ensued. The people crowded around to take a last look at

THE CHARTER OAK.

this guarantee of their liberties, when suddenly the lights were extinguished. On being relighted, the charter was gone. William Wadsworth had seized it, escaped through the crowd, and hidden it in the hollow of a tree, famous ever after as the *Charter Oak*. However, Andros pronounced the charter government at an end. "Finis" was written at the

close of the minutes of their last meeting.

The freedom of the press was now denied. Persons about to marry had to give heavy bonds with sureties. The right to join in wedlock was taken from the clergy and given to the magistrates. Payment of money to non-conformist ministers was forbidden. Farmers were required to take out new titles to their land, at great expense. The rule of the governor became at last unendurable. When he was finally deposed, the people brought out the faded but now doubly-precious charter from its hiding-place, the general court reassembled, and the "finis" disappeared.

SETTLEMENT OF NEW YORK.

This was the only colony planted by the Dutch. In 1609, Henry Hudson, an English navigator in the service of the Dutch, while seeking a northwest passage to the Indies entered the harbor of New York. His vessel, the *Half-Moon*, was the first European ship to sail up that noble river which now bears his name. Strange was the sight which greeted his wondering eyes. "Sombre forests," says Bancroft, "shed a melancholy grandeur over the useless magnificence of nature, and hid in their deep

THE HALF-MOON IN THE HUDSON.

shades the rich soil which the sun had never warmed. No axe had leveled the giant progeny of the crowded groves, in which the fantastic forms of withered limbs that had been blasted and riven by lightning contrasted strangely with the verdant freshness of a younger growth of branches. The wanton grape-vine, seeming by its own power to have sprung from the earth and to have fastened its leafy coils on the top of the tallest forest tree,

swung in the air with every breeze like the loosened shrouds of a ship. Reptiles sported in stagnant pools, or crawled unharmed over piles of mouldering trees." Red men, too, were there: sometimes conciliatory, as when they flocked about in their canoes to barter grapes, pumpkins, and furs for beads and knives; sometimes vindictive, as when they beset the little exploring boat and sent Hudson's long-time comrade to a grave on the beach.

About the time that John Smith went back to England, Hudson turned his prow toward Holland. His voyage had rendered his name immortal. Legends of the daring sailor still live among the old Dutch families, and when the black thunder-clouds send their crackling peals along the Palisades, they say, "Hendrick Hudson and his crew are playing nine-pins now."

It was the golden age of Dutch commerce. Holland immediately laid claim to the country and named it "NEW NETHERLAND." In 1613 some huts were erected on the present site of New York. The year after the landing of the Pilgrims, the Dutch West India Company obtained a patent for the territory between the Delaware and the Connecticut Rivers. To every one who should plant a colony of fifty persons they offered a tract of land sixteen miles in length, which they and their heirs should hold forever. These proprietors were called patroons, or lords of the manor. The famous anti-rent difficulties of after times grew out of these grants.

To supply the requisite number of emigrants, ship-captains brought over many poor Germans, whose passage-money was paid by the patroons, whom they were in turn bound to serve for a given term of years. It was a profitable arrangement for all concerned. During the period of service the *Redemptioners*, as they were called, gained a knowledge of the language and ways of the country, and were fitted to take care of themselves when they became independent. In that charming little volume, "New York Society in the Olden Time," a story is told of one of these settlers who, having completed his bondage of several years, quietly produced a bag of gold which he had brought over with him, and which was sufficient to purchase a farm. But, said his late master in surprise, "why, with all this money, did you not pay your passage, instead of serving as a redemptioner so long?" "Oh," said the cautious emigrant from the Rhine, "I did not know English, and I should have been cheated. Now I know all about the country, and I can set up for myself." Which was true phil-

osophy. These industrious settlers became respected citizens, and their descendants are to-day among the wealthy farmers along the Hudson.

Peter Minuits came over as first governor in 1626. He bought the Island of Manhattan of the Indians for twenty-four dollars. Here was founded the city of New Amsterdam. Trade was opened with the Indians, and canoes pushed up every neighboring inlet to barter for otter and beaver skins. Meanwhile there was trouble with the Swedes on the Delaware, and the English on the Connecticut, both of whom had settled on lands claimed by the Dutch. Then, too, there was a fearful massacre of Indians, perpetrated by Governor Kieft, and in revenge the war-whoop echoed through every forest glen, and not a farm or "bowerie" was safe. The colonists, indignant at his cruel folly, sent the governor home, but he was wrecked on the coast of Wales and miserably perished.

Under Governor Stuyvesant came better times. He arranged the Connecticut boundary line; conquered New Sweden, as the colony on the Delaware was called; made peace with the Indians, and built a palisade across the island where now is Wall street. Dutch industry and thrift meant prosperity here as well as in Holland. From the first, New York was a cosmopolitan city. Even at that early day eighteen languages were said to be spoken. The French Huguenots, the Italian Waldenses, the Swiss Calvinists, the world-hated Jew, all found a home and a refuge in this growing colony. The island was mostly divided into farms. The Park was crowned with forest trees and used for a common pasture, where tanners obtained bark and boys gathered chestnuts for half a century later.

With all Governor Stuyvesant's honesty and ability, "Head-strong Peter," as they called him, was inclined to be obstinate. He especially hated democratic institutions. The English in the

GOVERNOR STUYVESANT.

colony looked with longing eyes on the rights enjoyed by their Connecticut brethren, so that when, in 1664, an English fleet came to anchor in the harbor and demanded a surrender in the name of

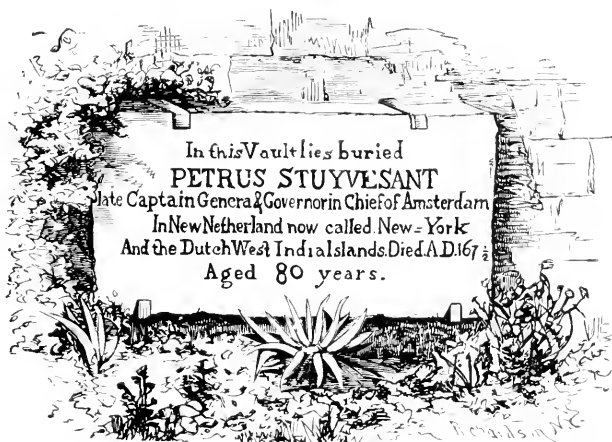

THE ENGLISH LANDING AT NEW YORK, 1664.

the Duke of York, there was secret joy in the town. The stout-hearted governor had been a brave soldier in his time, and he stumped about on his wooden leg at a terrible rate, angrily tore up the letter of his council making terms, and swore he would hold the place at every cost. But the burgomasters made him put the pieces together and sign the surrender. The English flag soon floated over the island, and the name of the colony was changed to New York in honor of the new proprietor. England was now master of the coast from Canada to Florida.

The English governors disappointed the people by not granting their coveted rights. A remonstrance against being taxed without representation was burned by the hangman. So that when, after nine years of English authority, a Dutch fleet appeared in the harbor, the people went back quietly under their old rulers. But the next year, peace being restored between England and Holland, New Amsterdam became New York again. Thus ended the Dutch rule in the colonies. Andros, who twelve years after played the tyrant in New England, was the next governor. He managed so arbitrarily that he was called home. Under his successor, Dongan, there was a gleam of civil freedom. By per-

mission of the Duke of York, he called an assembly of the representatives of the people. This was but transient, for two years after, when the Duke of York became James II., king of England, he forgot all his promises, forbade legislative assemblies, prohibited printing-presses, and annexed the colony to New England. When, however, Andros was driven from Boston, Nicholson, his lieutenant and apt tool of tyranny in New York, fled at once. Captain Leisler, supported by the democracy, but bitterly opposed by the aristocracy, thereupon administered affairs very prudently until the arrival of Governor Slaughter, who arrested him on the absurd charge of treason. Slaughter was unwilling to execute him, but Leisler's enemies, at a dinner party, made the governor drunk, obtained his signature, and before he became sober enough to repent, Leisler was no more. The people were greatly excited over his death, and cherished pieces of his clothing as precious relics. For long after, party strife ran high and bitter over his martyrdom.

THE TOMB OF PETER STUYVESANT.
(From St. Mark's Church, New York.)

In the latter part of the seventeenth century, Captain Kidd was noted as a bold and skillful shipmaster. He distinguished himself as a privateersman against the French in the West Indies, and received one hundred and fifty pounds for protecting New York city from pirates, who at that time infested the ocean highways. Being sent out against these sea-robbers, he finally became a pirate himself. Returning from his guilty cruise, he boldly appeared in the streets of Boston, where he was captured in the midst of a promenade. He was carried to England, tried, and hung. His name and deeds have been woven into popular romance, and the song "My name is Captain Kidd, as I sailed, as I sailed," is well known.

He is believed to have buried his ill-gotten riches on the coast of Long Island or the banks of the Hudson, and these localities have suffered many a search from credulous persons seeking for Kidd's treasure.

When New Netherland passed into the hands of the Duke of York, he sold the portion between the Hudson and the Delaware to Lord Berkeley and Sir George Carteret. This tract took the name of Jersey in honor of Carteret, who had been governor of the island of Jersey in the British Channel. The first settlement,

which was a cluster of only four houses, was called Elizabethtown, after his wife. His portion was called East, and Lord Berkeley's West New Jersey. The colonists were led by a brother of the proprietor, who came with a hoe on his shoulder to remind the people of the way to fortune and prosperity. The Quakers, Scotch

Presbyterians, and others persecuted for conscience sake, gradually occupied the country. Constant trouble prevailed among the settlers regarding the land titles, and in 1702 the proprietors gave up their rights, and "the Jerseys," as the colony was long known, became a royal province.

SEALS OF NEW AMSTERDAM AND
NEW YORK.

SETTLEMENT OF PENNSYLVANIA.

William Penn, the founder of Pennsylvania, was a celebrated English Quaker. Wishing to establish a home for the oppressed Friends in England, he secured from Charles II. the grant of a large tract west of the Delaware, in lieu of sixteen thousand pounds due his father by the crown, on condition of paying annually two beaver skins. This territory Penn wished to have called Sylvania (*sylva*, forest), as it was covered with woods; but the king ordered it to be styled Pennsylvania, and although Penn offered the secretary twenty guineas to erase the prefix, his request was denied. Penn immediately sent a body of emigrants to begin the "holy experiment," and came himself the next year in the ship "Welcome." Right royally was he welcomed by the settlers already within the

boundaries of his land, for his first proclamation had preceded him with the spirit of a benediction. "I hope you will not be troubled at your chainge and the king's choice," he wrote, "for you are now fixt, at the mercy of no governour that comes to make his fortune great. You shall be governed by laws of your own making, and live a free, and if you will, a sober and industrious people. God has furnisht me with a better resolution, and has given me His grace to keep it." On the beautiful banks of the Delaware, in 1683, he laid the foundations of Philadelphia. the "City of Brotherly Love," which he intended should be a "faire and greene country tounne," with gardens around every house. It was in the midst of the forest, and the startled deer bounded past the settler who came to survey his new home. Yet within a year it had one hundred houses; in two years numbered over two thousand inhabitants; and in three years had gained more than New York in half a century.

The government was most happily inaugurated, while the Philadelphia mansions were as yet mainly hollow trees. A legislature appointed by the people was to make all the laws. Every sect was to be tolerated. Any freeman could vote and hold office who believed in God and kept the Lord's day. No tax could be levied but by law. Every child was to be taught a useful trade. It seemed to be Penn's only desire to make the little colony as happy and free as could be. Under a large spreading elm at Shackamaxon, Penn attended a council of the Indian chiefs. "We meet," said he, "on the broad pathway of good faith and good will; no advantage shall be taken on either side, but all shall be openness and love. The friendship between you and me I will not compare to a chain; for that the rains might rust, and the falling tree might break. We are the same as if one man's body were to be divided into two parts; we are all one flesh and blood." The savages were touched by his gentle

STATUE OF PENN IN PHILADELPHIA.

words and kindly bearing. "We will live in love with William Penn and his children," said they, "as long as the sun and moon shall shine." They kept the history of the treaty by means of strings of wampum, and would often count over the shells on a clean piece of bark and rehearse its provisions. "It was the only treaty never sworn to, and the only one never broken." On every hand the Indians waged relentless war with the colonies, but they never shed a drop of Quaker blood. Penn often visited their wigwams, shared in their sports, and talked to them of God and Heaven. He found even in the breast of the red man of the forest a response to his faithful teachings and pure example. They gave him the name Onas, and the highest compliment they could confer on any person was to say he was like Onas.

Penn soon returned to England. Fifteen years afterward he came back with his family, intending to make the New World his home. But he could not shut out disturbance and conflict. The boundary between Maryland and Pennsylvania was uncertain. It was not settled until 1767, when two surveyors, Mason and Dixon, ran the line since famous as Mason and Dixon's line. The "Three Counties on the Delaware" became discontented. Penn gave them a deputy-governor and an assembly of their own. Delaware and Pennsylvania, however, remained under one government till the Revolution. The colonists of Pennsylvania were unwilling to pay the rents by which Penn sought to reimburse himself for his heavy outlay, and, not content with the privileges already secured, constantly sought to weaken the authority of their benefactor. Penn sorrowfully returned to his native land, and finally died in want and obscurity.

SETTLEMENT OF THE CAROLINAS.

Carolina, as we have seen, was first named in honor of a French monarch; but it remained for the English to settle the country. A company of religious refugees from Virginia had already pushed through the wilderness and "squatted" near the mouth of Chowan River. Here they established the Albemarle colony. In 1663, Charles II., who in his lavish ignorance had given away half the continent, granted the vast

territory south of Virginia to eight proprietors, chiefly his courtiers and ministers. The plan—the “grand model,” as it was called—of the colony which they proposed to establish was drawn up by Lord Shaftesbury and the famous philosopher, John Locke. It was the wonder of the day. All the vast territory—embracing the present States of North and South Carolina, Georgia, Tennessee, Alabama, Mississippi, Louisiana, Arkansas, Florida, Missouri, and a large part of Texas and Mexico—was to be divided into counties, each containing four hundred and eighty thousand acres. Over each county were to be a landgrave and two caciques or barons. They were to hold one-fifth of the land, and the proprietors one-fifth, leaving the balance to the people. No one owning less than fifty acres could vote; while tenants were to be merely serfs, and slaves were to be at the absolute will of their masters.

The emigrants sent out by the English proprietors first sailed into the well-known waters where Ribaut had anchored over a century before, but afterward removed to the ancient groves covered with yellow jasmine, which marked the site of the present city of Charleston, then only Oyster Point. The growth of the new colony was rapid. Thither came ship-loads of Dutch from New York, dissatisfied with the English rule and attracted by the genial climate. The French Huguenots, after the revocation of the Edict of Nantes, flocked to the land where religious persecution was to be forever unknown. Their church was in Charleston; and “thither on every Lord’s day, gathering from their plantations on the banks of the Cooper, they might be seen, the parents with their children, making their way in light skiffs, through scenes so tranquil that silence was broken only by the rippling of oars and the hum of the flourishing village at the confluence of the rivers.” The Huguenot settlers were a valuable acquisition to Charleston. At one time they numbered sixteen thousand, and added whole streets to the city. Many of them were from families of marked refinement in France, and their elegant manners, no less than their industry, charity, and morality, made an impress on the growing town. They brought the mulberry and olive from their own sunny land, and established magnificent plantations on the banks of the Cooper River. They also introduced many choice varieties of pears, which still bear illustrious Huguenot names. Their eminently honorable descendants have borne a proud part in the establishment of the American Repub-

lic. Of seven presidents who were at the head of the Philadelphia Congress during the Revolution, three were of Huguenot parentage.

HUGUENOTS GOING TO CHURCH.

A body of planters from the Barbadoes had, ere this, brought African slaves with them. Their labor proving very profitable, in a few years

they were introduced to such an extent that they nearly doubled the whites in number. A little incident which happened in 1694 had much to do with the early prosperity of the colony. The captain of a ship from Madagascar gave to Governor Smith a bag of seed rice, saying that it was much esteemed for food in Eastern countries. The governor shared it with his friends, and they all planted it in different soils to test its fitness for the American climate. It lived and thrived; and thus was introduced what shortly became an important staple.

The Great Model was an aristocratic scheme. The democrats of the New World, fleeing persecution and tyranny at home, living in log-cabins, and dressing in homespun and deer-skins, would none of it, and it was soon abandoned. The colonists were therefore allowed to have an assembly chosen by themselves, the governor only being appointed by the proprietors—the northern

and southern colonies, on account of their remoteness from each other, having each its own. There were still great difficulties with the proprietors about rents, taxes, and rights, untill in 1729, the Carolinas became a royal province.

SETTLEMENT OF GEORGIA.

Georgia was the last to be planted of the famous thirteen colonies. America, which was now a home for the oppressed of all religious faiths—Huguenots, Puritans, Presbyterians, Quakers, and Catholics—was also to become an asylum for afflicted debtors. James Oglethorpe obtained from George II. a tract of land which was named Georgia in honor of the king. Oglethorpe himself accompanied the first body of emigrants to their new home. His kindly mien, like that of another Penn, won the love of the Indians. One of the chiefs gave him a buffalo's skin with the head and feathers of an eagle painted on the inside of it. "The eagle," said the warrior, "signifies swiftness; and the buffalo, strength. The English are swift as a bird to fly over the vast seas, and as strong as a beast before their enemies. The eagle's feathers are soft and signify love; the buffalo's skin is warm and means protection; therefore love and protect our families." Another chief addressed him thus: "We are come twenty-five days journey to see you. When I heard you were come, and that you are good men, I came down that I might hear good things."

GENERAL OGLETHORPE, AGED 102.
(From an Old Print.)

In 1733 Oglethorpe laid out the city of Savannah in broad avenues and open squares, and here he lived for a year, in a tent pitched beneath four beautiful forest pines. Soon after, a company of German Lutherans set out on foot from their homes in Salzburg, and walked to Frankfort, chanting hymns of deliver-

ance as they went. Taking ship, in due time they also reached the land of the refugee. Sturdy Scotch Highlanders settled at Darien. Hither, also, came John and Charles Wesley, full of zeal for the conversion of the Indians and the religious good of the young colony. A little later, George Whitefield stirred the people by his wonderful eloquence. At one time, sixty thousand were gathered to hear him, and his open-air meetings were often attended by from twenty thousand to forty thousand people.

Georgia, as well as Carolina, bordered on Florida, and there were several contests between the young colonies and their Spanish neighbors. The South Carolinians and the Georgians each fruitlessly invested St. Augustine (1702 and 1740), and the Spaniards, in turn, attacked Charleston and Savannah (1706 and 1742). Little, however, resulted from these spurts of national hatred, except to make more apparent the necessity of bringing Florida under the English crown.

The laws of the Georgian colony were very irksome. The trustees limited the size of a man's farm, allowed no woman to inherit land, and forbade the importation of slaves or of rum. The last law cut off a large source of profit, as a valuable trade of lumber for rum had sprung up with the West Indies. Wearied by complaints, the trustees surrendered the colony to the crown, and Georgia became a royal province, like the other colonies.

PENNSYLVANIA TREATY TREE.

CHAPTER III.

COLONIAL WARS.

WHILE the English had thus established themselves on the Atlantic coast, the settlement of New France had gone on apace. The same year that Henry Hudson sailed north up the river which now bears his name, Champlain, a French explorer who had already founded Quebec, penetrating the wilds of New York southward, discovered the beautiful lake which was henceforth to be called in his honor. While most of the English

colonists steadily pushed back the Indians from their advancing settlements, making but slight efforts for their conversion or civilization, the French intermarried with them, mingled in their sports, shared their scanty fare, and, in their government of them, always joined kindness to firmness. They sought, not to drive away the natives, but to make the most of them. Their scheme of colonization, in fact, seemed to embrace but two objects—the mission work and the fur trade. Jesuit missionaries, burning with zeal and ardor, flocked to the banks of the St. Lawrence, and pushed their way into the virgin forest, dismayed by no storm, or hostility, or pestilence. Under the dripping trees, through the sodden snow, amid cruel and treacherous tribes, they moved with unflagging courage, asking only to baptize the poor red man, and ensure to his soul the joys of the upper paradise. Many of these indefatigable pioneers were murdered by the savages; some were scalped, some burned in rosin-fire, some scalded with hot water; yet, ever, as one fell out of the ranks,

another sprang forward, cross in hand, to fill his place. They crept along the northern lakes, and, in 1668, founded the mission of San

SAMUEL CHAMPLAIN.

Ste. Marie, the oldest European settlement in Michigan. Father Marquette floated in a birch-bark canoe down the Wisconsin to the Mississippi River. Going ashore one day at his hour of devotion, he did not return. His followers sought him, and found that he had died while at prayer, with his eyes fixed on the cross he had carried so long and so faithfully.

La Salle, a famous French adventurer, descended the Great River to the Gulf, naming the country on its banks Louisiana, in honor of Louis XIV. of France. Before the close of the seventeenth century, the French had explored the Great Lakes, the Fox, Maumee, Wabash, Wisconsin, and Illinois Rivers, and the Mississippi from the Falls of St. Anthony to the Gulf. They had traversed a region including what is now known as Louisiana, Arkansas, Mississippi, Iowa, Minnesota, Nebraska, Kansas, the Canadas, and Nova Scotia. In 1688, New France had a population of eleven thousand. The opening of the eighteenth century found them still at their labor of colonization. In 1700, De Tonty built Fort Rosalie near the present site of Natchez. Fort Detroit was erected in 1701. Mobile was settled in 1702 and became the capital of all Louisiana. New Orleans was founded in 1718, and Vincennes in 1735. The French names still lingering throughout the Mississippi valley preserve the memories of its early settlers.

Frequent contests broke out in Europe between England and France. The colonists naturally took part with their parent countries, and thus the flames of war were kindled in the New World. From 1689 to 1763—three-fourths of a century—the struggle went on. The series of quarrels are known with us as “KING WILLIAM’S WAR” (1689–1697), “QUEEN ANNE’S WAR” (1702–1713), “KING GEORGE’S WAR” (1744–1748), and the “OLD FRENCH AND INDIAN WAR” (1754–1763). There were frequent

MARQUETTE DESCENDING THE MISSISSIPPI.

pauses in the strife, but it was really and always a continuation of the same struggle; and the issue was to decide whether the French or the English were to rule the continent. The Indians generally sided with the French. They were armed with guns and often led by French officers. The horrors of King Philip's and the Pequod wars were now renewed with tenfold intensity. The border settlers were in constant fear of the tomahawk. "Children, as they gambolled on the beach; reapers, as they gathered the harvest; mowers, as they rested from using the scythe; mothers, as they busied themselves about the household, were victims to an enemy who disappeared the moment a blow was struck, and who was ever present when a garrison or a family ceased its vigilance." Every village had its block or garrison house, solidly constructed, and surrounded with a palisade of logs; the upper story sometimes projected beyond the lower, and in it were cut loop-holes for firing upon the invader. Thither the inhabitants fled for shelter at any alarm.

One June evening in 1689, ten squaws applied for lodging—two at each of the five garrisoned houses—in Dover, N. H. So secure were the inhabitants in the good faith of the Indians, that every family but one not only granted the request, but also showed them how to unfasten the bolts and bars of the doors and gates, in case they should desire to go out during the night,

Mesandowit, one of the chiefs, was entertained at Major Waldron's garrison, as he had often been before, where they chatted pleasantly together, and the family retired to rest in unsuspecting confidence. When all was quiet, the squaws opened the gates and gave a concerted signal to the concealed Indians without. Major Waldron, an old man of eighty years, awakened by the noise, jumped from his bed and fought valiantly with his sword, but was stunned by a blow from a tomahawk, and forced into an arm-chair, which was mounted on the long table where he had supped with his betrayer. "Who shall judge Indians now?" the savages derisively asked, as they danced about their veteran captive. Having forced the inmates of the house to prepare food for them, they regaled themselves, and then, wiping their knives, each "crossed out his account," as they mockingly said, upon the Major's body. Horribly mutilated and faint with the loss of blood, he was falling from the table, when one of them held his own sword under him and thus put an end to his misery. The family were all killed or taken prisoners, and the house was fired. The same fate befell the next dwelling and its inmates. The third house was saved by the barking of a dog, which aroused the dwellers in time to protect themselves. At Mr. Coffin's, the savages found a bag of money, and amused themselves by making the master of the house throw it on the floor in handfuls, while they scrambled after it. They then took him to the house of his son, who had refused to admit the squaws the night before, and, summoning the younger Coffin to surrender,

threatened to kill his father before his eyes if he refused. Both of these families were confined in a deserted house for safe keeping until the savages were ready to take them on their march, but, while their captors were busy in plundering, they happily managed to escape.

A FORTIFIED HOUSE.

A war-party of French and Indians coming down from Canada on their snow-shoes in the depth of winter (1690), attacked Schenectady. They stealthily dispersed through the town, and the inhabitants were only aroused from sleep as the brutal foe burst into their houses. Men, women, and children were

dragged from their beds and massacred. The few who escaped fled half-naked through the blinding snow to Albany.

THE INDIAN ATTACK ON SCHENECTADY.

In March, 1697, the Indians made a descent upon Haverhill, Massachusetts, where they murdered and captured about forty persons, and burned several houses. One Mr. Dustin was working in his field. He hastened to his home, and bidding his seven children run with all speed to a neighboring garrison, seized his gun, mounted his horse, and set out after them. He had intended to take one before him on his horse, and protect the rest as best he might; but when he overtook them, each one seemed so precious he could make no choice, and he determined that they should live or die together. Happily, he succeeded in keeping the Indians at bay until a place of safety was reached. He had left his wife ill in bed with an infant child, knowing that any effort to save her would only ensure death to them all. She, with the nurse and child, were dragged away in the train of captives. The babe of a week was soon disposed of in Indian fashion, and, as the strength of other prisoners failed, they were scalped and left by the roadside. Mrs. Dustin and nurse kept on the march for a hundred and fifty miles, when, learning that the captives were to be tortured to death after their destination was reached, she resolved

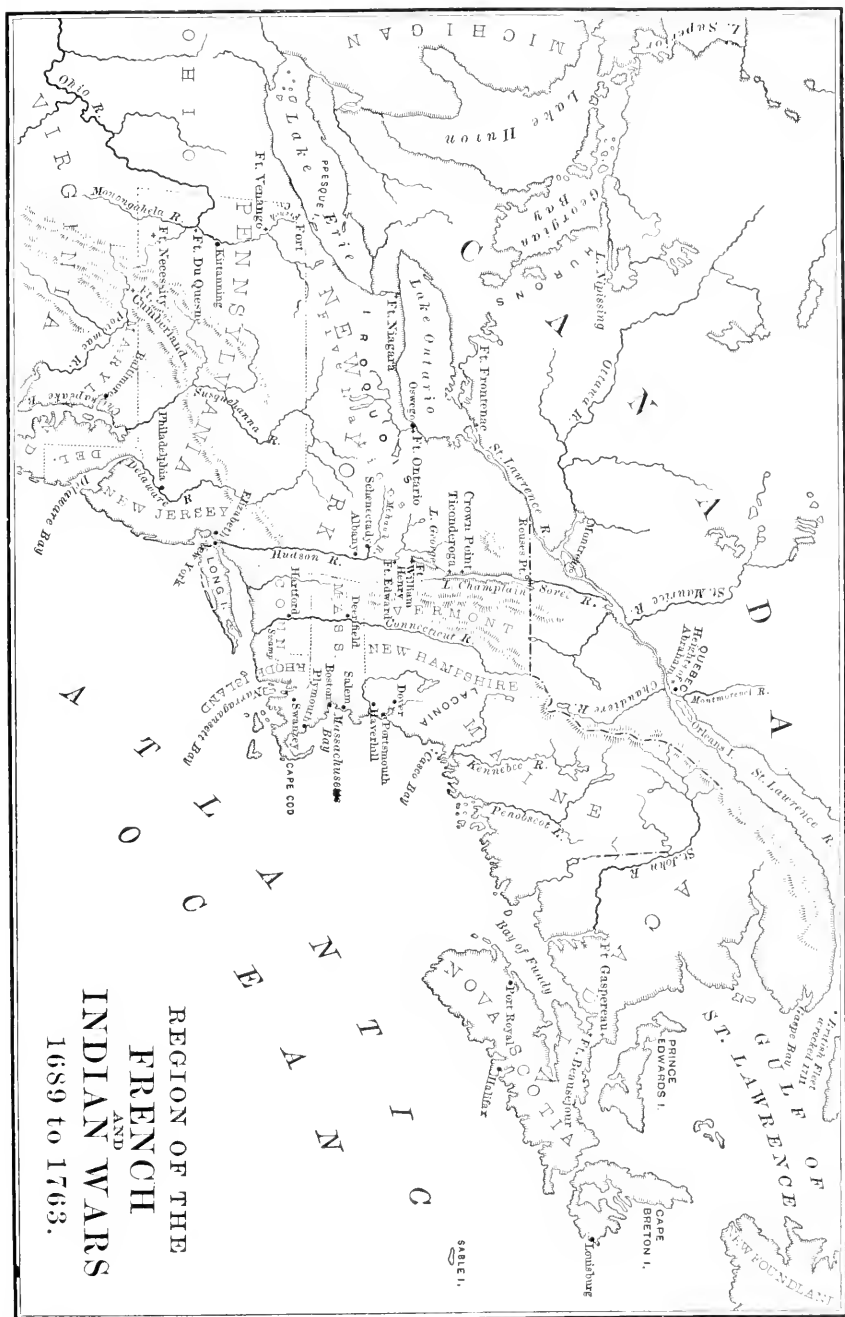

upon a desperate effort to escape. In the dead of night she arose with her nurse and an English boy who, having long been a prisoner, had learned how to produce death with one blow of the tomahawk. Taking a weapon, she killed ten of the sleeping Indians, only one wounded squaw escaping. Bringing away the scalps on her arm to prove her wonderful story, she hastened with her companions to the river bank, unloosed a canoe, and was ere long restored to her astonished family.

On the last night of February, 1704, while the snow was four feet deep, a party of about three hundred and fifty French and Indians reached a pine forest near Deerfield, Massachusetts. Skulking about till the unfaithful sentinels deserted the morning watch, they rushed upon the defenceless slumberers, who awoke from their dreams to death or captivity. Leaving behind the blazing village with forty-seven dead bodies to be consumed amid

MRS. DUSTIN DISPOSING OF HER CAPTORS.

the wreck, they started back with their train of one hundred and twelve captives. The horrors of that winter march through the wilderness can never be told. The groan of helpless exhaustion, or the wail of suffering childhood, was instantly stilled by the pitiless tomahawk. Mrs. Williams, the feeble wife of the minister, had remembered her Bible in the midst of surprise, and comforted herself with its promises, till, her strength failing, she commended her five captive children to God and bent to the savage blow of the war-axe. One of her daughters grew up in captivity, em-

braced the Catholic faith, and became the wife of a chief. Years after, dressed in Indian costume and accompanied by her warrior husband, she visited her friends in Deerfield. The whole village joined in a fast for her deliverance, and every persuasion was used to induce her to abandon her forest life; but her heart clung fondly to her dusky friends and her own Indian children, and she went back to the fires of her wigwam, and died a faithful Mohawk.

Such scenes of horror inspired the colonists with intense hatred toward the Indians and their French allies. A bounty as high as fifty pounds was offered for every Indian scalp, and expeditions were sent against the French strongholds. Two disastrous attempts were made to invade Canada; Port Royal was captured and became a British station under the name of Annapolis; and, finally, Louisburg was taken. This had been called the "Gibraltar of America," and its fortifications cost five million dollars. It quickly fell, however, before the rude attacks of General Pepperell's army of four thousand undisciplined farmers and fishermen. The last words of Whitefield, then in Boston, to the little army as it set sail, had been, "Nothing is to be despaired of when Christ is the leader." When the army came inside the city and beheld the almost impregnable fortifications captured so easily, they were dismayed at the very magnitude of their triumph. It seemed to those sturdy Puritans as if God indeed were on their side, and by Him alone had they won the day.

By the middle of the eighteenth century the French had sixty fortified posts guarding the line of their possessions from Quebec to New Orleans. They were determined to hold all west of the Alleghanies, and to make of New France a mighty empire watered by the St. Lawrence, the Great Lakes, and the Mississippi. Every fountain which bubbled on the west side of the Alleghanies was claimed as being within the French Empire. But "while De Bienville was burying plates of lead engraved with the arms of France, the ploughs and axes of Virginia woodsmen were enforcing a surer title." The final conflict was at hand. The English settlers, pushing westward from the Atlantic, and the French fur-traders and soldiers coming down from the north, began to meet along the Ohio river. The French would admit no intruders. Surveyors were driven back. A post on the Monongahela was destroyed. As there was just now a lull in national hostilities on account of the Peace of Aix-la-Chapelle (1748),

George Washington, a promising young man of twenty-one, was sent by Dinwiddie, Lieutenant-Governor of Virginia, to demand an explanation from the French. Washington set out on his peril-

AN INCIDENT OF WASHINGTON'S RETURN.

ous journey the same day on which he received his credentials. He found St. Pierre, the French commandant at Fort le Bœuf very polite but very firm. It was clear that France was determined to hold the territory explored by the heroic La Salle and Marquette. The shore in front of the fort was even then lined with canoes ready for an intended expedition down the river. Washington's return through the wilderness, a distance of four hundred miles, was full of peril. The streams were swollen. The snow was falling, and freezing as it fell. The horses gave out, and he was forced to proceed on foot. With only one companion he quitted the usual path, and, with the compass as his guide, struck boldly out through the forest. An Indian, lying in wait, fired at him only a few paces off, but missing, was captured. Attempting to cross the Alleghany on a rude raft, they were caught in the trembling ice. Washington thrust out his pole to check the speed, but was jerked into the foaming water. Swimming to an island, he barely saved his life. Fortunately, in the morning the river was frozen over, and he escaped on the ice. He at last reached home unharmed, and reported St. Pierre's avowed de-

termination to abide by the orders under which he declared himself.

The next spring, a regiment of Virginia troops under Colonel Frye, Washington being second in command, was sent to occupy the fork of the Alleghany and Monongahela Rivers. Learning that the French had anticipated them and already erected a fort called Du Quesne at that point, Washington hastened forward to reconnoitre. Jumonville, who was hiding among the rocks with a detachment of French troops waiting an opportunity to attack him, was himself surprised and slain. Colonel Frye dying soon after, Washington assumed command, and collected his forces at the Great Meadows, behind a rude stockade, which was aptly named Fort Necessity. Here he was attacked by a large body of French and Indians, and after a severe conflict was compelled to capitulate.

The contest for the possession of the continent was now evidently at hand. The crisis was imminent. A convention of commissioners from all the colonies north of the Potomac was in session at Albany to concert measures of defence. A union of the colonies seemed absolutely necessary.

Benjamin Franklin now came to the front. He was well known as the author of "Poor Richard's Almanac," which he had published for upwards of twenty years, and which had attained great popularity in Europe as well as America. Risen from a poor boy, his industry and native talent had already procured for him considerable fortune, and he had just begun those experiments in electricity which were afterwards to render his name immortal. To this philosopher and statesman the convention at Albany deputed the task of drawing up a plan for the proposed confederation. There was to be a governor-general appointed by the king, and a grand

BENJAMIN FRANKLIN.

council elected by the colonial assemblies. After much discussion the scheme was adopted, but, curiously enough, was rejected by the king because it gave too much power to the people; and by the people, as giving too much power to the crown.

The following year, an expedition of English and colonial troops set out under General Braddock, Washington acting as aide-de-camp, against Fort Du Quesne. As the army toiled through the wilderness, one hundred axemen laboriously hewed a path before it, while the gloom of the forest hemmed it in on every side. The general was a regular British officer, proud and conceited. "The Indians," said he, "may frighten continental troops, but they can make no impression on the king's regulars!"

WASHINGTON AT BRADDOCK'S DEFEAT.

Washington warned him of the dangers of savage warfare, but his suggestions were received with contempt. The column came within ten miles of the fort, marching along the Monongahela in reg-

ular array, drums beating and colors flying. Suddenly, in ascending a little slope, with a deep ravine and thick underbrush on either hand, they encountered the Indians lying in ambush. The terrible war-whoop resounded on every side. The British regulars huddled together, and, frightened, fired by platoons, at

random, against rocks and trees. The Virginia troops alone sprang into the forest and fought the savages in Indian style. Washington seemed everywhere present. An Indian chief with his braves especially singled him out. Four balls passed through his clothes, and two horses were shot under him. Braddock was mortally wounded and borne from the field. At last, when the continental troops were nearly all killed, the regulars turned and fled disgracefully, abandoning everything to the foe. Washington covered their flight and saved the wreck of the army from pursuit.

While this disgrace befell the English arms on the west, far in the north they were being tarnished by an act of heartless cruelty. A body of troops sent out against Acadia (Nova Scotia) easily captured the petty forts on the Bay of Fundy. The Acadians, a rural, simple-minded people, wished to be left to till their farms in peace. They gladly gave up their arms and promised to remain neutral. Refusing, however, to take the oath of allegiance to King George II., their houses were fired and they driven on board ship at the point of the bayonet. In the confusion of a forced embarkation, wives were separated from husbands and children from parents, never again in this world to be reunited. Seven thousand of these helpless people were distributed through the colonies from Maine to Georgia.

"Scattered were they, like flakes of snow, when the wind from the North-east
Strikes aslant through the fogs that darken the Banks of Newfoundland.
Friendless, homeless, hopeless, they wandered from city to city,
From the cold lakes of the North to sultry Southern Savannas,—
From the bleak shores of the sea to the lands where the Father of Waters
Seizes the hills in his hands and drags them down to the ocean,
Deep in their sands to bury the scattered bones of the mammoth.
Friends they sought and homes; and many, despairing, heart-broken,
Asked of the earth but a grave, and no longer a friend nor a fireside."

For years the colonial newspapers contained advertisements of these scattered exiles, seeking reunion with their lost ones. That they might not wander back to their old home, it was utterly desolated. The humble household relics, dear to their simple hearts, perished in the flames. Cattle, sheep, and horses were seized as spoils by their cruel conquerors. "There was none left round the ashes of the cottages of the Acadians but the faithful watch-dog, vainly seeking the hands that fed him. Thickets of forest trees choked their orchards; the ocean broke over their neglected dikes and desolated their meadows." Such was the

fate of the simple Acadian peasants, about which Longfellow has woven his sweet and imperishable story of *Evangeline*.

About the same time as Braddock's defeat, a force under William Johnson was sent against the fort at Crown Point. He met the French under General Dieskau near the head of Lake George. After a hot engagement, the French regulars were defeated by the backwoods riflemen and their gallant commander severely wounded. In the pursuit, Dieskau was found by a soldier leaning against a stump. As he was fumbling for his watch with which to propitiate his captor, the soldier, thinking him to be searching for his pistol, shot him. The refugees from the battle fell into an ambuscade of some New York and New Hampshire rangers and were utterly routed. This memorable conflict, says Parkman, has cast its dark associations over one of the most beautiful spots in America. Near the scene of the evening fight, a pool, half overgrown by weeds and water-lilies, and darkened by the surrounding forest, is pointed out to the tourist, and he is told that beneath its stagnant waters lie the bones of three hundred Frenchmen, deep buried in mud and slime. Johnson, however, gained nothing by his victory, but loitered away the autumn in building Fort William Henry.

Two years of disaster followed. In 1756, the French, under Montcalm, captured Fort Oswego with its valuable stores. The missionaries planted a cross on the spot, labeled, "This is the banner of victory;" and by its side was placed a pillar bearing the arms of France and the inscription, "Bring lilies with full hands."

The following year Fort William Henry was forced to capitulate. The English were guaranteed a safe escort to Fort Edward. They had scarcely left the fort, however, when the Indians fell upon them to plunder and slaughter. In vain did the French officers peril their lives to save their captives from the lawless tomahawk. "Kill me," cried Montcalm, in desperation, "but spare the English, who are under my protection." But the Indian fury was implacable, and the march of the prisoners to Fort Edward became a flight for life.

With 1758 dawned a brighter day. William Pitt, the warm friend of the colonies, was now Prime Minister of England. An army of fifty thousand men was raised, twenty-two thousand British regulars and twenty-eight thousand colonial troops. This was equal to half the entire population of New France. Fort Du

Quesne was captured, and as the English flag floated in triumph over the ramparts, this gateway to the West received the name of Pittsburg. The success was mainly due to the exertions of Washington. On his return he was elected to the House of Burgesses. As he took his seat, the Speaker, in the name of Virginia, publicly returned thanks to him for his services to his country. Washington, taken by surprise, rose to reply. Blushing and trembling, he found himself unable to utter a word. "Sit down, Mr. Washington," interposed the Speaker, with a smile of regard; "your modesty equals your valor, and that surpasses the power of any language I possess."

Louisburg, which had been given up to the French by treaty, was retaken during this campaign. General Abercrombie, how-

ever, though he had the largest army yet raised in the provinces—fifteen thousand men—was disastrously driven back from before Fort Ticonderoga. The wanderer in Westminster Abbey to-day finds the memory of Lord Howe, who fell in this repulse, perpetuated by a tablet erected in his honor by the Assembly of Massachusetts.

The next campaign (1759) was destined to be decisive. Montcalm had received no reinforcements from home; Canada was impoverished and food was scarce, so that even the garrison in Quebec had daily rations of but half a pound of bread, and the inhabitants were forced to be content with two ounces. Forts Niagara, Crown

Point, and Ticonderoga, feebly defended by the French, were soon taken. Meanwhile General Wolfe, sailing up the St. Lawrence, struck a more vital blow. With a formidable fleet and eight thousand men, he laid siege to Quebec. The citadel, however, far above the reach of their cannon, and the craggy bluff, bristling with guns, for a time repulsed every effort. At length he discovered a narrow path leading up the steep precipice. Here he determined to land his troops, ascend to the

plain above, and compel Montcalm to come out of his intrenchments and give battle. Sailing several miles up the river, he dis-

QUEBEC IN EARLY TIMES.

embarked his men. That clear, starry night, as they dropped down with the tide in their boats, Wolfe, who was just recovering from a severe illness, softly repeated the stanzas of a new poem which he had lately received from England. Like a mournful prophecy, above the gentle rippling of the waters, floated the strangely significant words from the lips of the doomed hero :

“The boast of heraldry, the pomp of power,
And all that beauty, all that wealth e'er gave,
Await alike the inevitable hour;
The paths of glory lead but to the grave.”—*Gray's Elegy.*

“Gentlemen,” said he, as he closed the recital, “I would rather be the author of that poem than to have the glory of beating the French to-morrow.”

Having reached the landing-place, his men, clambering up the steep cliff, quickly dispersed the guard, and at day-break he stood with his entire army drawn up in order of battle on the Plains of Abraham. Montcalm, astonished at the audacity of the attempt, could scarcely believe it possible. When convinced of its truth he at once made an impetuous attack. Wolfe's veterans held their fire until the French were close at hand, then poured upon

them rapid, steady volleys. The enemy wavered. Wolfe, placing himself at the head, now ordered a bayonet charge. Already twice wounded, he still pushed forward. A third ball struck him. He was carried to the rear. "They run! They run!" exclaimed the officer on whom he leaned. "Who run?" he faintly gasped. "The French," was the reply. "Now God be praised, I die happy," murmured the expiring hero. Montcalm, too, was fatally wounded as he was vainly trying to rally the fugitives. On being told by the surgeon that he could not live more than twelve hours, he answered, "So much the better. I shall not see the surrender of Quebec."

One knows not which of these two heroes to admire the more. Posterity has honored both alike. A monument inscribed WOLFE AND MONTCALM stands to their memory in the Governor's Garden at Quebec. The surrender of the city quickly followed the defeat of its army. The next year the fleur-de-lis was lowered on the flagstaff of Montreal, and the cross of St. George took its place. Peace was made at Paris, 1763. France gave up all the country west of the Mississippi to Spain, who, in turn, ceded Florida to England. The British flag now waved over the continent from the Arctic Ocean to the Gulf, and from the Atlantic on the east to the "Great River" on the west. The French had lost their foothold in the New World forever.

The English, however, were not left in quiet possession of their vast inheritance. The Indian tribes of the West soon became restive under their new and harsher masters. Pontiac, head of the Ottawas, an able, cunning, and ambitious chieftain, organized a wide-spread conspiracy for the simultaneous destruction of the British garrisons. All the Indian shrewdness was exercised in accomplishing this design. At Maumee, a squaw lured forth the commander by imploring aid for an Indian woman dying outside the fort. Once without, he was at the mercy of the ambushed savages. At Mackinaw, hundreds of Indians had gathered. Commencing a game of ball, one party drove the other, as if by accident, toward the fort. The soldiers were attracted to watch the game. At length the ball was thrown over the pickets, and the Indians jumping after it, began the terrible butchery. The commander, Major Henry, writing in his room, heard the war-cry and the shrieks of the victims, and rushing to his window beheld the savage work of the tomahawk and the scalping-knife. Amid untold perils he himself escaped. At Detroit, the plot was

betrayed, it is said, by a squaw who was friendly to Major Gladwin, the English commander, and when the chiefs were admitted to their proposed council for "brightening the chain of friendship," they found themselves surrounded by an armed garrison. Pontiac was allowed to escape. Two days after, he commenced a siege which lasted several months. Eight forts were thus captured. Thousands of settlers along the borders fled to escape the scalping-knife. Finally, the Indian confederacy was broken up, and Pontiac, fleeing westward, was assassinated while endeavoring to unite his dusky allies in another attempt to recover their ancient hunting-grounds.

The contest which had given America to England really conferred it upon the colonists. From the issue of the old French and Indian war, date the thought of independence and the ability to achieve it. A struggle against a common foe had knit the scattered colonists together. Sectional jealousies had been measurably allayed. The colonies had come to know their own strength. The emergency had forced them to think and act independently of the mother country, to raise men and money, and to use them as they pleased. Minds work fast in hours of peril, and democratic ideas had taken deep root in these troublesome times. Colonial and regular officers had belonged to the same army; and although, while on parade, the British affected to ridicule the awkward provincial, he often owed all his laurels, and sometimes even his safety, on the field of battle, to the prudence and valor of his despised companion. Washington, Gates, Montgomery, Stark, Arnold, Rogers, Morgan, Putnam, and a score of others, had been in training during these years, and had learned how to meet even British regulars when the time came.

THE GRAVE OF BRADDOCK.

CHAPTER IV.

COLONIAL LIFE.

THE thirteen colonies now (1774) numbered about two million white inhabitants and five hundred thousand negroes—mostly slaves. They were mainly scattered along the sea-coast and the great rivers, with occasional groups of settlements pushed into the backwoods beyond. Massachusetts, Rhode Island, and Connecticut had charter governments. Maryland and Pennsylvania (with Delaware)

were proprietary—that is, their proprietors governed them. Georgia, Virginia, New Hampshire, New York, New Jersey, and the Carolinas were directly subject to the crown. Boston and Philadelphia were the principal cities, each having not far from twenty thousand inhabitants. New York contained a population of about twelve thousand, the houses not yet being numbered. Charleston had about eighteen thousand. Baltimore and Lancaster (Pennsylvania) had each about six thousand. Agriculture was the main employment of the people. Manufactures, however, even at this early period, received much attention at the North. Hats, paper, shoes, household furniture, farming utensils, and the coarser kinds of cutlery were made to some extent. In an advertisement of 1769, we read: “The Bell Cart will go through Boston before the end of next month to collect rags for the Paper Mill at Milton, when all people that will encourage the Paper Manufactory may dispose of them.” Cloth-weaving had been introduced, although most thrifty people wove their own, and every frugal housewife expected

to dress her family in homespun. In 1753, the Society for Promoting Industry among the Poor, at its anniversary, exhibited, on Boston Common, three hundred young spinsters, each with her wheel; and a weaver, working at his loom, was carried through the streets on men's shoulders. Commerce had steadily increased—principally, however, as coast trade, in consequence of the oppressive laws of Great Britain. The daring fishermen of New England already pushed their whaling crafts far into the icy regions of the north. At the time of the Revolution the exports of the colonies were about four million pounds sterling, and the imports three and a half millions; the exports, per capita, being in 1769 nearly equal to those of 1869, and the imports over one-half as great. Money was scarce. Trade was by barter—a coat for a cow, or a barrel of sugar for a pile of boards. In 1635, bullets were given instead of farthings—the law not allowing over twelve in one payment. Massachusetts was the only colony to coin money. A mint was set up in 1652. For

thirty years all the coins bore the same date. They are known as the pine-tree shillings, sixpences, etc. The following curious anecdote is told concerning this coinage: "Sir Thomas Temple, brother of Sir William Temple, resided several years in New England during the

PINE-TREE SHILLING.

commonwealth. After the Restoration, when he returned to England, the king sent for him, and discoursed with him on the state of affairs in Massachusetts, and discovered great warmth against that colony. Among other things, he said they had invaded his prerogative by coining money. Sir Thomas, who was a real friend to the colony, told his Majesty that the colonists had but little acquaintance with law, and that they thought it no crime to make money for their own use. In the course of the conversation, Sir Thomas took some of the money out of his pocket, and presented it to the king. On one side of the coin was a pine-tree, of that kind which is thick and bushy at the top. Charles asked what tree that was. Sir Thomas informed him it was the royal oak which preserved his Majesty's life. This account of the matter brought the king into good humor, and disposed him to hear what Sir Thomas had to say in their favor, calling them 'a parcel of honest dogs.'"

The first printing-press was set up at Cambridge in 1639. The first book printed was the "Freeman's Oath," the second, an almanac, and the third a psalm-book. Most of the books of this day were collections of sermons. The first permanent newspaper, The Boston News Letter, was published in 1704. In 1750 there were only seven newspapers. The Federal Orrery, the first daily paper, was not issued till 1792. The first circulating library in America was established under Franklin's auspices at Philadelphia in 1732. There was a public library in New York, from which books were loaned at four and a half pence per week. In 1754, the Society Library was founded. Eleven years later there was a circulating library in Boston of twelve hundred volumes. As yet very few books had been printed here. Scarcely any American work was read in Europe. There was, however, a growing taste for literature and art. Jonathan Edwards's metaphysical writings and Franklin's philosophical treatises had excited much attention even in the Old World. West and Copley had already achieved a reputation as artists of ability and skill.

The usual mode of travel was on foot or horseback, the roads being poor, and as yet few bridges across the rivers. Chaises and gigs, however, were in use, with their high wheels, and bodies hung low on wooden springs. People along the coast journeyed largely by means of sloops navigated by a man and a boy. The trip from New York to Philadelphia occupied three days if the wind was fair. There was a wagon running bi-weekly from New

York across New Jersey. Conveyances were put on in 1766, which made the unprecedented time of two days from New York to Philadelphia. They were, therefore,

THE OLD STAGE COACH.

termed "flying machines." The first stage route was between Providence and Boston, taking two days for the trip.

A post-office system had been effected by the combination of the colonies, which united the whole country. The rate of postage was fourpence for each letter if carried less than sixty miles, sixpence between sixty and a hundred and sixty miles,

and twopence for every hundred miles thereafter. A mail was started in 1672, between New York and Boston, by way of Hartford. By contract the round trip was to be made monthly. Benjamin Franklin was one of the early postmasters-general. He made a grand tour of the country in his chaise, perfecting and maturing the plan. His daughter Sally accompanied him, riding sometimes by his side in the chaise, and sometimes on the extra horse which he had with him. It took five months to make the rounds which could now be performed in as many days.

Education early made great progress. Under the eaves of the church the Puritans always built a school-house. The records of Boston contain the following: "The 13th of ye 2nd month, 1635. It was then generally agreed upon yt our brother Philemon Purmount shall be intreated to become schoolmaster for ye teaching and nourture of all children with us." When the city was but six years old, four hundred pounds were appropriated to the seminary at Cambridge, now known as Harvard University. Some years after, each family gave a peck of corn or a shilling in cash for its support. In 1700, ten ministers, having previously so agreed, brought together a number of books, each saying as he laid down his gift, "I give these books for founding a college in Connecticut." This was the beginning of Yale College. It was first established at Saybrook, but in 1716 was removed to New Haven. It was named from Governor Yale, who befriended it most generously. Earlier than this, common schools had been provided, not, however, free, but supported by voluntary offerings. In 1647, Massachusetts made the support of schools compulsory and education universal and free. We read that, in 1665, every town had a free school, and, if it contained over one hundred families, a grammar school. In Connecticut every town that did not keep a school for three months in the year was liable to a fine.

The Middle Colonies had already their colleges and many humbler schools scattered through the towns. In the Dutch period it was usual for the schoolmaster, in order to increase his emoluments, to act as town-clerk, sexton, and chorister; to ring the bell, dig graves, etc.; somewhat after the custom still preserved in the country schools of Germany. Licenses were granted to schoolmasters for exclusive privileges.

The following, given by an English governor, Lovelace, for Albany, then a mere rude hamlet, in 1670, is still preserved: Where-

as, Jan Jeurians Beecker had a Graunt to keep y^e Dutch school at Albany for y^e teaching of youth to read & to wryte y^e which was allowed of and confirmed to him by my predecessor Coll. Richard Nicolls Notwithstanding which severall others not so capable do undertake y^e like some perticular tymes & seasons of y^e yeare when they have no other Employment, where by y^e scholars removing from one Schoole to another do not onely give a great discouragement to y^e maister who makes it his businesse all y^e yeare but also are hindred & become y^e more backwards in there learning ffor y^e reasons aforesaid I have thought fitt that y^e said Jan Jeurians Beecker who is esteemed very capable that way shall be y^e allowed schoolmaster for y^e instructing of y^e youth at Albany & partes adjacent he following y^e said Employment Constantly & diligently & that no other be admitted to interrupt him It being to be presumed that y^e said Beecker for y^e youth & Jacob Joosten who is allowed of for y^e teaching of y^e younger children are sufficient for that place.

Given under my hand at ffort James in New-Yorke this 16th day of May 1670.

In the English period some of the New York schools were kept by Dutch masters, who taught English as an accomplishment. In 1702, an act was passed for the "Encouragement of a Grammar Free School in the City of New York." Kings (now Columbia) College, was chartered in 1754. It is a noticeable fact that the astronomical instrument known as the Orrery, invented by Dr. Rittenhouse in 1768, is still preserved in Princeton College. No European institution had its equal. At Lewiston, Delaware, is said to have been established the first girls' school in the colonies. The first school in Pennsylvania was started about 1683, where "reading, writing, and casting accounts" were taught, for eight English shillings per annum.

The Southern Colonies met with great difficulties in their efforts to establish schools. Though Virginia boasts of the second oldest college in the Union, yet her English governors bitterly opposed the progress of education. Governor Berkeley, of whose haughty spirit we have already heard, said, "I thank God there are no free schools nor printing-presses here, and I hope we shall not have them these hundred years." The restrictions upon the press were so great that no newspaper was published in Virginia until 1736, and that was controlled by the government. Free schools were

established in Maryland in 1696, and a free school in Charleston, South Carolina, in 1712. Private schools were early established by the colonists in every neighborhood. The richer planters commonly sent their sons to England to be educated.

At the opening of the Revolution there were nine colleges in the colonies: Harvard, founded 1636; William and Mary, 1693; Yale, 1700; Princeton, 1746; University of Pennsylvania, 1749; Columbia, 1754; Brown University, 1764; Dartmouth, 1769; Rutgers, 1770. There was no law or theological school, although a medical school had been founded in Philadelphia 1762, and one in New York 1769.

EARLY PRINTING-PRESS.

NEW ENGLAND IN THE SEVENTEENTH CENTURY.

The New England character was marked by severe integrity. Conduct was shaped by a literal interpretation of the Scriptures. Private morals were carefully watched by the authorities in church and state. In the earliest times the ministers had almost entire control, and a church reproof was considered the heaviest disgrace. But something further was soon found necessary for less tender consciences and more flagrant offenders. A man was whipped for shooting fowl on Sunday. The swearer was made to meditate over his sin, standing in a public place with his tongue in a cleft stick; sometimes he was fined twelve pence, or set in the stocks, or imprisoned, "according to the nature and quality of the person." In exaggerated offences, the unruly member was bored through with a hot iron. Minor transgressions of the tongue were not winked at, and the unhappy house-

wife, whose temper got the better of her wisdom, had sorry leisure for repentance. "Scolds," says Josselyn, writing of the

A SCOLD GAGGED.

old "Body of Laws of 1646," "they gag and set them at their doors for certain hours, for all comers and goers by to gaze at." "Ducking in running water" is also mentioned as a punishment for this class of offenders. Philip Ratcliffe, of the colony, was sentenced to "be whipped, have his ears cut off, fined forty shillings, and banished out of the limits of the jurisdiction, for uttering malicious and scandalous speeches against the government and the church of Salem." As to the "prophanely behaved"

person, who lingered "without doores att the meeting-house on the Lord's daies," to indulge in social chat or even to steal a quiet nap, he was "admonished" by the constables; on a second offence "sett in the stockes," and if his moral sense was still perverted, he was cited before the court. If any man should dare to interrupt the preaching or falsely charge the minister with error, "in the open face of the church," or otherwise make "God's wayes contemptible and ridiculous,—every such person or persons (whatsoever censure the church may passe) shall for the first scandall bee convented and reprov'd openly by the magistrates at some Lecture, and bound to their good behaviour. And if the second time they breake forth into the like contemptuous carriages, they shall either pay five pounds to the publique Treasure or stand two houres openly upon a block or stoole four foott high upon a Lecture day, with a paper fixed on his Breast, written with capitalle letters, *An open and obstinate contemner of God's holy ordinances.*"

THE STOCKS.

The first "meeting-houses" consisted of a single room, perhaps twenty by thirty-six feet in size and twelve feet high "in the stud." The roof was either shingled or thatched with long grass. It was a great advance when they were able to have it "lathed on the inside, and so daubed and whitened over, workmanlike." They were afterwards built with a pyramidal roof, crowned with a belfry. The bell-rope hung from the centre, and the sexton performed his office half way between the pulpit and the large entrance door. Such a meeting-house, built in 1681, still stands in Hingham, Massachusetts.

In the early Plymouth days every house opened on Sunday morning at the tap of the drum. The men in "sad colored mantles," and armed to the teeth, the women in sober gowns, kerchiefs and hoods, all assembled in front of the captain's house. Three abreast, they marched up the hill to the meeting-house, where every man set down his musket within easy reach. The elders and deacons took their seat in a "long pue" in front of the preacher's desk, facing the congregation. The old men, the young men, and the young women each had their separate place. The boys were gravely perched on the pulpit-stairs or in the galleries, and had a constable or tithing-man to keep them in order. The light came straggling through the little diamond-shaped window-panes, weirdly gilding the wolf-heads which hung upon the walls—trophies of the year's conquests. As glass was scarce, oiled paper was sometimes used in its stead. The service began with the long prayer, and was followed by reading and expounding of the Scriptures, a psalm—lined by one of the ruling elders—from Ainsworth's Version, which the colonists brought over with them, and the sermon. Instrumental music was absolutely proscribed, as condemned by the text (Amos v. 23), "I will not hear the melody of thy viols"; and one tune for each metre was all those good old fathers needed. Those now known as *York*, *Hackney*, *Windsor*, *St. Mary's*, and *Martyrs* were the standard stock, and they were intoned with a devout zeal almost

THE FIRST CHURCH ERECTED IN CONNECTICUT.
HARTFORD, 1638.

forgotten in these modern times of organs and trained choirs. The approved length of the sermon was an hour, and the sexton turned the hour-glass which stood upon the desk before the minister. But woe to the unlucky youngster whose eyelids drooped in slumber! The ever-vigilant constables, with their wands tipped on one extremity with the foot and on the other with the tail of a hare, brought the heavier end down sharply on the little nodding, flaxen head. The careworn matron who was betrayed into a like offence was gently reminded of her duty by a touch on the forehead with the softer end of the same stick. After the sermon came the weekly contribution. The congregation, sternly solemn, marched to the front, the chief men or magistrates first, and deposited their offerings in the money-box held by one of the elders or deacons. The occupants of the galleries also came down, and marching two abreast, up one aisle and down another, paid respect to the church treasury in money, paper promises, or articles of value, according to their ability. Among other provisions made or recommended for the support of the pastor, we find the following: "1662. The court proposeth it as a thing they judge would be very commendable & beneficiall to the townes where God's providence shall cast any whales, if they should agree to sett apart some p'te of every such fish or oyle for the incouragement of an able and godly minister amongst them."

A search among the old colonial records is rewarded by curious glimpses of Puritan character. Old bachelors seem to have been held by the fathers in small respect, and on account of the "great inconvenience" arising from their anomalous condition, it was ordered that "henceforth noe single p'sons be suffered to live of himself or in any family, but as the celect men of the towne shall approve of." No youth under twenty-one should "take any tobacco untill hee had brought a certificate under the hands of some who are approved for knowledge and skill in phisick, that it is useful for him, and also that he hath received a lycense from the courte for the same." We read of fines for the juryman who should indulge in tobacco the same day of rendering verdict; also for all persons—except soldiers on training days—who used it "in very uncivil manner publickly" in the streets; or "within ten miles of any house, and then not more than once a day"; penalties for the "bringing in to the colony of any Quaker, Rantor, or other notorious heritiques," and, strangest of all to

the eyes of the active, wire-pulling politician of to-day, a law that any who "were elected to the office of Governor, and would not stand to the election, nor hold and execute the office for his year," should "be amerced in Twenty pounds sterling fine," as the price of his modesty or contumacy! O for the refreshing shadow of our great-grandfathers to overhang the nineteenth century caucus!

Fast and thanksgiving were the great public days. A fast-day was regularly kept at the season of annual planting; but days of fasting and prayer were often appointed on account of some special or threatened calamity. In 1644, one day in every month was ordered to be thus observed. Excellent care, however, was always taken to avoid a fast on Good Friday, as well as to keep clear of a feast on Christmas. Our Puritan forefathers were rigidly jealous of the slightest concession to "Popish" customs. We cannot suppress a smile when we read that, not content with denying the title of "Saint" to the apostles and ancient Christian fathers, they even refused to speak it when applied to places. "The Island of St. Christophers was always wrote Christophers, and by the same rule all other places to which Saint had been prefixed. If any exception was made, an answer was ready: Abraham, Isaac, and Jacob had as good right to this appellation as Peter, James, and John." "Because," says Lechford, "they would avoid all memory of heathenish and idols' names," they designated the days of the week and the months of the year by numbers. March was the first month, and Sunday or Sabbath, as they styled it, the first day. Morton, who complained before the Lords Commissioners of the Plantations in England of some of the Puritan ways, especially marriages by magistrates, says, "The people of New Engiand hold the use of a ring in marriage to be a relique of popery, a diabolical circle for the Devell to daunce in."

Whatever cheer was lost, from conscientious scruples, at Christmas-tide, was made up on Thanksgiving day, especially in Connecticut. From its first celebration, eighteen years after the Mayflower landing, it was the great social event of the whole twelve months. The growing family was gathered, from far and near, and clustering round the paternal hearthstone, forgot every trial in the joys of kinship. For days before it came, the plumpiest fowls, the yellowest pumpkins, and the finest of vegetables were marked and put aside. The stalled ox and the fatted calf

were killed. When the glad morning arrived a happy flutter pervaded every home. Children's feet pattered over the old farmhouse from cellar to garret and made the rafters echo with their noisy glee. "Sometimes there were so many that the house would scarcely hold them; but the dear old grandmother, whose memory could hardly keep the constantly lengthening record of their births, and whose eye, dim with tears and age, could never see which child to love the best, welcomed each with a trembling hand and overflowing heart."—(*Hollister's Hist. of Conn.*) After the public service, came the generous dinner; and then all gathered around the blazing hickory fire to listen to the joys and perils of the year. As the little eyes grew sleepy and fair heads began to nod with very weariness of enjoyment, the old family Bible was brought out, and the day was closed with a fervent thanksgiving for mercies past and supplications for the future. Huskings, apple-parings, and quiltings were also favorite occasions for social gathering. Governor Winthrop prohibited cards and gaming-tables. Dancing, however, was not entirely forbidden in New England circles, for we read that it was long the custom in Connecticut for the young people of a parish to celebrate the settlement of the new minister by an ordination ball. But these gradually fell into disrepute, and were at last suppressed by public sentiment.

The houses of most of the first settlers were, of necessity, primitive—a log cabin, often of a single room, with an immense chimney built externally at its side. The chinks between the logs were "daubed," as the term was, with a mortar of clay and straw. Tall grass, gathered along the beaches, was largely used for the thatching of roofs. There were not wanting, however, some "fair and stately houses," for which the New Haven people were reproved as having "laid out too much of their stocks and estates" in them. One Isaac Allerton, especially, is mentioned as having "built a grand house on the creek, with four porches." Governor Coddington built a brick house in Boston before he went thence to found his colony. Rev. Mr. Whitefield's stone house in Guilford, Conn., has endured two hundred and thirty-seven years, and is the oldest house, standing as originally built, in the United States, north of Florida. After thirty years, a better class of dwellings began to be more common. They were usually made of heavy oak frames, put together in the most solid manner, and made secure at night by massive

wooden bars. After the Indians and wild beasts had been driven back by increased settlement, bolts and bars fell into disuse. The foundations of the huge old stone chimneys were about twelve feet square. Forest logs four feet in length were piled upon the ponderous andirons, and on occasions a big "back-log" was drawn into the house by a horse, and then rolled into the fireplace with hand-spikes. "Blazing hearthstones" had then a meaning at which, in our days of furnaces and steam-pipes, we can only guess. No need for artificial ventilators when, through the crevices of the building, swept such keen, brisk currents of air.

In the morning the farmer and his family sat down to their breakfast of "bean porridge," or boiled cornmeal and milk, with a healthy appetite. Beer, cider, or cold water furnished their usual beverage; for tea and coffee were unknown in New England homes in the seventeenth century. "Rye and Indian" was the staff of life on which they leaned the most. We can fancy a New England table of those early days, with its pewter dishes, brightened to their utmost polish, and, in the wealthier households, here and there a silver beaker or tankard, the heirloom of the family. The dinner, which is at noon, opens with a large Indian pudding—ground corn sweetened with molasses—accompanied by an appropriate sauce; next come boiled beef and pork; then wild game with potatoes, followed by turnips and samp or succotash. Pumpkins were served in various ways. Supper was also a substantial meal, though generally eaten cold. Baked beans, baked Indian pudding, and newly-baked rye and Indian bread were standard dishes for Wednesday, "after the washing and ironing agonies of Monday and Tuesday"; salt fish on Saturday, but never on Friday, the "Popish" fast-day; and boiled Indian pudding, with roast beef for those who could get it, on Sunday.

WHITEFIELD'S HOUSE, GUILFORD, CONNECTICUT.

Although, from the scarcity of laborers, the proprietors toiled often in the same fields with the servants they had brought over from Old England, it must not be supposed that there were no grades or degrees in society. Titles, however, were used sparingly. Even that of *Reverend* does not seem to have been in use for at least a half century after the Mayflower touched port—the minister being addressed and recorded as Mr., Pastor, Teacher, or Elder. The first prefix, in fact, indicated much more in old colonial times than at present. Clergymen, the more distinguished members of the General Court, highly-born and University-bred men alone, were honored with it. Young men, of whatever rank, were seldom granted it. To be called Mr., or to have one's name recorded by the secretary with that prefix, two hundred years ago, was a pretty certain index of the person's rank as respects birth, education, and moral character. As for the common people above the grade of servants, the yeomen, tenants, owners of small estates, and even many deputies to the General Court, they were content with the appellation of *Goodman*, their wives receiving the corresponding one of *Goodwife*. The title of *Sir* was often given to undergraduates at a university or college who belonged to distinguished families. "Hence a son of Governor Winthrop, Mr. Sherman, or Governor Treat, returning home from Yale or Cambridge to spend a vacation, would be greeted by his old companions as Sir Winthrop, Sir Sherman, or Sir Treat." The *Esquire* or *Squire* was added or prefixed to descendants of the English nobility, sons of baronets, knights, etc. Such titles as "the Honored," "the Worshipful," "the Worshipful and much Honored," sometimes occur prefixed to such names as John Winthrop, or Captain John Allyn. Military titles were especially revered, for a long time "Captain" being the highest given.

Training-day was a great event. All the men from sixteen to sixty years of age were required to participate in the general drill. There does not appear to have been any uniform dress, and no music but that of the drum to inspire the military movements; but as every member of the militia practised for the defence of his own household, we can well imagine that there was lacking neither zest nor zeal. At Plymouth, by law, trainings were "always begun and ended with prayer." The pikemen—the tallest and strongest in the colony—shouldered their pikes—ten feet in length, besides the spear at the end—with religious resolution;

the musketeers firmly grasped their clumsy old matchlocks; and the young Puritan boys looked on and sighed with envy, longing for the time when they, too, might wear helmet and breastplate, or a cotton-stuffed coat to turn the Indian arrows. To be even a corporal in the militia was an honor which required an extra

TRAINING-DAY IN THE OLDEN TIME.

amount of humility to bear without danger to the soul. John Hull, a prosperous Boston merchant, chosen to that office in 1648, praises God for giving him "acceptance and favor in the eyes of His people, and, as a fruit thereof, advancement above his deserts."

How would those ante-revolutionary fathers have stared at our swift express trains, our lines of telegraphic wires, and our pleasure-trips from Atlantic to Pacific shore! Even a stage-coach was to them a luxury yet unknown. The fair bride accompanied her husband, gentleman or yeoman, on the wedding trip, from her father's house to his own home, wherever it might be, seated on a pillion behind him on his horse. She expected to prove a "help meet for him," as the minister's wedding counsels emphatically enjoined; and in her traveling costume of possibly a plain blue and white gown, the product of her own industry, she was as lovely in her sturdy husband's eye as the daintiest of modern brides can ever hope to be. Indeed, her fresh, glowing cheeks, and plump, elastic form might well strike envy to the heart of many a modern

belle. Notwithstanding the general simplicity of dress, however, in the early colonial times, great public days called out many an elegant costume. The rich articles of apparel brought over by the higher class of emigrants were carefully preserved, and lace ruffles, elaborate embroidery, silk and velvet caps, and gold and silver shoe and knee buckles, made a

A WEDDING JOURNEY.

gathering of wealthy colonists a much gayer affair than a black-coated party of to-day. Tightly-fitting small-clothes and high hose, a coat extending to the knees and fastened in front with buttons, clasps, or hooks and eyes, its full skirts stiffened with buckram and the habit itself profusely decorated with gold lace, a plaited stock of fine linen cambric with a large silver buckle at the back of the neck, a broad-brimmed, high-crowned, sugar-loaf hat, beneath which fell the long, luxuriant curls of the bleached or powdered wig, and a fashionable red cloak, gave to the dignified New England father an air of unquestionable gentility. The skins of animals were much used for garments. In the inventory of a wealthy Connecticut settler, who died in 1649, are enumerated "two raccoon coats, one wolf-skin coat, four bear-skins, three moose." Sheep and deer skins did like service. The small-clothes usually fitted quite closely to the person, and "those men were thought very fortunate whose forms were such that they could wear small-clothes above the hips without appurtenances, and stockings above the calf of the leg without garters." The well-to-do matrons carried their long-trailed gowns, "liberally set off with flounces and fur-belowes," gracefully over one arm, or had them "trolloped" in loops at the side, or let them sweep their full course—"from half a yard to a yard and a half"—along the floor. If in this they transgressed the statute which forbade any excess "beyond the necessary end of apparell for covering," some of them evidently

fulfilled its requirements in the upper cut of their robes, for before the end of the seventeenth century we hear Boston denounced as a "lost town," because of its "strange and fantastick fashions and attire, naked backs and bare breasts." Not to be behind the sugar-loaf appendages which brought their husbands up in the world, the ladies appeared in towering head-dresses of crape, muslin, or lace. The distinctions in dress between the higher and lower ranks of society which marked the old country were jealously guarded here. But American air from the first seems to have been charged with independence, so that all who touched our shores felt more or less the influence of the electric current. The spirit of equal rights, born in the untamed forest and undisturbed for centuries, refused to be banished its native haunts. It was, perhaps, as much an innocent ambition to rise in society as a mere love of finery which tempted the common people to ape the dress and condition of their betters in station. Before a score of years had passed, this tendency had become a source of anxiety to the careful colonial legislators. In 1640, it was ordered that as "divers Persons of severall Ranks are obsearved still to excede" in their apparel, "the Constables of every towne within there Libertyes shall observe and take notice of any particular Person or Persons within thier several Lymits, and all such as they judge to excede thier condition and Rank therein, they shall present and warn to appear at the particular Court." Among the proscribed articles appear "embroidered and needle-work caps," "gold and silver girdles," "immoderate great sleeves," and "slashed apparel." Rev. Nathaniel Ward, author of the "Body of Liberties," which was adopted (1641) as the code of laws for Massachusetts, and substantially for Connecticut, was sorely tried by the "female foppery" of the time. In a book entitled "The Simple Cobler of Agawam, in America, Willing to help Mend his Native Country, lamentably tattered, both in the Upper-leather and the Sole," etc., illustrative of colonial life and manners, he thus breaks forth: "I honour the woman that can honour herselfe with her attire; a good text alwayes deserves a fair margent; I am not much offended if I see a trimme, far trimmer than she that wears it; in a word, whatever Christianity or Civility will allow, I can afford with London measure; but when I heare a nugiperous gentle dame inquire what dresse the Queen is in this week; what the nudiustertian fashion of the Court; I meane the very newest; with egge to be in it in all haste, whatever it be; I

look at her as the very gizzard of a trifle, the product of a quarter of a cipher, the epitome of nothing, fitter to be kickt, if she were of a kickable substance, than either honour'd or humour'd. To speak moderately, I truly confesse, it is beyond the ken of my understanding to conceive how those women should have any true grace, or valuable vertue, that have so little wit as to disfigure themselves with such exotick garbes, as not only dismantles their native lovely lustre, but transclouts them into gant bargeese ill-shapen—shotten—shell-fish, Egyptian Hyeroglyphicks, or at the best into French flurts of the pastery, which a proper English woman should scorne with her heels; it is no marvell they weare drailes on the hinder part of their heads, having nothing as it seems in the fore part, but a few squirrils' brains to help them frisk from one ill-favored fashion to another." The evil seems not to have been remedied in 1676, for we find that still the "rising Generation" was "in danger to be corrupted" by an excess in apparel, which is "testified against in God's holy Word," and it was therefore ordered that "what person soever shall wear Gold or Silver Lace, or Gold or Silver Buttons, Silk Ribbons, or other costly superfluous trimmings, or any bone Lace above three shillings per yard, or Silk Scarfes," should pay equal taxes with those whose rank or fortune allowed such privileges. The families of public and military officers, and "such whose quality and estate have been above the ordinary degree, though now decayed," were excepted from this decree. These good old fathers even went further in their restrictions: "It is further ordered that all such persons as shall for the future *make*, or *weave*, or *buy* any apparell exceeding the quality and condition of their persons and Estates, or that is apparently beyond the necessary end of apparell for covering or comeliness, either of these to be Judged by the Grand Jury and County Court where such presentments are made, shall forfeit for every such offence ten shillings."

These sumptuary laws were not a dead letter, for we hear that Alice Flynt's "silk hood" was cited before the court, and she required to prove that she was entitled to wear it by her property of two hundred pounds; and of the "great boots" of Jonas Fairbanks, out of the shadow of whose guilt he managed to escape.

The price of wages was also regulated by law, and it was settled (1641) that "carpenters, plowrights, wheelrights, masons, joiners, smithes, and coopers shall not take above twenty pence for a day's work from the 10th of March to the 10th of October, and not

above eighteen pence a day for the other part of the yere, and to work ten hours in the day in the summer tyme, besides that which is spent in eating or sleeping, and six hours in the winter." The court, however, soon "found by experience that it would not avail by any law to redress the excessive rates of laborers' and workmen's wages, etc.; for, being restrained, they would either remove to other places where they might have more, or else, being able to live by planting and other employments of their own, they would not be hired at all."—(*Winthrop*.)

THE DUTCH IN NEW YORK.

The followers of Hendrick Hudson were quite a different people. To the bustling energy and severe religious laws of New England they opposed an easy good nature and imperturbable content. Only in the painfulness of extreme neatness did they resemble and even surpass their northern and eastern neighbors. Let us recall a comfortable Dutch mansion of the seventeenth century. Its gable-end of small black and yellow Dutch bricks, receding in regular steps from the base of the roof to the summit, and there crowned with a "fierce little weathercock," stood squarely to the street. Not ashamed to let its age be known, it was proclaimed in straggling iron figures upon the front. The inevitable porch, elevated by a few steps, was covered by a wooden awning, or perhaps a lattice-work, over which luxuriantly drooped and wandered a wild grape-vine. Multitudes of wrens flitted in and out this sylvan nook, and, says a Scotch lady, reporting Albany life at this period, "while breakfasting or drinking tea in the airy portico, birds were constantly gliding over the table with a butterfly, grasshopper, or cicada in their bills to feed their young, who were chirping above." These porches were the universal rendezvous in the after-part of the day. The old people clustered together in one, the younger in another, and the children sat placidly on the steps and ate their bread and milk before retiring; while the beaux sauntered along and cast shy glances toward their favorite maidens, or accepted an invitation to join the little group. The gutters on the roofs often stretched almost to the middle of the street, to the great

annoyance of passers-by. The front door, opened only on rare occasions, was ornamented with a gorgeous brass knocker, wrought in a curious animal device. This was the pride of the housewife, and was burnished daily with intense solicitude. A wide passage extended through the house, with doors at either end ; this, furnished with chairs and having always a scrupulously

DUTCH MANSION AND COTTAGE IN NEW AMSTERDAM.

white sanded floor, served for a summer parlor. Aside from this reception-hall, there were but two large rooms on the first floor, with light, ample closets adjoining. On account of the difficulty of warming these, and to save the best furniture from the dust and smoke of huge wood fires, the family usually retired in the winter to a small addition in the rear, consisting of one or two rooms above and below. This was built of wood, as indeed was ordinarily the whole house, except the pretentious gable front. While the Connecticut mistress spun, wove, and stored her household linens in crowded chests, the Dutch matron scrubbed and scoured her polished floor and woodwork. Dirt in no form could be endured by her ; and dear as water was in the city,

where it was generally sold at a penny a gallon, it was used unsparingly. Fine furniture was the good housewife's weakness. Ponderous tables, drawers resplendent with brass ornaments, quaint corner cupboards, beds and bedsteads, and even the frying-pan and immense Dutch oven had her most loving regards. "The mirrors, the paintings, the china, but, above all, the state bed," records the author above mentioned, "were considered as the family seraphim, secretly worshipped and only exhibited on very rare occasions." "The grand parlor," says Washington Irving, "was the sanctum sanctorum where the passion for cleaning was indulged without control. In this sacred apartment no one was permitted to enter excepting the mistress and her confidential maid, who visited it once a week for the purpose of giving it a thorough cleaning and putting things to rights—always taking the precaution of leaving their shoes at the door and entering devoutly on their stocking feet. After scrubbing the floor, sprinkling it with fine white sand, which was curiously stroked into angles, and curves, and rhomboids with a broom—after washing the windows, rubbing and polishing the furniture, and putting a new bunch of evergreens in the fireplace, the window-shutters were again closed to keep out the flies, and the room carefully locked up until the revolution of time brought round the weekly cleaning day."

In the early spring the good vrow donned her green calash, took her rake over her shoulder, and with her little painted basket of seeds went out to make the family garden. Mynheer was much too clumsy to be trusted in the delicate care of salads and sweet herbs, celery or asparagus; cabbages and potatoes and such like he cultivated in the field between the rows of Indian corn, but into the little spot sacred to the tenderer plants, no foot of man intruded, after it was dug in spring. The stakes to the simple deal fence, which enclosed the garden and the orchard, were oddly ornamented with skeleton heads of cattle and of horses; the jaws being fixed on the pole, with the skull uppermost. Samson's riddle here received a daily exemplification, for the birds built their nests therein and sent forth broods of young ones from the ghastly orifice. In clearing the way for the first establishment, a tree was always left in the middle of the back yard for the sole benefit of these little songsters; this tree being pollarded at midsummer when full of sap, every excised branch left a little hollow, and every hollow was the home

of a bird. It was also a custom to leave an ancient tree, or to plant one of some kind directly in front of the doorway, which the household regarded with great veneration.

Every family had a cow, fed through the day in a common pasture at the end of the town. They came at night and went in the morning of their own accord, like proper adjuncts to sedate and systematic households, and their tinkling bells never failed to warn of their approach along the grassy streets when the proper hour for milking arrived. Being allowed, however, to roam the town from evening to morning milking, they, by no means, improved the neatness of the highways, which presented a strange contrast in that respect to the immaculate interiors of the houses. On dark nights housekeepers were required to keep lights—tallow candles—in their front windows, and “every seventh householder” was obliged to “hang out a lanthorn and candle on a pole.”

The happy burghers breakfasted at dawn, dined at eleven, and retired at sunset. No change was ever made in the arrangements for the family dinner in favor of a guest, and the unexpected visitor was received at that meal with unmistakable signs of coldness and disfavor. A company tea, however, was a “perfect regale,” and cakes, sweetmeats, cold pastry, and fruit in abundance garnished a table which also often tempted by a fine array of roasted game or poultry, or, in its season, shell-fish. Clams—called clippers—was a favorite food. The tea was served from a large porcelain tea-pot, “ornamented with paintings of fat little shepherds and shepherdesses tending pigs, with boats sailing in the air and houses built in the clouds”—a cherished souvenir of Delft in the dear mother-country. The decoction was taken without milk, but a lump of sugar was placed beside each cup, the company alternately nibbling and sipping according to individual relish. Another custom was to suspend an immense lump of sugar by a string from the ceiling directly overhead, so that it could be swung from mouth to mouth and prevent unnecessary waste. Irving has so inimitably portrayed a “fashionable tea-party” of those days that it were a pity not to recall it here. “These fashionable parties were generally confined to the higher classes, that is to say, those who kept their own cows and drove their own wagons. The company commonly assembled at three o’clock, and went away about six, unless it was winter time, when the fashionable hours were a little earlier, that the ladies might

get home before dark. The tea-table was crowned with a huge earthen dish, well stored with slices of fat pork, fried brown, cut up into morsels, and swimming in gravy. Sometimes the table was graced with immense apple pies, or saucers full of preserved peaches and pears; but it was always sure to boast an enormous dish of doughnuts or olykoeks. At these decorous gatherings the young ladies seated themselves demurely in their rush-bottomed chairs, and knit their own woolen stockings; nor ever opened their lips except to say, *Yah Mynheer*, or, *Yah ya Vrouwe*, to any question that was asked them. As to the gentlemen, each of them tranquilly smoked his pipe, and seemed lost in contemplation of the blue and white tiles with which the fireplaces were decorated; wherein sundry passages of Scripture were piously portrayed. Tobit and his dog figured to great advantage; Haman swung conspicuously on his gibbet, and Jonah appeared most manfully bouncing out of the whale." A silent grace before meat was the usual habit with the Hollanders. Mush or bread with buttermilk, "and if to that they added sugar, it was thought delicious," constituted the standard family supper. On occasion of Dutch dances, a pot of chocolate and some bread were deemed sufficient refreshment. New Year's Day was the one of all the year for gayety and festivity. Our delightful fashion of New Year's calls is an inheritance from the Hollanders, who were also accustomed to exchange presents and other complimentary tokens on that day. General Washington, speaking of this usage, once remarked: "New York will in process of years gradually change its ancient customs and manners; but whatever changes take place, never forget the cordial observance of New Year's Day." To the Dutch also we owe our Christmas visit of Santa Claus, colored eggs at Easter, doughnuts, crullers, and New Year's cookies.

A Dutch belle of the seventeenth century wore her hair smoothly plastered back with suet tallow, under a quilted cap. Her gayly-striped linsey-woolsey petticoat—or rather petticoats, for her fortune was estimated by the number of garments she wore—came a little below the knee, affording an admirable view of her blue worsted stockings, adorned with bright red clocks, and her high-heeled, silver-buckled leather shoes. From her girdle depended her huge patch-work pocket, her scissors and her pincushion, potent charms, or possibly coquetries of the times, which did not fail to touch the tender part of Mynheer's

nature when, between his puffs, he settled the question of a competent vrow. The work-basket always accompanied her on picnic excursions, and while "the boys" fished or hunted to procure

game for the coming supper, the girls consoled themselves for their absence in knitting or sewing. The walls of the "spare room" in a Dutch home were not infrequently covered with extra homespun garments, a rather unique decoration, but an honest certificate of the industry, and considered as a sign of the wealth, of the household. As to Mynheer himself, the number of his breeches or *galligaskins* rivalled those of his fair one's petticoats, and unnecessarily heightened the

DUTCH COURTSHIP.

proportions of his rotund figure. His linsey-woolsey coat—doubly precious when spun and woven by the fair maid of his choice, as often it was, for love-gifts were substantial then—was profusely adorned with large brass buttons; enormous copper buckles set off his unquestionably broad understanding; a low-crowned, wide-brimmed hat shadowed his phlegmatic countenance, and his hair dangled down his back in a prodigious queue of eelskin. His pipe was an indispensable adjunct to his mouth.

The young Albanian had a custom of proving his worth to his lady-love by pushing, with a cargo of blankets, guns, beads, and various articles packed in a light canoc, into the deep forest, attended only by a faithful slave, and establishing trade with the Indians. If he succeeded well, he enlarged his business and followed it through life, or disposing of his schooner—which it

was his pride to own before he settled down—embraced less exciting mercantile or agricultural pursuits. The usual dower of a daughter was a well-brought-up female slave and the furniture of the best bed-chamber. There were two standard amusements among young people—sliding down hill in winter, and pillaging pigs and turkeys from a neighbor's garden. This was considered frolic, not theft, though the owner—if he failed to overtake and chastise the robbers, which was *his* token of gallantry—never saw his property again. The married man shut himself out from these sports, as unbefitting his dignity, but the bridegroom was sure to receive such a visit from some of his old companions. A story is told of two parties out one night on the same business. Both attacked the same place. The chief of the second party, finding the game gone, suspected the other, and followed it to an inn, where he found the coveted pig roasting before the fire. Sending the maid out on a trivial excuse, he cut the string by which the pig was suspended, and laying it in the dripping-pan, carried it swiftly through the dark and quiet streets to another inn, where his companions were awaiting him. The first party, not to be outdone, and rightly guessing the offenders, sent a messenger to the other inn, where supper and “the pig” had just been served. Throwing a huge parcel of shavings before the door, he touched a match to them, and crying “fire” with all his might, soon drew every occupant to the front. Stealing in the back way, he secured the traveled treasure, and rushing back to his friends, they feasted on the spoils. Strawberries abounded in June, when “the country people, perceiving that the fields and woods were dyed red, would go forth with wine, cream, and sugar; and instead of a coat of mail, every one takes up a female behind him on horseback, and starting for the fields, set to picking the fruit and regaling themselves as long as they list.”

Our Dutch friends seem to have regarded offences of the tongue with as little favor as the Puritans, though their punishments were milder. In 1638, one Hendrick Jansen is made to stand at the fort door at the ringing of the bell, and ask the governor's pardon for having “scandalized” him. This same Hendrick Jansen, evidently an over-officious reformer, preferred a charge against the minister's wife for having “drawn up her petticoat a little way in the street.” A woman who had the temerity to slander the minister was obliged also to appear at the fort door,

and publicly confess that "she knew he was honest and pious, and that she lied falsely." The "wooden horse" was a peculiar punishment. It had a very sharp back, upon which the offender was tightly strapped, or had weights tied to his feet, the horse being first put into the cart body. A woman was the first who received this penalty, and the instrument was named after her, "the horse of Mary Price." Culprits were sometimes led about the town fastened to the back of the cart, being whipped as they went. These customs continued as late as the middle of the eighteenth century, as witness an advertisement from the New York Gazette of March, 1750: "*The Public Whipper* being lately dead, twenty pounds a year is offered to a successor at the mayor's office." This, with other short items, is printed on the margin of the sheet, in a transverse direction to the column matter, another instance of the economy of the early New Yorkers.

The Dutch dominies were paid sometimes in beaver-skins—the dominie of Albany at one time received one hundred and fifty—and sometimes in wampum or seawant, a kind of Indian money

consisting of strings of clam-shells. Its current value was six beads of the white or three of the black for an English penny. In 1641, the New York City Council complains that "a great deal of bad seawant, nasty, rough things, imported from other places," was in circulation, while "the good, splendid Manhattan seawant was out of sight or exported, which must *cause the ruin of the country.*" The city schoolmasters of those days acted also as clerks, choristers, and visitors of the sick. The names of those old Dutch dignitaries sound strangely enough to modern ears. There were the *hoofd-schout* (high

YE DUTCH SCHOOLMASTER.

sheriff), the *wees-meester* (guardian of orphans), the *roy-meester* (regulator of fences), the *eyck-meester* (weigh-master), the *geheim-schryver* (recorder of secrets), and the *groot burgerrecht*, or great

citizen, in opposition to the *klein burgerrecht*, or small citizen. Only the "great citizens," of whom there were not more than a score, could hold offices, and in 1668, the number being so small, and many inconveniences arising in consequence, the distinction was abolished.

We have not particularized the family life of that exceptional class, the "patroons," who occupied a position not unlike that of an English baron with feudal retainers. Their social customs were simply those of the best European society of the day. They, themselves, were regarded by their numerous tenants with a certain respect and reverence which has had no counterpart since the Revolution. Holmes characterizes this feeling and the former accepted distinction of ranks, in his poem of "Agnes," where a gentlemen of the olden time went out to drive,

"And all the midland counties through,
The ploughman stopped to gaze,
Where'er his chariot swept in view
Behind the shining bays,
With mute obeisance, grave and slow,
Repaid by bow polite—
*For such the way with high and low,
Till after Concord's fight."*

These lords of the manor lived in a princely way on their large estates, which passed from father to son for more than a century. When the Revolution broke out, many of them declared for the king, and thus their lands became confiscated and their names ceased to exist in the ruling offices of the country. Few, indeed, in our democratic day, even know of the existence in those times of estates whose tenants were numbered by thousands, the gathering together of which was like that of the Scottish clans. When death entered the family of the proprietor, they all came to do honor at the funeral, "and many were the hogsheads of good ale which were broached for them." When Philip Livingston, of Livingston Manor, died, at both town and country house "a pipe of wine was spiced for the occasion, and to each of the eight bearers a pair of gloves, mourning ring, scarf, handkerchief, and silver *monkey spoon* were given." The latter was so named from its handle, whose extremity was in the form of an ape. Every tenant also received a pair of black gloves and a handkerchief. The whole expense amounted to five hundred pounds. In later times (1753) Governor William Livingston wrote against extrava-

gance in funerals; and his wife, it is said, was the first one who ventured, as an example of economy, to substitute linen scarfs for the former silk ones.

In August, 1673, a Dutch fleet recaptured New York from the British, and held it one year, calling it meantime *New Orange*, after the Prince of Orange. During this time strict military discipline prevailed. "The Dutch mayor, at the head of the city militia, held his daily parade before the City Hall (Stadt Huys), then at Coenties Slip; and every evening at sunset he received from the principal guard of the fort, called *hoofd-wagt*, the keys of the city, and thereupon proceeded with a guard of six to lock the city gates; then to place a *burger-wagt* (citizen guard) as a night-watch at various places. The same mayors went the rounds at sunrise to open the gates and to restore the keys to the officer of the fort." The comfort-loving burgher who accepted the position of mayor in those days paid dearly for the honor in the loss of his leisurely fireside smoke before breakfast in the morning. Mrs. Sigourney has written some lines upon this period, which, as a picture of the times, we copy from Watson's "*Annals of New York*," to which book, and those equally rich and spicy volumes entitled "*Annals of Philadelphia*," by the same author, we are indebted for many of the curious facts related in this chapter. The lines run thus:

Lo, with the sun, came forth a goodly train,
 The portly mayor with his full guard of state,
 Hath aught of evil vexed their fair domain,
 That thus its limits they perambulate,
 With heavy, measured steps, and brows of care,
 Counting its scattered roofs with fixed, portentous stare?

Behold the keys with solemn pomp restored
 To one in warlike costume stoutly braced,
 He, of yon fort, the undisputed lord.
 Deep lines of thought are on his forehead traced,
 As though of Babylon the proud command,
 Or hundred-gated Thebes were yielded to his hand.

See, here and there, the buildings cluster round,
 All, to the street, their cumbrous gables stretching,
 With square-clipt trees and snug enclosures bound
 (A most uncouth material for sketching)—
 Each with its stoop, from whose sequestered shade
 The Dutchman's evening pipe in cloudy volumes played.

Oh, had those ancient dames of high renown—

The Knickerbockers and the Rapaeljes,
With high-heeled shoes and ample ten-fold gown,
Green worsted hose, with clocks of crimson rays—
Had they, thro' time's dim vista, stretched their gaze,
Spying their daughters fair in these degenerate days,

With muslin robe and satin slipper white,

Thronging to routs, with Fahrenheit at zero,
Their sylphlike form, for household toils too slight,
But yet to winter's piercing blast a hero,
Here had they marvelled at such wondrous lot,
And scrubbing brush and broom for one short space forgot.

Yet deem them not for ridicule a theme,

Those worthy burghers with their spouses kind,
Scorning of heartless pomp, the gilded dream,
To deeds of peaceful industry inclined,
In hospitality sincere and grave,
Inflexible in truth, in simple virtue brave.

Hail, mighty city ! high must be his fame

Who round thy bounds, at sunrise, *now* should walk ;
Still wert thou lovely, whatsoe'er thy name,
New Amsterdam, New Orange, or New York,
Whether in cradle sleep on sea-weed laid,
Or on thine island throne, in queenly power arrayed.

EARLY COLONIAL LIFE IN THE SOUTH.

The manners of the Southerners on their plantations were quite distinct from those of either Puritan or Dutch. The first few years in all new colonies have necessarily a certain degree of sameness. An enforced rude state of living engenders rude and peculiar laws. Thus we find decrees in Virginia which strongly smack of New England quaintness. The Established Church of England was guarded with as jealous strictness in the South as were Puritan principles in the North; the first laws of both colonies pertaining to religious observances. In Virginia, according to the regulations of 1632, a room or house in every plantation was to be set apart for, and consecrated to, worship. Absence from service "without allowable excuse" was punished with a fine of a pound of tobacco, and if the absence continued a month, with fifty pounds. There are rumors of other penalties in earlier

times, such as being tied neck and heels for a night, and serving as a slave to the colony—a week for the first offence, a month for the second, and a year and a day for the third. Certain culprits also are mentioned as being made to stand in church, wrapped in a snowy sheet and holding a white wand, like guilty ghosts or transfixed lepers; or as having the initial letter of their crime fastened in a great, bold capital upon their back or breast, as in New England.

Ministers were restrained from a neglect of their duties by a fine of half their salary if they absented themselves for two months; losing the entire salary and the cure itself for an absence of double that length of time. The salary aforesaid consisted of ten pounds of tobacco and a bushel of corn—"the first-gathered and best"—from every male over sixteen, with marriage, christening and burial fees. In the earliest days, every twentieth calf, pig, and kid in the parish were also his due. The clerical liberty was further hedged in by an injunction not to give themselves "to excess in drinking or riot, spending their time idly by day or night, playing at cards, dice, or other unlawful games; but to read or hear the Holy Scriptures, or to employ themselves in other honorable studies or exercise, bearing in mind that they ought to be examples to the people to live well and Christianly." On the other hand, "he who disparaged a minister without proof, was to be fined five hundred pounds of tobacco, and to beg the minister's pardon publicly before the congregation." Drunkenness was fined five shillings, and every oath cost one shilling. Virginians in 1674 are thus described by Bancroft: "The generation now in existence were chiefly the fruit of the soil; they were children of the woods, nurtured in the freedom of the wilderness, and dwelling in lonely cottages scattered along the streams. No newspapers entered their houses; no printing-press furnished them a book. They had no recreations but such as nature provides in her wilds; no education but such as parents in the desert could give their offspring. The paths were bridleways rather than roads; and the highway surveyors aimed at nothing more than to keep them clear of logs and fallen trees. Visits were made in boats or on horseback through the forests; and the Virginian, traveling with his pouch of tobacco for currency, swam the rivers, where there was neither ferry nor ford. The houses, for the most part of one story, and made of wood, often of logs, the windows closed by convenient shutters for want of glass, were

sprinkled at great distances on both sides of the Chesapeake, from the Potomac to the line of Carolina. The parish was of such extent, spreading over a tract which a day's journey could not cross, that the people met together but once on the Lord's day, and sometimes not at all; the church, rudely built in some central solitude, was seldom visited by the more remote families, and was liable to become inaccessible by the broken limbs from forest trees, or the wanton growth of underwood and thickets."

The genial atmosphere of the "sunny South," so unlike the bleak New England climate, and the entirely different products of the two soils, each requiring its own peculiar mode of culture, served constantly to increase the dissimilarity in character and manners which primarily existed between the northern and the southern settlers. The large plantations of the latter necessitated a numerous train of servants. These, supplied at first by the apprentices brought over from England, were, in time, superseded by negro slaves.

There being but few books and little education in those early times—only a few families being able to send their sons and daughters to England to be instructed—excitement was often sought in bull-baiting, horse-racing, fox-hunting, and cock-fighting. These amusements, looked upon with horror by the Puritans, were not considered at all derogatory to the southern gentleman, who copied his sports from those of the English nobility of that day. The finest of horses were imported from the mother country, at great care and expense, and the Virginian planter was pardonably proud of his well-stocked stables.

The mode of originating a settlement, or, as Dr. Ramsay quaintly styles it, "breaking ground on bare creation," is thus described in that author's History of South Carolina. The parties migrate from the earlier settlements usually in March, or about the breaking up of the winter. They "go with family and plantation utensils, a few bushels of corn, and some domestic animals. After fixing on a site, they build in two or three days a cabin with logs, cut down and piled one upon another in the form of a square or a parallelogram. The floor is of earth; the roof is sometimes of bark, but oftener of split logs. The light is received through the door, and in some instances through a window of greased paper, or the bottom of a broken glass bottle. Shelter being prepared, their next care is to provide food. The large trees are girdled and the underbrush destroyed. The ground,

thus exposed to the action of the sun, is roughly ploughed or hoed, and so favors the growth of the seed corn that in ninety

EARLY AMERICAN PLOW.

or a hundred days the ears are large enough to roast, and in six weeks more the grain is ripe. Meantime the settler lives on the corn he brought with him, and on game and fish. His

axe and gun furnish him with the means of defence against Indians, wild beasts, and robbers. Light wood or the heart of dry pine logs affords a cheap substitute for candles. The surplus of his crop may be bartered for homespun garments, or, if he is married, he may convert the wool of his sheep or the flax or cotton of his field into coarse clothing for domestic use." In a few years a frame house is built, floored, and shingled. Other grains besides corn are cultivated. Fruits and vegetables supply his table. He purchases one or two slaves. He builds a barn and other out-houses. His children are put to school. He becomes a member of a church. Tea, coffee, and sugar are found on his table. His house is glazed and decently furnished. His stock is enlarged and made to further serve the interests of his family. The woods are ransacked for dye-stuffs, in which Carolina abounds, and the homespun adds brilliancy to durability. In short, he has become an independent man and respected citizen.

Emigrants from Maine and Vermont often struck into the then far west, along the banks of the Monongahela or even of the Ohio. We now speak of a time as late as just before the Revolution. Having established the "tomahawk right" by hacking the trees around the circuit—four hundred acres—to which settlement gave them free possession, they commenced pioneer life. Wild turkeys, venison, and bears' meat gave them strength while they waited the growth of pumpkins, squashes, and potatoes. A hominy block was hollowed out by fire, and the corn was pounded by a pestle; sometimes, to lessen the toil, by a sweep sixteen feet long. Nail-holes in a piece of tin formed a grater for the same purpose; two stones were also used, made to play upon each other in the manner in vogue in Paestine since before the days when our Saviour spoke of "two women grinding at the mill." A piece of deerskin stretched over a hoop and pierced with hot wire made a

good sifter or bolting cloth. A large trough sunk in the ground furnished a tan-vat for each family. Ashes were used instead of lime to unhair the skin; bears' grease or hogs' lard served for fish-oil, and soot mixed with grease was an efficient blacking. The bark was shaved and pounded. Every family did its own shoe-making. "Shoe packs" made like moccasins of single pieces of leather often answered every purpose. The women spun and wove the linsey-woolsey for the family clothing and fashioned every garment.

LATER COLONIAL TIMES.

In the course of their first century, the rigor of Puritan laws was somewhat softened. After the witchcraft terror had spent its fury, that crime, as well as heresy and blasphemy, disappeared from the statutes as capital offences. Here and there, by the side of lonely cross-roads, the wanderer still stumbled over heaps of stones, "the brand of infamy" under which the bones of the unhappy suicide were made to rest; and the pillory, the stocks, and the whipping-post had by no means become obsolete as efficient instruments in pointing morals. But branded cheeks and foreheads and decapitated ears were rapidly vanishing from sight as a means of stimulating sluggish religious consciences, and a man might venture now on a piece of mince-pie at Christmas without fear of fine or punishment. Crimes committed by slaves, who continued to be held in New

THE PILLORY.

England until the Revolution, were severely punished, and as late as the middle of the eighteenth century negroes were burned at the stake for such crimes as murder and arson.

Recreations and amusements, which in the first stages of pioneer life are necessarily few, now received more indulgence. "Popular assemblies" were introduced into Boston about 1740, and although at first severely frowned upon by "all ladies of propriety," so maintained and strengthened their hold that in a few years a handsome hall was built and supported by the lovers of

"musick, dancing, and other polite entertainments." In Litchfield, Conn., in 1748, when a violin was used for the first time as an accompaniment to the "light fantastic toe," we learn that the pastime was enjoyed by "most of the young people," and, further, that "the whole expense did not exceed one dollar, out of which the fiddler was paid!" Yet we are told that fathers and mothers were wont, then as now, to shake their heads gravely, and sorrowfully bemoan the extravagance of youth! Verily, in those times money was money. Minuets and sometimes country dances belonged to polite circles; "among the lower orders hipsesaw was everything," says Watson in his *Annals of Philadelphia*. About the same time of the assemblies appeared the first theatrical performance in Boston, played at a coffee-house—itself a new institution. The idea was so repugnant to New England notions that a law was immediately passed which banished the drama from Massachusetts for a quarter of a century thereafter.

In the middle and southern colonies, out of the Puritan element, life was much gayer. To the frequent balls in the southern cities, the young ladies from the country, where the roads were rough, used to ride in on ponies, attended by a black servant, "with their hoops and full dress arranged over the saddle fore and aft like lateen-sails; and after dancing all night, would ride home again in the morning." When there was snow, sleighing, with a dance to follow, was a popular pastime with the young people, but early hours were always kept. The rough, unpainted sleigh, capable of carrying thirty persons, was expected to be at the door about one o'clock in the afternoon. The gentlemen were clothed in cocked-hats, tied under the chin with a blue cotton handkerchief, leaving the queue to its own sweet will, a large camlet cloak, and oversocks which covered the shoes and reached to the small clothes at the knee. Yarn mittens protected the hands and a woolen tippet the throat. The ladies were wrapped in linsey-woolsey cardinals, with hoods which "were of such ample dimensions that their heads looked like so many beer-casks." The jingle of one or two cow-bells accompanied them. Arrived at the place of entertainment, the colored driver tuned his three-stringed fiddle, the gentlemen appeared in their square-toed pumps, and the ladies shook off their pattens, displaying little peak-toed, high-heeled slippers. They danced till eight o'clock, then hurried back to their homes, "for," says the relator of this entertainment, "to be abroad after nine o'clock on common occa-

sions was a sure sign of moral depravity." The same old gentleman, describing in 1828 to a young lady the courtship and wedding of her grandfather in New York, sixty years before, gives us the following picture: "The lover, after having received permission of her parents, pays his first visit to his beloved. In snuff-colored coat and small-clothes, cornelian brooch, paste buckles, lace frill-worked cravat, and heavily pomatumed and powdered hair, he is ushered into the family presence. On one side of the fireplace sit a bevy of maiden aunts, knitting. On the other side is the father, "stretched at his ease in an arm-chair, in a black cap instead of his wig, wrapped in a blue gown, with his breeches unbuttoned at his knees, quietly smoking his pipe. Mrs. B. in a chintz dress and mob-cap was at his side, engaged in making patch-work; whilst the lovely Prudence sat quite erect by her mamma, with her pincushion and housewife dangling from her waist, her eyes cast down, and her fingers diligently pricking themselves instead of her sampler." The young man shows his affection by keeping at a respectful distance from his sweetheart; talks politics with the father, assists the mother in arranging her party-colored squares, picks up straying balls of yarn for the spinsters, and when the bell rings nine gives one shy glance at his beloved and takes his leave. At the wedding which follows a succession of visits like the above, the guests mostly come on foot, for there are no hackney-coaches, and private carriages are not plentiful. The father of the bride is dressed in full-bottomed wig, velvet coat and breeches, gold buckles, and waistcoat reaching to the knees; the mother in plain brocade and snowy cap; the parson in "gown, cassock and bands, with a wig that seemed to consist of a whole unsheared sheepskin—for in 1768 it would have been rank heresy for a parson to appear at a wedding in simple black coat and pantaloons." The bride had her hair dressed over a high cushion and liberally pomatumed and powdered. The height of this tower was over a foot, and on its summit lay a single white rose. Her tight-sleeved, low-bodiced white satin dress was distended at the ankles by an ample hoop, beneath which crept her high-heeled, peaked and spangled white kid shoes. A lace handkerchief crossed over her bosom was fastened by a large brooch containing the miniature of her destined husband. The groom had his hair sleeked back and highly pomatumed, with the queue so stiff that, having had it dressed the afternoon before, he slept all night in an arm-chair, that it might not be disturbed. "His

coat was of a sky-blue silk lined with yellow ; his long vest of white satin, embroidered with gold lace ; his breeches of the same material and tied at the knee with pink ribbon." White silk stockings and pumps, lace wrist-ruffles and frill, the latter pinned with the miniature of his bride, completed his costume. After the ceremony every one saluted the bride with a hearty kiss.

From this marriage in comparatively high life, let us invite ourselves to one in the wilds of Pennsylvania. The parties were hardy pioneers. A wedding was to them a frolic, which shared with reaping, log-rolling, and house-building for occasion of social gathering. The party started early in the morning from the house of the groom, proceeding in double file on horses decked in old saddles, old bridles or halters, and pack-saddles, with a bag or blankets thrown over them ; a rope or string served for a girth. The jovial company were above all reproach of fashionable extravagance, for not a store, tailor, or mantua-maker existed within a hundred miles. Every article of dress was home-made and forced to do the longest service possible. The gents appeared in shoe-packs, moccasins, leather breeches, leggins, and linsey hunting-shirts ; the ladies in linsey petticoats and linsey or linen bed-gowns, coarse shoes, stockings, handkerchiefs, and, if any, buck-skin gloves. Fallen trees, interlocked grape-vines and saplings—the work of mischief-lovers, friends or foes—often delayed their progress. Sometimes a party in ambush fired a *feu de joie*, when the ladies shrieked, screamed, and implored help in finest feminine style, while their partners bustled around and offered protection as valiantly as if they were veritable knights in full steel armor and bound to do battle to the death for their true lady-loves. As the party neared the house of the bride, two of the most chivalrous young men, with an Indian yell, set out full tilt for the bottle of whiskey which was hung out for the first arrival. Over logs, brush, and muddy hollows, in a flush of pride and daring, they galloped on their large-boned, clumsy-footed steeds to the end of the goal. The prize won, they returned to the party, giving the first drink to the groom, who passed the bottle around ; every one, ladies included, joining in the dram. The ceremony over, dinner was in order. The table, made of a large slab of timber hewn out with a broad-axe and set on four sticks, was spread with beef, pork, fowls, and sometimes deer and bear meat. Wooden bowls and trenchers, a few pewter dishes and plates, some horn and some pewter spoons, served the company as well as

could china or silver. If knives were scarce, they carried always a substitute in the belts of their hunting-shirts. "After dinner dancing commenced, and usually lasted till the next morning. The figures were reels, or square sets and jigs. The commencement was always a square four, which was followed by what was called jigging it off; none were allowed to steal away to get a sleep, and if girls got tired, they were expected, for want of chairs, to sit upon the knees of the gentlemen. At nine or ten o'clock at night some of the young ladies would steal off with the bride. That was sometimes to a loft above the dancers, going there by a ladder; and such a bride's chamber was floored with

THE OLD-TIME FIRESIDE.

clapboards, lying loose and without nails. Some young men, in the meantime, stole off the groom to his bride. At a later period, they sent them up refreshments, of which 'black Betty,' so called, was an essential part, as she stood in their parlance for a bottle of whiskey." These entertainments sometimes lasted several days, or until every one was "fagged out." Happy for the weary set if, when they were ready for their homeward ride, they found their property uninjured, for slighted neighbors were sometimes wont to show their stealthy presence, by cutting off the manes, foretops or tails of the horses belonging to invited guests.

The prejudices of rank and social precedence brought over

from England did not easily die out, even in New England. The official dignities there were all monopolized by a few leading families, descending often from father to son. And as office now shared with wealth and high English connections—"which were to be proud of"—in giving admission to the charmed circle of the gentry, we may conclude that the public treasury no longer fattened on fines wrung from contumacious candidates. Until within three years of the time when "all men" were declared to be "created free and *equal*," the catalogue of Harvard College—Yale had just abolished the system—was arranged according to the social rank of the students. The list, made out each year and posted in the buttery, bore perpetual testimony to the rule of caste. In those days a young man's title to a superior room, or speedy attention at table, depended on the date of his father's commission as justice of the peace or some kindred petty sign of social degree. We can afford to laugh at it now as an excellent burlesque on the English custom of ranking by pedigree, but it was a sore reality then, as many an unlucky fellow proved. Fashion seems also to have invaded that scholastic sanctum, and to have divided popular attention with the sublimities of Horace and Homer. In 1754, the "overseers" of the college recommended the corporation to prohibit the wearing of "gold and silver lace or brocade" by students. Indeed, it is very apparent that the day of the plainest, ugliest cuts for all male apparel had nowhere yet dawned.

The early part of the eighteenth century was particularly characterized by high colors in dress. In 1724, a runaway barber is advertised. "He wore a light wig, a gray kersey jacket lined with blue, a light pair of drugget breeches, black roll-up stockings, square-toed shoes, a red leathern apron, and white vest with yellow buttons and red linings!" About the same time a lady, afflicted with the tender passion, thus bursts out in verse describing the costume of her beloved:

"Mine, a tall youth shali at a ball be seen,
Whose legs are like the spring, all clothed in green;
A yellow riband ties his long cravat,
And a large knot of yellow cocks his hat!"

The colonial gentry, in their morning negligee, were wont to appear in elegant silk and velvet caps and dressing gowns, exchanging them when they went out for hats and cloaks which

glittered with broad gold lace. The evening drawing-room was enlivened by embroidered garments of flowered silk and velvet in blue, green, scarlet, or purple hues, adorned with gold lace, silver knee-buckles, and silver coat, vest, and breeches buttons. These buttons bore sometimes the initial of the wearer, but were often made of real quarter-dollars and eleven-penny bits, the former being used for the coats and the latter for vests and breeches. The other gentlemanly ornaments consisted of gold or silver sleeve-buttons, silver stock-buckle, and, perhaps, a shagreen-cased watch of tortoise-shell or pinchbeck, with a silver or steel chain and seal. The best gentlemen of the country were content with silver watches, although gold ones were occasionally used. Gold chains would have been a wonder. It was so rare to find watches in common use that it was quite an annoyance at the watchmaker's to be so repeatedly called on by street-passengers for the hour of the day. Wide laced ruffles, falling over the hand, a gold or silver snuff-box, and a gold-headed cane were considered indispensable to gentility. A well-bred gentleman of 1776, arrayed in his stately suit of ceremony, moved with a courtliness and certain gravity of manner upon which we have hardly improved in our day of cultivated French nonchalance. It is not to be supposed, however, that any but an exceedingly small minority dressed in silks and velvets.

Broadcloth in winter and silk camlet in summer were popular in wealthy circles—coat and breeches of the same material. In 1738, Benjamin Franklin advertises for clothes stolen from his wardrobe, among which we find: "Broadcloth breeches *lined with leather*, sagathee coat lined with silk, and fine *homespun* linen shirts." Vests were made with great depending pocket-flaps, and breeches were short above the stride, suspenders being yet an unknown luxury. Working-men wore their breeches very full and free in girth, so that, when they became prematurely thin in the seat, they could be changed from front to rear. Worsted everlasting and buckskin were in great demand, especially for breeches, and common people were content with leather, homespun, and various heavy wools for winter. Bear-skin coats and little woolen muffs of various colors, called muftes, were worn by men in severe weather. Homespun linens and other light stuffs, coarse and fine, served for summer. Boots had not yet come in use, but every thrifty householder kept on hand whole calf-skins and sides of stout sole-leather to be

made into shoes as required. "Before the Revolution no hired men or women wore any shoes so fine as calf-skin; that kind was the exclusive property of the gentry; the servants wore coarse neat's leather." Mechanics, workingmen, and "country people attending markets" were universally clothed in red or green baize vests, striped ticking or leather breeches, and a leathern apron. On Sundays or holidays, a white shirt was substituted for the checked or speckled one, the deerskin breeches—greasy and stubbornly stiff with long wear, and only rendered supple by the warmth of the owner's limbs—were blacked or buft up, the coarse blue yarn stockings and well-greased shoes set off by a pair of large brass buckles, and the apprentice was at his best. Hired women wore short gowns of green baize and petticoats of linsey-woolsey, and were happy with wages of fifty cents a week. Until after the Revolution the dress of working-people and domestics was distinct from that of the higher classes.

Wigs went out of style about twenty years before the Revolution, following the lead of George II. and the British officers in this country. Previous to that, their use was universal, and as human hair could not be obtained in sufficient quantity, horse and goat hair "in choice parcels" were freely advertised for this purpose. Gray wigs were powdered, the barber performing that office on his block-head. After wigs, queues and frizzled side-locks had their day. Sometimes the hair was confined in a black silk sack or bag, adorned with a large black rose. The three-cornered or cocked hat of pre-Revolutionary times is familiar to every one.

Umbrellas were not known before the middle of the century. The first used were made of oiled linen, very coarse and clumsy, with rattan sticks. Previous to that the gentlemen wore "rain-coats" and "roquelaus"—a large oiled linen cape; ladies wore "camblets," and sometimes carried "quintasols"—a small article something like a parasol, imported from India. They were of oiled muslin in various colors. When umbrellas were first used as a protection from the sun, great ridicule was made of the idea. Ladies, as a preservative of their complexion, sometimes wore black velvet masks in winter and green ones in the summer, keeping them on by means of a silver mouthpiece. Veils were unknown, except in crape as a badge of mourning.

Woman's extravagance was then, as it is now, a juicy topic for grumblers, and an English traveler relates how the Boston ladies

"indulge every little piece of gentility to the height of the mode, and neglect the affairs of their families with as good grace as the finest ladies in London." The practical satirists of the day had their own little jokes, and drove out some of the most offensive fashions by novel expedients. The loose dress called a *trollopee* being distasteful to them, they dressed the wife of the public hangman of Philadelphia in one, and she paraded the streets in full costume, mincing and strutting to the sound of burlesque music. Trollopees straightway became obsolete. The long red cloaks were quickly stripped from the shoulders of the ladies of the same city after a depraved female criminal had been hung, clothed in a scarlet mantle of the most approved style. The "tower" head-dress, which had been petted to a ridiculous extreme, was effectually caricatured by a tall man, dressed in the latest feminine mode, and wearing a "tower" of colossal proportions, who made the tour of the city streets, preceded by a drum. No one but the dear creatures themselves guessed how much torture our great-grandmothers endured in the building up of a proper *coiffure*. In towns where there were a limited number of hair-dressers, and a grand party was in contemplation, it was no uncommon occurrence for ladies to have their hair frizzed and curled—an operation which required three or four hours in the hands of a skillful barber—the day before, and then to sit up all night to prevent its derangement! It was a great relief when cushions and artificial curled work came in, which could be sent out to the barber's-block and save the agony of personal attendance. The fashionable caps a hundred years ago were the "Queen's Nightcap," the style always worn by Mrs. Washington, and the "cushion head-dress," made of gauze stiffened out in cylindrical form with white spiral wire, and having a border called the "balcony." A cap was indispensable in those days. Bare heads were quite out of character. Even the boys wore wigs like their fathers, and little girls caps like their mothers. The "musk-melon bonnet" had the crown shirred with whalebone stiffeners, and was in vogue just before the Revolution. It was followed by the "whalebone bonnet," which was shirred only in front. Bonnets were bonnets in those days, veritable sun umbrellas, tied down at the chin. The "calash" was always made of green silk, so arranged that, when the wearer desired, it could be made to fall back on the neck and shoulders in folds like the cover of a buggy. To keep it up over the head, it was drawn by a cord held in the hand of the wearer.

A modification of this fashion has been revived once or twice during the last half century. Satin, a favorite material for evening robes, was admirably suited to the stately manners of the gentlewomen of the day. Brocades and mantuas also shared the public favor. At one time gowns were worn without fronts, displaying a finely-quilted Marseilles, silk or satin petticoat, and a worked stomacher on the waist. Chintz for summer, and some sort of worsted for winter, were worn at home, and "thought dress enough for common days" in the best society. Kerchiefs and aprons were as necessary as caps, and ranged in material from the finest of linen cambric, gauze, and taffeta, monopolized by the rich gentry, to the coarsest of checks, homespun, and tow, worn by the mass of the people. Before the invention of the spinning-jenny in 1767, pure cotton home fabrics were unknown, the homespun threads being too irregular to be of use except as a woof, and the supply being also very limited. The first cotton exported from the United States to England was sent in 1785, the ship taking but one bag. Hose were made of thread or silk in summer, and fine or coarse worsted in winter. Short gowns and long gowns are familiar names in our grandmothers' wardrobes, from the common linsey-woolseys to the stiff large-flowered brocades and satins, which we still love to produce as relics from old-fashioned chests which smell of camphor and cedar. The names of those old stuffs, of calamanco and durant and groset, of russet and wilton and tabby, of tandem and gulix and huckaback, sound strangely now to the young American girl, who would be astonished to find that some of them were at least first cousins to fabrics which, somewhat refined, shine in the present market under high-sounding French titles. Somewhat less intelligible still is the following list of articles, dress materials, etc., taken from a Philadelphia advertisement of 1745: "Quilted humhums, turkettees, grassetts, single allopeens, allibanies, florettas, dickmansoy, cushloes, chuckloes, cuttanees, crimson dannador, chained soosoo, lemonees, barragons, byrampauts, naffermamy, and saxlingham"!

Although the majority of houses were still humbly and sparingly furnished, yet comforts had greatly increased during the growing prosperity of the colonies, and a few really elegant homes were found in every city of importance, belonging mostly to the traveled gentry, whose property had come by descent. About the close of colonial times we hear of one house in Boston which

had cost three thousand pounds, and of another whose furniture was worth one thousand pounds. Large mirrors, marble tables, and Turkey carpets figured in fine stone mansions. Elaborate carvings were seen on massive balustrades in spacious halls, and the parlor walls were sometimes adorned with painted leather hangings. Deep paneled wainscots and carved cornices and mantles added to the solid elegance of these handsome dwellings. Crimson leather furnished a dignified upholstery to the straight high-backed mahogany chairs and sofas, while heavy damask curtains steadied the glitter from ponderous brass andirons and brass clock. There were a few private libraries of considerable size, but books were not plentiful, though well-selected and read with care. People bought an outfit of books as of furniture, expecting it to last a lifetime. Fielding, the father of English novelists, supplied the little that was desired of racy fiction. Smollett had just translated *Gil Blas*, and that, with the ever-delightful *Don Quixote*, kept up their sense of humor. The Vicar of Wakefield, newly out, was read till young and old had it almost by heart. Addison's *Spectator* and Johnson's *Rambler* were models for correct style. Shakespeare and Milton and Young were studied until their expressions were as familiar as thought; while a careful perusal of Blackstone's *Commentaries* and Montesquieu's *Spirit of Laws* was necessary to every gentleman who sought to be well-read. Everything, both in books and in furniture, was solid. Shams had not yet made their advent, and there were no veneered woods, no silver-plated wares. What would those straightforward, substantial New Englanders have thought of our day of dime novels and of shoddy?

ANCIENT CHAIR.
(Brought over in the Mayflower.)

But it was in the country towns, where the prim Puritan element had not been softened by recent English innovations, that one saw real New England life. White sanded floors, with unpainted pine settles, scoured to the last degree of whiteness; maple, rush-bottomed chairs set squarely back against the white-washed walls; lofty clock-cases reaching to the ceiling; glass-

doored corner closets wherein the china and silver—family treasures—were arranged at pure right angles; high chests of drawers filled with stores of household linen, packed squarely in;—everywhere an immutable regularity, angularity, and precision. Upon the walls, the little looking-glasses in two plates were framed with scalloped wood, and black mouldings set off the quaint, stiff bunches of flowers painted on glass or worked on satin—testimonies to fashionable accomplishment. Shining brass and copper candlesticks, ready to receive the tallow candles which had been snugly packed from the last dipping, were turned up on their large round base upon the wooden shelf. Fixed rules governed the arrangement of each article of furniture, and were as conscientiously observed as were those which decided the proprieties of manner. Everything was stiff, uncompromising, and sedate—everything, except the dancing flames in the open fireplaces which laughed at their own incongruous, frolicking reflections—the one freedom amid perpetual restraint. In the chambers, high, four-posted bedsteads kept guard over the same immaculate order. Their hangings and valances in the handsomest houses were sometimes of silk in summer and heavy damask in winter. More commonly, however, they were of snowy dimity, or of blue

and white stuff like the coverlets. Sheets of home-spun, blankets of home-made flannel, quilts of various hues—marvels of industry, and narrow, downy pillows above the soft bolster, completed the equipments. The thrift of the New England housewife reveled in crowded drawers of bed and table linen, which she worked early and late to produce. “She layeth her hands to the spindle and her hands hold the distaff” was an

THE WOOLEN SPINNING-WHEEL.

emphatic record of her daily life. The two wheels, one small and worked by the foot for spinning linen thread, and the other large and turned by the hand for woollen yarn, were honored articles

in every household. No less were her kitchen and larder a pride. The shining lines of pewter along the ample dresser, the painfully scoured floor and white pine furniture, the rows of jams and marmalades, the strings of dried pumpkin and apples, the casks and bottles of cider, metheglin, and anise-seed cordial, all attested her careful forethought. In many houses a china or silver bowl of rum punch stood in the hall, a hospitable invitation to every guest, who all drank from the same dish. Flip and toddy were common drinks, and a moderate use of the flowing bowl seems to have been almost universal. But woe to the man who overstepped the subtle line which divides the drinker from the drunkard. His name, posted in every alehouse—the keepers of which then, selves were required to be of “good character” and “property holders”—shut him out forever from further lawful tippling. Just before the Revolution, a unique punishment was in vogue in New York for drunkards. It consisted of “three quarts of warm water and salt enough to operate as an emetic, with a portion of *lamp oil* to act as a purge.” In 1772, a negro, found drunk and sent to Bridewell, died after enduring his sentence.

If one were to tell all the curious local customs which prevailed here and there over the colonies, it would read spicily enough. Here is a choice dish: “The height of the fashion was to put into the kettle of chocolate several links of sausages, and, after boiling all together, to serve the guests with a bowl of chocolate and sausage. The latter was cut up, and the mess eaten with a spoon.” When tea first came in use, it was boiled in an iron kettle and strained; the leaves were well buttered, and the clear liquid was drunk “to wash down the greens.” A dish called *whistle-belly-vengeance* was made by simmering the sour household brewed beer in a brass kettle, with crumbled crusts of brown bread, adding a little molasses. It was served hot.

Yet, without carpets, gas, or other “modern improvements,” taking their long journeys over rough roads in lumbering coaches or on horse, cooking by open fireplaces, and spinning and weaving all needful articles for use or wear by slow hand labor, our pre-Revolutionary fathers and mothers extracted, doubtless, quite as much comfort from life as their more luxurious descendants. The old-time physician did not neglect his patients though he always made his calls on foot, and never ventured to charge more than two shillings for each visit; while fair ladies bustled through the muddy streets in pattens and galoshes, and deemed it no

great hardship to sit out a round hour sermon with only the little tin or wooden foot-stove under their feet to temper the winter chill of the meeting-house which had never known a fire. When the frosts lay heavy on lake and river, came the festivities of skating, and the great ox was roasted on the thick-ribbed ice. With spring came May-day, still kept up in many parts with true Old England merriment. For ball and party invitations, since blank cards were yet unknown, the back of a common playing-card served as well as anything else; why not? No opportunity for promiscuous flirting or coquetry then, when a partner was engaged for the whole evening, each couple being expected to drink tea together on the following afternoon.

We turn again to the sunny South, seeking repose in a Virginia planter's luxurious home. We have seen how these spacious mansions were situated, dotting at long intervals the bank of some lovely river. Free, generous, a prince in hospitality, the southern gentleman kept open-house to all respectable strangers who might seek food or lodging. "The doors of citizens," says a southern writer, "are opened to all decent travelers and shut against none. Innkeepers complain that this is carried to such an extent that their business is scarcely worth following. The abundance of provisions on plantations renders the exercise of this virtue not inconvenient, and the avidity of country people for hearing news makes them rather seek than shun the calls of strangers. The State may be traveled over with very little expense by persons furnished with letters of introduction, or even without them by calling at the plantations of private gentlemen on or near the roads." It was a delightful termination to a day of weary journeying when the bridle was loosed before one of these inviting country homes and the gentlemanly host uttered his courteous welcome. Over the low verandas and balconies climbed, in wanton luxuriance, the yellow jasmine, sweet honeysuckle, or the trumpet flower; the soft air was fragrant with the breath of scented shrubs which sprang from warm, moist earth; everywhere was an atmosphere of delicious languor. Within the dwelling was the same air of repose. The music of the harpsichord was oftener heard than the hum of the spinning-wheel, though the southern matron had, too, her own peculiar round of duties. Black slaves performed all the domestic labors, it is true; but the heart of the kind mistress was mindful of the wants of her large and, in many respects, dependent household,

in which she found sufficient employ. Her articles of luxury and many of her comforts were brought direct from England. Ships from Liverpool sailed up the river and delivered at the private wharf of the wealthy planter the goods of fashionable attire or household elegance which he had ordered from England, receiving in return the tobacco sowed, gathered, and packed by the negroes on the plantation. Along the Potomac many of the planters had beautiful barges imported from England, which were rowed by negroes in uniform. When they traveled on horseback, they were attended by their black servants in livery. The ladies often took their airing in a chariot and four, with liveried black postilions. A short distance from the family residence stood the kitchen, which, like the laundry, was always separate from the mansion. From its large, open fireplace, presided over by some ancient Dinah or Chloe in gorgeous red or yellow turban, came savory dishes of sweet bacon, wild-fowl, or game. Hot biscuit were served at every meal, and no breakfast was complete without a plate of delicious "hoe-cakes"—cakes made of Indian meal and baked before the fire, which are as naturally associated with the southern table as pumpkin-pies with the New England board or doughnuts with the Dutch. Conveniently retired, might be found the negro quarters; a cluster of wooden cabins each with its own little garden and poultry yard, and with swarms of black babies, *pickaninnies*, gambolling in the sunshine. The southern planter, like the roving Merovingian kings of France, had artificers of all kinds in his retinue of servants: tailors, shoemakers, carpenters, smiths, and so on through all the needful trades of ordinary life. There were ample stables for the blooded horses, and kennels for the hounds, for the chase was a favorite diversion. Washington was passionately fond of it, and the names of his fox-hounds—Vulcan, Singer, Sweetlips, Music, Truelove, etc.—were carefully registered in his household books, the character of some of them giving us a faint hint of an undercurrent of sentiment, which in his grave dignity he seldom revealed. On his beautiful Mount Vernon estate, that wonderful man, as careful a proprietor as he was brave general and accomplished gentleman, so watched over his exports that they became noted as always reliable, and it was said that any barrel of flour bearing his brand passed into West India ports without inspection.

Washington's early friend and patron, Lord Thomas Fairfax,

possessed one of the largest estates in America. His mansion house, called Greenway Court, in the Shenandoah Valley, was the scene of many brilliant festivities. He was an ardent loyalist, and when he heard of the surrender of Cornwallis, it is related that he said to his servant, "*Come, Joe, carry me to bed, for it is high time for me to die.*" Nor did he long survive that event. His immense lands, valued at ninety-eight thousand pounds, were confiscated to the Union. They embraced five million two hundred and eighty-two thousand acres, including everything between the Potomac and the Rappahannock. When we read of one person enjoying the title-claim to an extent of territory covering all the present counties of Lancaster, Northumberland, Richmond, Westmoreland, Stafford, King George, Prince William, Fairfax, Loudon, Fauquier, Culpepper, Clarke, Madison, Page, Shenandoah, Hardy, Hampshire, Morgan, Berkeley, Jefferson, and Frederick—twenty-one in all—we do not wonder that in those times common people made bitter complaint that all Virginia was in the hands of a few owners.

FIELD-SPORTS OF THE SOUTH—FOX-HUNTING.

CHAPTER I.

ALIENATION OF THE COLONIES.

THE scattered settlements along the Atlantic grew into a nation as naturally as infancy matures into manhood. The whole history of the colonies pointed an index hand to Lexington and Bunker Hill. The Declaration of Independence was but the normal outgrowth of the contract signed by the Pilgrims in Cape Cod Harbor a little over a century and a half before. The so-called "Causes of the Revolution" only served to develop that which had its root in the very nature of things. This country was settled by men who fled from persecution at home, and America to them meant liberty above all things else. Freedom was their birthright, and they had studied its principles thoroughly. To provoke such men by injustice, was to shake rudely every tie which bound them to the mother country. Just this England did, wantonly and continually.

The royal governors often carried matters with a high hand. There were attempts made to take away the charters of Massachusetts, Rhode Island, and Connecticut. There were suggestions of creating a provincial peerage and of giving the Established Church the precedence in all the colonies. In the army, a "regular" captain outranked a "provincial" colonel. Every effort was made to keep the colonies dependent, and to favor the British manufacturer and merchant. Even Pitt, the friend of America, asserted that the colonists had "no right to manufacture a nail for a horse-shoe." Commerce and manufactures were bound hand and foot. In 1750, the Americans were forbidden to send pig-iron to England and to make steel or bar iron for home use. Iron-works were declared "common nuisances." The exportation of hats from one colony to another was prohibited, and no hatter was allowed to have more than two apprentices at one time, as the colonists, if let alone, "would supply all the world with hats." The importation of sugar, rum and molasses was burdened with exorbitant duties; and the Carolinians were forbidden to cut down the pine-trees of their vast forests, in order to convert the wood into staves, or the juice into turpentine and tar, for commercial purposes. England, says Sabine, forbade the use of waterfalls, the erection of machinery, looms and spindles, and the working of wood and iron; set the king's broad arrow upon trees in the forest; shut out markets for boards and fish; seized sugar and molasses, and the vessels in which they were carried; required an American vessel wrecked on the Irish coast to first send its goods destined for an Irish market to England, and then have them brought back to Ireland in an English vessel; and attempted to define the limitless ocean to be but a narrow pathway to such lands as bore the British flag. Such odious laws drove men to their violation. It was the only hope of trade. Smuggling became so common that it is said of the one and a half million dollars worth of tea used annually in the colonies, scarcely any had paid duty. Not one chest out of five hundred landed in Boston was regularly entered. A considerable part of Hancock's fortune inherited from his uncle was made by smuggling tea in molasses hogsheads; and at the breaking out of the Revolution, the crown had sued Hancock himself to recover penalties for violations of revenue laws to the amount of half a million dollars.

The home government had incurred heavy expenses during

the old French and Indian war. George III. was now king. Pitt, who was almost idolized in America, was dismissed, and the monarch, following incompetent ministers like Bute, Grenville, and Townshend, stupidly and wantonly drove on the colonists to revolt. It was determined to make the rich and thriving young colonies contribute to the payment of the debt. The colonists were not represented in parliament, and they declared the principle that "TAXATION WITHOUT REPRESENTATION IS TYRANNY."

Step by step the struggle now went on. In 1761, strict orders were received by the revenue officers to enforce the obnoxious laws against trade. Warrants, or writs of assistance, as they were called, were issued, authorizing these persons to search for smuggled goods. With such a pretext, any petty custom-house

official could ransack a man's house or store at his pleasure. The colonists held the Englishman's maxim, that "every man's house is his castle." The royal collectors were accordingly resisted from one end of the country to the other. At the General Court in Boston, James Otis, without fear or fee, eloquently withstood the issuing of such warrants. "To my dying day," said he, "I will oppose, with all the powers and faculties God has given me, all such instruments of slavery on the one hand and villainy on the other." "Then and there," wrote John Adams, "the trumpet of the Revolution was sounded."

From that time, in his indignation, Adams could "never read the acts of trade without a curse." In 1764, parliament distinctly declared its "right to tax America." Colony after colony entered its solemn protest; but in vain. In 1765, the Stamp Act was

WILLIAM PITT, EARL OF CHATHAM.

passed. This ordered that no legal document was valid unless it bore a British stamp costing from three pence to six pounds; that every newspaper and pamphlet should bear a stamp worth from a halfpenny to four pence; and that each advertisement should pay a duty of two shillings.

The ministers were authorized to send troops to America, and, by a clause in the Mutiny Act, it was ordered that the colonists should provide the soldiers with quarters and necessary supplies. America was not only to be taxed but to be made to house and feed its oppressors. The assembly of

PATRICK HENRY ADDRESSING THE VIRGINIA ASSEMBLY.

Virginia was in session when these obnoxious laws were announced. Patrick Henry, a young lawyer, the youngest member of the house, quickly drew upon the blank leaf of an

old law-book a series of resolutions denying the right of parliament to tax America. He supported these in a strain of burning patriotism, declaring, "Caesar had his Brutus, Charles I. his Crom-

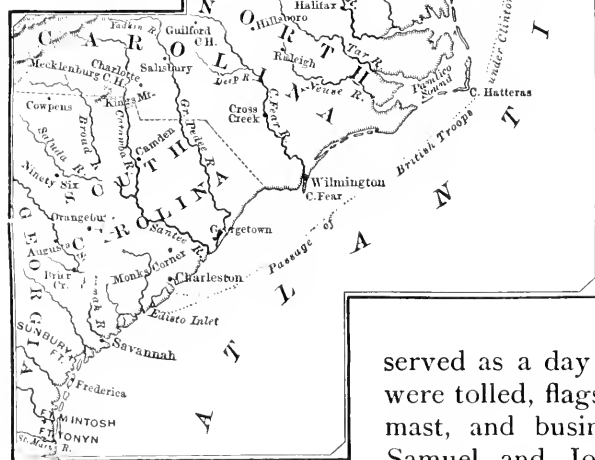

well, and George III."—here pausing till the cry of "Treason! Treason!" from several parts of the house had subsided, he deliberately added—"may profit by their examples. If this be treason, make the most of it." "The sun of liberty is set," wrote Franklin; "the Americans must light the lamps of industry and economy." "Be assured," was the reply of Colonel Thomson, "we shall light lamps of a very different character."

The tide of opposition everywhere ran high, and even sometimes overflowed the barriers of law and order. The houses of British officials were mobbed. The opponents of the tax met on Boston Common under a large elm, famous as the "liberty tree." Associations were formed which took the name of "Sons of Liberty," a phrase used by Colonel Barre in a powerful speech, now familiar to every school-boy, delivered in parliament in defence of the colonies. At Portsmouth, N. H., a coffin inscribed "Liberty, aged CXLV years," was borne to an open grave. With muffled drums and solemn tread, the procession moved from the State House. Minute-guns were fired till the grave was reached, when a funeral oration was pronounced and the coffin lowered. Suddenly it was proclaimed that there were signs of life. The coffin was raised. A new inscription, "Liberty Revived," was appended. Bells rung, trumpets sounded, men shouted, and a jubilee ensued. Stamps were everywhere seized, and the agents were forced to resign. The people agreed not to use any article of British manufacture. Trade with England almost ceased. The women entered heartily into the struggle, and the newspapers of the day are full of their patriotic doings. They formed associations called "Daughters of Liberty," and spun and wove with renewed vigor, determined to prove themselves independent of the mother-country. "Within eighteen months," wrote a gentleman at Newport, Rhode Island, "four hundred and eighty-seven yards of cloth and thirty-six pairs of stockings have been spun and knit in the family of James Nixon of this town." In Newport and Boston the women, at their tea-drinkings, used, instead of imported tea, the dried leaves of the raspberry, which they called Hyperion. The feeling spread to every condition of life. The very children in the streets caught up the cry, "Liberty and property forever! No stamps."

In North Carolina John Ashe, speaker of the Assembly, declared to Governor Tryon, "This law will be resisted to blood and to death." When the sloop-of-war Diligence anchored in Cape

Fear harbor with a supply of stamped paper for the use of the colony, the crowd, headed by Colonels Ashe and Waddell, prohibited the terrified captain from landing his cargo. Thence they marched to the governor's palace at Wilmington and threatened to burn it over his head unless he gave up the stamp-master, whom they forced to swear not to discharge the duties of his office.

Massachusetts suggested a convention to be held at New York in October. The call was endorsed by South Carolina, and delegates met from

THE COLONIES.

nine colonies. They proposed a declaration of rights, and memorials to the king and parliament. The first of November, the time appointed for the law to go into effect, was observed

as a day of mourning. Bells were tolled, flags were raised at half-mast, and business was suspended. Samuel and John Adams, Patrick

BENJAMIN FRANKLIN.

Henry, and James Otis aroused the people over the whole land by their stirring and patriotic speeches.

In February, 1766, Benjamin Franklin, then in England as agent for Pennsylvania, was called before the bar of the House of Commons and questioned concerning the condition of the colonies. His firm and decisive answers greatly impressed the officers of the crown. The English government, finding that the Stamp Act could not be executed, except by force of arms, at last repealed it. The news was received in America with transports of joy. Addresses of thanks were voted to the king and distinguished statesmen, such as Camden, Pitt, and Barre. At Boston, Faneuil Hall was adorned with full-length pictures of the latter two friends of America. The debtors were released from jail, and what with fireworks, public entertainments, music, and parades, the day was one of the happiest ever seen. The "home feeling" toward England was restored and trade resumed.

But the cloud soon settled again. The government still declared its right to inflict taxation on the colonies. Duties were imposed on tea, glass, paper, etc., and a Board of Trade was established at Boston, to act independently of the colonial assemblies. The press and the pulpit at once sounded the alarm. The non-importation agreement was revived with greater stringency. The New York assembly, refusing to quarter English troops at the colonial expense, was suspended from all legislative acts. The Massachusetts assembly having sent a circular to the other colonies urging a union for redress of grievances, parliament, in the name of the king, ordered it to rescind its action. It almost unanimously refused. In the meantime the assemblies of nearly all the colonies had declared that parliament had no right to tax them without their consent. Hereupon they were warned not to imitate the disobedient conduct of Massachusetts.

New events constantly occurred to keep up the excitement. The commissioners of customs seized a sloop laden with wine, because the owner, John Hancock, refused to pay duty upon it; but the mob falling upon them, they were glad to take refuge in Castle William. Boston being considered the hotbed of the rebellion, General Gage ordered thither two regiments of troops. They entered on a quiet Sunday morning, and marched as through a conquered city, with drums beating and flags flying. All the prejudices of a peaceful, Sabbath-loving, liberty-sworn people were thus aroused. Quarters being refused, the soldiers

took possession of the State House. The Common was soon covered with tents. Cannon were planted, sentries posted, and citizens challenged; while the harbor was occupied by a fleet of vessels.

An obsolete law of the time of Henry VIII. was revived, and the governor of Massachusetts ordered to send the persons concerned in the late disturbance to England for trial. This high-handed measure was bitterly opposed by a minority in the House of Commons, Burke exclaiming, "Can you not trust the juries of that country? If you have not a party among two millions of people, you must either change your plans of government or renounce the colonies forever."

The presence of the soldiers in Boston was a constant aggravation, and the people did their utmost to render their stay uncomfortable. The city committee persuaded the farmers to sell them nothing but the provisions necessary for their existence; straw, timber, boards, and other articles were purposely withheld from their market. Articles purchased by the agents of government encountered mysterious accidents; straw took fire and burned; vessels with bricks sunk; wood-carts overturned, and, in short, the vexations of life were multiplied upon them.

Frequent quarrels took place between the people and the "red-coats." One day (March 5, 1770) a crowd of men and boys, maddened by their presence, insulted the city guard. A fight ensued. Several citizens were wounded and three killed. The

FANEUIL HALL.

bells were rung. The country people rushed in to the help of the city. Quiet was with difficulty restored. But the snow in King Street was purple, and "that stain, though it melted away in the next day's sun, was never forgotten nor forgiven." In the morning Faneuil Hall was filled with an indignant crowd. The immediate removal of the troops was demanded. The government was forced to yield, and to order the soldiers out of the city to Castle William. The citizens slain in

the brawl were buried with solemn pageantry, and apotheosized as the first martyrs to liberty. The story of the "Boston Massacre," as it was called, became a tale of horror. The fact that

the soldiers fired in self-defence against an excited mob was ignored, and the hate of foreign domination was intensified by details of what was spread as an unprovoked assault upon quiet and defenceless citizens.

The guard which had fired on the mob were tried for murder. The result was a beautiful triumph of law and order over popular prejudice. The defence was conducted by John Adams and James Otis. In spite of the universal agitation, all were acquitted except two, who were convicted of manslaughter only. These were branded in the hand in open court and discharged. This fair and honorable trial exhibited the temper of the people and the uselessness of reviving an ancient statute in order to secure justice.

In North Carolina the insolence shown in the notorious embezzlements of the royal officers aroused open rebellion. The governor, who was himself squandering the funds in building a palace, stated in an official paper that the "sheriffs had purloined more than half the public moneys." In this province the revenue was raised by a poll-tax, so that the richest merchant paid no more than the poorest laborer. The officers often levied four times the lawful tax. The courts refused the distressed people their rights. Money was scarce; wheat brought only one shilling per bushel, and that after being hauled fifty or a hundred miles to market. Under such circumstances the taxes became simply unendurable. At last, as the only means of obtaining justice, an association of regulators was formed for the avowed purpose of redressing the grievances of the country. Governor Tryon, however, marched against them, defeated them at Alamance Creek (May 16, 1771), and left three hundred of their number dead on the field. Six were afterward hanged. The governor and his satellites took possession of such of their estates as they desired. Not a few of the hardy backwoodsmen fled to the wilderness and obtained lands of the Cherokees, where they laid the foundation of the State of Tennessee. The regulators were subdued, though a bitter hatred of British rule was engendered.

In 1772, the *Gaspée*, a British revenue schooner, while chasing a vessel, ran aground. The opportunity was too good to be lost. That night a party from Providence boarded and set her on fire.

The English government was greatly alarmed by the steady determination evinced by the colonies. The merchants, whose goods lay unsold in their warehouses, offered to pay the govern-

THE REGULATORS THREATENING GOVERNOR TRYON.

ment the entire amount expected to be realized from the duties. Finally, all were rescinded except that on tea, which was left merely to maintain the right of taxation. With a curious misapprehension of the American spirit, an arrangement was made with the India Company whereby this could be furnished at a cheaper rate in America than in England. The subterfuge only exasperated the patriots. They were fighting for a great principle, not against a paltry tax.

At Charleston the tea was stored in damp cellars, where it soon spoiled. The tea-ships at New York and Philadelphia were sent home. The British authorities at Boston refused to let the vessels loaded with tea return. Upon this, an immense public meeting was held at Faneuil Hall. Speeches were made by Quincy, Adams and others. It was resolved that the tea should never be landed. That evening (December 16, 1773), memorable in American history, a party of men disguised as Indians boarded the vessels and emptied three hundred and forty-two chests of tea into the water. The dock was crowded with people who looked on with joy. When the work was done they quietly dispersed. As the party passed by a house where Admiral Montague was visiting, he raised a window and called out, "Well, boys, you've had a fine night for your Indian caper. But, remember, you've got to pay the fiddler yet." "Oh, never mind," replied one of the leaders, "never mind, squire! Just come out here, if you please, and we'll settle the bill in two minutes." But the Admiral declined to come out; and to "settle the bill" took seven years of bloody war, thousands of lives, and millions of money.

The issue was now fairly made. "The king, his ministers, parliament, and all Great Britain set themselves to subdue this one stubborn little town on the sterile coast of Massachusetts Bay." The odds were terrible. But in resolute little Boston there were a town hall, free schools, free presses, and free pulpits. There was a government of the people, for the people, and by the people; there were heroes who knew the right and dared maintain it; there were praying men, zealous ministers, and conscientious statesmen. God smiled on his own, and that town was safe.

The English government at once adopted retaliatory measures. General Gage was appointed governor of Massachusetts, with orders to enforce new and more coercive decrees, virtually abrogating the charter. The port of Boston was closed by act of parliament. Great distress was thus produced in the city, but from every side came expressions of sympathy and substantial aid. The cause of Boston was made the common cause of the country. The merchants of Marblehead and Salem, refusing to profit by the ruin of their rivals, offered the use of their wharves to the Boston merchants. Wyndham, Conn., donated a flock of two hundred and fifty sheep. Schoharie, New York, forwarded five hundred and fifty bushels of wheat. The people of Georgia sent their sympathies from the far south, accompanied by sixty-three barrels of rice and seven hundred and twenty dollars in specie.

The burgesses of Virginia, then in session at the old capitol in Williamsburg, learning the news of the Boston Port Bill, appointed a fast day on June 1st, when it was to go into effect. The governor immediately dismissed the refractory assembly, as a schoolmaster would a class of unruly boys,—yet it contained such men as Henry, Jefferson, Lee, Pendleton, and Nicholas. Washington notes in his diary that he observed that day as a rigid fast, and attended services at church. George Mason charged his children to go thither clad in mourning. The burgesses, after their dissolution, immediately repaired *en masse* to the famous "Apollo Room" of the Old Raleigh Tavern—Virginia's Faneuil Hall—less than one hundred paces from the capitol. Here they declared unanimously that the attack on Massachusetts was one upon all the colonies, and must be resisted by their united wisdom.

Committees of correspondence were now appointed by the various colonies. This idea, acted upon first by the Sons of Lib-

erty in New York city, became a powerful political engine in combining the colonies against England. A curious device, representing the colonies as parts of a snake, with the significant motto, "Join or die," was extensively adopted. At the suggestion of influential men and meetings in all parts of the country, delegates were chosen to a general congress.

CARPENTER'S HALL.

The first Continental Congress assembled at Carpenter's Hall, Philadelphia, September 5, 1774. Every colony but Georgia was represented. The venerable Peyton Randolph was chosen president. Fifty-three delegates were present—among them such men as Samuel and John Adams of Mas-

sachusetts; Hopkins of Rhode Island; Sherman and Deane of Connecticut; Livingston and Jay of New York; Lee, Henry, Randolph, and Washington of Virginia; Rutledge and Gadsden of South Carolina. The first meeting, we are told, was fearfully solemn. All felt the momentous responsibility of the occasion. At last the silence was broken by the magic eloquence of Patrick Henry. He was followed by Richard Henry Lee. It was resolved that each session should open with prayer—Samuel Adams, though a Congregationalist, moving that Rev. J. Duché, rector of Christ Church, Philadelphia, should be invited to officiate.

Morning came. News had arrived of a bloody attack on Boston by the British troops. The regular psalm for that day (seventh) seemed providentially ordered. The chaplain read: "Plead thou my cause, O Lord, with them that strive with me, and fight thou against them that fight against me. Lay hand upon the shield and buckler, and stand up to help me. Bring forth the spear, and stop the way against them that persecute me." "Lord, how long wilt thou look upon this? O deliver my soul from the calamities which they bring on me." "Awake and stand up to judge my quarrel. Avenge thou my cause, my God and my Lord. Judge me, O Lord, my God, according to thy righteousness; and let them not triumph over me." After this,

the chaplain unexpectedly broke out into an extempore prayer so full of zeal and fervor, for Congress, the country, and especially for Boston, that the hearts of all were thrilled and comforted.

As yet few members had any idea of independence. Congress, however, voted, that obedience was not due to any of the recent acts of parliament, and sustained Massachusetts in her resistance. It issued a protest against standing armies being kept in the colonies without consent of the people, and agreed to hold no intercourse with Great Britain, though expressing at the same time the most devoted loyalty to the king. It also agreed not to import or purchase slaves after the first of December ensuing.

The country heaved like an ocean in a storm. Party lines were now sharply drawn. Those opposed to the action of the British government were termed Whigs, and those supporting it Tories. Everywhere were repeated the thrilling words of Patrick Henry in the Virginia House of Burgesses, "I know not what course others may take, but as for me, give me liberty or give me death." Companies of soldiers, termed "minute-men," were formed. To be a private in one of these was an honor. Balls were cast, cartridges made, and military evolutions learned. Nothing was heard, says Botta, but the din of arms and the sound of fife and drums. Gage, being alarmed, fortified Boston Neck, and seized the powder in the magazine at Charlestown. A rumor having been circulated that the British ships were firing on Boston, in two days thirty thousand minute-men were on their way to the city. A spark only was needed to kindle the slumbering hatred into the flames of war.

ENGLAND FORCING TEA DOWN THE THROAT OF AMERICA.
(From a caricature of the time.)

CHAPTER II.

OPENING OF THE WAR.

GENERAL GAGE, learning that the patriots were collecting stores and ammunition at Concord, resolved to seize them. On April 18th, about eleven o'clock in the evening, a body of eight hundred regulars, under the command of Lieutenant-Colonel Smith and Major Pitcairn, secretly left Boston, and near midnight took the road for Concord. The moon shone brightly from the clear sky, and

they moved on rapidly. The Boston leaders, however, were on the alert. From the tower of the old North Church streamed a beacon light; while Paul Revere and William Dawes, escaping the guard, were already far ahead announcing their coming. There was

"A hurry of hoofs in a village street,
A shape in the moonlight, a bulk in the dark,
And beneath, from the pebbles, in passing, a spark
Struck out by a steed flying fearless and fleet."

Soon the distant ringing of bells and firing of guns told the troops that the alarm was spreading. When they reached Lexington at dawn, they found a small company of minute-men gathering on the village green. Riding up, Pitcairn shouted, "Disperse, you rebels! Lay down your arms!" "Too few to resist, too brave to fly," they hesitated. Discharging his pistol, he cried aloud to his troops, "*Fire!*" It was a murder, not a battle. Only a few random shots were returned by the patriots to the volley which followed. Jonas Parker had sworn never to run

from the red-coats. Already wounded, he was reloading his gun on his knees, when a bayonet thrust pierced his heart. Harrington was hit while standing in front of his house. His wife saw him from the window, and rushed down only to catch him as, tottering forward, he expired in her arms. With three huzzas

PAUL REVERE SPREADING THE ALARM.

over their valiant slaughter of a handful of villagers, the troops marched on, leaving behind them seven Americans lying on the bloody grass—the first dead of the Revolution.

Lonely did they look in the still air and the solemn hush that fell on the town after the sharp crack of the rifle had died away; but they were heroes all, and, a century later, we gaze back upon Lexington as upon an altar of sacrifice.

“Of man for man the sacrifice,
Unstained by blood, save theirs, they gave.
The flowers that blossomed from their grave
Have sown themselves beneath all skies.

“No seers were they, but simple men;
Its vast results the future hid;
The meaning of the work they did
Was strange and dark and doubtful then.”

Elated by their success, the English now pushed forward to Concord and destroyed what stores they could find at that place. Major Pitcairn, who was given to bluster as well as profanity, entered the village tavern and poured out a glass of brandy, which he sweetened to his taste, but not finding a spoon to stir

it, mixed it with his fingers; at the same time saying in bluff soldier fashion that "just so he would stir up the blood of the Yankees before the day was over." Meantime the militia were gathering fast on the neighboring hills, and even ventured to sharply return a volley from the British pickets at the Concord Bridge, where

"The embattled farmers stood
And fired the shot heard round the world."

The grenadiers ran in confusion. The example was contagious, and Smith decided to return. It was high time. The whole region

was in arms. Every boy old enough to grasp a musket and a powder-horn hurried to avenge his fellows. The gray-haired men hobbled on as best they could to get a shot at the enemies of their country. An old hoary-headed man of Woburn figures in the stories of the time, who rode a fine white horse after the

flying troops, and, dismounting within gunshot, would send his sure bullet to the mark. When he fired some one fell. They came to cry, at sight of him, "Look out, there is the man on the white horse." Every bush, tree, stone wall, and building concealed a patriot, who blazed away at the red-coats as they passed, firing, loading quickly, and then running ahead across the fields to catch another shot; fresh allies on either flank streamed in by every cross-road; and between them all the British, no longer in ranks, were flying like sheep along the same road by which they had come, afraid of the storm they had aroused. The whole body would have been captured had they not met Lord Percy with reinforcements near Lexington. He formed a hollow square to receive the breathless fugitives, who rushed forward with "tongues hanging out of their mouths, like those of dogs after a chase." Even now there was danger. The woods were swarming with "rebels." The cannon Percy had brought with him

scarcely kept the Americans at bay. It was with the greatest difficulty that he at last escaped under the guns of the fleet off Charlestown.

During that eventful day the English had lost about two hundred and eighty, and the Continentals one-third that number. Percy's men, enraged at their losses, plundered houses, destroyed furniture, and fired buildings on their route, driving the sick from their beds and killing the infirm. In one place, a boy had taken refuge under his mother's bed; a soldier, seeing the little fellow's foot projecting, barbarously pinned it to the floor with his bayonet. The young hero never groaned.

The effect of this day's work was electrical. The news that American blood had been spilled flew like wildfire. Patriots came pouring in from all sides. General Putnam, "Old Put," as he was familiarly called, already famous for his exploit in the

PUTNAM STARTING FOR CAMBRIDGE.

wolf's den and other equally daring deeds, left his cattle yoked in the field, and without changing the checked shirt he had on, mounted his fastest horse, and the next morning was at Cambridge, having ridden one hundred miles in eighteen hours. Soon twenty thousand men were at work throwing up entrenchments to fasten the British in the city. Congresses were formed

in all the colonies, and committees of safety were appointed to call out the troops, and to provide for any emergency.

Meanwhile Connecticut resolved to strike a blow for the good cause. An expedition was accordingly fitted out under Ethan Allen, a noted leader of the "Green Mountain Boys," and Benedict Arnold, to seize the forts of Ticonderoga and Crown Point. Troops were hastily gathered, and the march began. Late on the night of May 9th they reached the shore of the lake. Only a few boats could be secured, and at daybreak only eighty-three men had crossed. No time was to be lost if a surprise was to be effected. With this little band, Allen marched directly upon a fortress that mounted one hundred guns—himself leading the at-

ETHAN ALLEN AT TICONDEROGA.

tack, with Arnold emulously at his side. As Allen rushed into the sally-port, a sentinel snapped his gun at him and fled. The Green Mountain Boys quickly formed upon the parade-ground in hollow square, facing each way toward the barracks, and raised the Indian whoop. "It was a cry," says Bancroft, "that had not been heard there since the time of Montcalm." Rapidly making his way to the commander's quarters, Allen, in a voice of thunder, ordered him to surrender. "By whose authority?" exclaimed the frightened officer. "In the name of the Great Jehovah and the Continental Congress!" shouted Allen. No resistance was at-

tempted. Large stores of cannon and ammunition, just then so much needed by the troops at Boston, fell into the hands of the Americans without the loss of a single man. A detachment was sent off under Colonel Seth Warner to take Crown Point, and that fort surrendered at the first summons.

A few hours after the capture of Ticonderoga, the second Continental Congress met at Philadelphia. It voted to raise twenty thousand men, and to issue three million dollars in paper money. John Adams, after a powerful speech setting forth the qualities requisite for the commander-in-chief of the army, suddenly nominated George Washington, then present as delegate from Virginia, for that high office. All were surprised, as he had informed no one of his intention, but the members unanimously approved the choice. Artemas Ward, Charles Lee, Philip Schuyler, and Israel Putnam were appointed major-generals; Seth Pomeroy, Richard Montgomery, David Wooster, William Heath, Joseph Spencer, John Thomas, John Sullivan, and Nathaniel Greene, brigadiers; Horatio Gates was made adjutant-general, with the rank of brigadier. Strange to say, there were still hopes of a reconciliation, and committees were appointed to petition the king and to address the people of England.

Gage had now received heavy reinforcements under experienced generals, Clinton, Burgoyne, and Howe. Thus encouraged, he declared martial law, but offered pardon to all rebels who should lay down their arms, excluding, however, Samuel Adams and Hancock, whose crimes were so great that they were to be taken to England and reserved for more condign punishment. The English were now determined, as Burgoyne expressed it, to get "elbow room," and they had already resolved to fortify Dorchester Heights and Bunker Hill, which overlooked the city, on the 18th of June. This becoming known in the patriot camp, it was decided to anticipate them; and General Ward, who was then at the head of the besieging forces, ordered Colonel Prescott, with one thousand men, to occupy Bunker Hill. On the night of June 16th the troops assembled at Cambridge, whence, after prayer by President Langdon of Harvard College, they noiselessly marched to Breed's Hill, which they had decided to be a more commanding position. It was bright moonlight, and they were so near the enemy that they could distinctly hear the "All's well" of the sentinels at the foot of Copp's Hill; yet so quietly did they work that there was no alarm. Before morning they had

thrown up a redoubt eight rods square and six feet high. At dawn, a watchman on one of the ships discovered the earthwork. Fire was at once opened, in which soon after all the shipping and a battery on Copp's Hill joined. Under the raining bombs and balls the Americans toiled on, strengthening the work already

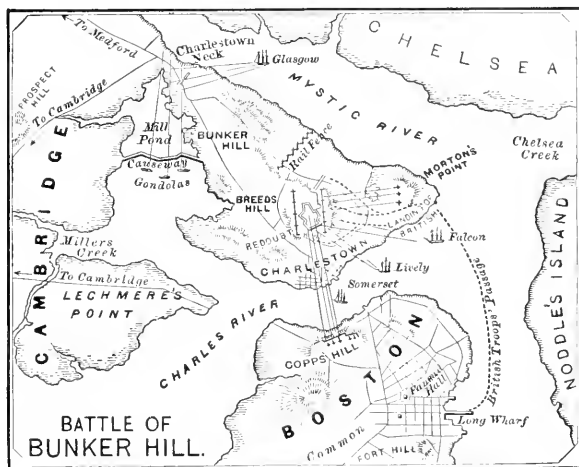

THE PRAYER BEFORE THE BATTLE OF BUNKER HILL.

thrown up, and also running a breastwork north about twenty rods down the hill. A soldier who had ventured outside being killed by a cannon-ball, some panic-stricken ones fled. Colonel Prescott, although his tall, commanding form rendered him a conspicuous mark, sought to reassure his men by leisurely making a tour upon the parapet. General Gage, in Boston, was standing near Counsellor Willard, Prescott's brother-in-law, inspecting the works through a glass. "Who is that?" he demanded. "That is Colonel Prescott," was the reply. "Will he fight?" was the next question. "Yes, sir," said Willard; "he will fight as long as a drop of blood remains in his veins." "The works must be carried immediately," was the quick response, and the British general turned to give the orders.

The English commander might have occupied the neck of the peninsula and cut off the entire American forces. Instead, he

landed at Morton's Point with about two thousand men, intending to march along the Mystic river and thus outflank the American line. Prescott sent a Connecticut regiment to check this movement. They took post behind a low stone wall and rail fence, in front of which they placed a second fence, filling the space between with new-mown hay. The artillery was stationed in the gap between the rail fence and breastwork. Ward, fearing an attack at Cambridge, refused to send reinforcements, but patriots singly and in squads dared the passage of the Charlestown peninsula, now raked by the enemy's fire, and came to the aid of their countrymen. Pomeroy, an old man of seventy, leaving his horse, which was a borrowed one, lest it might be killed on the way, shouldered a musket, and came on foot into the lines. Dr. Warren, who had just received his commission as major-general, reached the redoubt and served as a volunteer. Stark and his New Hampshire men took post with the Connecticut regiment, rapidly extending their line down to the river. Prescott sent back the entrenching tools to General Putnam, who was planning to fortify Bunker Hill, but the tired men who carried them took advantage of the opportunity and ran to the rear.

Howe, seeing the strength of the American position, prudently waited for reinforcements. On their arrival, he formed his men. It was a moment of terrible suspense. The neighboring hills, the streets and roofs of Boston were crowded with anxious spectators. On the one side were fifteen hundred undisciplined yeomen, weary with their night's labor, hungry and thirsty, under a leader of no acknowledged reputation; on the other, three thousand picked troops, richly uniformed and equipped; officers and men who had won victories on many of the famous battlefields of Europe. The British slowly ascended the

hill, breaking their ranks only to throw down the fences and to pass the obstructions which lay in their way. As they drew near they opened a heavy fire, while all the time ships and floating batteries never ceased raining shot and shell upon the patriot lines. Prescott had instructed his men to wait until they could "see the whites of their enemies' eyes" before firing, and then "aim at their waistbands." The patriot ranks lay quietly behind their

THE BAYONET CHARGE AT BUNKER HILL.

earthworks until the British were within ten rods, every piece sighted and pointed at its victim. Suddenly Prescott, waving his sword, shouted, "*Fire!*" A blaze of light shot from the whole line; soon another; and then another. Entire platoons went down before the terrible storm.

The survivors, unwilling to fly, stood among the dead, bewildered, paralyzed, by the shock. At last, the bugles sounded the recall and they fell back to the shore.

After a brief delay, Howe rallied his men and advanced a second time under cover of the smoke of Charlestown, which had been fired by his orders. Again they met that deadly discharge and again recoiled in dismay.

Clinton came with reinforcements from Boston, and a third attempt was now made. The British soldiers threw off their knapsacks and moved at the quickstep, with orders to use the bayonet only. The artillery was brought to bear on the fatal gap between the breastwork and the rail fence. The defenders of the former were quickly driven into the redoubt. This was attacked on three sides at once. The ammunition was scarce in the American ranks. Only one volley smote the British; the head of their column was torn in pieces, but the main body poured over the ramparts, driving all before it. Even yet the patriots sturdily resisted; most, having no bayonets, clubbed their muskets and disputed every inch. As a sample of the spirit of the day, one Salmon Steele is quoted, who, as he was leaving the redoubt, stumbled over a dead British soldier. On opening his enemy's cartridge-box and finding only one round was used, he strapped the box to his side, and fired the remaining ammunition with deadly aim before he left the field. Saddest of all that day's losses, Warren was shot by a British officer who knew him, as he was trying to rally his men. Stark, at the rail fence, when he saw the redoubt taken, sullenly retired. The British regiments, wounded and shattered, were unable to continue the pursuit. Putnam, collecting the fugitives, held Prospect Hill, scarce a mile in the rear of the battle-field. The English had lost over a thousand men, the Americans but four hundred and fifty. Sorrowful was the sight the sun beheld as it sank to rest. Where but the day before the mower had quietly swung the scythe, the dead now lay "thick as sheep in the fold."

The effect of this battle upon the patriot cause was that of a victory. It had been proven that American farmers could stand firmly before the muskets of British regulars. The struggle for liberty might be a severe one, but there was a chance for success. "Americans will fight," Franklin wrote; "England has lost her colonies forever." "Did the militia stand fire?" inquired Washington. When he learned that they not only did that, but withheld their own until the British were within ten rods, he exclaimed, "The liberties of the country are safe." From ridicule of American pretension, the British were suddenly startled into respect for American valor. The troops who expected to crush the "impudent rebels" in one easy charge, now boasted of their courage in advancing against so murderous a foe, and took credit for a bravery to which, it was averred, "no history could

produce a parallel." The colonists had at least compelled an acknowledgment of their claim to a decent regard.

News of the fight at Bunker Hill reached Philadelphia on the 22d. The next day Washington set out for Cambridge to take command of the army. On Monday, July 3, beneath the spreading elm since so famous in song and story, he formally assumed the command. Washington is described at this time as a tall, finely-proportioned, dignified man, with a strikingly noble and commanding air. Mrs. Adams, who was present, wrote thus to her husband: "Those lines of Dryden instantly recurred to me:

'Mark his majestic fabric! His a temple
Sacred by birth, and built by hands divine;
His soul's the Deity that lodges there:
Nor is the pile unworthy of the God.'

According to the fashion of his time, he was dressed in a blue broadcloth coat faced with buff, buff small-clothes, silk stockings, shoulder epaulettes, and a cocked hat. As he wheeled his horse and drew his sword, a shout of enthusiasm went up from the assembled multitude.

He found the army numbering about fourteen thousand. It was an army, however, only in name. In fact, it was merely an immense "gathering of neighbors, schoolmates, and friends," each with his own musket, powder-horn, and bag of bullets, and only such provisions as he had brought with him or as were sent into camp by his friends and others. Some of these had left home on the impulse of excitement, and already wearied of the monotony and peril of war. There were bitter jealousies growing out of the appointment of the higher officers by Congress. Many of the inferior officers were grossly inefficient, insubordinate, and over-confident. Few of the companies were disciplined or uniformed. Powder was so scarce that there was only enough to furnish nine cartridges to each man. "Our situation in the article of powder is much more alarming than I had the faintest idea of," wrote Washington to Congress. Reed, Washington's secretary, reported that "almost the whole powder of the army was in the cartridge-boxes." "The bay is open: everything thaws here, except Old Put," facetiously wrote another; "he is still as hard as ever, crying out for 'Powder, powder! Ye gods, give us powder!'" Washington immediately set about organizing the troops and reforming abuses,

meanwhile strengthening their position against any attempt of Gage to break out of Boston. Fortunately, such was the discouragement of the British leader that he never ventured even to make a sally. The provincial lines were nearly nine miles in length. Washington himself took command of the centre, General Ward of the right wing, and General Charles Lee, a former British officer who had espoused the patriot cause, of the left.

The first troops raised under the order of Congress were the Virginia riflemen. In less than sixty days, says Bancroft, twelve companies were in Washington's camp, having come on foot from four to eight hundred miles. The men, painted in the guise of savages, were strong and of great endurance; many of them more than six feet high; they wore leggins and moccasins, and an ash-colored hunting-shirt with a double cape; each one carried a rifle, a hatchet, a small axe, and a hunter's knife. They could subsist on a little parched corn and game killed as they went along; at night, wrapped in their blankets, they willingly made a tree their canopy, the earth their bed. The rifle in their hands sent its ball with unerring precision a distance of two or three hundred yards. Their motto was, "LIBERTY OR DEATH." Newspapers of the day relate how they offered to shoot apples off one another's heads in true William Tell style; how one man at sixty paces put eight balls through a paper the size of a dollar; and another stuck his knife into a tree, and firing, halved his bullet upon the edge.

During the summer and fall there was constant skirmishing around Boston. Transports bearing stores to the beleaguered troops were seized. Parties gathering hay and other supplies on the islands in the bay were attacked in the boldest manner. The English ships along the coast began a predatory warfare which did little harm, but bitterly exasperated the people. On October 16, Captain Mowatt burned the town of Falmouth, now Portland, declaring that he had orders to destroy every seaport between Boston and Halifax.

While all these stirring events were transpiring around Boston, the cause of liberty was kindling into life in the other colonies. In April, Dunmore, the detested governor of Virginia, imitating the action of Gage of Massachusetts, seized the powder in the magazine at Williamsburg. This overt act aroused general indignation. Patrick Henry headed the people in a call upon the governor, and they did not come away until he had

promised to pay for the powder. The amount given, fifteen hundred dollars, was afterward found to be too large, and the balance was returned to Dunmore. The governor, alarmed by the situation of affairs, fortified his residence and issued a proclamation against Henry and his compatriots.

THE OLD MAGAZINE AT WILLIAMSBURG.

Some letters of the governor's, grossly misrepresenting the colonists, were afterward intercepted, and these adding fuel to the flame, he was forced to take refuge on board a royal vessel. From this asylum he valiantly declared martial law, and called upon the slaves to leave their masters and help him in his emergency. He thus gathered at Norfolk a

small force of blacks and royalists. November 28, the Virginia militia came over to Great Bridge, where they threw up a fortification opposite the British fort built to defend the approach to Norfolk. A few days after, Dunmore, with the seamen from the ships and a mixed crowd of royalists and negroes, came out to drive them from their position. The negroes and loyalists stood at a safe distance, while the regulars bravely charged down the narrow causeway, one hundred and sixty yards long, at the end of which was the entrenchment. The fire of the sharpshooters was terrific. The British leader, Fordyce, fell, struck by fourteen balls. The rest fled, leaving half their number behind. The Virginians lost not a man, and only one received a slight wound. After the firing ceased, they hastened to bring in their wounded foes who might need the surgeon's aid. So little did the British understand their generous sympathy, that the sufferers shrank from their approach, expecting the tomahawk or the scalping-knife. "For God's sake," cried one, "don't murder us." "Put your arm about my neck," was the quiet reply, and the sturdy Virginian, who had just laid

down his rifle, tenderly supported his wounded enemy to the breastworks. Captain Leslie, who commanded the negroes and Tories, was so touched by the gentle act, that he stepped upon the platform of the fort and bowed his respectful thanks to the "shirtmen," whose hearts were as kind as their souls were brave. The next night the British abandoned the fort and fled to the protection of their ships.

On New Year's day, 1776, Dunmore landed troops which set fire to Norfolk, the richest town in Virginia. Finally, abandoning the Old Dominion, he sailed with his followers for the West Indies. Though largely monarchical in feeling and Episcopal in worship, Virginia had already given a leader to the Democratic and Presbyterian army that beleaguered Boston. By this last act her alienation from the crown was made complete.

In New England the feeling against the British aggressions, as we have seen, was strong from the very first. This was natural, since the rigor of the English laws pressed most heavily upon that part of the country. "Here," says Sabine, "were the Roundheads, who met England in the workshops and on the ocean." Adams, in sight of the ashes of Charlestown and the trenches of Bunker Hill, wrote that Congress should at once adopt a constitution and provide for defence. His letters were published by the royalists in the expectation that they would destroy his reputation and influence among the people.

In the Middle and Southern States the feeling was far from unanimous. Tories were thick in Maryland, Pennsylvania, South Carolina, and Georgia. New York was a stronghold of the royalists, and it was long doubtful which way the assembly would eventually go. In Queens county the inhabitants, by a vote of more than three to one, refused to send delegates to the Provincial Congress. The Delanceys and Phillipses in Westchester, staunch friends of the king and vast land-holders, so influenced their numerous tenantry, that all the patriotism of Van Courtlandt and of Morris of Morrisania could only hold a nearly equal balance.

While Washington was *en route* for the camp at Boston, a complication arose at New York which curiously illustrates the condition of affairs and the indecision of many of the people. "At the same time with his arrival," says Sparks, "news had come that Governor Tryon was in the harbor, just arrived from England, and would land that day. The Provincial Congress were

a good deal embarrassed to determine how to act on this occasion; for though they had thrown off all allegiance to the authority of their governor, they yet professed to maintain loyalty to his person. They finally ordered a colonel to so dispose of his militia as to be ready to receive '*either the General or Governor Tryon, whichever should first arrive, and wait on both as well as circumstances would allow.*' "

As New York city was exposed to a bombardment from the English vessels, the merchants were often exceeding timid, even when their sympathies were with the patriots. Governor Tryon had announced that Lord Dartmoor, in command of the fleet, had orders to consider and treat any city taking a decisive part, as in open rebellion. The utmost zeal of the whigs for a long time made little head against the fears of some and the opposition of others. A committee of public safety, however, had been appointed. The tories did all they could to embarrass any action, and to furnish the British ships in the bay with information and provisions. At last, Congress having recommended the arrest of any person whose going at large was likely to endanger the safety of the colonies, Governor Tryon took alarm and went on board a vessel. Here he was in constant intercourse with the tories, and encouraged every movement of hostility to the patriot cause.

The course of Pennsylvania was undecided, since, besides its royalist population, it was a Quaker colony, and the religious principles of the people forbade any forcible resistance to the tyranny of their rulers. While the precipitate action of Gage and Dunmore hurried the colonies under their immediate authority into rebellion, the governors of Pennsylvania, New Jersey, Delaware, and Maryland were prudent and wisely watched the progress of affairs. Hence in these colonies there was little disturbance, and the people quietly waited the action of the British government.

North Carolina was largely whig from the start. The regulators of that State were the first to take up arms to secure their rights. As early as May, 1775, the patriots of Mecklenburg county met at Charlotte and declared their allegiance to king and parliament forever ended. The Mecklenburg Declaration was issued fourteen months before the Colonial Congress met in Philadelphia and the old State-house bell rang out liberty to all the land. In South Carolina, on the other hand, the royalists were numerous, active, and probably in the majority. The income of

the planters and the commerce of Charleston itself rested upon raw products raised and shipped to England. The ties of interest, business, and friendly relationship all bound the principal men to the mother country. War would sunder these at once. Yet the patriots of this colony, which had so much at stake, perilled all, drove off the royal governor, fortified Charleston, and took their government in their own hands.

Georgia was also friendly to parliament, and, indeed, was not represented in the Continental Congress until the second session, delegates being elected July 4, 1775.

In looking back upon it now, the action of Congress seems to us to have been timid and uncertain. It had forwarded a second petition to the British government, and the majority still fondly dreamed of reconciliation with England. At the most, said they, a single campaign will show the king the folly of coercion. The truth is, the colonists yet clung to their English traditions with wonderful tenacity. They earnestly

desired a settlement of their difficulties, and a restoration to their old situation. They hoped only for a redress of certain grievances, and then all would be well. Jefferson afterward wrote that the "possibility of a separation from England was contemplated with affliction by all." Washington said, "When I first took command of the army, I abhorred the idea of independence;" and John Adams even, the very palladium of American independence, declared that "there was not a moment during the Revolution when I would not have given everything I possessed for a restoration to the state of things before the contest began, provided we could have a sufficient guaranty for its continuance." Dickinson, from the beginning the patriot leader of Pennsylvania, opposed the Declaration of Independence in 1776 to the very last. Under these circumstances, Congress was timorous. Franklin's plan of a confederation, considered twenty-one years before, in Albany, was brought out again, but laid aside. Troops were enlisted only until an answer could be expected from the petition. A third million dollars in paper was ordered to be printed; but Congress had no power to lay taxes of any kind; while commerce was dead, and

CONTINENTAL MONEY.

there were no imports. Promises of thirteen colonies, distracted by war and internal dissension, to pay at some indefinite time, were sure to depreciate from the beginning. It seemed the best, however, that could be done.

Meanwhile the British government was straining every nerve to recruit its armies in America. British emissaries were busy among the Five Nations of central New York and the savage Indians of Canada, urging them to take up arms against the colonists. The "Olive Branch," as the petition to the king was styled, was rejected. Trade with the colonies was forbidden. American vessels, and all others found trading in American ports, with their cargoes, were liable to seizure, and the crews to be treated as slaves. Treaties were made with certain German princes, who promised to furnish seventeen thousand men for the American war at thirty-six dollars per head. The Landgrave of Hesse-Cassel sent the largest number, hence these mercenaries were called Hessians.

The obstinacy of the king, the refusal even to hear the respectful petition read in parliament, the passage of these violent measures, and especially the hiring of foreign mercenaries, filled the cup of England's wrongs to her colonies. Separation and war were inevitable.

Congress invited the other British colonies in America to unite with them in asserting their rights. As Canada refused to take part in the movement, and British forces ascending the St. Lawrence could thence attack the colonies in the rear, it was decided, if possible, to wrest that country from the crown. Early in the summer and fall of 1775, General Montgomery, commanding an expedition, captured St. John's, at the foot of Lake Champlain, within the Canadian border. Thence pushing on to Montreal, he took that city, and advanced through the ice and snow of December upon Quebec.

Meanwhile a force under General Arnold, detached from the beleaguering army at Boston, had ascended the Kennebec River, and made its way northward through the pathless wilderness. With this indefatigable leader were Morgan, Greene, Meigs, and Aaron Burr—then a young man of twenty, afterward Vice-President of the United States. No pen can describe the horrors of their march. Making their way with infinite toil; carrying their boats, baggage, and ammunition past the rapids and marshy swamps; exposed to rain and storm; crossing swollen streams;

barefooted and with clothes torn almost to nakedness; cold, wet, weary, and sick; with the last ox killed; the last dog eaten; then roots and moose-skin moccasins devoured in the extremity of hunger; finally, after two days of starvation, the famished troops emerged among the Canadian settlements. On the 10th of November they appeared like spectres upon the banks of the St. Lawrence, opposite Quebec. Morgan's riflemen wore linen hunting-shirts. By some mistake, in the news of their coming, the word *toile* became changed to *tôle*, and the simple peasants heard to their amazement that the advancing army were clad in sheet-iron. Securing boats with the greatest difficulty, Arnold crossed the river, landed in the same cove where Wolfe made his daring attempt, and climbed to the Plains of Abraham. He here summoned the city to surrender; but in vain. Soon after, he was joined by Montgomery, who took the command. Their combined forces did not number one thousand men and a few small cannon, yet they proposed to besiege the greatest fortified city in America, mounting two hundred guns and defended by an army twice as large as their own. But Montgomery had been a companion of Wolfe, and he emulated his glorious example. For a time he endeavored to pro-

THE PRESCOTT GATE, QUEBEC.

voke the garrison to come out and fight in the open field; but Carleton, the governor, was present when Montcalm ventured to leave the protection of the walls, and he did not propose to repeat the rash experiment. Montgomery was forced to begin a regular siege. The ground was frozen too hard to trench for planting the battery, so he filled the gabions and fascines with snow, over which he poured water. This made a solid rampart of ice to protect the men as they worked the guns. Three

weeks of useless labor followed. Perils thickened. The artillery was too light to breach the walls; small-pox and other diseases broke out among the troops; the enlistment of the men had nearly expired, and soon the army would break up. Montgomery decided to venture all upon an assault. The preparations were carefully made. There were to be two feigned movements upon the upper town to distract the attention of the besieged, while the real attacks were made by Montgomery and Arnold on the lower town. The former general was to advance along the St. Lawrence, and the latter, the St. Charles River, and both were to unite in storming the Prescott Gate.

It was the last morning of the year 1775. The men were ready at two o'clock. To recognize one another in the dark, they placed in the front of their hats bits of white paper, on which some of them wrote Patrick Henry's words, "Liberty or Death." It was storming bitterly as they sallied out from their rude huts, and stumbled through and against the cutting hail and deep-driving snow. They tried to protect their guns as best they could, but they soon became useless. Montgomery, advancing along the river at the foot of Cape Diamond Cliff, helped with his own hands to push aside the huge blocks of ice, and, struggling through the drifts, cheered on his panting men. As they rushed forward, a rude block-house appeared through the blinding storm. "Men of New York," he shouted, "you will not fear to follow where your general leads." Charging upon it, he fell at the first fire. His followers, disheartened, fled. Arnold, in the meantime, approached the opposite side of the city. While bravely fighting he was severely wounded and borne to the rear. Morgan, his successor, pressed on the attack with his riflemen; but at last, unable to retreat or advance against the tremendous odds, now that Montgomery's assault had failed, he took refuge in the neighboring houses, where he was finally forced to surrender. The remainder of the army, crouching behind mounds of snow and ice, maintained a blockade of the city until spring. Congress, blindly bent on keeping up the useless struggle, ordered Washington to send his best men and officers, and to divide his scanty supply of powder, for the siege of Quebec. It was in vain. The garrison laughed outright as they saw General Wooster, the new commander, in his big wig, spying out their weak points. They knew they were invincible.

May 1st, General Thomas assumed control of the blockading

army. He decided to retreat. It was already too late. Reinforcements from England were fast arriving in Quebec. Before he could remove his sick the garrison sallied out from the gates and drove his men in confusion. Many of the sick, amid the hurry, crept off among the Canadian peasants, who nursed them kindly, while Carleton gave them the privilege of entering the hospital, with leave to return home when they were fully recovered. Thomas dying of the small-pox, Sullivan took command. He attempted the offensive, but was soon forced to resume the retreat.

It was not until July that the fragments of the army of Canada, then under Gates, safely reached Crown Point. Terrible was their condition. "There was not a hut," says Trumbull, "which did not contain a dead or dying man;" while a physician, witnessing the arrival of the sick, declared that he "wept at their sufferings until he could weep no more."

A STREET IN QUEBEC—SCENE OF ARNOLD'S ATTACK.

CHAPTER III.

INDEPENDENCE YEAR—1776.

DURING the winter of 1775-6, Congress and the country were impatient at Washington's inactivity. He dared not make known his real weakness. He could not publish the facts: that for six months he never had powder enough for a battle; that the military chest was empty, the men appointed to sign the paper-promises being too lazy to do the work; that he lacked bayonets; that two thousand of his men had

no muskets; that, by the expiration of enlistments, he had to disband one army and recruit another; and all this in the presence of the enemy. Toward the close of December, the Connecticut troops, having served their time of enlistment, determined to leave in a body. Washington was greatly hurt by this lack of patriotism. He tried to stimulate their zeal by frequent appeals, and made the camp to resound with popular songs of heroism and liberty. But it was all in vain. "The desire of retiring into a chimney-corner seizes the troops as soon as their terms expire," he wrote reproachfully. So little sympathy did these recreant troops find on their way homeward that they could hardly get enough to eat, and when they reached their own firesides they found the honest indignation of their patriot wives and mothers a so much harder thing to face than the mouth of the enemy's cannon, that many were glad soon to return to camp.

Washington, in spite of all these discouragements, resolutely laid his plans, and made ready for a grand stroke which he hoped

would be decisive. On the 4th of March, just after the candles were lighted in the houses of Boston, he suddenly opened a tremendous fire on the city from all his batteries. The enemy replied. Soon the air was heavy with the roar of the guns, and the streets were full of citizens and soldiers watching the flight of the shells and dreading their fall and explosion. Under cover of the noise and confusion, Dorchester Heights were occupied, entrenchments thrown up with bales of pressed hay, an abattis made of the trees in the neighboring orchards, and even barrels of stone provided to roll down on an advancing enemy. In the morning the English were astonished to see on a height commanding the city a formidable-looking fortress looming indistinctly through the rising fog." "The rebels," exclaimed Howe, "have done more work in one night than my whole army would have done in a month." "We must drive them from that post," said Colonel Monckton, "or desert the place." A storm prevented an immediate attack, a delay which was well improved by the provincials. General Howe, who was then in command, remembering the lesson of Bunker Hill, decided to leave. Indeed, there was no alternative. The British troops had no stomach for another fight. The American cannon completely commanded the harbor, and the admiral refused to remain. Gage accordingly set sail for Halifax on the 17th with his entire army and about eleven hundred loyalists. Washington's end was accomplished, and not twenty men had been lost since he took command.

It was a bitter pill for the English. The generals who had come expecting to run over the colonies at their pleasure, and had even brought with them fishing-rods, as if on a holiday excursion, had, instead, been cooped up close to their landing-place for months, and were now forced to ignominiously leave their winter-quarters, and to lower their flag without the satisfaction of firing a parting shot. But how sad was it for the loyalists who had clung to the king, and now, startled by finding the army unable to protect them, were suddenly forced to leave native land, home, and property, and henceforth to drag out a useless life on a dreary shore, pensioners on the bounty which the government pityingly doled out to them in their distress!

For eleven months the inhabitants had endured the horrors of a siege and the insolence of the soldiery. Houses and shade-trees had been burned for fuel. The Old North Meeting-House had thus passed into ashes, the Old South being reserved for a

riding-school. An elegantly carved pew with silk hangings, belonging to the latter, was taken by one of the officers for a pigsty. Faneuil Hall was converted into a theatre. One evening, before a house packed with troops and tories, a play was in progression called "The Blockade of Boston," being a broad burlesque on the patriot army. Washington herein appeared as "an awkward lout, equipped with a huge wig and a long rusty sword, attended by a country booby as orderly sergeant, in rustic garb, with an old firelock seven or eight feet long." It was very funny, and when a British sergeant suddenly came to the front, exclaiming in excited tones, "The Yankees are attacking Bunker's Hill!" it was loudly applauded as a piece of magnificent acting. But, directly, the clear, commanding voice of General Howe rang out, "Officers, to your alarm-posts." The scene was quickly changed. Women shrieked and fainted; men jumped to their feet; everybody scrambled over everybody else to reach the open door. The ridiculous general and his frowsy sergeant were left upon the stage to tumble out of their clownish masquerades as best they might, while the soldier audience hastened with quite different expectations to meet, perhaps, the real Washington. But it proved to be General Putnam, who, swooping down upon Charlestown, fired the guard-house, took a handful of prisoners, and escaped, without loss, back to the American quarters.

All this was now passed. Those who had been so long exiled from their homes returned to the city. Ancient customs were renewed. We read how on Thursday evening following, Washington attended the regular week-day lecture, and the congregation together thanked God for the restoration of their beloved Zion, its "stakes unmoved" and its "cords unbroken." "It seemed," says Bancroft, "as if the old century was reaching out its hands to the new, and the Puritan ancestry of Massachusetts were returning to bless the deliverer of their children."

Governor Martin of North Carolina, following in the footsteps of Dunmore, sought to combine the friends of the king, and thus check the rising tide of liberty in his State. He accordingly authorized Donald McDonald, a noted Highlander at Cross Creek, now Fayetteville, to raise the loyalists of that region. Soon fifteen hundred had gathered about the standard of this faithful Scotchman. The patriots, however, were awake. Colonel Moore, with a large body of regulars and militia, approached his headquarters and cut off all his communications with Governor

Martin. McDonald, finding he could not intimidate the "rebels," thereupon rapidly retreated toward Wilmington, where he hoped to join the governor and also await General Clinton, who was expected to arrive from the North with reinforcements. At Moore's Creek, however, he found his retreat cut off by Colonels Caswell and Lillington with one thousand minute-men. The

BOSTON ONE HUNDRED YEARS AGO.

brave Highlander resolved to cut his way through the gathering foes. Early in the morning of February 27, to the sound of bagpipes and bugle, the royalists advanced to the charge. When within twenty paces, the whigs rose from their ambush, while another party under Lieutenant Slocum, by a circuit came upon the enemy's rear. In a few minutes the tory army was utterly routed, with a loss of seventy killed and wounded, while the patriots had only two of their number injured. This battle decided the fate of the royal cause in North Carolina; and soon after the governor took refuge on a British vessel.

An anecdote is told of the wife of Lieutenant Slocum, who was as heroic as himself. After her husband departed, she saw him in a dream lying dead on the ground. Awaking in great distress, she arose, saddled a horse, and rode at full gallop through the swamp in the direction taken by the troops. At nine in the morning she neared the battle-field. One of the first objects she saw was the lieutenant's cloak wrapped around a body stretched upon the ground. With sinking heart, she dis-

mounted, to find, not her husband, but one of his wounded men. She washed his face, bound up his wounds, and was performing the like office to a second sufferer when her astonished husband came up. She remained all day, caring for the wounded loyalists with true Samaritan kindness. At midnight she started for her home, where a mother's duties were required. In less than forty hours this wonderful woman rode one hundred and twenty-five miles, spending the time when out of her saddle, not in taking rest, but in dressing the wounds of her enemies.

Though the British had abandoned Boston, they had not given up the war. The next movement was destined for the South. Early in June, Admiral Parker appeared off the harbor of Charleston with a strong fleet, having on board General Clinton with about twenty-five hundred land troops. The South Carolinians had received news of their probable coming, and were hard at work getting ready to give their unwelcome visitors a hot reception. Fort Sullivan, a fort on an island of the same name, commanded the entrance to the harbor. It was built of two rows of palmetto logs, sixteen feet apart, the space between being filled with sand. Major-General Charles Lee, who had been sent by Washington to watch the seaboard, had no confidence in this rude fortress, and was anxious to have it abandoned. He declared that it was but a "slaughter pen," provided only twenty-eight rounds of ammunition for twenty-six of its guns, and repeatedly urged the necessity of securing the retreat of the garrison. But the brave Carolinians proposed to hold the place. "What do you think of it now?" said an officer to Colonel Moultrie, as they were surveying the British line of ships, all of which were already over the bar. "We shall beat them," was the determined reply. "The men-of-war will knock your fort down in half an hour," returned the other. "Then," said Moultrie, nothing daunted, "we will lie behind the ruins and prevent their men from landing."

On the morning of the 28th the British fleet took position and opened a terrific fire. The balls sank into the porous, spongy palmetto logs without breaking or splintering them. Moultrie slowly replied, but each shot told, and the ships in a few hours were completely riddled. At one time, every man except Admiral Parker was swept from the deck of his vessel. In the early part of the action the staff was struck by a ball, and the flag, the first Republican banner hoisted at the South, fell out-

THE ATTACK ON FORT MOULTRIE.

side the fort. Sergeant Jasper leaped over the breastwork, about which the balls were thickly flying, caught up the flag, and springing back, tied it to a sponge staff and hoisted it again to its place. General Clinton, who commanded the British land troops, tried to attack the fort in the rear, but Thomson's riflemen, posted behind myrtle bushes and sand hills, made it too hot for him. The fleet was at last so badly shattered that it withdrew and sailed for New York. This victory gave the colonists great delight, as it was their first encounter with the boasted "mistress of the seas." The fort so gallantly defended was christened Moultrie. It had saved not only a city, but a province. The next day Governor Rutledge offered the brave Jasper a sword and a lieutenant's commission. He modestly refused the latter, saying, "I am not fit for the company of officers; I am content to be a sergeant."

Gradually, but surely, the colonists were being weaned from the mother country. Day by day for nearly a year the sword had been busy, cutting the ties which had so long bound them to

Great Britain. Since the king had pronounced them "rebels," the feeling had been gaining ground that independence was the only hope. No one did better work toward accomplishing this result than Thomas Paine, who, coming from England the year before, had been induced by Franklin and others to use his pen in behalf of the colonists. His first essay, entitled *Common Sense*, in plain, simple language urged the necessity of at once separating entirely from England. Every line glowed with the spirit of liberty, and men's hearts were thrilled as they read. The pamphlet reached Congress, then in session at Philadelphia, January 8, the day after the news had arrived of the burning of Norfolk by Dunmore. It produced a powerful impression. Washington, writing to Secretary Reed, says: "A few more such flaming arguments as were exhibited at Falmouth and Norfolk, added to the sound doctrine and unanswerable reasoning contained in 'Common Sense,' will not leave numbers at a loss to decide."

In April, at the opening of the courts in South Carolina, the chief justice charged the jury that they "owed no obedience to George III." The British flag kept its place on the State-house of Virginia until May of this year, when the assembly directed the Virginia delegate in Congress to propose a dissolution of their allegiance to Great Britain. Washington wrote that "nothing but independence could save the nation." Accordingly on the 7th of June, Richard Henry Lee offered a resolution declaring that "THESE UNITED COLONIES ARE, AND OF RIGHT OUGHT TO BE, FREE AND INDEPENDENT STATES." It was seconded by John Adams. After a little discussion from the delegates of several colonies, who were pledged to vote against independence, a committee was appointed, consisting of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston, to propose a suitable Declaration; Jefferson representing Virginia, from which the proposition emanated, and, being elected by the largest number of votes, was selected to draft it. Meanwhile, the delegates from the different colonies received instructions from their constituents how to vote upon the measure. July 2d, Lee's resolution was formally passed by twelve of the colonies; New York alone abstaining from the vote. Two days after, the Declaration having been closely debated by Congress, was adopted with but few amendments.

While the protracted and oftentimes severe discussions over the Declaration were in progress, Jefferson remained silent; John

Adams being its stout defender. "During the debate," the former wrote in his journal, "I was sitting by Dr. Franklin, who observed that I was writhing a little under the acrimonious criticism of some of its parts; and it was on that occasion that, by way of comfort, he told me the story of John Thompson, the hatter, and his new sign." All readers of Franklin's autobiography will remember the story: how the prospective shopkeeper, with much pride, laid out his plan for a sign, "John Thompson, hatter, makes and sells hats for ready money," accompanied by a picture of the article; and how his critical friends picked first at this word and then at that as superfluous, till the dismayed shopman had nothing left but his name and the painted hat. The point was too obvious not to be enjoyed, especially when told in Franklin's happy style.

During the day of the 4th the streets of Philadelphia were crowded with people anxious to learn the decision. In the steeple of the old State-house was a bell which, by a strange coincidence, was inscribed, "Proclaim liberty throughout all the land unto all the inhabitants thereof." In the morning, when Congress assembled, the bell-ringer went to his post, placing his boy below to announce when the Declaration was adopted, that his bell might be the first to peal forth the glad tidings. Long he waited as the day wore on and the tedious deliberations held the result in suspension. Impatiently the old man shook his head and repeated, "They will never do it! They will never do it!" Suddenly he heard his boy clapping his hands and shouting, "Ring! Ring!" Grasping the iron tongue, he swung it vigorously to and fro. The crowded streets caught up the sound. Every steeple re-echoed it. All that night, by shouts, and illuminations, and booming of cannon, the people declared their zeal and joy.

LIBERTY BELL.

“ There was tumult in the city,
In the quaint old Quakers' town,
And the streets were rife with people,
Pacing restless up and down ;—

People gathering at corners,
Where they whispered each to each,
And the sweat stood on their temples,
With the earnestness of speech.

“ As the bleak Atlantic currents
Lash the wild Newfoundland shore,
So they beat against the State-house,
So they surged against the door ;
And the mingling of their voices
Made a harmony profound,
Till the quiet street of Chestnut
Was all turbulent with sound.

“ ‘ Will they do it ? ’ ‘ Dare they do it ? ’
‘ Who is speaking ? ’ ‘ What’s the news ? ’
‘ What of Adams ? ’ ‘ What of Sherman ? ’
‘ Oh, God grant they won’t refuse ! ’
‘ Make some way there ! ’ ‘ Let me nearer ! ’
‘ I am stifling ! ’ ‘ Stifle, then !
When a nation’s life’s at hazard,
We’ve no time to think of men ! ’

“ So they beat against the portal,
Man and woman, maid and child ;
And the July sun in heaven
On the scene look’d down and smiled ;
The same sun that saw the Spartan
Shield his patriot blood in vain,
Now beheld the soul of freedom
All unconquer’d rise again.

“ See ! See ! The dense crowd quivers
Through all its lengthy line,
As the boy beside the portal
Looks forth to give the sign !
With his small hands upward lifted,
Breezes dallying with his hair,
Hark ! with deep, clear intonation,
Breaks his young voice on the air.

“ Hush’d the people’s swelling murmur,
List the boy’s strong, joyous cry !
‘ Ring ! ’ he shouts, ‘ RING ! *Grandpa*,
‘ RING ! OH, RING FOR LIBERTY ! ’
And straightway, at the signal,
The old bellman lifts his hand,
And sends the good news, making
Iron music through the land.

“ How they shouted ! What rejoicing !
 How the old bell shook the air,
 Till the clang of freedom ruffled
 The calm, gliding Delaware !
 How the bonfires and the torches
 Illumed the night's repose,
 And from the flames, like Phoenix,
 Fair Liberty arose !

“ That old bell now is silent,
 And hush'd its iron tongue,
 But the spirit it awakened
 Still lives,—forever young.
 And while we greet the sunlight,
 On the fourth of each July,
 We'll ne'er forget the bellman,
 Who, twixt the earth and sky,
 Rung out OUR INDEPENDENCE :
 Which, please God, *shall never die !* ”

The Declaration had been duly authenticated by the president before being published. It was ordered to be engrossed on parchment, and on the 2d of August the fifty-four delegates present affixed their signatures. John Hancock's name, as president, led the rest. After he had written his name in a bold, clear hand, he rose from his seat and said, “ There ! John Bull can read that without his spectacles, and may now double his reward of five hundred pounds for my head. That is my defiance.” Turning to the rest, he added, “ Gentlemen, we must be unanimous ; we must all hang together.” “ Yes,” replied Franklin, “ or we shall all hang separately.” The Declaration of Independence was read by Washington's orders at the head of the army then in New York. It created the greatest enthusiasm. That night the statue of George III. was torn from its pedestal. It was of lead, gilded, and being melted, made forty-two thousand bullets for the use of the troops.

The Declaration of Independence completed the breach between England and America. It clearly set before the colonists the object for which they were struggling, and combined England for the overthrow of the new Republic. Henceforth, the issue was Liberty or Slavery. There was no other choice. The whig and tory parties were now more distinctly defined, and the most bitter hatred arose between them. Persons known as favoring the king were tarred and feathered by their patriotic neighbors,

and exhibited in this state to the derision of the crowd. Congress appointed committees to restrain these over-zealous manifestations, but they were often powerless in the face of public sentiment.

During this year and the next all the States either adopted a new constitution or remodeled their charters to adapt them to the necessities of free and independent States; Rhode Island and Connecticut only having to change the word "king" to "people" to effect this result.

It is a noticeable fact that the founders of our government, when they threw off the bondage of Great Britain, had no direct intention of founding a republic. That idea came only as mature fruit from the blossom of free thought, borne by the tree of liberty, planted so long before on American soil. They revolted from George III., not because he was a king, but because he was a despot. They threw off the rule of Great Britain, not because it was a monarchy, but because it was tyrannical. They became a republic, as that seemed the only thing to do. No one thought of a monarch. The people had learned how to govern themselves, and their rulers needed none of the false dignity that "doth hedge about a king." The colonies, for nearly a century and a half, all unconsciously, had wrought out the idea of a republic. It now came as naturally as the rain and the dew from heaven.

After the evacuation of Boston, Washington thought that probably the British would next try to seize New York, both on account of its commercial importance and the strong tory element in that vicinity. He therefore, soon after, came to that city. The most vigorous preparations were made to complete the fortifications, already begun by General Charles Lee. Troops were enlisted for three years, and a bounty of ten dollars offered to encourage recruiting. About twenty-seven thousand men were finally collected. Little over half of these were fit for duty. One regiment, we read, had only ninety-seven firelocks and seven bayonets. The officers, many of whom were grossly incompetent, wrangled about precedence. The soldiers mistook insubordination for independence. Sectional jealousies prevailed to such a degree, that a letter of the times reports that the Pennsylvania and New England troops were quite as ready to fight each other as the enemy.

The first of July, General Howe arrived at Staten Island from Halifax. Soon after, he was joined by his brother, Admiral Howe.

from England, and Clinton, from the defeat of Fort Moultrie. They had thirty thousand men admirably disciplined and equipped; among them about eight thousand of the dreaded Hessians. The fleet, consisting of ten ships-of-the-line, twenty frigates, and four hundred ships and transports, was moored in the bay ready to co-operate. Parliament had authorized the Howes to treat with the insurgents. By proclamation they accordingly offered pardon to all who would return to their allegiance. This document was published by direction of Congress, that the people might see what England demanded. An officer was then sent to the American camp with a letter addressed to "George Washington, Esq." Washington refused to receive it. The address was afterward changed to "George Washington, &c., &c." The messenger endeavored to show that this bore any meaning which might be desired. But Washington utterly refused any communication which did not distinctly recognize his position as commander-in-chief of the American army. Lord Howe was evidently desirous of a restoration of peace. He solicited an interview with Franklin, an old-time friend; but events had gone too far. England would not grant independence, and the colonies would accept nothing less. War must settle the question.

It was not till the last of August that Clinton crossed over the Narrows to Long Island. Brooklyn was fortified by a series of entrenchments and forts extending from Gowanus Bay to Wallabout. Here were stationed about eight thousand men under Generals Sullivan and Stirling. About two and a half miles south was a range of wooded heights traversed by three roads along which the British could advance; one leading up directly from the Narrows and Gravesend to Gowanus Bay, a second from Flatbush, and a third, the Jamaica road, cutting through the hills by the Bedford and the Jamaica passes. General Greene, who was intimately acquainted with the ground, being unfortunately sick, General Putnam was hastily sent over to take charge of the defence. General Stirling and General Sullivan occupied the heights, but, by a fatal oversight, the Jamaica road was unguarded. The English were not slow to take advantage of the opportunity.

On the eve of the 26th, General Clinton, with Percy and Cornwallis, crossed the narrow causeway called Shoemaker's Bridge, over a marsh near New Lots—where, it is said, a single regiment could have barred the way—and, before daylight, had seized the Bedford and the Jamaica passes, while the Americans were yet

Marylanders lay dead on the field. Washington beheld the fight from a neighboring hill, and, wringing his hands in agony, exclaimed, "What brave fellows I must lose this day!"

It was a sad augury for the Republic which had just issued its Declaration of Independence. The British loss was but four hundred and the American nearly one thousand. Of the latter, the larger part, with Generals Sullivan and Stirling, were prisoners. The higher officers were soon exchanged,

but the hard lot of the privates and lower officers made the fate of those who perished in battle to be envied. Numbers were confined in the sugar-house and the old hulks at Wallabout, where afterward so many

PRISON-SHIP AT WALLABOUT.

other American prisoners suffered untold agonies. Here, festering with disease, perishing with famine, and loathsome with filth, deprived of fresh air, water, and every necessary of life, eleven thousand Americans, it is said, found an untimely grave ere the war was over.

Had Howe attacked the works at Brooklyn immediately, the Americans would probably have been utterly destroyed. Fortunately, he delayed for the fleet to co-operate; but an adverse wind prevented. For two days the patriots lay helpless, awaiting the assault. On the second night after the battle there was a dense fog on the Brooklyn side, while in New York the weather was clear. A little before midnight, the Americans moved silently down to the shore and commenced to cross the river, near what is now the Fulton Ferry. Everything was planned with Washington's peculiar precision. The guards, sentinels, and outer lines were ordered to remain quietly at their posts till the very last, that the enemy might suspect no movement. The stifled murmur of the camp, as each man took his place in silence for the march to the river-side, gradually died away in the distance. Suddenly the roar of a cannon burst upon the night-air. "The effect," says an

American who was present, "was at once alarming and sublime. If the explosion was within our own lines, the gun was probably discharged in the act of spiking it, and could have been no less a matter of speculation to the enemy than to ourselves." The mystery of that midnight gun remains still unexplained. Fortunately, it failed to rouse the British camp. Startled by this unexpected *contre-temps*, the men reached the shore. Washington, feeling the urgent necessity for despatch, sent one of his aides-de-camp to hurry up the troops in march. By mistake he gave

THE RETREAT FROM LONG ISLAND.

the order to all who had been left behind. In the midst of embarrassment and confusion at the ferry, caused by the change of tide and of wind, which beat back the sail-boats, the whole rear-guard arrived. "Good God! General Mifflin!" cried Washington, "I fear you have ruined us by so unseasonably withdrawing the troops from the advance lines." Mifflin somewhat warmly explained that he had only followed orders. "It is a dreadful mistake," exclaimed Washington:

“and unless you can regain the picket lines before your absence is discovered, the most disastrous consequences may follow.” Mifflin hastened back, but again the dense fog and Providence had favored them, so that though nearly an hour had intervened the desertion of their posts had not been noticed by the enemy. At length their own time came, and the last boat pulled from the shore. The strain of the night was over and the army was saved. “What with the greatness of the stake, the darkness of the night, the uncertainty of the design, and the extreme hazard of the issue,” says one, “it would be difficult to conceive a more deeply solemn scene than had transpired.”

This timely deliverance moved every pious American heart to profoundest gratitude, for if once the English fleet had moved up the East River and cut off communication between New York and Brooklyn, nothing could have saved the army from capture. Howe, not supposing an escape possible, had taken no precautions against such an event. It is said that a tory woman sent her negro servant to inform the British of the movements of the patriot army; but he fell into the hands of the Hessians, who, not understanding a word of English, kept him until morning. After daybreak, and the fog had lifted, a British captain, with a handful of men, stealthily crept down through the fallen trees, and, crawling over the entrenchments, found them deserted. A troop of horse hurried to the river and captured the last boat, manned by three vagabonds who had staid behind for plunder.

Washington, conscious that, with the weakened and now dispirited army under his command, it was impossible to hold New York, wished to evacuate the city, but Congress would not consent. While awaiting the movements of Howe, Captain Nathan Hale of Connecticut consented to visit the English camp, and, if possible, find out their plans. He passed the lines safely and gained much valuable information, but on his return journey was recognized by a tory relative, who arrested him. He was taken to Howe's headquarters, and the next morning executed as a spy. No clergyman was allowed to visit him, nor was he permitted even a Bible in his last hours. His farewell letters to his mother and sister were destroyed. The brutality of his enemies did not, however, crush his noble spirit, for his last words were, “I only regret that I have but one life to give to my country.”

Having occupied Buchanan's and Montrossor's islands, now Ward's and Randall's, Clinton, with a heavy body of troops,

crossed the East River under the fire of the fleet early Sunday morning, September 15, and landed at Kip's Bay, at the foot of the present Thirty-fourth street. The American troops at this point fled from the entrenchments. It was all-important that the position should be held, as Putnam was in the city below with four thousand men, and time must be gained for them to escape. Washington came galloping among the fugitives and rallied them. But when two or three score red-coats came in sight, they broke again without firing a shot and scattered in the wildest terror. Losing all self-command at the sight of such cowardice, Washington dashed forward toward the enemy, exclaiming, "Are these the men with whom I am to defend America?" General Greene writes of this scene, that the poltroons "left His Excellency on the ground, within eighty yards of the enemy, so vexed at the infamous conduct of his troops that he sought death rather than life." He might indeed have fallen into the hands of the British, so overcome was he by the dastardly conduct of his soldiers, had not an aide-de-camp seized his horse by the bridle and hurried him away. Rallying his self-possession, Washington hastened to look after the safety of the rest of the army. It was a moment of extreme peril. Fortunately, on landing, Howe, Clinton, and some others called at the house of Robert Murray for refreshments. The owner, who was a Quaker, was absent, but his wife, a staunch whig, regaled them with such an abundance of cake and wine, and listened with such admirable attention to their humorous descriptions of her countrymen's panic, that their appetite and vanity got the better of their judgment, and kept them long at her delightful entertainment. Meanwhile, Putnam was hurrying his men along the Bloomingdale road, not a mile distant, under a burning sun, through clouds of dust, and liable at any moment to be raked by the fire of the English ships anchored in the Hudson. Thanks to the wit of the good Mrs. Murray, the British troops came up only in time to send a few parting shots at their rear-guard. Washington collected his army on Harlem Heights.

That night the wearied troops lay on the open ground, in the midst of a cold, driving rain, without tent or shelter. Anxious to encourage his disheartened men, Washington, the same evening, ordered Silas Talbot, in charge of a fire-ship in the Hudson, to make a descent upon the British fleet. Accordingly, this brave captain, dropping down with the tide, steered his vessel alongside

the Renommé. Stopping to grapple his antagonist surely, and to make certain of firing the trains of powder, he was himself fearfully burned before he could drop into the water. It was an awful scene. The British ships poured their broadsides upon his little boat as he was rapidly rowed away, while huge billows of flame bursting out from the fire-ship lighted up the fleet and the harbor with terrible distinctness. From every side boats put off to the rescue of the endangered vessel, which was finally brought safely away. But the entire British fleet slipped their moorings and quitted the stream.

Early the next morning, the advance guard of the British descended into Harlem Plains, drove in the American pickets, and sounded their bugles as if in defiance. Washington rode to the outpost, near where is now the Convent of the Sacred Heart, and made his preparations to teach them a lesson. Engaging their attention by a skirmish in front, he sent Colonel Knowlton and Major Leitch to march around through the woods and cut off their retreat. A spirited contest ensued. The enemy were driven back upon the main body with great loss, while the Continentals suffered little. The success, however, was saddened by the death of both the commanding officers, killed in the moment of triumphantly leading to victory the troops who the day before had fled so ignominiously.

The British, on their entry into New York, were received by the tories with the greatest enthusiasm. Scarcely had they settled down in what they hoped would be snug winter-quarters, when a fire broke out, which destroyed about five hundred houses. The whigs were accused of the incendiarism, and the enraged soldiers, with their bayonets, actually tossed several persons into the flames. They also hanged up one man by his heels until he died, discovering afterwards, however, that he was a staunch loyalist.

Washington immediately took great pains to fortify his position on Harlem Heights, throwing up a series of entrenchments reaching from Harlem River to the Hudson, and protecting the right wing by Fort Washington. The army, however, was in a desperate condition. The term of service being nearly expired, it seemed on the eve of dissolution. The disheartened troops abandoned their colors by hundreds; whole regiments even returning to their homes. The Connecticut militia was reduced from six thousand to two thousand. "Among many of the subordinate

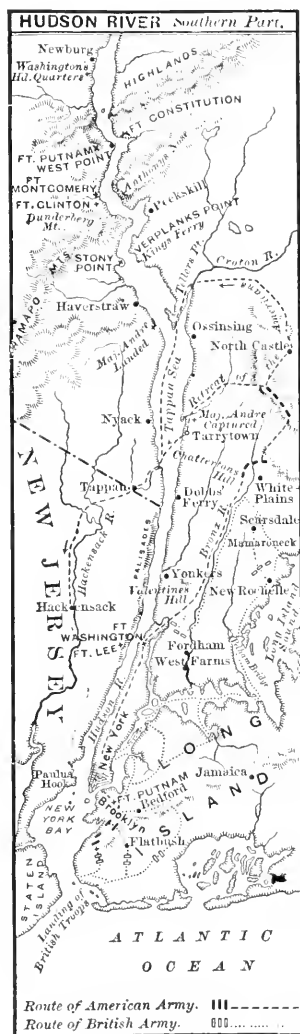

officers," says Lossing, "greed usurped the place of patriotism. Officers were elected on condition that they should throw their pay and rations into a joint-stock for the benefit of a company; surgeons sold recommendations for furloughs for able-bodied men at sixpence each, and a captain was cashiered for stealing blankets from his soldiers. Men went out in squads to plunder from friend or foe, and immorality prevailed throughout the American army." The soldiers, too, had lost confidence in their principal officers, Washington alone commanding their fullest respect and unwavering devotion. The men were true to him, and he was true to duty. He was already fast becoming the hope of the country.

General Howe, unwilling to attack the American army in its strong position on Harlem Heights, determined to get in its rear. Leaving his own lines in front of New York well defended, he accordingly moved up the Sound, and disembarked his troops at Throg's Point, Westchester county, while his fleet passed up the Hudson to cut off all communication with the western bank of the river. Washington was prepared for this movement, which he had already foreseen, and immediately ordered troops to occupy the causeways leading out from the little peninsula on which the British were encamped. The bridge being removed, and his advance thus cut off, Howe crossed in his boats to Pell's Point (Pelham), and landing again, moved toward New Rochelle, where he was joined by the Hessians under Knyphausen. He now decided to occupy White Plains. Meanwhile, Washington had evacuated Manhattan Island, and, crossing to Fordham Heights, marched northward to head off the British. "The modern Fabius" kept his army on the high hills along the western bank of the Bronx, occupying in succession a series of entrenched camps reaching to White Plains, a distance of thirteen miles. The two armies marched parallel to each other, and there were frequent skirmishes between the outposts, in which Washington took care that the Americans, who were now in fine spirits, should have the advantage. Moving on the shorter line, Washington was the first to reach White Plains, where he threw up breastworks, meanwhile preparing an entrenched camp in his rear on the heights of North Castle. Howe, coming up, threw a part of his troops across the Bronx, and carried Chatterton's Hill. The patriot militia under McDougal held their rude breastworks over an hour, and then retreated in good order to the main line. The apparent strength of Washington's entrenchments, which consisted, it is said, in part,

of heaps of cornstalks covered with dirt and sod, caused Howe to await his reinforcements under Lord Percy.

On the night of the 31st, amid a tempest of wind and rain, Washington quietly fell back upon the Heights of North Castle. On this formidable position, Howe dared not risk an assault, but withdrew to Fordham Heights. Washington, apprehending that the British would next carry the war into the Jerseys, and perhaps move on Philadelphia, crossed the Hudson and fixed his head-quarters in the Highlands, leaving General Lee at North Castle with about seven thousand men, until Howe's movements were more fully developed.

During the encampment at White Plains an incident occurred which curiously illustrates the character of General Lee, then the most admired officer in the army, and whose coming had been looked for as that of "a flaming angel from heaven." The story is thus told by Sears: General Lee lodged in a small house, near which General Washington occasionally passed when observing the dispositions of the enemy. One day, accompanied by some of his officers, he called on General Lee and dined with him; but no sooner was he gone than Lee, addressing his aide-de-camp, said: "You must look me out another place, for I shall have Washington and all his puppies continually calling upon me, and they will eat me up." Next day, seeing the commander-in-chief and his suite coming that way, and suspecting another visit, he ordered his servant to write on the door with chalk, "No victuals dressed here to-day." Perceiving this inscription, General Washington and his officers rode off, not a little amused at the incident and the oddities of Lee's character.

The scene now shifts to Fort Washington on the banks of the Hudson. A little force of three thousand men was here environed by the enemy in overwhelming numbers. Washington had been opposed to holding this post after the retreat of the Continental army, but Congress urged that it must be maintained, and General Greene, who was in command at Fort Lee, fully acquiesced in this view. Washington most reluctantly yielded his own opinion. On the eve before the final attack by the British, he was crossing the river to personally inspect the fortifications, when he met Generals Greene and Putnam. They assured him that "the men were in high spirits and all would be well." It was already too late to evacuate the fort. Howe's plans were complete.

The advanced line of entrenchments before the fort was about seven miles long and weakly defended. Early on the morning of November 16th, this was attacked at four different points. The Americans, though outnumbered five to one, made a gallant defence, but Cornwallis carried Laurel Hill; Percy and Stirling on the south swept all before them; while on the north, Knyphausen and Rall with the Hessians, clambering up the heights, catching hold of branches and bushes, pushing through the underbrush, and tearing away the fallen trees, under a murderous fire, pressed to within one hundred paces of the fort and demanded its surrender. Washington, who was watching the fight from Fort Lee, "wept with the tenderness of a child" as he saw his men, while begging for quarter, bayoneted by the brutal Hessians. He sent over word, promising to bring off the garrison in the night if they could only hold out till then; but there was no hope. Magaw, the commander, could get but half an hour's delay. The troops crowded into the fort were disheartened, and would no longer man the ramparts. The American flag was hauled down. Though the garrison had lost but one hundred and fifty men and the British five hundred, yet twenty-six hundred prisoners were given up, with artillery and stores which were invaluable to the patriot cause.

Washington now turned all his thought to the probable campaign in New Jersey. He gave orders to immediately evacuate Fort Lee, as the plan of preventing the English fleet from ascending the Hudson was now defeated by the capture of the more important fort. Greene, however, was too slow. November 20th, Cornwallis crossed the Hudson, with a strong detachment, five

miles above Fort Lee, his marines dragging his cannon up the steep ascent to the top of the Palisades. A countryman brought the news to Greene, who sprang from his bed and took to flight with his men, leaving behind them tents standing, blankets unrolled, and camp kettles over the fire. Washington, hearing of the danger, seized the bridge across the Hackensack, and covered the retreat so that all the fugitives, except a few stragglers, escaped.

For eighteen long, weary days, Washington and his shattered army continued to fall back before the conquering forces of Cornwallis. Many of the patriots had no shoes, and their footsteps on the frozen ground were traced in blood. There were but three thousand men in all, on a level country, with no entrenchments, and not a tool for throwing up defences. Newark, New Brunswick, Princeton, and Trenton, marked the successive stages in this bitter flight. The advance of Cornwallis entered Newark as Washington's rear-guard was leaving. At Brunswick, the term of service of the Jersey and Maryland brigades expired, and they refused to stay longer under the flag. At daybreak, December 1st, the disbanded soldiers scattered over the fields seeking the shelter of the woods, and the little remnant of the patriot army broke down the bridge over the Raritan, as Cornwallis's cavalry dashed into their late camp through the still smoking embers of their fires. At Princeton, Cornwallis was joined by Howe with fresh troops. The British unaccountably delayed here for seventeen hours. When they at last reached Trenton, December 8th, it was only to see across the deep, angry Delaware, the Continental rear watching their approach. To cross was impossible, for, under Washington's orders, every boat for seventy miles along the stream had been taken to the southern shore and placed under guard.

During this march, messenger after messenger, order after order, had been sent to General Lee, to hasten from North Castle to the help of his commander-in-chief. Ambitious, flattered with the idea of a separate command, and with the praises of those who were continually contrasting his audacity with the caution of Washington, Lee lingered behind, hopeful of accomplishing some brilliant feat. It was not till December 4th that he crossed the Hudson. He then moved along by the British flank about twenty miles away, watching for a chance to "reconquer the Jerseys." But his presumption was soon to be bitterly punished. On the night of the 12th he stopped at Baskingridge with only a small guard. He did not breakfast till ten o'clock, and then tarried to

write to Gates a letter full of complaint and treason. It was not yet sealed when a cry of "The British!" was raised. Instead of making an effort to escape, the coward came out, bareheaded, in slippers and blanket-coat, and begged for his life. The dragoons carried him off in this unsoldierly plight, without change, to their camp. Sullivan, who had now been exchanged, brought the army safely to the American quarters. Lee's reputation at this time was high, and when Congress learned that he was to be tried as a deserter, it set apart six British officers, then prisoners, to await his fate. This decided measure caused Lee to be released on parole. (December, 1777.)—Time has revealed the fact, however, that while in custody he offered to betray his adopted country.

A carefully-prepared project for the conquest of America, in Lee's handwriting, and endorsed by the secretary of the Howes, as "Mr. Lee's Plan," has lately been discovered in England, which conclusively proves his treason.

HESSIAN GRENADEIER.

The condition of the country was now fearful in the extreme. New Jersey was overrun by the British army. The whigs were forced to hide where they could, and leave their families to the insults of a brutal soldiery. Houses, barns, and fences were burned, orchards cut down, crops and cattle carried off; women were subjected to every species of insult; households were plundered even of the cradles in which infants were rocked to sleep; and "children, old men, and women were left in their shirts, without a blanket to cover them, under the inclemency of winter."

Many of these families had printed protections, signed by order of the British commander; but they availed nothing. The Hessians could not, and the British would not, understand them. The former were utterly lawless. Without ceremony they entered dwellings, ordered the family out of their chairs at the breakfast, dinner, or supper table, and, seating themselves in their places, demanded the best the house could afford. Their appetite satisfied, they roamed through the various apartments, confiscating every article which caught their greed or fancy, with a simple

"Dis is goot for Hesse-man," and happy for the trembling inmates if the visit was not concluded with personal indignities. De Heister was the "Arch-plunderer," and set the example to all his followers. He had even the meanness to advertise the house in which he lived in New York for public sale, although it had been voluntarily given him for his use by its owner, a true loyalist. Worse than all, the American soldiers, infected by the general demoralization, took upon themselves to sack the houses of tories and loyalists, so that, between both armies, no property was secure. Washington was finally compelled to issue orders imposing the severest penalties upon "any officer found plundering the inhabitants, under the pretence of their being tories."

In November, Howe had issued a proclamation offering full pardon to every one who should within sixty days submit to the royal authority. It was well timed. For ten days after the issuing of this proclamation two or three hundred persons daily flocked to the royal camp to take the oath of allegiance to the king. Among them were distinguished persons; as, for example, Samuel Tucker, who had been president of the Provincial Congress and a most trusted patriot. Even John Dickinson refused to accept from Delaware a seat in the Continental Congress. To deepen the gloom still more, Clinton, with four brigades and a fleet under Parker, sailed for Rhode Island and landed at Newport the day that Washington crossed the Delaware. That State was now entirely under their control. Troops that were destined for Washington were detained in New England, and several American armed vessels were kept blockaded in Providence River. Along the Delaware the British army, twenty-seven thousand strong, admirably equipped, was now reaching its advance posts opposite Philadelphia, and it was expected that the English fleet would soon ascend the river. Congress, alarmed, fled from Philadelphia amidst the jeers of tories and the maledictions of patriots. Howe had already written home, "Peace must be the consequence of our successes." No wonder that the hearts of men misgave them in this hour of trial. Yet there were still patriots whose hopes were bright and whose courage stood high. John Adams wrote, "I do not doubt of ultimate success." Washington remained calm and unmoved, and his serene patience touched the hearts of all. Misfortune only mellowed and ripened his magnificent faith, and in all that he said or did there seemed an inspiration.

It was in the midst of winter; the English had gone into cantonments reaching from Brunswick to below Burlington. Howe was in New York, where all was now as merry as a marriage-bell. British and Royalist vied in making the city gay with festival and flag, in honor of the approaching decoration of Lord Howe as Knight of the Bath, conferred upon him in return for his distinguished services. The officers in their comfortable quarters were arranging to pass away the idle hours in theatrical performances for the benefit of the widows and orphans of the war. Cornwallis, thinking the war over, had sent his baggage on board a vessel to return home. Throughout the British army there was the profoundest contempt for the Americans. Grant, who was left in command of Cornwallis's division, declared that with a corporal's guard he could march anywhere in the Jerseys. "Washington's men," he wrote, "have neither shoes, nor stockings, nor blankets; they are almost naked, and are dying of cold and want of food." So he argued they were not to be feared. How little he realized the stuff of which patriots are made!

Rall, who was stationed at Trenton with about fifteen hundred men, principally Hessians, made light of a rumor that he was likely to be attacked. One of his officers having suggested that it would be well to throw up some works to provide against a possibility of assault, he laughed the idea to scorn. "An assault by the rebels! Works! pooh! Let them come. We'll at them with the bayonet." "Herr Colonel," urged the more prudent major, "it will cost almost nothing, and if it does no good, it can do no harm." Rall only laughed the more heartily at such a ridiculous project, and, turning on his heel, sauntered off to hear the musicians, whom he kept almost constantly at their instruments for his own entertainment. "Whether his men were well or ill-clad, whether they kept their muskets clean or their ammunition in good order, was of little moment to him; he never inquired about it; but the music! that was the thing! the haut-boys—he never could have enough of them."

Washington was resolved, as he said, "to clip the wings" of the Hessians, who, by their brutality and cupidity, had excited such universal detestation. The approaching Christmas, a time of general festivity among the Germans, offered a favorable opportunity. The plans were carefully laid. Washington was to cross the Delaware about nine miles above Trenton, and, marching down the river, fall upon the troops at that place. Ewing,

with the Pennsylvania militia, was to cross a mile below the town, and, securing the bridge over the Assanpink, a creek flowing along the south, cut off the retreat of the enemy. General Gates was to take command of troops under General Putnam, Cadwallader, and Colonel Reed, and, crossing at Bristol, to fall upon Count Donop at Bordentown. The night was dark and stormy, with sleet and snow; the river angry and threatening, with cakes

WASHINGTON CROSSING THE DELAWARE.

of grinding ice; so bitter was the cold that two of the men were frozen stiff in death. Putnam was detained at Philadelphia by rumors of insurrection. Cadwallader, honest and zealous, came down to the river, but found the floating ice so thick that he sent back word he could not cross. Ewing did not even make an attempt. Reed, discouraged, went into the enemy's lines at Burlington, and, it is said, obtained a protection from Donop. Gates, impatient of control, disobeyed orders, and set out for Baltimore to intrigue with Congress. There was different stuff in Washington and his officers. Here were Stark, Greene, Stirling, Sullivan, Knox, Monroe, Hamilton—heroes all.

Just as they reached the river, a courier came announcing the failure of Gates. He had easily traced the track of the army by the blood on the snow from those whose shoes were broken. All

the burden was on Washington, but there was no thought of turning back. Anxious and troubled, he stood on the shore watching the boats as they were ferried across by Marblehead boatmen, the same who had brought the army over from Brooklyn on the eventful morning of August 30.

It was gray twilight before the men and the guns were in line on the opposite bank. Then came nine miles march through the howling storm. Sullivan led his men by the river; Washington conducted another column along the upper Pennington road. The former, finding that the arms of his men were wet, sent a messenger to Washington to report the fact. The orderly returned, dismayed by the sudden reply he had received, to "go back and tell his general to use the bayonet." They were near the town. It was broad daylight. But the storm had driven even the sentries inside. As Washington approached the village, he hailed a wood-chopper by the roadside, and asked, "Which way is the Hessian picket?" "I don't know," was the surly reply. An officer interposed, "You may tell; this is General Washington." Dropping his axe, and raising his eyes to heaven, the patriot laborer exclaimed, "God bless and prosper you! The picket is in that house, and yonder stands the sentry." The advance rushed forward. There was a shout, "Der feind! der feind! Heraus! heraus!" (The enemy! Turn out!) The tardy sentries sought to make a stand, but the rush swept them along. Just then there came the sharp rattle of Sullivan's guns from the lower town. The drums beat the alarm. The town was in an uproar. The Hessians, aroused, flew to arms, some firing from the windows, and some hastily forming their ranks. The British light horse and about five hundred Hessians and Chasseurs fled by the bridge across the Assanpink.

Rall had received word the day before that he would be attacked that night, and about dusk a party had come swiftly out of the woods, and, firing upon one of his pickets, departed. He had ordered his men into their ranks, strengthened the outposts, and himself scoured the woods. Finding nothing, and thinking this all that there was to be, he had gone to a Christmas supper and spent the night in card-playing, drinking, and revelry. At early dawn a messenger came from a tory with a note bearing news of the crossing of the river by the American forces. The negro servant, obeying his master's orders, refused him admittance. Knowing the importance of the message, he prevailed on the servant to

carry the note to the officer. Rall, on receiving it, excited by wine and the play, thrust it unopened into his pocket. But now came a different warning. The rattle of the guns was not to be mistaken. Only half sobered by the sudden surprise and the bitter cold, he attempted to rally his men. Captain Washington and Lieutenant Monroe rushed forward with a party and captured the guns in front of his quarters, as the gunners stood with lighted matches in their hands ready to fire. Washington and Sullivan had now joined forces, and Forest's battery of six guns was opened upon the dismayed Hessians at only three hundred paces. Washington, himself, was in front directing every movement. Rall, however, extricated his men and drew them up in an orchard east of the village. By a quick movement, Hand's regiment of riflemen was thrown on his rear. Even now, with a desperate resolve, he might have cut his way out; but he could not think of fleeing from his despised foes, and the Hessians were loath to give up the booty they had collected in their quarters. The word was given to charge. In the midst Rall was struck by a ball and fell from his horse. His troops, quickly hemmed in by the exulting Americans, surrendered. It was an hour of triumph. "The Lord of hosts," wrote the praeses of the Pennsylvania German Lutherans, "heard the cries of the distressed, and sent an angel for their deliverance." Washington, overwhelmed by supreme joy, clasped his hands and raised his eyes gleaming with thankfulness to heaven. Nearly one thousand prisoners, twelve hundred small arms, six guns, and all the standards of the brigade, were the trophies of this victory. Had the other detachments carried out the part assigned to them, there would have been a complete capture at Trenton, while the various posts along the Delaware would have shared the same fate.

Washington dared not stay in the quarters so hardly won, as the enemy, alarmed by the fugitives from the battle, would soon gather. Before leaving Trenton, however, accompanied by Greene, he visited Rall. Here the soldier was lost in the Christian, and the dying hours of the Hessian officer were soothed by the sympathy of his generous foe. "The remembrance of the deed," says Lossing, "seems to play, like an electric spark, around the pen of the historian while recording it." Back through the same storm amid which it had come the little army now toiled, conveying its prisoners and spoils. Another night of peril and hardships in recrossing the river brought them again to

their old camp, after an absence of forty hours. Stirling and half the men were disabled by the exposure.

This daring stroke gave a new impulse to the cause of liberty. The prestige of invincibility which had hitherto preceded the

WASHINGTON'S VISIT TO GENERAL RALL.

Hessians was broken. Those who had grown lukewarm now became ardent again. Tories were depressed. The general whom all thought so slow was found to be bold and dashing when the proper opportunity arrived. Howe, alarmed, sent Cornwallis with reinforcements back into Jersey for a winter campaign. "All our hopes," said Lord George Germain, "were blasted by the unhappy affair at Trenton." News of the victory having reached Congress, the president attempted to announce the fact, but broke down, and could only call upon the secretary to read Washington's modest despatch.

Meanwhile, Washington's hands had been strengthened by Congress. He was made virtually a dictator for six months, being authorized to remove any officer under brigadier-general, to fill any vacancy, to seize supplies for the use of the army, to

arrest the disaffected, and to raise troops at his discretion. The regiments whose time expired the first of January were induced to remain by a bounty of ten dollars to each man. The military chest was empty, but Washington applied to Robert Morris, the rich patriot merchant of Philadelphia, who had just sent up to the commander-in-chief a small sum of "hard money," namely, four hundred and ten Spanish dollars, two crowns ten shillings and sixpence in English coin, and a French half-crown. The exigencies now required a large amount, and Morris was at a loss how to meet the sudden demand. The records of the time tell how, on New-Year's morning, he went from house to house, rousing the inmates from their beds, to borrow money. He had no success; but at last, while walking home from his office anxiously considering the case, he met a wealthy Quaker, to whom he imparted the state of affairs. "Robert, what security canst thou give?" asked the Quaker. "My note and my honor," said Morris. "Robert, thou shalt have it," was the reply; and the next morning the sum of fifty thousand dollars was on its way to Washington.

ROBERT MORRIS.

CHAPTER IV.

THIRD YEAR OF THE REVOLUTION—1777.

THE year dawned brightly for the new Republic. The term, "Great news from the Jerseys," now grew into a popular saying. Widespread was the panic among the British troops. December 25th, General Griffin, with some Pennsylvania militia, finding he was too weak to join in the proposed attack, and wishing to do something in the good cause, managed to decoy Donop and the Hessians off on a fruitless chase as far as

Mount Holly. There he left them to find their way back as best they could. On the 27th, Cadwallader crossed the Delaware. He was accompanied by Colonel Reed, who had become a warm patriot again, and was ever after the friend and confidant of Washington. They found Burlington, Bordentown, and other posts deserted, the British having fled precipitately. All along the road the inhabitants were busy tearing down the red rags—tory signals—from their doors.

Washington having given his men a brief rest, recrossed the Delaware and took post at Trenton. Here he managed to collect five thousand men, three-fifths of whom were merchants, mechanics, and farmers, who knew nothing of war, but, inspired with love of country, had left their warm firesides in the midst of winter to lie upon the ground without tent or shelter; to march through snow and storm; to encounter privation and danger, if only they could drive back the foe.

Cornwallis was now pressing forward from Princeton with the

flower of the British army. His advance, annoyed by troops hidden in the woods who stubbornly disputed every inch of ground, was slow. At Trenton he found Washington's army drawn up behind the Assanpink, with the bridge, across which the cavalry escaped on the famous morning of December 26th, and all the neighboring houses and barns, strongly held. It was late. Sir William Erskine urged to storm the position that night, but Cornwallis replied that his troops were weary and he would "catch the fox in the morning."

Washington's situation was perilous in the extreme. Before him was a powerful army, behind, an impassable river. To retreat was to give up Jersey to the enemy. If he stayed he could hardly hope for victory. He determined to sweep around the British left, by a circuitous route known as the Quaker road, to Princeton, where he presumed there were few troops remaining, and thence, perhaps, gain the English magazines at Brunswick. The army began to move at midnight. The roads, however, were muddy and the cannon could not be moved. Suddenly the wind veered, and within a few hours the ground everywhere became as hard as a pavement. To conceal the movement, men were set at throwing up earthworks near the bridge. The sentinels kept their posts until daybreak, heaping fuel on the blazing fires.

About sunrise, having arrived near Princeton, Washington, with the main body, turned off by a nearer and side road to the college, while General Mercer, with his brigade, kept on along the Quaker road to the turnpike, where he was to break down the bridge over Stony Brook, and thus intercept any fugitives from Princeton and any reinforcements from Cornwallis at Trenton. Just then the British seventeenth regiment and the fifty-fifth regiment, Colonel Mawhood, had crossed the bridge *en route* for Trenton. Catching sight of the patriot guns gleaming in the sunrise, Mawhood hurried back with his regiment. Both parties rushed to secure an advantageous post on the high ground at the right, toward Princeton. The Americans, reaching it first, took position behind a fence, whence they opened fire upon the British. It was sharply returned. Mercer's horse fell under him. In the confusion Mawhood charged. The Americans, having no bayonets, broke. Mercer, while trying to rally them, was knocked down with the butt end of a musket, and, refusing to ask for quarter, but defending himself to the last, was repeatedly stabbed and left for dead. Just then Washington, hearing the

guns, came to the rescue with the Pennsylvania militia, and, rallying the fugitives, led them to the charge. The raw troops wavered. Washington, dashing to the front within thirty paces of the enemy, reined in his horse just as both lines fired a volley. Fitzgerald, his devoted aide-de-camp, drew his cap over his eyes that he might not see the death of his beloved general. The smoke cleared away, and there still stood the commanding form

THE DEATH OF GENERAL MERCER.

of Washington, calm and imperturbable, as if on parade. "Thank God!" exclaimed Fitzgerald, "your excellency is saved!" "Away, and bring up the troops! The day is our own!" cried the heroic commander, his eye ablaze with inspiration and resolve. Troops now coming up on every side, the British fell back, and it was only by their desperate valor and perfect discipline that they escaped over the fields and fences to the Trenton road and across the brook. Washington, in the midst of the conflict, marked their superior control and exclaimed to his officers, "See how those noble fellows fight. Ah, gentlemen! when shall we be able to keep an army long enough together to display a discipline equal to our enemies'?"

Meanwhile, the rest of the Americans had engaged the fifty-fifth and fortieth regiments, which had come up too late for the fight. Again, after a sharp contest, the British were defeated. A part fled to the Brunswick road, and the rest took refuge in

the college. The artillery opened upon them. The first ball, it is said, passed through the portrait of George II., hanging in the room used for a chapel, neatly taking off the monarch's head. Captain Moore and his brave companions soon broke open the door, and the occupants were glad to surrender. The American loss had been trifling, except in officers, while that of the British was two hundred killed and wounded and two hundred and thirty prisoners. Washington, with his wearied men, did not dare to continue on to Brunswick, but turned toward Morristown, where, among the rugged highlands, he would be safe from pursuit.

That morning's light had revealed to Cornwallis the smouldering watch-fires and the deserted camp of the Americans. No one could tell him whither his enemy had gone. Even the Tories, usually so watchful, were at fault. He heard the guns at Princeton through the keen, frosty air, but mistook it for thunder. Erskine, however, was not deceived. He exclaimed, "To arms, General! Washington has outgeneraled us. Let us fly to the rescue at Princeton." Chagrined at his blunder, and alarmed for the safety of his magazines at Brunswick, Cornwallis roused his men and hastened back toward Princeton. As his advance-guard came in sight of Stony Brook, they saw a party which Washington had sent back under Major Kelly to tear down the bridge. Opening fire, they drove off the men; but the major kept on chopping desperately at the log which held up the timbers, till at last it suddenly gave way, and he fell into the stream. Hastily scrambling out, he started to run, but his wet clothes impeded his progress, and he was afterward captured. Cornwallis could not stop to repair the bridge, and so, ordering his men into the water, they forded the swollen brook, and in their "mail of frozen clothes" hastened on to Princeton.

Suddenly they were brought to a stand by a shot fired from a heavy thirty-two pounder in an entrenchment at the entrance of the village. Supposing the patriots to be there in force, he sent out horsemen to reconnoitre, and prepared to storm the battery. The cavalry found the gun deserted. It had been fired by a straggler from Washington's rear-guard.

The delay at the brook and the breastwork had given time for the patriots to escape. Cornwallis, dejected and disheartened, went on to Brunswick. A bolder general might have pursued the Americans, but the British, just then, were in no mood for any

rash enterprise against a general whose strategy had proved so superior to all their discipline and numbers.

Meanwhile the patriot army was toiling forward, the men so weary from lack of food and sleep that they often dropped down on the frozen ground, and, sinking into a lethargic slumber, were aroused only by the blows and shouts of their companions. That night, chilled and half-clothed, with no tents or blankets, they lay in the woods at Somerset Court-House, an easy prey, had the enemy been at hand.

These exploits won for Washington universal applause. He was declared to be the savior of his country. Europe rang with praises of the New World's general. Frederick the Great of Prussia declared that his achievements were the most brilliant of any recorded on the pages of history. Before the sixty days mentioned in Howe's proclamation had expired, Washington issued a counter one, commanding that all who had signed the British pardon should, within thirty days, either withdraw to the English lines or take the oath of allegiance to the United States, on pain of being held as common enemies. The excesses of the British army had aroused the bitterest hatred. The day of deliverance seemed now to have come, and all classes were animated with the hope of "expelling these infamous robbers." Armed men sprang up as if from the ground. Foraging parties were everywhere cut off, and soon the British dared not venture outside their lines. The day Washington reached Morristown, one Oliver Spencer, with some New Jersey militia, routed an equal body of Hessians, taking thirty-nine prisoners. The same afternoon, Governor Clinton, coming down with a small force from Peekskill, captured Hackensack, the garrison making a speedy flight. General Maxwell took Elizabethtown and one hundred prisoners. General Dickinson, with four hundred raw volunteers, forded the river near Somerset Court-House, and attacked a foraging party, taking several prisoners, forty wagons, and one hundred English draught horses. Before the close of January the British held only Brunswick, Amboy, and Paulus Hook.

From the beginning of the war there had been hopes of obtaining aid from Europe. The French were especially well disposed to the Americans, partly because of hatred to England, and partly of a love for liberty which was gaining ground among the people of that country. In 1776, Silas Deane, of Connecticut, had been sent as commissioner to France. He accomplished little, however.

He sent back only about fifteen thousand old muskets, and was strongly suspected of misappropriating the public funds. He was afterward followed by Benjamin Franklin and Arthur Lee. The former, already noted as a philosopher, in his quaint Quaker garb, calf-skin shoes tied with leather strings, and his plain, republican manners, was a novelty in high French circles. His wit, his sturdy common sense, and his fascinating conversation, attracted universal admiration, and he instantly became the lion of the day. The fashionable world went crazy over the strange American, who was formally presented to the king in a plain Manchester velvet coat—the same which he had worn in England when he appeared before the Privy Council as agent for Massachusetts—white stockings, with spectacles on his nose, a white hat under his arm, and his thin gray hair quite innocent of powder. When he visited the theatre or opera, the brilliant audiences rose to receive and greet him with wild applause. Elegant *fêtes* were given in his honor, and of three hundred lovely women, the most beautiful was chosen to crown his gray hairs with a wreath of laurel and salute his cheeks with a kiss. Franklin modestly accepted all these extravagant attentions as offered only through him to his beloved country.

He soon secured a promise of secret assistance. Fifty-six thousand hogsheads of tobacco were to be furnished the agents of the French government, upon which an advance of a million francs was obtained. More than twenty thousand stands of arms and one thousand barrels of powder reached America during the ensuing campaign. Quite as valuable were the gallant volunteers who espoused our cause and came across the ocean to help fight the battles of freedom.

Marquis de Lafayette, at a banquet given in honor of the brother of the English king, first heard the Declaration of Independence. The effect upon him was quite contrary to that intended. Won by its arguments, he from that time joined his hopes and sympathies to the American side. Yet, how was he to aid it? The French nobility, though heartily disliking England, did not endorse the action of her colonies. He was not yet twenty years of age; he had just married a woman whom he tenderly loved; his prospects at home for honor and happiness were bright. To join the patriot army would take him from his native land, his wife, and all his coveted ambitions, and would lead him into a struggle that seemed as hopeless as its cause was just. But

his zeal for America overcame all this. Other difficulties now arose. His family objected; the British minister protested; the French king withheld his permission. Still undaunted, he purchased a vessel, fitted it out at his own expense, and, escaping the officers sent to detain him, crossed the ocean. Arriving at Charleston, he hastened to Philadelphia, and, offering himself to Congress, asked permission to serve as a volunteer without pay. A few days after, his acquaintance with Washington began, which soon ripened into a tender and intimate friendship.

Baron de Kalb accompanied Lafayette. He was a French officer of skill and experience, and received the appointment of major-general in the Continental army. He proved a valuable officer, and met a glorious death amid the rout at Camden.

PULASKI.

BARON DE KALB.

KOSCIUSKO.

Kosciusko, a Pole of noble birth, was commended to Washington by Franklin, and offered himself "to fight as a volunteer for American independence." "What can you do?" asked the commander. "Try me," was Kosciusko's laconic reply. Washington was greatly pleased with him, and made him his aid. He became a colonel in the engineer corps, and superintended the construction of the works at West Point.

Count Pulaski, a Polish officer who had performed many daring exploits during the struggles of his native country for liberty, entered the service of the United States this year. "Pulaski's American Legion" afterward won great renown and did excellent service.

The English government was now making every exertion to fill up the army for the ensuing campaign. The most reliance

was placed upon the Hessians; but the German princes met with great difficulty in supplying recruits. The cause was unpopular among the people, and desertions were numerous. Officers picked up men anywhere they could find them. Foreigners, vagabonds, and loose fellows—even unprotected travelers were forced into the ranks. Troops had to be driven on shipboard at the point of the bayonet. The regiments of Anspach, for example, could not be trusted with arms or ammunition. When it came to embarking, the guard was unable to get them aboard, and the landgrave himself was sent for in all haste. He personally took the place of driver, and, by the power of his traditional authority, at last succeeded in forcing the reluctant and rebellious soldiers into the boats. Frederick of Prussia, we are told, was disgusted with this whole mercenary scheme. Metternich, as the representative of the Austrian court, reclaimed the subjects of that country. Thus the English army secured only about enough Hessians to make up the loss at Trenton.

The most flattering proposals were made to induce the captured American sailors to enlist in the British navy. The reply of one of them, Nathan Coffin, is worthy of immortality, "Hang me to the yard-arm of your ship if you will, but do not ask me to become a traitor to my country."

Enlistments among the tories were encouraged. Tryon, who was a fitting tool, was put in charge of this detestable work. Commissions were issued freely. De Lancey of New York and Skinner of New Jersey were made brigadiers. It was a common boast of the loyalists that as many of the inhabitants of the States were taken into the pay of the crown as into that of Congress. This was doubtless an exaggeration, yet Sabine, in his "Loyalists of the American Revolution," estimates twenty-five thousand as a low figure for the total number who thus not only proved recreant to the cause of liberty, but took up arms against it in the service of the tyrant.

The tomahawk and scalping-knife were also called in to aid the king in this emergency. The entire frontier, it was hoped, would resound with the war-whoop, as in the terrible days of Philip and Pontiac. The merciful provisions of Sir Guy Carleton, in command in Canada, for the employment of the Indians, were revoked. "The Ottawas, the Chippewas, the Wyandottes, the Shawnees, the Senecas, the Delawares, and the Pottawatomies," wrote the secretary, Lord Germain, "are no longer to be

restrained." The employment of such allies was severely denounced by the opposition in the British parliament. "If I were an American, as I am an Englishman," exclaimed Pitt in an eloquent speech on the subject, "while a foreign troop was landed in my country, I never would lay down my arms—never, *never*, NEVER!"

This year witnessed the first celebration of the signing of the Declaration of Independence. The Pennsylvania Journal of that date gives a glowing description of the festivities in Philadelphia. The firing of salutes, music from the Hessian band taken at Trenton, *feux de joie* from a corps of British deserters, a congressional dinner with toasts for the living and the dead, and a military review, filled up the day. In the evening there were the ringing of bells and an exhibition of fireworks—the latter beginning and ending with the flight of thirteen rockets. "Thus," says the writer, "may the Fourth of July, that glorious and ever-memorable day, be celebrated through America by the sons of freedom from age to age, till time shall be no more. Amen and Amen!"

George III., we are told, was interested in the minutest detail of the American war. The plan for the campaign of 1777, which was adopted in his closet, was for General Howe to take care of Washington and his army and seize Philadelphia; General Burgoyne was to move from Canada by the old French and Indian war route up Lake Champlain, while Clinton was to ascend the Hudson from New York; thus all intercourse between New England and the other States would be cut off, and the navigation of the Hudson secured. Burgoyne left Canada with a force of, perhaps, ten thousand British and Indians. Near Crown Point he gave a grand feast to the chiefs of the Six Nations, after which four hundred of their warriors took the war-path with the British general. Here a grandiloquent proclamation was issued, declaring how difficult it would be to restrain his savage allies in case any resistance should be offered to the progress of the royal forces under his command.

At evening on the 1st of July, he appeared before Fort Ticonderoga. St. Clair, who was in command at that point, had written not long before: "Should the enemy attack us they will go back faster than they came." On the 5th, the British dragged a battery of heavy guns up Mount Defiance, on the opposite side of the outlet, which commanded both Ticonderoga and Fort Independence, but was supposed to be inaccessible to artillery. St.

Clair had no chance of defence. That night, with his garrison of three thousand men, he escaped in the darkness by land and water, taking only such stores as his boats could carry. The burning of his residence at Fort Independence by General De Fermoy, in violation of express orders, revealed to the enemy what was transpiring. General Fraser pushed on eagerly in pursuit. Burgoyne, at day-break, took possession of the forts. It was the third time Fort Ticonderoga had been captured without bloodshed.

At sunrise on the 7th, Fraser overtook the rear-guard of the Americans at Hubbardton while they were at breakfast. Fraser had only about eight hundred men; while there were three regiments of the Americans under Seth Warner, Francis, and Hale. The last, with his men, retired in the direction of Castleton, and *en route* meeting a body of the British, surrendered without resistance. Warner and Francis gallantly rallied the remainder, about seven hundred in number, and turning upon the British, seemed on the point of winning the day; but Riedesel, hearing the firing, came up with a body of Hessians, his music playing and his men singing a battle-hymn. The Americans were forced to give way. Francis, after having charged three times, was killed. Over one hundred fell and two hundred were taken prisoners. Those who escaped scattered through the woods. It was two days before Warner, with ninety men reached St. Clair.

RUINS OF FORT TICONDEROGA.

Meanwhile, Burgoyne sent a fleet up the lake. It overtook the American flotilla bearing the stores from Ticonderoga, just as, unsuspecting of danger, it moored in the harbor at Whitehall. The Americans blew up some of the galleys, abandoned the others with the bateaux, set fire to the buildings, and fled back to join General Schuyler at Fort Edward. A British regiment

pursued them as far as Fort Ann. The garrison of that post, under Colonel Long, consisted of about five hundred convalescents and invalids. He gallantly came out to meet the enemy, and took post in a ravine about a mile in front of his works. The British recoiled from his sharp fire and retreated to a neighboring hill. Following them up, he would have utterly defeated them if his ammunition had held out. As it was, he inflicted a loss of fifty men. When the English came back with reinforcements, it was only to find the fort burned to the ground and the garrison escaped.

The fall of Ticonderoga and the defeat of the army, with the loss of two hundred pieces of artillery, fell upon the country like a thunderbolt from the clear sky. "We shall never be able to defend a fort," wrote John Adams, "till we shoot a general." A ridiculous story obtained credence that Burgoyne had paid Schuyler and St. Clair for their treachery, in silver bullets fired into the American camp. Possibilities of Schuyler's treachery and reports of his cowardice and incapacity were freely circulated.

The entire country between Whitehall and Fort Edward was a wilderness, traversed by a single military road leading through extensive woods and morasses and crossing many creeks. Burgoyne, on his advance, found his path obstructed by fallen trees, broken-down bridges, and ruined causeways. Beyond this, Schuyler did nothing to prevent the British progress, and on the 29th the cross of St. George was planted on the banks of the Hudson. During the march, the English army had built with infinite toil more than forty bridges and a log causeway over two miles long. This labor, under the hot sun of July, by men burdened with their equipments and annoyed by swarms of insects, had thoroughly exhausted their strength. There was no enemy, however, to dispute their way. Fort Edward could not be held, and the Americans retired, first to Saratoga, then to Stillwater, and finally to the islands in the Hudson at the mouth of the Mohawk. In spite of this timidity and lack of skill, Burgoyne's disastrous fate was fast unfolding itself.

Before leaving Canada, he had sent Colonel St. Leger to ravage the Mohawk Valley, thus creating a diversion in his favor, and then to meet him at Albany. St. Leger had induced one thousand Indians to join his ranks as he marched southward from Oswego. With Brandt and his Mohawk Indians, Johnson and his

tories, and Butler and his rangers, he laid siege to Fort Schuyler, late Fort Stanwix, now Rome. This was at that time the extreme western settlement of the State. It was a log fortification, built on rising ground, and held by two New York regiments under Gansevoort and Willett.

General Herkimer, knowing that the fort was not provisioned or equipped for a siege, raised a body of militia from Tryon county, and set out for its relief. At Oriskany they fell into an ambuscade. While carelessly marching through the woods, "Johnson's Greens" attacked them in front and Brandt's Indians on both flanks. It was a true battle of the wilderness. The militia, royalists, and savages were soon so intermingled that there was no room to use fire-arms. The white man and Indian, wrestling in mortal conflict, striking with bayonet, hatchet, and hunting-knife, often fell in the shade of the forest, "their left hands clenched in each other's hair, their right grasping, in a grip of death, the knife plunged in each other's bosom." Herkimer was mortally wounded, but remained till the end giving orders and encouraging his companions. About four hundred of the Americans finally retreated to a knoll near by, where, from behind trees and logs, they held their ground until the Indians, suddenly shouting "Oonah! Oonah!" hastened back to save their camp.

While this struggle was going on, Lieutenant-Colonel Willett, with a part of the garrison, had made a daring sally toward the scene of conflict. They drove all before them—rangers, Tories, savages, and squaws. Hearing, however, of Herkimer's misfortune, they went back to the fort without losing a man, carrying with them kettles, furs, five flags, and a few prisoners.

When the enemy first appeared, the garrison was without a flag, but with true American ingenuity, one had been straightway improvised. Shirts were cut up to form the white stripes, bits of scarlet cloth were sewed together to supply the red, and a blue cloth cloak served as a ground for the stars. Beneath this patchwork streamer they now proudly placed the colors they had won. "It was the first time," says Bancroft, "that a captured banner floated under the stars and stripes."

It is interesting, in this connection, to notice the origin of our flag. In early times the English colonies naturally displayed the flag of the mother-country. We read that in 1636, however, Endicott, the governor of Massachusetts, cut out the cross of St. George as a "Romish symbol," and the king's arms were after-

ward substituted for this emblem, so obnoxious to the Puritans. In 1651, with the commonwealth came a revival of the old standard of St. George. At the opening of the Revolution the colonies used a great variety of flags. At Bunker Hill it is probable there was no American banner flying. Considering themselves still a part of the British empire, the patriots frequently fought under the "Union Jack." While Washington was in command at Cambridge he raised a flag, called the "Great Union," which consisted of thirteen red and white stripes, having at the corner the cross of the English flag. The Americans carried this banner when they entered Boston after its evacuation by General Howe; when they fled through New Jersey before the conquering enemy; and when they crossed the Delaware 'mid snow and ice, and charged at Trenton in the early dawn. The vessels of the infant navy bore a white flag with a green pine-tree in the corner. The United States were free a long time before they assumed a distinctive flag. June 17th of this year Congress voted that "the flag of the thirteen United States be thirteen stripes, alternate red and white, and the union be thirteen white stars in the blue field." The latter were arranged in a circle. Paul Jones, who afterward became famous, was the first to hoist the new flag over an American ship-of-war, he having previously displayed it to a crowd assembled on the banks of the Schuylkill, while he sailed up and down in a small boat, with the patriotic banner proudly unfurled.

Finding that Fort Schuyler could not hold out much longer, Colonel Willett and a friend, Lieutenant Stockwell, determined to inform Schuyler of the situation. One dark, stormy night they crept from the entrenchments, passed through the camp, escaped sentinels and Indians, crossed the Mohawk on a log, and reached the American army in safety.

Arnold, always ready for a desperate service, volunteered, with eight hundred men, to go to the relief. He accomplished his mission by a stratagem. A half-witted boy, who had been taken prisoner, was promised his freedom if he would spread the report among St. Leger's troops that a large body of Americans was close at hand. Having cut holes in his clothes, he accordingly ran breathless into the camp of the besiegers, showing the bullet holes and describing his narrow escape from the enemy. When asked their number, he mysteriously pointed upward to the leaves on the trees. The Indians and British were so fright-

ened that, though Arnold was yet forty miles away, they fled in a panic, leaving their tents and artillery behind them.

Such was the difficulty of getting supplies through the wilderness from Lake George, that after two weeks hard labor Burgoyne had only secured four days provisions. Learning that the Amer-

THE ALARM AT FORT SCHUYLER.

icans had collected a quantity of stores at Bennington, he sent Colonel Baum with about eight hundred Hessians, Canadians, and Indians to seize them, collect horses, recruit royalists, and thence rejoin the army at Albany. Fortunately, on the very day, August 13th, that Baum set out, General Stark, who was in command of a brigade of New Hampshire militia, arrived at Bennington. He had just refused to join General Schuyler, on the ground that his troops were raised for the defence of the State, and he had been promised a separate command. This act of insubordination, which might have been fatal, now proved the salvation of the country. On receiving news of the approach of the British, Stark immediately forwarded word to Colonel Warner to come to his aid with the Green Mountain Boys. Nearing Bennington, Baum discovered a reconnoitering party of Americans, and entrenching himself on high ground in a bend of the Walloomscoick River, sent back to Burgoyne for reinforcements. The next day was so rainy, that all movements were prevented.

During the night of the 15th a body of Berkshire militia arrived. Rev. Mr. Allen, of Pittsfield, and a large number of his church members were among them. This gentleman was burning to display his patriotic zeal, and before daybreak, while the clouds were still pouring, he impatiently sought Stark. "Now, general," he said, "the Berkshire people have been called out several times before, without having a chance to fight, and if you do not give it to them this time, they will never turn out again." "Well," answered the general, with a secret satisfaction at the pluck of his troops, "do you wish to march now, while it is dark and raining?" "No, not just this moment," was the reply. "Then just wait till the Lord gives us sunshine," returned Stark, "and if I do not give you fighting enough, I'll never ask you to come out again."

The morning dawned clear, and both sides prepared for action. About noon, Stark developed his plan. Detachments were sent right and left to the rear of the enemy's main post on the heights. Baum, seeing men in their shirt-sleeves and with simple fowling-pieces collecting behind his camp, mistook them for country people, and thought nothing of it. Another detachment was then sent to Baum's right, while his attention was attracted by a feigned attack upon a tory entrenchment at the ford in front. At three o'clock the troops in the rear dashed up the hill. At the first volley Stark ordered a charge. As they reached the top they caught sight of the British lines forming for battle. "There are the red-coats," he shouted; "we beat them to-day, or Betty Stark is a widow." On his men dashed, sweeping the tories before them. There was no flinching. With perfect confidence in their leader, though destitute of cannon, bayonets, and discipline, they closed in upon the Hessians on all sides. The sharp-shooters crept up within eight paces to pick off the cannoneers. The Germans fought with desperate valor, but their ammunition giving out, the militia scaled the works. Baum ordered his men to break out with bayonet and sword, but he was soon mortally wounded, and his men surrendered. The Indians had fled with horrible yells early in the day.

Just as the battle was won, however, it seemed to be lost. The militia had dispersed to plunder the camp when Breyman came up with the reinforcements from Burgoyne. An hour earlier and they might have claimed the day. They now rallied the fugitives and pushed for Baum's entrenchments. At this moment Warner arrived with his regiment. Stark collected the militia, and again

the battle raged fiercely as ever. At sunset the Hessians ordered a retreat, leaving cannon and wounded. The exulting Americans followed them till night-fall. Darkness alone saved them from annihilation. The patriots lost only seventy all told, while the British loss was twice as great, besides about seven hundred prisoners.

An incident illustrates the spirit of the men that day. One old man had five sons in the patriot army. A neighbor, just from the field, told him that one had been unfortunate. "Has he proved a coward or a traitor?" asked the father. "O no; he fought bravely," was the answer; "but he has fallen." "Ah," said the father, "then I am satisfied."

The flight of St. Leger and the defeat at Bennington aroused the people from their depression, and inspired them with hope of success. The atrocities committed by the Indians also did much to inflame them with hatred of a government which let loose upon them such savage foes. None of their bloody acts caused more general execration than the murder of Jane McCrea. This young lady was the betrothed of a Captain Jones of the British army. She lived near Fort Edward in the family of her brother, who, being a whig, started for Albany on Burgoyne's approach. But she, hoping to meet her lover, lingered at the house of Mrs. McNeil, a staunch royalist, and a cousin of the British General Fraser. Early one morning the house was surprised by Indians, who dragged forth the inmates and hurried them away toward Burgoyne's camp. Mrs. McNeil arrived there in safety. A short time after, another party came in with fresh scalps, among which she recognized the long, glossy hair of her friend. The savages, on being charged with her murder, declared that she had been killed by a chance shot from a pursuing party, whereupon they had scalped her to secure the bounty. The precise truth has never been known. This massacre was probably no more horrible than many others. But it was susceptible of embellishment, and everywhere produced a deep impression. Many patriots were led to join the army, and many royalists to desert a cause which permitted such atrocities.

The New England troops were unwilling to serve under Schuyler, who seemed to have little confidence in them, and the militia consequently came in but slowly. Gates, who was ambitious of a separate command, and who had been superseded by Schuyler in the charge of this department, was constantly

intriguing to oust his rival. Congress lacked faith in Schuyler's abilities, and, after the fall of Ticonderoga, even proposed to change all the higher officers of the northern army. Washington was desired to nominate a successor to Schuyler, but declined. With noble self-sacrifice, though he was himself confronted by a far larger army than was Schuyler, he sent him two brigades of his best troops, and ordered thither Morgan with his incomparable riflemen; Lincoln, who was popular with the eastern militia; and Arnold, famous for his desperate daring. He also wrote personally to the governors of the New England States, urging them to rally in this emergency. Soon the yeomanry began to pour into camp, all eager, even anxious, for a battle. Such was the dissatisfaction with Schuyler, that Gates was now appointed to take his place. However much the former may have lacked the abilities of a great general, he proved

MRS. SCHUYLER SETTING THE GRAIN-FIELDS ON FIRE.

a true patriot. No spirit of jealousy at the success of his rival actuated him. He magnanimously threw all his influence in favor of Gates, made known to him his plans and efficiently aided in their execution. His great heart had no more room for envy than for selfishness. During the retreat he had given orders to Mrs. Schuyler to set fire to his fields of grain at Saratoga, to prevent the possibility of their falling into the enemy's hands.

Burgoyne's position was every day becoming more embarrassing. The Canadians and tories were discouraged. The Indians,

indignant at the humane efforts Burgoyne had made to restrain their ferocity, were rapidly deserting. His misfortunes weighed like an incubus on the *morale* of the whole army. His instructions, however, were positive. He expected Clinton had already ascended the Hudson to co-operate with him, and so, against the judgment of his best officers, determined to proceed. Provisions for about thirty days had been painfully gathered, and with his army of six thousand men, all veterans, splendidly equipped, and with a fine artillery, he promised yet to "eat his Christmas dinner in Albany."

Meanwhile, the American army, at least ten thousand strong, well armed, burning with patriotism and eager for the fray, had advanced to Bemis's Heights, near Stillwater. Gates was unskilful, and perhaps cowardly, while Schuyler's friends were indignant at his displacement; but Arnold, Morgan, Poor, Learned, Fellows, Dearborn, Cilley, Cook, Scammel, Glover, and others were there, and no one in the patriot ranks had a doubt. Burgoyne crossed the Hudson on the 13th and 14th, and encamped at Saratoga; but, delayed by bad roads and broken bridges, in four days he did not progress as many miles. It was not until the 18th that he reached Wilbur's Basin, two miles from Bemis's Heights, and proposed to attack the Americans. Their position was a very strong one, and, under Kosciusko's direction, had been carefully fortified. The line of entrenchments was circular in form, with the right resting on the river and the left on a ridge of hills. About ten o'clock the next forenoon the British army advanced in three columns. The left wing, with the artillery under Phillips and Riedesel, was to move along the flat by the river; Burgoyne himself commanded the centre; and Fraser led the right by a circuit upon the ridge to attack the American left wing. Upon the front and flanks of the columns hung Tories, Canadians, and Indians. Gates desired to await an attack. At the urgent solicitation of Arnold, however, he finally sent out Morgan with his riflemen and Major Dearborn with the infantry. The former passed unobserved through the wood, but driving back a party of Canadians and Indians too vigorously, he unexpectedly came upon the main body of the English. His men were scattered, and for a moment he was left almost alone. A shrill whistle soon brought his sharp-shooters around him. Cilley and Scammel coming to his aid with the New Hampshire regiments, a sharp contest ensued. The battle now lulled, Phillips

bringing up artillery on one side and Cook the Connecticut militia on the other.

At three o'clock the struggle began again, not far from the same point. Gates had no plan; there was consequently no manœuvring. Both sides were on gentle eminences, partly sheltered by wood, and out of gun-shot of each other; between them was an open field. The British advanced to clear the wood of the Americans; they sallied forth and drove the English from their guns, who, in turn, rallied. Thus the tide of battle ebbed to and fro. The cannon were taken and retaken several times. Too late to accomplish anything, Learned with a brigade went around to attack the British in the rear; but Riedesel with some Hessians climbed the hill and fell upon the American flank. Darkness now coming on, the patriots quietly drew back to their entrenchments. Twice during the evening, however, there were sharp skirmishes, and the last American did not leave the field until eleven o'clock. The English lay on their arms near by, and technically claimed the victory, though they had not gained their end, which was to dislodge the Americans from their position; while the latter had gained theirs by preventing the British from advancing. Each side, however, took to itself the honor, and supposed that with a part of its forces it had beaten the whole of the hostile band. In fact, only about three thousand of either army were engaged. The American loss was not far from four hundred, and the English five hundred. The fire of the American riflemen was excessively annoying. They climbed the trees and picked off the English officers. A bullet designed for Burgoyne struck the arm of an aid who was just handing him a letter. In one battery three-fourths of the artillerymen were killed or wounded, and every officer save one was struck.

The next morning Arnold urged that the work should be followed up, and Burgoyne's shattered forces be attacked at once before they had time to prepare entrenchments or to recover from their exhaustion. Gates resented the interference. A quarrel ensued, and Arnold demanded a pass to go to General Washington, which was granted. Seeing how discreditable it would be to leave just before a battle, Arnold finally remained in his tent, but without any troops, as the command of the right wing was given to Lincoln.

For over two weeks both armies lay in their camps, which were only a cannon-shot apart, carefully fortifying themselves and

watching an opportunity to catch each other at a disadvantage. Burgoyne's position was now perilous in the extreme. He had six or eight hundred sick and wounded in hospital; his horses were weakened by work and want; and he was forced to cut off one-third of the daily rations of his men. Patriot bands swarmed everywhere, breaking down bridges and harassing the pickets and foraging parties. Neither officer nor soldier dared to remove his clothes at any time, and the camp was in almost constant alarm. One night twenty young farmers, residing near by, resolved to capture the enemy's advance picket-guard. Armed with fowling-pieces, they marched silently through the woods until they were within a few yards of the station. They then rushed out from the bushes, the captain blowing an old horse-trumpet and the men yelling. There was no time for the sentinel's hail. "Ground your arms, or you are all dead men!" cried the patriot captain. Thinking that a large force had fallen upon them, the picket obeyed. The young farmers, with all the parade of regulars, led back to the American camp over thirty British soldiers.

Burgoyne was in constant hope of being relieved by the promised expedition of Clinton up the Hudson River, as in that event Gates would necessarily send a part of his army to the defence of Albany. On the 21st Burgoyne received a letter in cipher from Clinton, stating that he was about to start. Greatly encouraged thereby, he replied that he could hold on till November 12th. Every day, however, the net of his difficulties was drawn about him more and more tightly. The time came when he must either fight or fly. On the 7th of October he attempted a reconnaissance in force, in order to cover a large foraging party, and also, if opportunity offered, to turn the left of the American line. For this service fifteen hundred picked men were selected. Burgoyne led them in person, and under him were Fraser, Riedesel, and Phillips. Marching out of camp, they formed in double ranks on a low ridge, less than a mile northwest of the American camp, and awaited events. Meanwhile the foragers were busy getting supplies, and the officers were scanning the patriot lines.

Morgan with his riflemen, Poor's New Hampshire brigade, and Dearborn's light infantry were thereupon ordered to attack simultaneously the enemy's right and left flanks. Steadily the New Hampshire men mounted up the slope, received one volley, and then with a shout dashed forward to the very mouth of the

cannon. So fierce was the contest that one piece was taken and retaken several times. Colonel Cilley leaped upon it, waved his sword, "dedicating the gun to the American cause," and then, with their own ammunition, opened it upon the enemy. It was the very inspiration of courage. Major Ackland was severely wounded. The British lines broke. Meanwhile, Morgan had driven back Fraser, who was covering the English right, and fallen on that flank so impetuously that it was already in retreat. Arnold, who was chafing in camp and anxious "to right himself," as he said, "with the sword," sprang to his saddle and rushed into the fray. "He will do some rash thing," shouted Gates, and ordered his aid, Major Armstrong, to call him back; but Arnold, suspecting the message, put spurs to his beautiful brown horse, named Warren after the hero of Bunker Hill, and was soon out of reach. He had no right to fight, much less to lead, but his rank and valor gave him authority at once. Dashing to the head of a part of Learned's brigade, where he was received with cheers by his old command, he ordered a charge on the centre of the British line. Leading the onset, delivering his orders in person where the bullets flew thickest, he galloped to and fro over the field as if possessed by the very demon of battle. In his rage he struck an American officer on the head with his sword without being conscious of the fact, as he afterward declared. His headlong valor inspired the troops with desperate courage. At the second charge the English gave way.

Fraser was busy forming another line in the rear. Brave to a fault and chivalric in his sense of duty, this gallant officer was the mind and soul of the British army. Morgan saw that he alone stood between the Americans and victory. Calling to him some of his best men, he said, "That gallant officer is General Fraser. I admire and honor him; but he must die. Stand among those bushes and do your duty." Mounted on an iron-gray charger and dressed in full uniform, Fraser was a conspicuous mark. A bullet cut the crupper of his horse and another his mane. "You are singled out, general," said his aide-de-camp; "had you not better shift your ground?" "My duty forbids me to fly from danger," was the reply. A moment after he fell mortally wounded.

Just then the New York men under Ten Broeck, coming on the field, swept all before them. Burgoyne sought to stay the tide; a bullet went through his hat and another tore his vest.

The Americans urged the pursuit up to the very entrenchments. Arnold, maddened by the fight, stormed the camp of the light infantry under Earl Balcarras, the strongest part of the English line. For an hour the useless struggle continued. Repulsed, he rode to the American left, all the way exposed to the cross-fire of both armies, and ordered a general assault on the British right.

GENERAL FRASER COVERED BY SHARP-SHOOTERS.

A stockade was carried, and Breyman with his Germans was cut off from the main body of the British army. As Arnold dashed into a sally-port, the Hessians fired a parting volley, wounding him in the same leg as at Quebec. At that moment Armstrong came up with Gates's order. He was borne from the field, but he had already gained a victory while his commander stayed in his tent. Breyman being mortally wounded, his men lost heart and over two hundred surrendered. This position was the key to the British line. Burgoyne tried to rally his men to retake it; but darkness closed the hard-fought contest. The Americans lay on their arms ready to renew the struggle in the morning.

During the night, Burgoyne evacuated a part of his entrenchments, and gathered his army upon the heights around the hospital, with the river in the rear and a deep ravine in front. His new position was so strong that Gates did not deem it best to hazard an attack. Fraser, in his dying moments, requested that he might be buried at six in the evening on the top of a little knoll in

the great redoubt. Just at sunset his body was borne thither accompanied by Burgoyne, Phillips, and Riedesel. The American cannoneers were attracted by the presence of the officers, and, ignorant of the sad ceremony which was being enacted, their balls fell thick about the chaplain as he read the solemn burial service. So Fraser was entombed, as he had died, amid the roar of artillery.

Burgoyne now renewed the retreat. The rain fell in torrents, and the roads were so badly cut up that he did not reach Saratoga, a distance of six miles, until the next night. The men, too much exhausted to procure wood or build fires, lay down on the ground and slept in the fast-falling rain. On the 10th they crossed the Fishkill and made their last encampment. The fine house and mills of General Schuyler at the ford were burned by order of General Burgoyne. The British were now hemmed in on all sides. The end was near.

Just at this time occurred a circumstance which illustrates the small events on which depend the fortunes of war. Gates received word that Burgoyne had sent on the bulk of his army toward the north. He determined at once to cut off the rear-guard still left in camp. The British general in some manner became advised of the plan, and put his best troops in ambush, where he could fire upon the Americans at the very moment of victory. All apparently went well. A patriot brigade had crossed the creek and another was just entering, a dense fog concealing the movement. Just then a British deserter came in and revealed the plot. Messengers were hurried out and the troops ordered back, but not without some loss. A few minutes more, and the success of the whole campaign would have been imperiled.

A reconnoitering party sent on to Fort Edward reported that the crossing was held by General Stark. The opposite bank of the Hudson was lined with the Americans. Bateaux containing part of their scanty stock of provisions had been seized, the rest being saved only by bringing them up the steep bank under a heavy cannonade. No word was received from General Clinton. Every part of the camp was searched out by the American fire. Water was scarce, and no one dared to get it, until a woman volunteered, when the sharpshooters, respecting her sex, let her pass unharmed. While a council of war held in Burgoyne's tent was considering the necessity of a surrender, several grape-shot struck near, and an eighteen-pound cannon-ball passed over the table around which the officers sat. Under these circumstances

a decision was quickly made. They resolved to treat for capitulation. At first Gates demanded an unconditional surrender; but knowing that Clinton had captured the forts in the Highlands commanding the passage of the Hudson, he consented that the British should be taken to Boston and be allowed to return to England, on condition of not serving in the war again until exchanged. When Burgoyne heard from a deserter of Clinton's progress, he hesitated to sign the conditions; but Gates drew up his army and threatened to open fire. Whereupon Burgoyne yielded.

A detachment of Americans marched into the British camp to the lively air of Yankee Doodle, while the English army gravely filed out and laid down their arms. With a delicate consideration, the Continental forces were withdrawn from sight, and the only American officer present was Major Wilkinson, who had charge of the arrangements. The total number surrendered was five thousand seven hundred and ninety-one, besides one thousand eight hundred and fifty-six prisoners of war, including sick and wounded. Forty-two brass cannon and forty-six hundred muskets, with abundant munitions of war, were among the trophies. After this ceremony was over, Generals Burgoyne and Gates advanced to meet each other at the head of their staffs. The former was dressed in a magnificent uniform of scarlet and gold, and the latter in a plain blue frock-coat. It was a marked contrast between vanquished and victor. When they had approached nearly within a sword's length, they halted, and Burgoyne, with a graceful obeisance, said, "The fortune of war, General Gates, has made me your prisoner." General Gates, returning the salute, replied, "I shall always be ready to testify that it has not been through any fault of your excellency."

As they met after these formalities, Gates used the common expression, "*I am very happy to see you.*" "I believe you are," replied Burgoyne. Gates, pretending not to hear the retort, invited him to his marquee, where they partook of a sumptuous dinner. In the afternoon, the English troops were marched between the double lines of the Americans, and, in presence of both armies, Burgoyne handed his sword to Gates, who promptly returned it. The tragedy was finished. The northern invasion had proved an inglorious failure. The prisoners were forwarded to Boston, but the British government failing to ratify the agreement, and fears arising that the men, if given up, would be at once turned into the British army, Congress ordered them to be sent into the interior of Virginia. The action caused much excitement and was fruitful of mutual recriminations between the two countries. Late in the fall, the "convention troops," as they were called, were marched seven hundred miles across the country to Charlottesville, Virginia. Here comfortable barracks were built the next summer; an extensive territory was cleared, and gardens were laid out and beautifully cultivated by them. At the close of the war many of the prisoners remained among their fellow-Germans and became useful citizens.

The picture of this celebrated invasion would be incomplete without referring to the pathetic account left by Madame Riedesel, who followed her husband throughout the disastrous campaign. This lady had a large calash made for her use, capable of holding herself, three children, and two female servants, in which they accompanied the army on their march. After they encamped, a small square building, with a capacious chimney, was erected for her comfort. She goes on to relate: "On the 7th of October our misfortunes began. I was at breakfast with my husband, and heard that something was intended. On the same day I expected Generals Burgoyne, Phillips, and Fraser to dine with us. I saw a great movement among the troops; my husband told me it was merely a reconnoissance, which gave me no concern, as it often happened. I walked out of the house, and met several Indians in their war-dresses, with guns in their hands. When I asked them where they were going, they cried out, '*War! war!*' meaning that they were going to battle. This filled me with apprehension, and I had scarcely got home before I heard reports of cannon and musketry, which grew louder by degrees, till at last the noise became excessive.

“About four o'clock in the afternoon, instead of the guests whom I expected, General Fraser was brought on a litter, mortally wounded. The table, which was already set, was instantly removed, and a bed placed in its stead for the wounded general. I sat trembling in a corner; the noise grew louder, and the alarm increased; the thought that my husband might perhaps be brought in, wounded in the same manner, was terrible to me, and distressed me exceedingly. General Fraser said to the surgeon, ‘Tell me if my wound is mortal; do not flatter me.’ The ball had passed through his body, and, unhappily for the general, he had eaten a very hearty breakfast, by which the stomach was distended, and the ball, as the surgeon said, had passed through it. I heard him often exclaim with a sigh, ‘Oh! fatal ambition! Poor General Burgoyne! Oh! my poor wife!’ He was asked if he had any request to make, to which he replied that, ‘If General Burgoyne would permit it, he should like to be buried at six o'clock in the evening, on the top of a mountain, in a redoubt which had been built there.’

“I did not know which way to turn; all the other rooms were full of sick. Toward evening I saw my husband coming; then I forgot all my sorrows, and thanked God that he was spared to me. He ate in great haste, with me and his aide-de-camp, behind the house. We had been told that we had the advantage over the enemy, but the sorrowful faces I beheld told a different tale; and before my husband went away he took me aside, and said everything was going very badly, and that I must keep myself in readiness to leave the place, but not to mention it to any one. I made the pretence that I would move the next morning into my new house, and had everything packed up ready. * * *

“I could not go to sleep, as I had General Fraser and all the other wounded gentlemen in my room, and I was sadly afraid my children would wake, and by their crying disturb the dying man in his last moments, who often addressed me and apologized ‘for the trouble he gave me.’ About three o'clock in the morning I was told that he could not hold out much longer; I had desired to be informed of the near approach of this sad crisis, and I then wrapped up my children in their clothes, and went with them into the room below. About eight o'clock in the morning he died.

“After he was laid out, and his corpse wrapped up in a sheet, we came again into the room, and had this sorrowful sight before

us the whole day ; and, to add to the melancholy scene, almost every moment some officer of my acquaintance was brought in wounded. The cannonade commenced again ; a retreat was spoken of, but not the smallest motion was made toward it. About four o'clock in the afternoon I saw the house which had just been built for me in flames, and the enemy was now not far off. We knew that General Burgoyne would not refuse the last request of General Fraser, though, by his acceding to it, an unnecessary delay was occasioned, by which the inconvenience of the army was increased."

As soon as the funeral service was finished and the grave of General Fraser closed, an order was issued that the army should fall back.

"The retreat was ordered to be conducted with the greatest silence ; many fires were lighted, and several tents left standing ; we traveled continually during the night. At six o'clock in the morning we halted, which excited the surprise of all ; General Burgoyne had the cannon ranged and counted ; this delay seemed to displease everybody, for if we could only have made another good march, we should have been in safety. My husband, quite exhausted with fatigue, came into my calash, and slept for three hours. During that time Captain Wiloe brought me a bag full of bank-notes and Captain Grismar his elegant watch, a ring, and a purse full of money, which they requested me to take care of, and which I promised to do to the utmost of my power. We again marched, but had scarcely proceeded an hour before we halted, as the enemy was in sight ; it proved to be only a reconnoitering party of two hundred men, who might easily have been made prisoners if General Burgoyne had given proper orders on the occasion.

"About evening we arrived at Saratoga ; my dress was wet through and through with rain, and in this state I had to remain the whole night, having no place to change it ; I, however, got close to a large fire, and at last lay down on some straw. At this moment General Phillips came up to me, and I asked him why he had not continued our retreat, as my husband had promised to cover it and bring the army through. 'Poor, dear woman,' said he, 'I wonder how, drenched as you are, you have the courage still to persevere and venture further in this kind of weather ; I wish,' continued he, 'you were our commanding general ; General Burgoyne is tired, and means to halt here to-night and give us our supper.'

“On the morning of the 10th, at ten o'clock, General Burgoyne ordered the retreat to be continued. The greatest misery at this time prevailed in the army, and more than thirty officers came to me, for whom tea and coffee were prepared, and with whom I shared all my provisions, with which my calash was in general well supplied; for I had a cook who was an excellent caterer, and who often in the night crossed small rivers and foraged on the inhabitants, bringing in with him sheep, small pigs, and poultry, for which he very often forgot to pay.

“About two o'clock in the afternoon we again heard a firing of cannon and small arms; instantly all was alarm, and everything in motion. My husband told me to go to a house not far off. I immediately seated myself in my calash with my children and drove off; but scarcely had I reached it before I discovered five or six armed men on the other side of the Hudson. Instinctively I threw my children down in the calash, and then concealed myself with them. At this moment the fellows fired, and wounded an already wounded English soldier who was behind me. Poor fellow! I pitied him exceedingly, but at this moment had no means or power to relieve him.

“A terrible cannonade was commenced by the enemy against the house in which I sought to obtain shelter for myself and children, under the mistaken idea that all the generals were in it. Alas! it contained none but wounded and women. We were at last obliged to resort to the cellar for refuge, and in one corner of this I remained the whole day, my children sleeping on the earth with their heads in my lap; and in the same situation I passed a sleepless night. Eleven cannon-balls passed through the house, and we could distinctly hear them roll away. One poor soldier, who was lying on a table for the purpose of having his leg amputated, was struck by a shot, which carried away his other; his comrades had left him, and when we went to his assistance, we found him in the corner of a room, into which he had crept, more dead than alive, scarcely breathing. My reflections on the danger to which my husband was exposed now agonized me exceedingly, and the thoughts of my children and the necessity of struggling for their preservation alone sustained me. * *

“I now occupied myself through the day in attending the wounded; I made them tea and coffee, and often shared my dinner with them, for which they offered me a thousand expressions of gratitude. One day a Canadian officer came to our cellar, who

had scarcely the power of holding himself upright, and we concluded he was dying for want of nourishment; I was happy in offering him my dinner, which strengthened him and procured me his friendship. I now undertook the care of Major Bloomfield, another aide-de-camp of General Phillips; he had received a musket-ball through both cheeks, which in its course had knocked out several of his teeth and cut his tongue; he could hold nothing in his mouth, the matter which ran from his wound

almost choked him, and he was not able to take any nourishment except a little soup, or something liquid. We had some Rhenish wine, and in the hope that the acidity of it would cleanse his wound, I gave him a bottle of it. He took a little now and then, and with such effect that his cure soon followed; thus I added another to my stock of friends, and derived a satisfaction which, in the midst of sufferings, served to tranquillize me and diminish their acuteness.

GENERAL BURGoyNE.

“One day General Phillips accompanied my husband, at the risk of their lives, on a visit to us. The general, after having witnessed our situation, said to him, ‘I would not for ten thousand guineas come again to this place; my heart is almost broken.’

“In this horrid situation we remained six days; a cessation of hostilities was now spoken of, and eventually took place. On the 16th, however, my husband had to repair to his post and I to my cellar. This day fresh beef was served out to the officers, who till now had only had salt provisions, which was very bad for their wounds.

“On the 17th of October the convention was completed. General Burgoyne and the other generals waited on the American General Gates ; the troops laid down their arms, and gave themselves up prisoners of war !

“My husband sent a message to me to come over to him with my children. I seated myself once more in my dear calash, and then rode through the American camp. As I passed on, I observed—and this was a great consolation to me—that no one eyed me with looks of re-

sentment, but that they all greeted us, and even showed compassion in their countenances at the sight of a woman with small children. I was, I confess, afraid to go over to the enemy, as it was quite a new situation to me. When I drew near the tents, a handsome man approached and met me, took my children from the calash, and hugged and kissed them, which affected me almost to tears. ‘You tremble,’ said he, addressing himself to me ; ‘be not afraid.’ ‘No,’ I answered, ‘you seem so kind and tender to my

children, it inspires me with courage.’ He now led me to the tent of General Gates, where I found Generals Burgoyne and Phillips, who were on a friendly footing with the former. Burgoyne said to me, ‘Never mind ; your sorrows have now an end.’ I answered him, ‘that I should be reprehensible to have any cares, as he had none ; and I was pleased to see him on such friendly footing with General Gates.’ All the generals remained to dine with General Gates.

“The same gentleman who received me so kindly now came

GENERAL GATES.

and said to me, 'You will be very much embarrassed to eat with all these gentlemen; come with your children to my tent, where I will prepare for you a frugal dinner, and give it with a free will.' I said, 'You are certainly a husband and a father, you have shown me so much kindness.' I now found that he was General Schuyler. He treated me with excellent smoked tongue, beefsteaks, potatoes, and good bread and butter! Never could I have wished to eat a better dinner; I was content; I saw all around me were so likewise; and, what was better than all, my husband was out of danger.

"After dinner General Schuyler begged me to pay him a visit at his house in Albany, where he expected also to receive General Burgoyne. Having sent to my husband for advice, he counselled me to accept the invitation."

She was delighted with her reception at General Schuyler's hospitable mansion, and records that Mrs. Schuyler and her daughters "loaded us with kindness, and behaved in the same manner toward General Burgoyne, though he had wantonly caused their splendid country establishment to be burned." General Schuyler's gentlemanly courtesy was characteristically shown in his first meeting with Burgoyne after the surrender. The latter, remembering his unnecessary destruction of the former's property, attempted an excuse. "That was the fate of war," replied General Schuyler; "I beg you, say no more about it." Burgoyne, in a speech before the House of Commons, adds: "He did more: he sent an aide-de-camp to conduct me to Albany, in order, as he expressed it, to procure better quarters than a stranger might be able to find. That gentleman conducted me to a very elegant house, and, to my great surprise, presented me to Mrs. Schuyler and family. In that house I remained during my whole stay in Albany, with a table of more than twenty covers for me and my friends, and every other demonstration of hospitality."

We turn now from the brilliant exploits at Saratoga to a sad and sober record, relieved only by episodes of heroism, sacrifice, and devotion. Washington, at the opening of the campaign, had not over seven or eight thousand men, while General Howe moved out of New York with more than double that number, all veterans and eager for battle. The last of May, Washington removed from his winter quarters at Morristown to a strong position behind the Raritan at Middlebrook, in order to more care-

fully watch General Howe, then at New Brunswick. It was yet uncertain where he would strike, though he evidently aimed at Philadelphia. In June he tried to cut off Sullivan at Princeton, but failing in that, manœuvred to force Washington to a general engagement. The American Fabius was too wary, and so Howe turned back to Staten Island. The 5th of July he began to embark the army on his brother's fleet. Slow and pleasure-loving as ever, he kept the troops on shipboard in the sultry sun till the 23d, when he put out to sea. There was great doubt where the bolt would fall. Now there were rumors that he would enter the Delaware; now that he had returned and ascended the Hudson; and then that he had sailed for Charleston. Meantime, the army was moved to Germantown to await events. At last the news that the British were actually in the Chesapeake dispelled all doubt.

The army was immediately set in motion. In order to overawe the disaffected, the troops were marched through Philadelphia, down Front and up Chestnut streets. The soldiers looked their best and the fifes and drums played merrily, but they could not hide their indifferent equipments and the fact that the finest uniform was a brown linen hunting-shirt. To make the army appear somewhat alike, each soldier wore in his hat a sprig of green. Washington took post at Wilmington, while troops of light horse and infantry were sent on to annoy the advance of the enemy, who were already landing at the head of the Elk River. The patriot cause looked almost hopeless. With the greatest efforts, Washington had collected only about eleven thousand five hundred men, while the English numbered, according to returns in the British Department of State, nineteen thousand five hundred, besides officers. The contrast in the discipline and equipments of the two armies was yet more marked. Howe was within fifty-four miles of Philadelphia, with a level country before him, no strong positions for defence, and a population largely royalist or indifferent. Yet Washington determined to hazard a battle before yielding the national capital.

Considerable skirmishing now took place, during which occurred one of those wonderful instances of preservation so characteristic of Washington's career. "We had not lain long," says Major Ferguson, of the rifle corps, "when a rebel officer, remarkable by a huzzar dress, pressed toward our army, within a hundred yards of my right flank, not perceiving us. He was

followed by another, dressed in a dark green and blue, mounted on a bay horse, with a remarkable high cocked-hat. I ordered three good shots to steal near and fire at them; but the idea disgusting me, I recalled the order. The huzzar, in returning, made a circuit, but the other passed within a hundred yards of us, upon which I advanced from the wood toward him. Upon my calling he stopped, but after looking at me he proceeded. I again drew his attention and made signs to him to stop, leveling my piece at him; but he slowly cantered away. As I was within that distance at which, in the quickest firing, I could have lodged half a dozen balls in or about him before he was out of my reach, I had only to determine; but it was not pleasant to fire at the back of an unoffending individual who was acquitting himself very coolly of his duty; so I let him alone. The day after, I had been telling this story to some wounded officers who lay in the same room with me, when one of the surgeons, who had been dressing the wounded rebel officers, came in and told us that they had informed him that General Washington was all the morning with the light troops, and only attended by a French officer in a huzzar dress, he himself dressed and mounted in every point as above described. I am not sorry that I did not know at the time who it was."

Washington finally took position back of the Brandywine to defend the principal route to Philadelphia, which crosses at Chad's Ford; while General Sullivan was stationed above to watch the fords and protect the right flank. Howe immediately made his arrangements to repeat the tactics of Long Island. Knyphausen and the Hessians were to make a feint of forcing a passage at Chad's Ford, while Cornwallis led the bulk of the army higher up the river. Washington, advised of the movement, decided to cross the river himself and cut off Knyphausen's detachment before Howe, who had gone on with Cornwallis, could return to his aid. Word was at once dispatched to Sullivan to move over the fords and keep Cornwallis busy. Unfortunately Sullivan was not informed of the progress of the enemy, and, relying upon insufficient information, disobeyed his orders and halted. Precious time was lost. The plan was abandoned, and before Sullivan could believe that Cornwallis had left Kennet Square, in front of Chad's Ford, he was actually, with thirteen thousand men, fairly across and on the heights near Birmingham Meeting-House, within two miles of his own right flank. Sulli-

van now did what he could to remedy the terrible mistake; but before he could get his men into position, the British were upon him with the bayonet. The raw militia hurled back charge after charge, but at length gave way and streamed across the fields toward the main body. Lafayette, struggling sword in hand to rally the fugitives, was shot through the leg by a musket ball, and was helped off by his aide-de-camp.

Meantime, Washington had been waiting in anxious expectation. Suddenly a whig-farmer, named Thomas Cheney, dashed into camp, his horse covered with foam, and informed him that while out reconnoitering up the river, he had suddenly come upon the enemy; that they fired upon him, and he had only escaped by the swiftness of his horse. Washington, misled so often, doubted the intelligence, but the man exclaimed, "My life for it, you are mistaken. Put me under guard till you find my story true!" Just then came word from Sullivan, and soon the booming of guns told that the news was only too correct. Putting himself at the head of a division of Pennsylvanians and Virginians, Washington hastened to the relief of the imperiled right. Greene, with one brigade, marched four miles in forty-two minutes. Opening his ranks to let the flying militia pass through, he closed them again to check the pursuers. At a narrow defile about a mile from Dilworth, which Washington had already selected, he took a stand. The British came in hot haste, expecting no opposition. But Greene held his ground obstinately. When night came on, he drew off his men at leisure. Wayne defended Chad's Ford against Knyphausen until the heavy cannonading, and finally the appearance of the British on his flank, warned him of his danger, when he retreated in good order.

Lafayette gives a graphic picture of the scene along the road to Chester during the flight of the militia. Terror and confusion were everywhere; fugitives, cannon, and wagons recklessly crowded along pell-mell, while, above all, in the rear sounded volleys of musketry and the roar of the guns. Amid the disorder and darkness, it was impossible to check the torrent. At the bridge in Chester, Lafayette placed a guard. Washington and the troops of Generals Greene, Wayne, Armstrong, and others here came up, and the wearied army found repose. The English had marched far, and the check by Greene was too decided to admit of any further pursuit.

September 11th had been a sad day for the patriot cause. The

American loss was about one thousand, the British half as great. The streets of Philadelphia were full of citizens anxiously listening to the sound of the cannonade. When news came of the American defeat, the whigs were in consternation. Many deserted their homes and fled, leaving all behind them. Congress that evening voted to adjourn to Lancaster, whence it afterward removed to York with all the archives of the government.

In this time of general fear, one loves to linger on single instances of heroism. Among the names to be remembered is that of Hannah Irwin Israel, whose husband was a prisoner on board a British frigate in full sight of his own house. He had been heard to say that he would sooner drive his cattle as a present to General

Washington, than to receive for them thousands of dollars in British gold. As

a retort, a detachment of soldiers was sent to his meadow to slaughter his cattle before his eyes. His spirited young wife, who was not yet out of her teens, saw the move-

ment, and with quick wit divined its cause. Taking with her a young boy, only eight years of age, she ran to the field, threw down the bars, and commenced to drive out the cattle. "Stop, or we shall shoot you!" shouted the soldiers. "Fire away!" was the only answer of the intrepid woman, intent on her determination. The balls fell thick and fast about her, but she carried her point, saved her property, and saw the foiled enemy go empty-handed back to their ship. Her husband was tried, and

only saved his life by giving the Masonic sign to the presiding officer, who, he had discovered, was a member of the order. At this magical signal everything was changed. The patriot, who had been served with the meanest of food and whose bed was a coil of ropes on the open deck, was now sent to his home, in a splendid barge, loaded with presents for his heroic wife, while the tory witnesses who had caused his arrest, received a reprimand for wishing harm to an honorable man.

Washington was in nowise discouraged by the defeat of Brandywine. The next day he moved to Germantown, where he gave his men only a day's rest, and then recrossed the Schuylkill, and taking the Lancaster road, went out to meet Howe again, if need be, on the same field. The two armies came in sight near the Warren tavern, twenty miles from Philadelphia. The advanced posts had begun to skirmish, and a battle seemed imminent, when a deluging rain, which lasted for twenty-four hours, checked all movements. The Americans had no tents or blankets, their guns became wet, and finally it was discovered that the cartridge-boxes were so poorly made that they admitted the water, and the ammunition was spoiled. There were few bayonets, and retreat was the only resource. All day and part of the next night, the army, a thousand of the men barefoot, marched, under a pelting rain, over muddy roads, to Warwick furnace, where supplies were secured.

Moving thence to defend the passage of the Schuylkill, Wayne was left to hang on the enemy's rear and cut off the baggage. He concealed his command deep in the wood, and supposed no one knew of his whereabouts, while his spies watched the British camp. Unfortunately, he was surrounded by tories, who kept Howe perfectly informed of all his movements. Grey, known as the "no-flint" general, because he usually ordered his men to remove the flints from their muskets when about to make an attack, prepared with a strong detachment to surprise him. On the night of September 20th, Wayne, expecting reinforcements, had ordered his troops to lie on their arms. But, in the dark and rain, Grey stealthily approached the camp, cutting down the pickets on the way. The alarm was given and Wayne drew up his men, unfortunately, in front of their fires. By the light, the enemy saw distinctly where to strike. Suddenly the British dashed out of the shade of the forest, and the bayonet made short work. Three hundred of the patriots were killed, wounded, or captured, many

being mercilessly butchered after they had surrendered. The British lost only seven men. Wayne, by his presence of mind, saved the rest of his detachment and rejoined Washington.

The Paoli massacre, as it was called, left open the way to Philadelphia. By a feigned movement toward Reading, as if to

THE PAOLI MONUMENT.

seize the stores at that point, Howe decoyed Washington to defend the upper fords of the Schuylkill, while he turned in the night, and, crossing below, struck boldly between Philadelphia and the American army. Howe entered the city on the 26th. The army was put into winter-quarters there and at Germantown.

As the British general, with his brilliant staff and escort, marched into Philadelphia, followed by a long train of the choicest troops in the army—grenadiers, light-dragoons, and artillerymen with shining brass pieces, all in holiday array—they presented an imposing spectacle. Conquerors they proclaimed themselves in every motion; stepping proudly to the swelling music of GOD SAVE THE KING, and “presenting,” says Irving, “with their scarlet uniforms, their glittering arms and flaunting feathers, a striking contrast to the poor patriot troops, who had recently passed through the same streets, weary and wayworn, and happy if they could cover their raggedness with a brown linen hunting-frock, and decorate their caps with a sprig of evergreen.”

Washington's campaign seemed a failure. Really, however, it was a success. By delaying Howe a month in marching little over fifty miles, he had rendered Saratoga possible. Howe was to have taken the city and then sent reinforcements to the north. By the time he had accomplished his task, the fate of Burgoyne was virtually decided. Moreover, the capture of the national capital proved not as great a piece of good fortune as was anticipated. The dissipation of the winter sadly demoralized the army, so that Franklin wittily said, “Howe had not taken Philadelphia so much as Philadelphia had taken Howe.”

Washington would not let the enemies of his country rest in peace. A few weeks after they had nestled down in their snug quarters, he made arrangements for a surprise upon their encamp-

ment at Germantown. Howe, having sent off a detachment against the forts along the Delaware, and another to convey some provisions, gave Washington just the opportunity he wanted. In the evening of October 3d, the American army set out from its encampment at Skippack Creek upon this hazardous expedition. The troops moved in four columns by as many roads. Two of these were to attack the enemy in front and one on each flank. They were to time their march of fourteen miles so as to reach the neighborhood early enough to give the men a short rest, and then at daybreak to fall simultaneously upon the British camp.

The column, consisting of Sullivan's and Wayne's divisions, and Conway's brigade, which was to enter Germantown by the Chestnut Hill road and thence through the principal street of the village, found the alarm had been given by the patrols, and the picket on Mount Airy was under arms. It was, however, soon driven back upon a battalion of light infantry and the fortieth regiment, under the veteran Colonel Musgrave. A sharp skirmish followed. Wayne's men were not to be stopped. They remembered the terrible night of September 26th, and their hearts were steeled and their arms nerved. It was now their turn to use the bayonet, and the officers could not hold them back, even when the time for mercy came. They raised the terrible cry of "Revenge! Revenge! Have at the blood-hounds!" Howe, springing from his bed, and rushing in among the fugitives, shouted, "For shame! I never saw you retreat before! It is only a scouting party!" But the rattling grape-shot told a more serious story, and he rushed off to prepare for a battle. In Philadelphia, Cornwallis heard the roar of the guns and hastened reinforcements to the rescue. Musgrave would not flee, but threw himself with six companies into the large stone mansion of Justice Chew, barricaded the doors and windows, and opened fire upon the pursuing troops. Up to this point all went well for the patriot cause.

Now came a turn in the tide. Instead of watching this little fortress with a detachment, the troops stopped to capture it, General Knox declaring that it was against every rule of war to leave a fort in the rear. So much for red tape. Smith, a gallant Virginian, advanced, bearing a flag with a summons to surrender. He was fired upon and mortally wounded. Cannon were brought to bear, but proved too light. Attempts were made to set fire to the house, but in vain. After a precious half-hour was wasted,

the column moved on, leaving a regiment to guard the place. During the attack, the troops had become separated. A dense fog made it impossible to recognize one another, and parties frequently exchanged shots before they found out their mistake. The two columns of militia which were to attack the flanks never fired a shot. Greene, who had nearly two-thirds of the army, was to strike the English right wing near the market-place, but being three-quarters of an hour late, the British were ready to

BATTLE OF GERMANTOWN—ATTACK ON CHEW'S HOUSE.

receive him, and his attack proved a failure. Williams's regiment of Virginians pushed gallantly forward, and took prisoners a large party of the British, but raising a shout brought a larger force upon them through the fog, and they were compelled to surrender. Woodford's brigade opened a cannonade on Chew's house. Wayne's men had now pushed down the street; but, alarmed by this firing and supposing the British had gained their rear and cut them off from camp, they became panic-stricken. In their retreat they came upon Stephen's brigade, where, being mistaken for the enemy, they caused a fresh flurry among these troops. Sullivan's men had exhausted their ammunition, when they were startled by the cry of a light-horseman that they were surrounded. Washington, who was in the very front of the battle and under the hottest fire, now gave the order to retreat. It was sent to every detachment, and the men crept off in the fog as

silently as they came. Pulaski with his cavalry gallantly covered the movement. Not a cannon was left behind. The British lost about six hundred and the patriots one thousand, including General Nash and other valuable officers.

The battle was counted as an American defeat; yet it greatly encouraged the patriots. They afterward learned that they had come off in the very moment of victory; that Howe was on the point of retreating, and that Chester had been already named as the place of rendezvous. The British officers could but respect a general who displayed so much daring, and whose plans would have certainly ended in the utter route of their army, had it not been for events over which he could have no control. This battle also had an excellent effect in Europe. Count Vergennes said to the American commissioners in Paris that "Nothing struck him so much as General Washington's advancing and giving battle to General Howe. To bring an army raised within a year to this, promises everything."

While New Jersey had been the centre of interest, some events had occurred at the northward worth recording. When Washington was hurrying his weary men from Princeton, he sent a note to General Heath, then in command of the American troops collected in the Highlands, to make a demonstration upon New York, hoping thereby to induce the enemy to withdraw troops from Jersey for the defence of that city. Heath accordingly advanced to King's Bridge, and sent a bombastic summons to Fort Independence, threatening to put everybody to the sword who did not surrender within twenty minutes. After a few days skirmishing, learning of troops up the Sound which might get in his rear, he withdrew, the laughing-stock of both armies.

In March, General Howe, with a fleet of ten sail, ascended the Hudson to Peekskill, and, landing, set fire to a large quantity of army stores collected at that place. General McDougal, having only two hundred and fifty men, could muster little defence against the overwhelming force of the enemy.

Late in April, Governor Tryon, with about two thousand men, left New York to destroy the military supplies at Danbury, Connecticut. He landed at the foot of Compo Hill, near the mouth of the Saugatuck River. The expedition was a surprise and met with no resistance. At Bethel, on the way, an amusing incident occurred. One Luther Holcomb, in order to lengthen the time as much as possible for the benefit of the people of Danbury, rode

to the top of a hill, over which the British were about to make their way, and, waving his hat, turned to an imaginary host in his rear, shouting, "Halt the whole universe! break off into kingdoms!" Tryon immediately checked his army, arranged his cannon so as to sweep the advancing enemy, and sent out reconnoitering parties. Holcomb, content with having stopped the whole army by a bit of rodomontade, put spurs to his horse and retreated to Danbury, leaving the duped general to digest the joke as amiably as possible. Guided by two tories of Danbury, Tryon reached that place and destroyed the stores. The night was passed in drinking and carousing. At dawn, the torch was set to all the houses except those of the tories, and, amid the flames of the burning town, the troops started on their return.

Then ensued a scene like that of Lexington and Concord two years before. The militia were fast gathering from the neighboring villages. Tryon took a new route, hoping to dodge his foes, but they were not to be thrown off. General Wooster, then a veteran of near seventy, with a little force of two hundred, hung on the rear. While encouraging his men he was mortally wounded. Generals Arnold and Silliman hurried to Ridgefield, and, throwing up a barricade across the road, with five hundred men awaited the advance of two thousand. They held their post for a quarter of an hour, when it was outflanked. A whole platoon fired upon Arnold at a distance of thirty yards. His horse fell, and a tory rushed up, calling upon him to surrender. "Not yet," exclaimed Arnold, as he sprang to his feet, drew a pistol, and shot the man dead. Then, springing toward a swamp, under a shower of bullets, he escaped unharmed, and was soon off mustering the militia on the road in advance of the British.

Tryon remained here all night, and the next day renewed his perilous journey. The patriots, from behind stone walls and buildings, continually annoyed the march. Lamb, with artillery and volunteers from New Haven, was at the Saugatuck bridge. Tryon avoided them by fording the river a mile above, and then, putting his men at full speed, ran for the hill of Compo. Some of the Continentals pushed across the bridge and struck them in flank; some kept along the west side and galled them with shot and ball, and some forded the stream and fired on the rear-guard. Arnold led on the attack until his horse was disabled, and seamen from the fleet, coming to the rescue, checked the Americans in their eager pursuit. Tryon's wearied party

now embarked, harassed to the very last by Lamb's artillery. In this useless exploit the British lost two hundred men, and, by their savage ferocity, kindled everywhere a hatred that burned long after peace had come. Congress voted Arnold a caparisoned horse, as a token of approbation for his gallant conduct.

The next month Colonel Meigs avenged the loss at Danbury. Embarking in whale-boats at Guilford about two hundred militia-

CAPTURE OF GENERAL PRESCOTT.

men, he crossed the Sound on the night of May 23d, and reaching Sag Harbor at day-break, burned there a British vessel of half a dozen guns and several loaded transports, destroyed the stores, and captured ninety prisoners, escaping without the loss of a man. For this brilliant feat Congress presented him a sword.

In July, Lieutenant-Colonel Barton laid a plan to capture General Prescott, in command of the British forces in Rhode

Island, who was quartered at a lonely farm-house near Newport. Taking about forty militia in boats, Barton rowed across Narraganset Bay, through the English fleet, dexterously avoiding their vessels, and landed in a cove close by the general's quarters. Seizing the astonished sentinel who guarded his door, they entered the house, captured, and hurried off the half-dressed general. A soldier, escaping from the house, gave the alarm, but the laughing guard assured him he had seen a ghost. They soon, however, found it to be no jesting matter, and vainly pursued the exultant Barton; for, while they were searching the sand on the shore for the foot-prints of his party, he passed under the stern of the English guard-ship and escaped to Providence. "You have made a bold push to-night," said Prescott as they landed. "We have done as well as we could," replied Barton. He received a sword from Congress and was also promoted to a colonelcy.

Unfortunately, Lee was the only officer in Howe's possession with the same rank as Prescott, and they were exchanged. It proved no gain to the patriot cause, although at that time everybody rejoiced that by this daring feat they had again secured the "palladium of their liberties."

While Burgoyne was making his desperate adventure at the north, Clinton attempted a diversion from the south, as was expected at the beginning of the campaign. Putnam, commanding on the Hudson, in his easy good-nature had allowed his troops to become scattered, so that he had only two thousand men for the defence of the Highlands. Clinton made a feint on Fishkill, which led Putnam off on a wild-geese chase. George Clinton, governor of New York, however, saw the real point of danger, and hastened, with his brother and all the troops he could gather, to Forts Clinton and Montgomery. October 6th, the British landed and carried both forts by storm. The garrison made a desperate resistance, but, being overpowered by superior numbers, fled, and, favored by the gathering darkness, mostly escaped over the hills. The heavy iron chain and boom which had been put across the river to prevent the ascent of the British fleet was now useless. Two American frigates, sent down for the defence of the obstructions, were becalmed, and were fired to prevent their falling into the hands of the enemy. Fort Constitution being abandoned, the Hudson was opened to Albany. Clinton, however, took no advantage of the opportunity, but returned to

New York, leaving Burgoyne to his fate. Vaughan remained behind and led a marauding party as far up as Kingston (October 15th), burning and plundering that town and the houses of patriots along the river. If Clinton had gone on to Albany, Gates, then on the eve of success, would have been forced to retreat into New England, and Burgoyne's way would have been clear. As it was, this wanton, useless expedition only excited wide-spread indignation.

A very amusing incident is told which occurred during this sally. Some Dutchmen were at work near a swampy flat, when suddenly the red-coats came in view. It was low water, and they fled across the flats toward Ponkhocken, as fast as their legs could carry them, not daring to look behind, lest, like Lot's wife, they might be detained. The summer haymakers had left a rake on the marsh meadow, and upon this one of the fugitives trod, the handle striking him in the back. Not doubting that a "Britisher" was close upon his heels, he stopped short, and, throwing up his hands imploringly, exclaimed, "O, mein Cot! mein Cot! I kivs up. Hoorah for King Shorge!"

Meantime, Governor Clinton had been trying to raise a force for the defence of Kingston. While he was encamped near New Windsor, collecting the scattered troops, one day about noon a horseman galloped in hot haste up to the sentinel on guard, and, in answer to his challenge, said, "I am a friend and wish to see General Clinton." He was admitted to the general's presence, but on entering betrayed an involuntary surprise, and muttering, "I am lost!" was seen to hastily put something into his mouth and swallow it. Suspicion being thus excited, he was arrested and given a heavy dose of tartar emetic. This brought to light a silver bullet, which, however, the prisoner succeeded in again swallowing. He refused to repeat the dose, but was assured that resistance was useless, as, in case he persisted, he would be immediately hanged and a post-mortem examination effected. Having yielded, the bullet was at length secured. It was found to be hollow, and secreted within it was the following note, written two days before:

"FORT MONTGOMERY, Oct. 8, 1777.

"*Nous y voici*, and nothing now between us and Gates. I sincerely hope this little success of ours may facilitate your operations. In answer to your letter of the 28th of September

by C. C., I shall only say, I cannot presume to order or even advise, for reasons obvious. I heartily wish you success.

"Faithfully yours,

"H. CLINTON.

"*General Burgoyne.*"

This established the guilt of the prisoner. The secret messenger of Sir Henry Clinton had supposed the Americans to be utterly routed in the Highlands; and the persistent contempt of the British, who never granted the honor of a military title to any American officer—addressing the commander-in-chief himself only as *Mr. Washington*—so misled him that when he heard of his proximity to *General Clinton*, he supposed himself of course among his own friends. He was tried, condemned, and hanged as a spy while the flames of burning Esopus, fired by Vaughan's maraud-

EXECUTION OF A SPY AT KINGSTON, NEW YORK.

ing party, streamed up the distant sky, in full sight of the apple-tree on which he ignominiously swung.

In order to prevent the English fleet from ascending the Delaware, that river had been carefully fortified. A few miles below Philadelphia, a strong redoubt, called Fort Mifflin, had been erected, and on the New Jersey shore, at Red Bank, another, named Fort Mercer. The principal channel, lying between these fortifications, had been obstructed by strong *chevaux*

de frise, or frames made of heavy timbers, armed with spikes and filled with stone, so as to keep them in their place. Under the protection of the guns were moored floating batteries, galleys, and fire-ships. Further down the river, at Billingsport, was another fort with similar obstructions; these, however, were captured by an English detachment soon after the battle of Brandywine, and, by the middle of October, several vessels broke a passage through the obstacles in the channel. The upper forts remained, and it was determined to defend them to the last. Colonel Greene was in command at Fort Mercer, with four hundred Rhode Island Continentals, having Captain Mauduit Duplessis, a brave French engineer officer, to direct the artillery. Fort Mifflin was garrisoned by Lieutenant-Colonel Smith, and about the same number of Maryland troops of the line. The fleet was under Commodore Hazlewood. Howe saw that he must open up communications with his ships, or his position in Philadelphia would become untenable from the difficulty of securing supplies.

On the morning of the 22d of October, the little garrison at Fort Mercer was startled by the appearance on the edge of the woods, within cannon-shot, of a body of Hessians, twelve hundred strong, under Count Donop. Soon an officer with a flag and a drummer approached and pompously demanded a surrender—"The king of England orders his rebellious subjects to lay down their arms, and they are warned that if they stand the battle no quarter will be given." Greene at once replied, "We ask no quarter, nor will we give any." Hurried preparations were made for defence. About five o'clock the enemy advanced to the assault in columns, headed by a captain, with the carpenters and their axes, and a hundred men carrying fascines for filling the ditches. The outworks were unfinished, and the garrison made little attempt to defend them. The Hessians, elated by the easy victory, entered at two points, and rushed forward with the drum "beating a lively march." Not a man was to be seen, and on the north side some even reached the earthworks, when a terrible musketry fire burst forth. At the same time their flanks were raked with grape-shot from a battery in the angle of the embankment, and chain-shot from a couple of galleys concealed behind the bushes on the bank. The Hessians, however, pressed ahead. Under Donop at the south side they broke through the abattis, filled the ditch, and began to ascend the rampart. But those who reached

the top were struck down by spear and bayonet. Donop fell mortally wounded. The rest were forced to fall back to the protection of the forest. In this brief hour of slaughter, the British lost four hundred men and the Americans only thirty-eight.

While Mauduit was inspecting the works after the assault was repulsed, he heard some one calling out, "Whoever you are, draw me hence." It proved to be Count Donop, who, mortally wounded, was wedged in among the bodies of the slain. He lived three days afterward, receiving every possible comfort from Mauduit, who personally attended him until his death. "It is finishing a noble career early," he said to his kind companion. "I die the victim of my ambition and of the avarice of my king; but, dying in the arms of honor, I have no regrets." Thus perished this brave man, at the age of thirty-seven. He was buried near the fort he vainly sought to capture. A rough boulder marks the spot. His bones have been carried off by relic-hunters, and his skull is said to be in the hands of a New Jersey physician.

The British fleet ascended the river to take part in the contest. The next day they opened a heavy cannonade on Fort Mifflin. The reply from fort and fleet was too severe, and they were forced to drop down the stream. Two frigates, the *Augusta* and the *Merlin*, grounded. The former was blown up by red-hot shot from the American guns, several of her officers and crew perishing in the explosion; the latter was set on fire and abandoned by her crew.

During the attack, one old lady remained in her house on the bank of the river, answering urgent entreaties to flee with "God's arm is strong, and will protect me; I may do good by staying." She was left to her fate, and while the balls whizzed and rattled, battering against the brick walls of her dwelling, like hailstones in a tempest, the steady hum of her spinning-wheel was undisturbed and unbroken. At length a twelve-pounder came booming through the side of the house, sundering partitions with a terrific crash, and landing in a wall near the plucky spinner. Taking her wheel, she now retreated to the cellar, where she continued her industry till the battle was over. She then put her spinning aside, and devoted herself to the suffering wounded who were brought into her house. She cared for all alike, but administered a stirring rebuke to the mercenary Hessians, while, at the same time, she tenderly dressed their wounds. The name of this brave woman was Anna Whitall, a Quakeress.

The British now adopted surer measures for the reduction of the forts. Heavy works were erected on the Pennsylvania shore and on Province Island at a distance of five hundred yards. In all, fourteen redoubts manned with heavy artillery, a floating battery of twenty-two guns at forty yards, and a fleet carrying three hundred and thirty-six guns, were brought to bear upon this devoted garrison. From the 10th to the 15th, they kept up an unbroken rain of bomb and shot. Smith was wounded and left the fort; the next in rank being also disabled, Major Thayer of Rhode Island volunteered for the command. On the last day, other vessels worked up into the narrow channel next the shore, where they could throw in hand-grenades. About ten o'clock, a bugle-note gave the signal, and the fire was renewed with redoubled energy. The only two serviceable guns were dismounted. The yard-arms of the ships overlooked the earth-works, so that sharp-shooters perched in the tops picked off every man who showed himself upon the platforms. In the night, the remainder of the garrison, nearly two hundred and fifty having been killed or wounded, passed over to Red Bank. When the British entered the deserted works the next morning, they found nearly every cannon stained with the blood of its gallant defenders.

Howe, having been heavily reinforced from New York, sent Cornwallis with a superior body of troops along the left shore of the Delaware. Red Bank was evacuated, part of the American vessels escaping during a dark night up to Burlington, and the rest being destroyed. The British leveled the fortifications, removed a part of the obstructions, and soon had complete control of the river. Philadelphia was fortified, and Howe's position became secure.

Winter had come, but Washington was unwilling to send his men to York, Lancaster, or Carlisle, the nearest towns where they could be comfortably housed, as that would leave a large and fertile country open to the incursions of the enemy. So he still kept his famishing and suffering army in the field. On the night of December 4th, Howe quietly left Philadelphia with fourteen thousand men, hoping to surprise Washington and "drive the Federal army over the Blue Mountains." To his astonishment, he found Washington occupying a strong position in wooded heights at Whitemarsh, all ready to receive him. For several days he skirmished about, trying to draw Washington

out of his camp, but finding this impossible, and not daring to attack him in his chosen position, during the night of the 8th he decamped and hastened back to Philadelphia, making such good time that the next day none but the American light-horse could overtake his rear-guard.

The secret of his failure may be easily told. The British adjutant-general had fixed upon a back-chamber in the house of William and Lydia Darrah, as a convenient place for private conference; and here he often met one or more officers in close consultation. One day he requested Lydia to prepare the room with fire and candles, as he should need it that evening, adding in an impressive voice, "Be sure that your family are all in bed at an early hour." His manner excited her curiosity, and after they had entered and locked themselves in their room, she quietly arose, and in her stocking-feet stole to the door. Putting her ear to the keyhole, she distinctly heard an order read for an attack on Washington's troops the next night. Lydia was a true patriot, and this order banished sleep from her eyes. In the early dawn she awoke her husband and informed him that she was obliged to go to Frankford that morning for flour. As the Philadelphians were chiefly dependent on the Frankford mills, this was a frequent occurrence, and a passport was readily furnished by General Howe, at whose headquarters she stopped on her way out of the city. She walked the five miles over the frozen snow that cold December morning at her utmost speed, and, halting at the mill only long enough to leave her bag, pressed rapidly on toward the American lines. Meeting Lieutenant-Colonel Craig, whom Washington had sent out as a scout, she relieved her mind of its burden. Hastening back to the mill, she shouldered her bag of flour and returned home without exciting suspicion. On the return of the discomfited troops, the adjutant-general called her to his room and proceeded to question her. "Lydia, were any of your family up on the night I received company here?" "No," she promptly replied, "they all retired at eight o'clock," which was true. "It is very strange," he pursued; "you, I know, were asleep, for I knocked at your door three times before you heard me when we left the house." This also was true, in so far as his knocking was concerned; for the subtle Lydia had too much at stake to appear awake at that moment, and had feigned the heaviest of slumber. "It is certain we were betrayed, yet how I cannot imagine," he concluded, "unless the walls of the

house tell tales." His meek listener left him to his own conjectures, and respectfully retired.

Such was the condition of the soldiers and the severity of the season, that it became absolutely necessary to provide them with some shelter. Washington, after careful deliberation, selected Valley Forge, a secluded spot about twenty miles from Philadelphia. Here he would be able to keep watch of the enemy and protect the people from incursions. December 11th, the army set out on its painful march of eight days. Reaching their destination, the men had yet to build their own houses. The 18th was observed as a "day of thanksgiving and praise," says the record. It must have been truly a patient heart that, in that extremity, could have felt any response to such a recommendation of Congress.

The next day, the troops began to cut down trees and erect log-houses over the sloping hill-sides. The huts were each fourteen feet by sixteen; the interstices were filled with clay; the fire-places were plastered with the same material; and the roofs were covered with split planks, or thatched with boughs. These rude dwellings were arranged in regular streets, and within the Christmas holidays the Valley took on quite the look of a military encampment.

While this work was going briskly forward, Washington received news that the enemy was making a sortie toward Chester. On orders being issued for the troops to be ready to march, the generals replied, "Fighting is preferable to starving." The men, already without bread for three and meat for two days, had mutinied. In this emergency, with his shivering, famishing men around him, Washington learned that the Legislature of Pennsylvania had remonstrated against his going into winter-quarters, instead of keeping the field. It manifested a cruel indifference, and he indignantly wrote to the president of Congress: "Gentlemen reprobate the going into winter-quarters as much as if they thought the soldiers were made of stocks or stones, and equally insensible of cold and hunger. * * * I can assure these gentlemen, that it is a much easier, less distressing thing, to draw remonstrances in a comfortable room, by a good fireside, than to occupy a bleak hill, and sleep under frost and snow, without clothes or blankets. However, although they seem to have little feeling for the naked and distressed soldiers, I feel abundantly for them, and from my soul I pity their distresses, which it is neither in my power to relieve nor prevent."

This spirited rebuke did not still the clamor, and Washington was even advised to risk all and dash his little army to pieces by hurling it against the strong entrenchments of the English at Philadelphia, rather than endure longer the reproach of inactivity.

WASHINGTON'S HEADQUARTERS AT VALLEY FORGE.

CHAPTER V.

FOURTH YEAR OF THE REVOLUTION—1778.

THE winter at Valley Forge was, indeed, the darkest period of all that "time which tried men's souls." The Continental paper-money was so depreciated in value that an officer's pay would not keep him in clothes. Many, having spent their entire fortunes in the war, were now compelled to resign, in order to get a living. The men were encamped in cold, comfortless huts, with little food or clothing. Frequently there was only one suit of clothes for two soldiers, which they would take turns in wearing. Barefooted, they left on the frozen ground their tracks in blood. Few had blankets. Numbers were compelled to sit by their fires all night. Their fuel they were compelled to carry on their backs from the woods where they cut it. Straw could not be obtained. Soldiers who were enfeebled by hunger and benumbed by cold, slept on the bare earth, and sickness followed such exposure. Within three weeks, two thousand men were rendered unfit for duty. With no change of clothing, no suitable food, and no medicines, death was the only relief. A distinguished foreign officer has related that at this time he was "walking one day with General Washington among the huts, when he heard many voices echoing through the open crevices between the logs, '*No pay, no clothes, no provisions, no rum!*' And when a miserable wretch was seen flitting from one hut to another, his nakedness was only covered by a dirty blanket."

Amid this terrible suffering, the fires of patriotism burned brightly. Every effort was made to induce the suffering soldiers to desert and join the British army; but few, however, proved false, and these were mainly foreigners. Washington felt that his cause was just, and inspired all around him with his sublime faith. One day during the winter, while Isaac Potts, at whose house Washington was quartered, was on his way up the creek, he heard a voice of prayer in the thicket near by. Softly following its direction, he soon discovered the general upon his knees, his cheek wet with tears. Narrating this incident to his wife, he added with deep emotion, "If there is any one to whom the Lord will listen, it is George Washington, and under such a commander our independence is certain."

In January, a raft made of kegs full of powder, and fitted with machinery to explode them upon striking any object, was floated down the river. One of the kegs burst opposite Philadelphia. The fleet which had been lying in the stream happened to have been drawn into the harbor that night, and so escaped injury. Great alarm was caused in the city by this singular device of the Yankees. The cannon were trained upon every strange object floating on the water, and for twenty-four hours thereafter no innocent chip even could get by without a shot. Judge Hopkinson wrote the following comic ballad upon the circumstance. It was set to the tune of Yankee Doodle :

THE BATTLE OF THE KEGS.

"Gallants attend, and hear a friend
Trill forth harmonious ditty;
Strange things I'll tell, which late befell
In Philadelphia city.

"'Twas early day, as poets say,
Just when the sun was rising,
A soldier stood on log of wood,
And saw a thing surprising.

"As in amaze he stood to gaze,
(The truth can't be denied, sir),
He spied a score of kegs, or more,
Come floating down the tide, sir.

"A sailor, too, in jerkin blue,
The strange appearance viewing,
First wiped his eyes, in great surprise,
Then said, 'Some mischief's brewing.

" 'These kegs, I'm told, the rebels hold,
Packed up like pickled herring ;
And they've come down t'attack the town
In this new way of ferry'ng.'

"The soldier flew, the sailor too,
And, scared almost to death, sir,
Wore out their shoes to spread the news,
And ran till out of breath, sir.

"Now up and down, throughout the town,
Most frantic scenes were acted,
And some ran here, and others there,
Like men almost distracted.

* * * * *

"Now, in a fright, Howe starts upright,
Awaked by such a clatter ;
He rubs both eyes, and boldly cries,
'For God's sake, what's the matter?'

"At his bedside, he then espied
Sir Erskine, at command, sir ;
Upon one foot he had one boot,
And t'other in his hand, sir.

" 'Arise ! arise !' Sir Erskine cries ;
'The rebels—more's the pity—
Without a boat, are all afloat,
And ranged before the city.

" 'The motley crew, in vessels new,
With Satan for their guide, sir,
Pack'd up in bags, or wooden kegs,
Came driving down the tide, sir,

" 'Therefore prepare for bloody war ;
These kegs must all be routed ;
Or surely we despised shall be,
And British courage doubted.'

"The royal band now ready stand,
All ranged in dread array, sir,
With stomach stout to see it out,
And make a bloody day, sir.

"The cannons roar from shore to shore,
The small-arms loud did rattle ;
Since war began, I'm sure no man
E'er saw so strange a battle.

* * * * *

“ The kegs, ’tis said, though strongly made
Of rebel staves and hoops, sir,
Could not oppose their powerful foes,
The conqu’ring British troops, sir.

“ From morn to night these men of might
Display’d amazing courage,
And when the sun was fairly down,
Retired to sup their porridge.

“ A hundred men, with each a pen,
Or more, upon my word, sir,
It is most true, would be too few,
Their valor to record, sir.

“ Such feats did they perform that day
Against those wicked kegs, sir,
That, years to come, if they get home,
They’ll make their boasts and brags, sir.”

Captain Henry Lee, afterward famous as “Light-horse Harry,” first came into notice for his daring exploits during the advance of the British toward Philadelphia. He was the son of the “Lowland beauty” who, in her early days, touched Washington’s heart, though she gave her own to another. The commander-in-chief had a peculiar liking for this dashing young officer, and in the fall of 1779 ordered all Lee’s letters to be marked “private,” that they might come directly into his hands. On the night of January 20th, an attempt was made to surprise the captain in his quarters about six miles from Valley Forge. At daylight, he was awakened to find his house surrounded by two hundred British cavalry. Securing the doors, and placing his companions, seven in all, each at a window, he maintained such a steady fire that, after a contest of half an hour, the enemy withdrew. They then tried to capture his horses from the barn adjoining. Lee thereupon dashed out with his men, exclaiming, “Fire away, here comes our infantry; we shall have them all!” The British, supposing help was at hand, fled precipitately. Lee’s men, quickly mounting their horses, pursued their late besiegers for a long distance. On the recommendation of Washington, the gallant captain received the rank of major, and was authorized to raise an independent partisan corps, afterward known through the war as “Lee’s Legion.”

The story of the Revolution is incomplete unless a peep be taken behind the scenes, and some of the secret but unparal-

leled difficulties experienced by the true heroes of the day be thoroughly understood. Valley Forge was only a part of the dark back-ground of the long struggle for Independence. It is a common idea that ours is a degenerate age; that 1776 was a time of honor and honesty, of sincerity and devotion. To think this, is to undervalue the achievements of our Revolutionary sires, as well as to erect a false standard with which to compare the present. Whoever supposes that

IN CAMP AT VALLEY FORGE.

the spirit of union
and of sacrifice was
unanimous among even
the great actors in the drama
of Independence, utterly fails
to comprehend the greatest
obstacles to the successful

prosecution of the war, and the ultimate Union of the States.

The war, as it progressed, seemed to demoralize all classes in society. The pulpit, the press, and good men, sought in vain to stem the tide of evil. While the army was suffering so much in the cause of liberty, contractors became rich, and monopolists hoarded the very necessities of life. Trade with the royal troops was opened on every side. Though the magazines at Valley Forge

were empty, and meat was often not seen for a week at a time, the markets in Philadelphia were abundantly supplied. Washington, having received authority from Congress to seize provisions for the troops and issue scrip therefor, ordered the farmers within a radius of seventy miles to thresh out one-half of their grain by February 1st, and the rest by March 1st, under penalty of having it all seized as straw. The inhabitants refused, and, guns in hand, stood guard over their stacks and cattle, even burning what they could not sell, to prevent its falling into the hands of the famishing patriot army. Men abandoned useful occupations to plunge into stock-jobbing, gambling, and other disreputable pursuits; counterfeited the public securities; forged official signatures; refused to pay their honest debts, except in depreciated paper-money; and fattened upon the common necessities. Love of country was declared to be an illusion. There were times when private or public faith appeared to be the exception. Washington, alarmed at this enemy in the rear—this new peril which threatened the country—wrote that “idleness, dissipation and extravagance seem to have laid fast hold of most; speculation, and an insatiate thirst for riches have got the better of every other consideration and almost every order of men.”

At first the masses were enthusiastic; but as the contest wore on, the slow friction of the struggle became irksome, and, in many quarters, apathy was almost universal. During the flight across New Jersey, not one hundred volunteers from that State rallied under the flag of their only defender. The Maryland militia, sent to Washington's aid just before the battle of Germantown, lost half its number by desertion. When Pennsylvania was overrun by the British, and the Federal capital in the hands of the enemy, there were only twelve hundred Pennsylvania militia in the army. Recruiting was slow; very few enlistments were secured for three years, or during the war. Sabine says “that the price paid for a single recruit was sometimes as high as one thousand dollars, besides the bounty offered by Congress; and that one hundred and fifty dollars in specie was given for only five months service.” The soldier might be pardoned for deserting the cause of a country that would neither pay him nor feed him; but what should be thought of a people that, before the war, could import one and a half million dollars worth of tea annually, besides other luxuries, and yet allow the men who were fighting for its liberties to starve and freeze in this hour of peril?

Even in the army which was engaged in protecting the dearest rights of man, all were not patriots nor honest men. Whigs were plundered under the pretence of being tories. Parties of a dozen or twenty men at a time returned home, or took refuge in the newer settlements of the country. In 1781, one thousand men perjured themselves to escape from the service, taking advantage of an error in the date of their enlistment. Some joined the royalist regiments, and became spies, guides, and informers. Bounty-jumpers infested the ranks. Drunkenness and theft were by no means uncommon. A foreigner of rank dying at Washington's quarters, and being buried with his jewels and costly clothing, a guard was placed over his grave to prevent the soldiers from digging up his body for plunder. Nor were the officers always better than their men. There were those who used for their own gratification, money designed to pay the troops under their command: who violated their furloughs, and grossly neglected their duty. Courts-martial were frequent, and long lists of the cashiered were from time to time forwarded to Congress. Washington declared that the officers sent him from one State were "not fit to be shoe-blacks," and wrote to a certain governor that the officers from his State were "generally from the lowest class, and led their men into every kind of mischief." Many of the surgeons, too, he complained, were rascals, receiving bribes to grant discharges, and applying to their private use the luxuries designed for the sick. There were constant feuds among the officers for rank and position. "I am wearied to death," wrote John Adams in 1777, "by the wrangles between military officers, high and low. They quarrel like cats and dogs."

Members of Congress lost heart. Many of the strong men stayed at home and weaklings took their place. For some time only twenty-one members were present. A bitter opposition to Washington was developed, and while the demands upon him as commander-in-chief were as exacting as ever, his recommendations and well-known opinions were openly thwarted or quietly ignored. Arnold was the oldest brigadier-general, and, in the opinion of Washington, there was "no more active, spirited, or sensible officer"; yet he was passed over in promotion. Stark, than whom none was braver, was also slighted, and he retired to his plow, and remained at home, until he came to Bennington to show how a victory could be won with raw militia. Gates was appointed adjutant-general without consulting Washington as to

whom he desired for chief of his staff. The commissary department was reorganized against Washington's expressed wishes. Colonel Trumbull, an efficient commissary-general, at once resigned. Henceforth the bad working of that department caused continual delays and disasters. Mifflin, the quartermaster-general, was disgracefully unmindful of his duties. Washington never could get a stock of provisions on hand for any movement that he contemplated. Indeed, it is said that during the dreary march to Valley Forge, when the shivering troops left lines of red behind them from their bruised and bleeding feet, that "hogsheads of shoes, stockings, and clothing were lying at different places on the roads and in the woods, perishing for want of teams, or of money to pay the teamsters."

Officers who were jealous of Washington found men in the national council to listen to and even sympathize with them in their complaints. At first, General Charles Lee was considered a rival of Washington, and the victory which others achieved for him at Charleston, was contrasted with the disastrous defeat on Long Island. Then Gates was brought to the front, and Saratoga was put by the side of Brandywine to Washington's disadvantage. Indeed, Gates, after the surrender of Burgoyne, did not report to the head of the army, as courtesy and military usage demanded, but direct to Congress, Washington only receiving tidings of the event through hearsay and unofficial letters. Had Gates dispatched his army at once to Pennsylvania after the surrender, as Washington desired and earnestly entreated, Howe might have been driven from Philadelphia, and the same fall, perhaps, his whole force captured, and Saratoga re-enacted at the Quaker city. Yet Congress, influenced, doubtless, by the advice of jealous officials, forbade Washington to detach any troops from the northern army without consulting General Gates and the governor of New York. It was only with the greatest difficulty and by finally sending his favorite aid, Alexander Hamilton, with peremptory orders from the commander-in-chief, that he secured reinforcements either from Gates or from Putnam.

At last a cabal was organized to displace Washington from his post and elevate Gates in his stead. Chief in this movement was General Conway, a wily, unprincipled intriguer. Pennsylvania sent a remonstrance to Congress against the measures of Washington. Members from Massachusetts re-echoed their disapprobation. While the patriot army was marking out the path of

liberty with blood-stained feet, John Adams could write: "I wish the Continental army would prove that anything can be done. I am weary with so much insipidity." Samuel Adams, who was still more impatient, declared: "I have always been so very wrong-headed as not to be over-well pleased with what is called the Fabian war in America." Benjamin Rush, in a similar strain, affirmed that "a Gates, a Lee, and a Conway in a few weeks could render the army an irresistible body of men."

In October, 1777, a board of war was created to have the general direction of military affairs. Gates became its president. He was urged to hasten on and save the country. Conway was made inspector-general, and his office declared independent of the commander-in-chief. By the advice of the board, an expedition to Canada was planned, and, in order to detach Lafayette from Washington, to whom he clung with a chivalrous devotion, he was appointed to the command. With the quick apprehension of a loving heart, he detected the animus of the cabal. By the advice of Washington, however, he accepted the post. Proceeding to Yorktown, he found Gates at table, and was at once invited to join the repast. Toasts were given, and drunk in full glasses, according to the custom of the day. The marquis noticed a significant omission, and so offered as a sentiment, "Our commander-in-chief." It was drunk in silence. Washington did all he could to fit out the expedition, but no one else aided, and Lafayette, indignant and disgusted at the failure of those who had promised him so much, returned to his friend and adviser.

Washington was aware of these intrigues to remove him, but in perfect equipoise of mind and temper, with a patriotism that no disappointment or treachery could chill, and a noble superiority to all which affected only his personal reputation, he

MARQUIS DE LAFAYETTE.

wrote to Patrick Henry these magnificent words: "IF THE CAUSE IS ADVANCED, INDIFFERENT IS IT TO ME WHERE OR IN WHAT QUARTER IT HAPPENS." Such generosity and devotion could but triumph at last. The army and most of the best men of the country implicitly trusted Washington. Their indignation toward his enemies was unbounded. The whole movement finally recoiled on the heads of its instigators. Congress began to perceive its error. The cabal lost its power. Neither Conway nor Samuel Adams dared to show himself among the soldiers. The office of inspector was taken from the former, and given to Baron Steuben.

At the last, however, Conway was the only one of the intriguers magnanimous enough to confess his fault. General Cadwallader, who was Washington's devoted friend, was so incensed at his attempt to injure the commander-in-chief that he challenged him to personal combat. Conway, being wounded, mortally, as he believed, wrote the following letter to General Washington: "Sir:—I find myself just able to hold my pen during a few minutes, and take this opportunity of expressing my sincere grief for having done, written, or said anything disagreeable to your excellency. My career will soon be over; therefore, justice and truth prompt me to declare my last sentiments. You are, in my eyes, the great and good man. May you long enjoy the love, esteem, and veneration of these States, whose liberties you have asserted by your virtues." Washington, too great to harbor resentment, said, as he closed the epistle, "Poor Conway! He never could have intended much wrong; there is nothing to forgive."

The particulars of this duel, as related in Garden's Anecdotes of the Revolution, so well illustrate the manner of conducting those affairs that they appear worthy of record. They show, says the narrator, that "though imperious circumstances may compel men of nice feeling to meet, the dictates of honor may be satisfied without the smallest deviation from the most rigid rules of politeness. When arrived at the appointed rendezvous, General Cadwallader accompanied by General Dickinson of Pennsylvania, and General Conway by Colonel Morgan of Princeton, it was agreed by the seconds that on the word being given, the principals might fire in their own time, and at discretion, either by an off-hand shot, or by taking a deliberate aim. The parties having declared themselves ready, the word was given to proceed. Gen-

eral Conway immediately raised his pistol and fired with great composure, but without effect. General Cadwallader was about to do so, when a sudden gust of wind occurring, he kept his pistol down and remained tranquil. 'Why do you not fire, General Cadwallader?' exclaimed Conway. 'Because,' replied General Cadwallader, 'we came not here to trifle. Let the gale pass and I shall act my part.' 'You shall have a fair chance of performing it well,' rejoined Conway, and immediately presented a full front. General Cadwallader fired, and his ball entering the mouth of his antagonist, he fell directly forward on his face. Colonel Morgan, running to his assistance, found the blood spouting from behind his neck, and lifting up the club of his hair, saw the ball drop from it. It had passed through his head, greatly to the derangement of his tongue and teeth, but did not inflict a mortal wound. As soon as the blood was sufficiently washed away to allow him to speak, General Conway, turning to his opponent, said, good-humoredly, 'You fire, general, with much deliberation, and certainly with a great deal of effect.' The parties then retired free from all resentment."

Early in February, there arrived in camp at Valley Forge, Baron Steuben, a veteran of the Seven Years War under Frederick the Great. His advent was hailed with enthusiasm. The raw militia troops presented a sorry appearance to this able disciplinarian, accustomed to the exact order of the Prussian army; but he had sense to see what was needed, and to adapt his methods to the peculiar condition of the country. Soon the whole army was under drill, Steuben personally supervising every detail, even to the examination of each soldier's musket and accoutrements. His ignorance of the language was a sore worry and embarrassment to him, especially when he sought to explain any difficult manoeuvre to his raw learners. "The men blundered in their exercise; the baron blundered in his English; his French and German were of no avail; he lost his temper, which was rather warm; swore in all three languages at once, which made the matter worse," and was in an agony of despair until a New York officer, who spoke French, stepped forward and offered his services as interpreter. "Had I seen an angel from heaven," records the relieved Prussian, "I could not have been more rejoiced." Under his skillful discipline, the army, officers as well as men, soon showed marked signs of improvement.

Baron Steuben had brought over with him a superior French

cook to serve in the camp. This personage was horrified to find no utensils or conveniences for preparing the choice dishes on which he longed to show his skill. He applied to one of the men for information. "We cook our meat," was the reply, "by hanging it up by a string, and turning it before a good fire till sufficiently roasted." The poor cook, appalled at such a state of affairs, received the daily rations of beef and bread with the hopeless air of a martyr. He loved his master, and, with many shrugs and sighs and some oaths, tried to accommodate himself to the trying situation; but at last his patience was exhausted, and he sought the baron's presence. "Under happier circumstances, *mon General*," he said, "it would be my ambition to serve you; but here I have no chance to show my talents, and my honor obliges me to spare you my expense, since *your wagoner is just as able to turn the string as I am*." Baron Steuben afterward told this story with great effect to a company which expressed some surprise at the resignation of Robert Morris as government financier. "Believe me, gentlemen," said the baron, "the treasury of America is just as empty as was my kitchen at Valley Forge; and Mr. Morris wisely retires, thinking it of *very little consequence who turns the string*."

On March 2d, General Greene was appointed Quartermaster-General. He accepted the position for a year without compensation. His efficient measures soon changed the condition of affairs. Provisions began to appear in camp. Even "Grim-visaged War," when well fed, wore a smile. Ladies, too, lent their charming presence. The little parlor of Mrs. Greene, who spoke French, quickly became a favorite resort for foreign officers, where her wit and graceful tact made her a reigning queen. Mrs. Washington also came to spend the winter, and brighten the anxious life of her husband. At the little soirees "there was tea or coffee, and pleasant conversation always, and music often; no one who had a good voice being allowed to refuse a song." The courtly Morris and the brilliant Reed were there; and Charles Carroll, who was to outlive them nearly all; and Knox, whom Greene loved as a brother; the loved and trusted Lafayette; the generous Steuben; and the stately De Kalb, who, as the soldier of Louis XV., had served against Steuben and his royal master Frederick, in the Seven Years War; the dignified Sullivan and the gallant "Mad Anthony" Wayne; and a host of others who forgot for a while the horrors and hardships of a soldier's life in

the delightful intercourse of friendship. Gates was transferred to the northern department again, and made subject to Washington's orders.

The capture of Burgoyne giving confidence to France, and the queen, Marie Antoinette, being our hearty ally, Louis XVI. was finally persuaded to acknowledge the independence of the United States and to make common cause with the Americans. May 2d, a messenger arrived in this country with the glad news. Four days after, there was a fête at Valley Forge, and a salute was fired in honor of Louis XVI. The disaster to Burgoyne, and the French Alliance, produced a great effect in England. There was a loud cry to put an end to the useless contest. The minority in parliament, opposed to the government, again raised its warning voice. Fox wished to have the colonies declared free at once. Lord North's

LOUIS XVI., MARIE ANTOINETTE, AND
THE DAUPHIN.

MEDAL COMMEMORATING THE ALLIANCE BETWEEN
FRANCE AND THE UNITED STATES.

"Conciliatory Bills," as they were termed, were readily passed. These authorized the appointment of commissioners to treat for peace with the government of the United Colonies. They could not grant independence, however, and that alone would satisfy the "rebels"; and so nothing came of the attempt at a reconciliation.

General Howe's military career in the United States had not proved a success. He now resigned. The close of his inglorious residence in Philadelphia was celebrated by a famous pageant or mischianza, a sort of medley of tournament and regatta. Its splendor and mock heroics were the theme of merriment and wonder in the staid Quaker city for many a day.

Just after this festival, Howe received news that Lafayette, with a large force, had taken post at Barren Hills, twelve miles nearer Philadelphia than Valley Forge, to watch the British army more closely. To cut off this detachment would shed a parting gleam of glory over his American career. He sent out General

Grant by night with a picked body of men, while he followed with the main force. Lafayette was nearly taken; but, by a skillful manœuvre, he seized the only ford not guarded by the enemy, made a feint of attacking Grant, and while that general was getting ready for battle, the brave young Frenchman was on his way to Washington. Howe came back weary and disappointed from his bootless expedition.

Clinton, who succeeded Howe, received orders to evacuate Philadelphia and to concentrate his forces at New York. As the commissioners, who had been sent over, as we have seen, to restore the old condition of affairs, landed in Philadelphia, they found the flight already begun. Sad was the fate of the abandoned tories. "The winter's revelry was over; honors and offices turned suddenly to bitterness and ashes, and papers of protection were only a peril." Three thousand houseless fugitives, carrying all they could save from the wreck, followed the army. Washington rapidly pursued the British across New Jersey. General Charles Lee held the advance. He had orders to attack the enemy: instead, he grossly neglected his duty, even if he did not treacherously lead his troops into peril.

It was a hot, sultry Sunday morning, June 28th. Washington, sitting on his horse near the Freehold meeting-house, west of Monmouth, was planning for the battle now just beginning, as he thought from the few dropping shots in the distance. Suddenly he was startled by the news that the Americans were falling back. Spurring forward, he found the advance-guard in full flight before an overwhelming force. Riding up to Lee, he demanded, "Whence arises this disorder and confusion?" Lee could only stammer "Sir—sir." Not a minute could be lost. The genius of Washington never shone out more fully than now. Rallying the fugitives and judiciously posting a battery, he checked the pursuit upon a narrow causeway traversing a deep morass. A new line of battle was formed back of the swamp, General Stirling commanding the left, Greene the right, and Washington the centre. Wayne was posted in advance, under the protection of an orchard and a battery on Comb's Hill. The British attacking the left and right were several times repulsed. Finally Monckton advanced upon Wayne at the head of the English grenadiers. So perfect was their discipline and so accurately did they march, that it is said that a single ball striking in line with a platoon disarmed every man. As they came close to

the American position, their leader waved his sword for the charge. Wayne at the same moment gave the order to fire. Every British officer fell. The men fought desperately over Monckton's body; but the whole line finally gave way, and the patriots took possession of the hotly-contested field. Washington was preparing in turn to attack the enemy, when night closed the struggle. Under cover of the darkness, Clinton withdrew his men. The American loss was about two hundred and thirty; the English

MOLLY PITCHER AT THE BATTLE OF MONMOUTH.

lost over four hundred, and eight hundred more deserted their colors before they reached New York. Many of the troops on both sides, it is said, fell from the intense heat (ninety-six degrees in the shade) without a wound.

During the day an artillery man was shot at his post. His wife, Mary Pitcher—a “red-haired, freckled-faced young Irish-woman,” who was already distinguished for having fired the last gun at Fort Clinton—while bringing water to her husband from a spring, saw him fall and heard the commander order the piece to be removed from the field. Instantly dropping the pail, she hastened to the cannon, seized the rammer, and with great skill and courage performed her husband's duty. The soldiers gave her the nickname of Captain Molly. On the day after the battle, she was presented to Washington, and received a sergeant's com-

mission with half-pay through life. Her bravery made her a great favorite among the French officers, and she would sometimes pass along the lines holding out her cocked-hat, which they would nearly fill with crown pieces.

Lee, after Washington's rebuke, did nothing except to sit idly in the rear and declaim upon the madness of the attempt to fight the enemy. The next day he wrote to the general demanding an apology. Washington having replied in a dignified manner, Lee returned a most insulting letter, in which he grandiloquently expressed a hope that "temporary power of office and the tinsel dignity attending it would not be able, by the mists they could raise, to obfuscate the bright rays of truth." He was court-martialled and suspended for a year. Later, for obtaining money from British officers, and for an insulting letter to Congress, he was dismissed from the service.

Washington moved his army to the North River. In August, he thus wrote from White Plains: "After two years manœuvring and the strangest vicissitudes, both armies are brought back to the very point they set out from, and the offending party at the beginning is now reduced to the use of the spade and pickaxe for defence. The hand of Providence has been so conspicuous in all this, that he must be worse than an infidel that lacks faith, and more than wicked that has not gratitude enough to acknowledge his obligations."

Congress now returned to Philadelphia. On the 15th of November, 1777, it had agreed upon articles of confederation for the closer union of the several States and the more perfect harmony of their action. These had been accepted by eight of the States. The others were now called upon to "conclude the glorious compact." All agreed except Maryland, which refused on the plea that the public lands northwest of the Ohio should be the common property of the States. So the subject was postponed, and the general government dragged along its feeble existence, having, indeed, the right to advise and appoint, but being destitute of any power to demand or enforce. It was the era of State rights.

The French fleet under Count d'Estaing having arrived off the coast, a combined land and naval expedition was planned to recover Rhode Island. Sullivan was placed in charge of the troops. Washington spared two brigades from his weakened ranks. New England in twenty days increased his forces to ten

thousand men. On the 29th of July, the French entered Narragansett Bay. Some days after, Howe arrived off the harbor with the English fleet. D'Estaing went out to meet him. A terrible storm came on, which so shattered both fleets that they were compelled to put back for repairs—the English to New York and the French to Boston. General Sullivan, though deserted, was loath to leave. Just as he began his retreat, the English attempted to cut off his right wing. Greene, by a brilliant attack, drove back the enemy, and secured the escape of the army just in time to avoid Clinton, who came up from New York with reinforcements for the British. The French gave no further aid during the year.

The beautiful Valley of Wyoming, famed in history and song, was settled mainly from Connecticut. The charter of that colony was older than that of Pennsylvania, and gave it a strip of land extending from sea to sea. Differences naturally arose with the Pennsylvania government. These were finally settled by an appeal to the king, who decided in favor of Connecticut. The colony was therefore created as the town of Westmoreland, and attached to Litchfield county. These local disputes faded out only in the more absorbing topics of the Revolution. This valley, smiling in peace and plenty, now lay open to attack from the Six Nations, who bitterly remembered the slaughter of their braves at Oriskany and panted for revenge. The able-bodied men were in the Continental regiments, and though they urged the defenceless condition of their wives and children, Congress took little or no action in their behalf. The women and the old men plowed, sowed, reaped, and made gunpowder for the little garrison in their forts, obtaining the nitre by leaching the soil under the floors of their houses.

Early in the summer a force of five or six hundred men, consisting of Butler's Rangers, Johnson's Royal Greens, and a body of Indians, principally Senecas, under a celebrated chief named Giengwatah, or The-one-who-goes-in-the-smoke, dropped down the Chemung and Susquehanna Rivers in canoes, and on July 1st appeared in the Wyoming Valley. All was dismay. Those who could, fled to their forts. Two of their strongholds were quickly captured. Colonel Zebulon Butler of the Continental army, who happened to be at home, took command of the forlorn hope of three hundred soldiers—old men and boys—all that could be mustered for the defence of their homes. With these he marched

out to meet the enemy. He found them near Wintermoot's Fort, near the site of the present village of Troy, ready to meet him. Outnumbered from the first, the Americans could have little hope. They held their ground bravely, however, for half an hour, when, their left being outflanked by an Indian ambush, Colonel Denison, in command at that point, gave the order to fall back. He was misunderstood, and the fatal word "retreat" was passed down the lines. The Indians sprang from their coverts, and a terrible massacre ensued. Few of the patriots escaped. Some were slain on the banks of the river; some were tomahawked among the bushes; some fled to an island and were hunted to death. The Senecas took two hundred and twenty-five scalps. No mercy was shown. One tory brutally murdered his own brother while crying for quarter. Lieutenant Shoemaker, "whom to know was to love," was treacherously tomahawked by Windecker, a man who had often received his generous bounty.

That night, tories and Indians held high carnival. Captain Bidlack was thrown on the burning embers of the fort and held down with pitchforks till he expired. Sixteen prisoners were arranged around a large stone, still known as Queen Esther's rock. The savages held them while a Seneca half-breed by that name walked slowly round the circle, singing a death-song and striking them one by one, alternately with her hatchet and mallet. Two of the captives, breaking away, escaped to the bushes under a shower of balls. The next day, the forts surrendered. Though lives were spared thereafter, robbery and arson ran riot. Butler could not restrain his savage allies. The inhabitants fled from the scene of terror. The swamp through which they made their way is remembered to this day as the Shades of Death. Children were born and buried in this terrible flight. Many were lost in the wilderness and perished miserably. The fainting survivors straggled into the settlements on the other side of the mountains, famine-stricken and desolate. Meantime the savages pillaged and burned their deserted houses. Decked in their booty, they at last withdrew. "The appearance of the retiring enemy," says Lossing, "was extremely ludicrous, aside from the melancholy savagism that was presented. Many squaws accompanied the invaders, and these brought up the rear. Some had belts around their waists, made of scalps stretched on small hoops; some had on from four to six dresses of chintz or silk, one over the other; and others, mounted on stolen horses,

and seated 'not sidewise, but otherwise,' had on their heads four or five bonnets, one within another."

Clinton, after his bootless expedition to Newport, returned to New York, detaching, however, Grey, of Paoli massacre memory, to ravage the New England coast. New Bedford, Fair Haven, and Martha's Vineyard were laid waste. In September, Cornwallis led a foray into New Jersey, during which "No-flint Grey" surprised Baylor's light-horse while they were quietly resting in some barns in Old Tappan. Cries for mercy fell on deaf ears. Eleven of the dragoons were butchered, and twenty-five desperately mangled by bayonet thrusts, some receiving as many as sixteen wounds. At the same time, Captain Ferguson emulated his rival in the bayonet exercise by destroying the shipping in Little Egg Harbor, and thence scouring the adjacent country, burning the houses of those who were pointed out as patriots by the tories who accompanied the expedition. Count Pulaski had been sent out with his legion to check these predatory incursions. Ferguson, going up the river in boats during the night of the 15th of October, noiselessly surrounded the house in which Pulaski's infantry was quartered. "It being a night attack," wrote the captain afterward in his report, "little quarter could be given, so there were *only five prisoners*."

The western part of Virginia and Kentucky would have suffered equally with Wyoming Valley had it not been for the energy and vigilance of Colonel Clark. Hamilton, the British general at Detroit, was busy in organizing parties of savages for forays upon the defenceless frontier settlement. He offered rewards for scalps, not for prisoners, and was known as the "hair-buying general." Clark, by a bold dash, seized Kaskaskia, and the county of Illinois became a part of Virginia. Hamilton, thereupon invading the country, summoned the post of Vincennes to surrender. Captain Helm had but one man as garrison, but maintained a bold front, and standing with lighted match over a cannon, he deceived the enemy and secured the honors of war. Hamilton was now more active than ever in preparing for bloody work. The ensuing winter, Clark, whose situation looked desperate, finding that Hamilton had sent off most of his men on predatory excursions, suddenly set out in January with one hundred and thirty bold men to recapture Vincennes. The river was high, and in crossing the "drowned lands" of the Wabash they had to wade for miles with the icy water breast high. But he resolutely kept on, and laid

siege to the fort, which, with its garrison and governor, fell into his hands.

The 10th of November saw the terrible scenes of Wyoming repeated in Cherry Valley, New York. A body of tories, regulars and Indians, under Walter Butler, son of John Butler, and Brandt, the Mohawk chief, crept into this settlement under cover of the early morning mist. The fort, garrisoned by Continental troops, was too strong to be carried, but over thirty of the inhabitants—men, women and children—were murdered, and all the houses fired. Brandt showed mercy at times, but the tories, “more savage than the savages,” knew no pity. Mr. Wells was cut down while at prayer. A mother and her innocent babe were slain in bed together. After the marauders had gone away with their booty, the survivors timidly stole back to find the mangled bodies of fathers, mothers, wives, husbands and children amid the burning timbers of their homes.

Brandt afterward pushed his incursions into Orange county. Here, we are told, one day the savages came to a school-house which was filled with young children. They took the school-master into the woods and killed him. They then clove the skulls of several of the boys with their tomahawks; but the little girls, who stood looking on horror-struck, and waiting for instant death, were spared. A tall savage—it was Brandt—dashed a mark of black paint upon their aprons, and when the other savages saw it they left them unharmed. Swift as an inspiration, the little girls resolved to save their brothers. They flung over them their aprons, and when the next Indians passed by, they were spared for the mark they bore.

The Six Nations had not taken the field until 1777 at the battle of Oriskany. Their determination to bear arms against the colonists, with whom they had fought so bravely during the French and Indian war, was due to the influence of the Johnsons. Sir William had been knighted for the victory of Lake George. After the war, he received a tract of one hundred thousand acres north of the Mohawk, long known as “Kingsland.” In 1764, he built Johnson Hall, near Johnstown, about twenty-five miles west of Schenectady.

Here he lived with the splendor of an old feudal baron, and dispensed a lavish hospitality. His influence over the Indians was almost unbounded. Many anecdotes are told of his shrewdness in dealing with them. Allen relates that on his receiving

from England some fine laced clothes, the Mohawk chief, Hendrick, desiring to equal the baronet in the splendor of his apparel, with a demure face pretended to have dreamed that Sir William had presented him with a suit of the decorated garments. As the solemn hint could not be mistaken or avoided, the Indian monarch was gratified, and went away highly pleased with the success of his device. But, alas for Hendrick's short-sighted sagacity, in a few days, Sir William, in turn, had a dream, to the effect that the chief had given him several thousand acres of land. "The land is yours," said Hendrick; "but now, Sir William, I never dream with you again; you dream too hard for me."

When the difficulties arose with England, the contest in Sir William's mind between his love of liberty and his loyalty to the king brought on a fit of apoplexy, of which he died. His son and heir, Sir John Johnson, and his sons-in-law, Colonel Guy Johnson and Colonel Claus, felt no reluctance in supporting the royal cause. They at first fortified their stone mansions in the Mohawk Valley, armed their Scotch tenants, and, with their adherents, the Butlers of Tryon county, and Brandt, the great Mohawk sachem, prepared for defence. Finally they all fled to Canada. The Six Nations declared for the crown. Sir John raised a body of tories, known as the Royal Greens. Their names were henceforth associated with deeds of crime and bloodshed, in which the tories far surpassed their Indian allies. Wyoming and Cherry Valleys were only illustrations on a large scale of minor massacres which kept in continued dread the entire frontier to the very suburbs of Albany.

The peace commissioners returning to England after their unsuccessful mission to the United States, were fierce in their denunciations. "No quarter," exclaimed one of their number, "ought to be shown to their Congress. If the infernals could be let loose on them, I should approve the measure." The government did not have it all its own way, however. The Bishop of Peterborough called attention to the significant fact that in the army-appropriation was an item for "scalping-knives"; and many followed him denouncing the use of such instruments of war.

The English, discouraged by their repeated failures in the Eastern and Middle States, now decided to transfer their forces to the South. Henceforth, the Revolutionary struggle was mainly confined to that field. In combination with various minor movements, three thousand men, under Lieutenant-Colonel Campbell,

were sent from New York, and on December 23d appeared off Tybee Island. Soon after, the fleet passed the bar and the troops landed near Five-fathom Hole. General Howe, with his little army of militia, not a third as large as that of the enemy, resolved to fight for the defence of Savannah. He accordingly took a strong position at the head of a causeway, with a swamp on one side and rice-fields on the other. The British, having driven his advance from Brewton's Hill, manœuvred as if to assault in front. Meanwhile, guided by a negro named Quamino Dolly, Sir James Baird and a party passed through a by-path in the swamp and turned the American position. The patriots, attacked at once in front and rear, soon gave way in despair. Some were drowned in the swamp, and many were captured. The pursuers, chasing the refugees through the town, bayoneted several unarmed citizens whom they found on the streets. So the English captured Savannah, the capital of Georgia, including all its extensive stores, with a total loss of only twenty-four killed and wounded. The captives, refusing to enlist in the British army, were hurried into the prison-ships to speedily die of disease. Protection was offered to those of the inhabitants who would return to their allegiance. Numbers flocked to the British standard, while many patriots fled to the uplands and to Carolina.

After his gallant exploit at Charleston, Sergeant Jasper received from Colonel Moultrie a roving commission entitling him to form a scouting command. His spies often proved of great service to the American army. At one time, he remained in Savannah, after its capture by the British, several days, collecting valuable information concerning the English forces and their position. Some of his adventures were full of romance. One, especially, has become historical.

Near Ebenezer, he met a Mrs. Jones, whose story awakened his sympathies. Her husband had taken the oath of allegiance to the British government, but afterward joined the American army. Having been captured, he was now, with several companions, *en route* to Savannah, to be tried and probably hanged. Sergeant Jasper and his friend Newton determined to rescue the prisoners. Thinking that the party would stop to drink at a pleasant spring about two miles out of Savannah, the two patriots went ahead, and, hiding themselves in the bushes near by, awaited the turn of affairs. Upon reaching the point, the guard stacked arms, leaving two of their number in charge of the prisoners.

Taking advantage of a moment when the sentinels' backs were turned, Jasper and Newton sprang from their covert, seized the guns, shot the two armed soldiers, and called upon the rest to surrender. They had no resource but to yield. The irons were knocked off the prisoners and placed on the late guard. The whole party then, redeemed friends and captive soldiers, marched into the American camp at Purysburg.

The next year, when Jasper lay dying before the fortifications of Savannah, his last words were, "Tell Jones, his wife and son, that the remembrance of the battle I fought for them brought a secret joy to my heart when it was about to stop its motion forever." The spring, named after Jasper, is now neatly walled in, and is the resort of hundreds of visitors.

JOSEPH BRANDT.

(From a Painting by Catlin.)

CHAPTER VI.

FIFTH YEAR OF THE REVOLUTION—1779.

WITH the opening of the year the English vigorously pushed their success at the South. General Prevost, commanding the royal forces in Florida, marched across the wilderness, captured Sunbury, the only fort in Georgia occupied by the Americans, reached Savannah, and assumed command. Campbell was sent to take possession of Augusta. The whole State lay at his mercy. Sir James Wright was reinstated

governor, and all things were restored as in the good old times before the war. England could once more boast of a royal province among her former colonies. The conquest of South Carolina now seemed imminent. Meanwhile, Major-General Lincoln had arrived to take command of the patriot troops in the southern department. His little force of eleven hundred men was encamped on the Savannah, near Purysburg. Port Royal being taken by a British detachment which landed from their ships, Moultrie was sent to drive them out. Rallying some militia to his standard, he accomplished the task in gallant style.

A large body of North Carolina royalists having started to join Prevost at Augusta, Colonel Pickens, with a party of citizens from Ninety-Six, fell upon them at Kettle Creek as they were plundering about the country, and put them to rout. Seventy of the prisoners were tried by jury and convicted of treason. Five of the most influential were executed. This mode of treating prisoners of war was a dangerous precedent, and served as an excuse to the British for similar usage on a more extended scale.

Lincoln, being reinforced, had hopes of recovering Northern Georgia. He accordingly detached General Ashe with fifteen hundred men to take post opposite Augusta. At his coming, the British evacuated the town. Ashe thereupon crossed the river, and followed on nearly to Brier Creek, half way to Savannah. He had apparently "never heard of military discipline and vigilance." On the 3d of March, Prevost surprised his position. The militia threw away their guns and fled at the first fire. The Continentals, sixty strong, fought bravely, but uselessly. Of the whole detachment, only four hundred and fifty, by wading the swamp and swimming the river, rejoined Lincoln in camp.

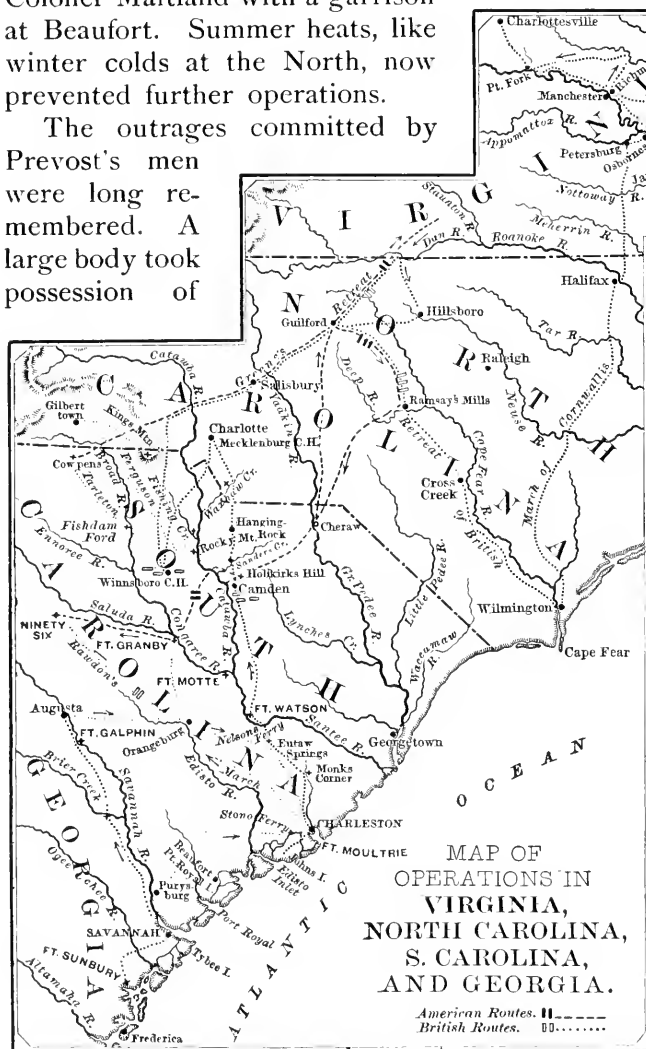

Leaving Moultrie with one thousand militia to guard the passage of the Savannah, Lincoln now crossed the river and marched up toward Augusta, hoping to protect the legislature of Georgia, then about to convene. Prevost also immediately crossed, and, driving Moultrie before him, moved towards Charleston. He was accompanied by Indians, and still more relentless tory allies. It was a grand marauding time. Every house belonging to a whig was robbed of money, jewelry, and even furniture. Windows, mirrors, and crockery were wantonly broken. Animals which could not be driven off, were shot. Tombs were desecrated. Gardens were trampled underfoot. The appearance of this banditti before Charleston, May 11th, aroused the deepest anxiety. Had Prevost arrived two days earlier he might have taken the city at once. Fortifications had been hastily thrown up; troops had arrived, and there was now a chance of defence. The council, however, parleyed with the enemy, sure at least of gaining time. At this juncture South Carolina felt itself alone. Washington had been able to send South but few men. Congress had done nothing except to commend the arming of the slaves—a proposition indignantly rejected by the Carolinians.

Rutledge, against the bitter opposition of such men as Laurens, Gadsden, Ferguson, and Edwards, proposed that South Carolina should remain neutral during the rest of the war. Prevost declined the offer. "Then we will fight it out," exclaimed Moultrie, and forthwith waved the flag from the city gate as a signal that debate was over. But Prevost had learned that Lincoln was coming by forced marches, and so, after gathering what plunder he could in the neighborhood, he retired to St. John's Island. Lincoln, on his arrival, prepared an attack on the re-

doubts which protected the ferry across the Stono River to the island. He was repulsed. Soon after, Prevost, unperceived, escaped by interior navigation to Georgia, leaving Lieutenant-Colonel Maitland with a garrison at Beaufort. Summer heats, like winter colds at the North, now prevented further operations.

The outrages committed by Prevost's men were long remembered. A large body took possession of

the house and plantation of Mr. Robert Gibbes on the Stono River. This gentleman had an aged and infirm brother, Mr. John Gibbes, who was then on a visit to him from his beautiful home near Charleston, where his grounds were laid out with exquisite taste and at a great expense. A Major Sheridan, arriving

at Mr. Robert Gibbes's from the army on the Neck, was asked by an officer in the presence of the brothers, "What news? Shall we take the city?" "I fear not," replied Sheridan, "but we have made glorious havoc of the property round about. I witnessed yesterday the destruction of an elegant establish-

ment belonging to an arch-rebel, who, luckily for himself, was absent. You would have been delighted to see how quickly the pine-apples were shared among our men, and how rapidly his trees and ornamental shrubs were leveled with the dust." Mr. John Gibbes, who recognized his own place in this description, could not restrain his indignation, and, fearless of consequences, exclaimed, "I hope that the Almighty will cause the arm of the scoundrel who struck the first blow to wither to the shoulder." Sheridan uttered a threatening retort, but his commanding officer, who divined the truth, advised him for his own credit to be silent. Mr. Gibbes so seriously felt the outrage and the loss that he retired to his bed and never rose again. Not long afterward the whole family was ordered to leave, fire having been opened upon the house and neighboring encampment from some Charleston galleys, which had quietly ascended the river. It was midnight, dark and rainy. Mr. Gibbes, who was ill, started out with his large household for an adjoining plantation. When out of reach of the pelting shot, they halted for a moment to see if all were present. To their dismay, they found that one little boy—a distant relative—had been left behind. The servants were entreated to return for him, but utterly refused. Miss Mary Anna Gibbes, a young girl of thirteen, resolutely undertook the mission, ran the long mile through the rain and darkness, obtained, by many tears and pleadings, an admission to the house, secured the babe, and carried him in her arms through a storm of grape and round shot, which frequently covered her person with dirt as they struck the ground at her side, safe to the retreat of her family. The boy thus saved became the gallant Lieutenant-Colonel Fenwick, distinguished in the war of 1812.

Washington's army passed the winter in a line of positions extending from the Highlands to the Delaware. Clinton's instructions permitted only a series of predatory excursions, and little was attempted on either side. Signals were devised to give warning when the British parties left New York. On Battle Hill, sentinels were placed, with orders by day to fire a big gun familiarly called the "Old Sow," and at night to kindle a beacon. These signals, repeated from hill to hill, quickly spread the alarm through the country.

One day in March, General Putnam, while shaving at his headquarters at Horse Neck, saw in his mirror the reflection of a body of British coming up the road. Changing his razor for a

sword, he darted out, mounted his horse, and gathered his men upon a hill near by to resist their advance. The overwhelming forces of the enemy at length compelled him to flee. Ordering his troops to scatter into a neighboring swamp, he spurred his own horse over a precipice and descended a zigzag path, where the British dragoons did not dare to follow. Tryon, who was in command of the English, plundered the neighboring people, destroyed the salt works, and then retreated to King's Bridge. But the irrepressible Putnam was after him, and on the way recovered most of the booty.

During Prevost's plundering raid in South Carolina, General Matthews was sent from New York to Virginia on a similar expedition. He cast anchor in Hampton Roads May 9th. Predatory parties ascended the James and the Elizabeth Rivers. Portsmouth and Norfolk—the latter just recovering from its destruction by Dunmore—was seized, and the inhabitants brutally maltreated. One hundred and thirty vessels were captured. Plantations were pillaged and the buildings fired. Every house save one in Suffolk county was burned. Matthews returned to New York with a rich booty, consisting in part of three thousand hogsheads of tobacco. He had inflicted a damage of two million dollars, without advancing the royal cause in any sense.

On the return of this expedition, Clinton ascended the Hudson and captured the works at Stony Point and Verplanck's Point, which guarded King's Ferry. The American army had now no means of communication between New England and the Middle States below the Highlands.

Connecticut was next to feel the heavy hand of the invader. On the evening of the 4th of July, the inhabitants of New Haven were startled by the appearance of a fleet in the bay. Early the next morning, troops were rapidly landed. Tryon was again out with his royalists and Hessians on their favorite work. They were soon busy at plunder. The militia, however, rallied and drove off the marauding bands both here and at East Haven. Dr. Daggett, ex-president of Yale College, was barbarously maltreated while resisting the advance of the enemy. When threateningly asked if he "would take up arms again," he bravely answered, "I rather think I shall if I get an opportunity." Fairfield, Norwalk, and Greenwich were next visited, pillaged, and burned. Tryon boasted of his clemency in sparing a single house. Unarmed men were brutally murdered. Females were

insulted. For days afterward, women, half frantic with grief and fear, were found wandering through the neighboring woods. The expedition was preparing to make a descent on New London when it was recalled by General Wayne's famous exploit at Stony Point.

Washington looked with an envious eye on the British possession of Stony Point, and had resolved upon its recapture. Upon making known his wishes to Wayne, that general replied, "I will storm h—l if you will only lay the plan." The

GIVING THE COUNTERSIGN AT STONY POINT.

fort was on an eminence, washed on three sides by the river, the fourth being protected by a marsh that was overflowed at flood-tide. The only hope lay in a surprise. Twelve hundred men were selected, and marched through swamps until within a mile and a half of the enemy, where they were concealed. The countersign, which, curiously enough, was "The fort is ours," was obtained of a negro who was in the habit of selling strawberries at the fort. He guided the troops in the darkness to the causeway leading over the flooded marsh around the foot of the hill. The unsuspecting sentinel, having received the countersign, was chatting with the negro, when he was suddenly seized and gagged by two soldiers dressed as farmers. Wayne's men

passed over the causeway and reached the base of the hill undiscovered, where they seized the second sentinel in the same manner. Forming in two columns, with unloaded muskets and fixed bayonets, just after midnight they commenced the ascent of the steep and rugged slope. A forlorn hope of twenty men preceded each to remove the abattis. They had nearly reached the picket before they were discovered. Fire was at once opened upon them. Wayne was wounded, but commanded his aids to carry him that he might die at the head of his column. The rush of his men was irresistible. An instant more, and a deafening shout told that the fort was won. Both columns reached the centre of the works at nearly the same time. The British lost in killed and prisoners six hundred and six men, and the Americans but ninety-eight. Even English authorities agree that the Americans did not take the life of a man except in fair fight. On account of the vicinity of the main army under Clinton, Washington ordered the fort to be evacuated. The stores were all removed and the works razed to the ground.

August 19th, Major Henry Lee rivaled this brilliant exploit of Wayne's by the capture of Paulus Hook, now Jersey City, in sight of New York, and almost in range of its guns. Reaching the neighborhood of the fort before daylight, his detachment was mistaken by the sentinel for a foraging party and allowed to pass. The Americans were inside the works before the garrison was fairly awake. Major Sutherland, the commander of the post, threw himself with sixty Hessians into a block-house and opened fire; but Lee had no time for an assault, as alarm-guns began already to be heard. Collecting one hundred and fifty-nine prisoners, he retired as rapidly as he had come. Lee received a gold medal from Congress for this feat.

While everything under Washington's immediate eye was thus favorable, an expedition sent out by Massachusetts against the British at Fort Castine, on the Penobscot, proved a total and disgraceful failure. It consisted of nineteen vessels, carrying over three hundred guns, and twenty-four transports, bearing one thousand men. It reached its destination July 25th. Delays followed. Finally a British fleet dispersed the naval forces, when the land troops were glad to make their way home through the wilderness as best they could.

The continued Indian and tory atrocities in the Wyoming and Mohawk valleys threatened to depopulate these fertile regions.

It was now felt that such a punishment must be inflicted upon the Six Nations as would deter them from further incursions. General Sullivan accordingly organized for this purpose a force of about three thousand men. Late in August he moved northward from Wyoming, the artillery and stores being drawn up the Susquehanna in one hundred and fifty boats. At Tioga he was joined by General Clinton with one thousand New York troops. The latter had marched from Albany, up the Mohawk to Canajoharie, and thence ascending Canajoharie Creek, had reached Otsego Lake. Finding the water of the outlet too low to float his bateaux, he built a dam across the stream, by which the lake was raised several feet. When the dam was cut, the boats glided easily down to Tioga upon the rushing water. The Indians fled in dismay at the sight of a flood in the midst of the summer drought, believing it a signal proof of the displeasure of the Great Spirit.

On the 26th, the combined forces ascended the Chemung, an Indian word for Big Horn. Sullivan carefully provided against the danger of a surprise. Large flanking parties were thrown on each side of the line of march, and strong guards were in front and rear. Reaching a place called Hog's Back, they found the Indians under Brandt, Corn-Planter, and Red Jacket, and the Tories under Sir John Johnson and the Butlers, awaiting their approach. They were about eight hundred in all, and occupied a strong position. Their left rested on the hill and their right on a ridge running parallel with the river. They had regular entrenchments thrown up nearly half a mile in length, and were also protected by the pines and shrub-oaks covering the ground. The works were artfully concealed by green boughs planted in front. Sullivan at once ordered General Hand and the rifle corps to attack in front, while Generals Poor and Clinton, with their brigades, cleared the hill on the Indian left. This was done in fine style. The savages, leaping from tree to tree and rock to rock, though greatly alarmed by the fire of the artillery, disputed every inch; while Brandt, animating his followers, ranged the field like a very demon. Night was coming on, and the assaulting columns seemed to falter for a moment. Then, as the legend says, there hovered above them, amid the smoke of the battle, the vision of a mother clasping her babe in her bosom and shielding it from an uplifted tomahawk. The troops instantly, as if by an inspiration, dashed forward. Poor and Clinton swept

the hill at the point of the bayonet. Brandt, despairing, raised the shrill cry, "Oonah! Oonah!" and the whole body fled in confusion. The Americans, in spite of the desperation of the Iroquois, lost only five or six men and fifty wounded.

The Indians, satisfied that they could not resist this powerful force, gave up in despair. Sullivan, marching up the river about seven miles, came to an Indian village called Conewawah—an Iroquois term meaning a-head-on-a-pole—afterward the site of a settlement known as Newtown, and now Elmira. This he destroyed, and thence proceeded to Queen Catharine's Town, now Havana, near the head of Seneca Lake.

The Senecas and the Cayugas had regularly-laid-out villages, and lived in framed houses, many of them painted and having chimneys. Their fields were large and fruitful, especially in the Genesee Valley, and were covered with orchards of apple, pear and peach trees. "At Wyoming, no mercy was shown but the hatchet; here, none but the firebrand." The army marched resistlessly to and fro through the whole country from the Chemung to the Genesee, destroying their waving fields of maize, ruining their orchards and burning their villages. The Christian emulated the savage in the barbarity of war. Kanadaseagea, now Geneva, the capital of the Senecas; Schoyere, near Cayuga Lake; Kanandaigua, a town at the head of the beautiful lake by the same name; and Honeoye, were all destroyed without resistance.

When the army entered the Valley of the Genesee, the Indians, having hidden their women and children in the forest, were lying in wait on the flats toward the head of Connessius Lake; but the vanguard of the invading force put them to flight. Approaching Little Beard's town, Lieutenant Boyd was sent forward with a party to reconnoitre. While on his return he fell into an ambush prepared by Brandt and his warriors. Nearly all Boyd's men were killed; he was taken and put to death with cruel tortures. Thence Sullivan spread his troops wide over the smiling valley, laying waste magnificent fields of grain, destroying forty towns—among them Genesee, the capital of the Six Nations—and leaving only a blackened waste of all that beautiful region. It was expected that he would push westward and destroy the English fort at Niagara, which was the very focus of Indian and British intrigue; but he had moved so slowly that he was compelled to return without accomplishing this greatly desired result. Just before reaching the Chemung again, forage gave out, and Sulli-

van ordered several hundred horses to be killed. This equine Golgotha has since retained the name of Horse-Heads.

The Six Nations were subdued for the moment; but their bitter hatred was aroused, and they swore vengeance against Washington, whom they styled the Town-destroyer. Yet, singularly, their veneration for him was never lessened. According to their belief, no white man except Washington ever reached heaven. Their legends represent him as occupying a fort-like mansion at the gate of the happy hunting-grounds. He walks in full uniform to and fro, in "meditation, fancy free," and the faithful Indians see him, but always pass in respectful silence.

On the first of September, the French fleet of twenty ships-of-the-line, under d'Estaing, appeared off the coast of Georgia. A combined attack upon Savannah was now arranged with Lincoln. The militia of South Carolina turned out with alacrity, and Washington despatched several North Carolina regiments for this service. The combined forces, however, were not able to commence operations till the 23d, although the French had already landed and summoned Prevost to surrender. The British had thoroughly improved the delay, called in their forces, thrown up entrenchments, and were well prepared for defence. Two weeks of bombardment from the trenches and the shipping followed, without any marked result. D'Estaing became impatient. The autumnal gales were approaching; his fleet lay off the open coast, and delays were full of peril. On October 8th it was decided that the next day should witness an assault. It was gallantly executed, but was a failure almost from the start. A column under Count Dillon was to have fallen on the English rear; but, becoming entangled in the swamp, it was beaten back by the enemy's guns without attempting an attack. The French and American columns reached the works in front under a heavy fire, the former planting a banner on the parapet. Lieutenants Bush and Hume, of the second South Carolina regiment, leaped to the top with the colors given to them at Fort Moultrie. Both officers were killed. Sergeant Jasper, springing to their help, fell mortally wounded. In his dying moments, he managed to creep away with the banner he had sworn to protect. Laurens himself, struggling in the thickest of the fight, in despair at the retreat of his men, threw away his sword, and, stretching out his hands, it is said, "prayed for death." Pulaski, carrying a banner placed in his hands by the Moravian nuns, was struck down by a

cannon-ball, at the head of his legion. D'Estaing was twice wounded. A dashing charge of grenadiers and marines from the city now drove the assailants back to their lines. The Americans had lost in this fruitless enterprise over four hundred, and the French about six hundred men, while the British had suffered but slightly. D'Estaing immediately sailed away. Lincoln retired to Charleston with what he could save of his army, and the militia scattered to their homes or took to the swamps.

While the French-American army was thus unsuccessfully engaged in the siege of Savannah, Colonel White of Georgia achieved a feat which borders on the marvelous. Learning that Captain French and a party of British regulars, with five vessels, four of which were armed, one carrying fourteen guns, were on the Ogeechee, about twenty-five miles below the city, he determined to attempt their capture. He had only a captain and three soldiers. He lighted many fires in the woods, so as to give the appearance of a camp. To complete the stratagem, he then, accompanied by his four companions, rode hither and thither, after the manner of a general and his staff, inspecting his lines and giving his orders. The English officer was next summoned to capitulate. Thinking himself about to be attacked by a great body of the enemy, French surrendered his detachment, ships, and crews (October 1st). White now pretended that he must keep his men in the camp, in order to restrain their fury, and prevent an indiscriminate slaughter of the prisoners. He therefore delivered French and his party into the hands of three guides, who would conduct them to a place of safety. They had orders to move off as rapidly as possible. Meanwhile, White, who had stayed behind to "bring up the main body," hastened into the country with his remaining soldier, quickly collected a force of militia, and finally overtook his captives, who were proceeding along comfortably under the care of his guides, and were full of thankfulness for his merciful consideration.

No American successes caused more annoyance to the British than those of the navy. In 1775, Washington sent out several vessels to cruise along the New England coast as privateers. In the same year Congress established a naval department. Thirteen ships were ordered to be fitted out and two battalions of seamen enlisted. So anxious was the American government, that Washington was forced to divide his scanty store of supplies with the newly-fledged fleet. Swift-sailing vessels, manned by bold

seamen, soon infested every avenue of commerce. Within three years they captured five hundred ships. They even cruised among the British Isles, and, entering the harbors, seized and burned ships lying at English wharves.

Paul Jones was among the most famous of these naval heroes. In six weeks he is said to have taken sixteen prizes. While cruising off England, September, 1779, in the forty-gun ship *Bon Homme Richard*, named in honor of the Poor Richard of Franklin's Almanac, he came across the *Serapis*, carrying forty-four guns. Jones at once laid his vessel alongside. Twice the ships fell afoul each other. The

CAPTURE OF THE SERAPIS BY THE BON HOMME RICHARD.

first time, the *Serapis* hailed the *Richard*, asking if she had "struck her colors." "I have not yet begun to fight," was Jones's reply. The second time, with his own hands he aided in lashing the vessels together. For two hours longer the crews fought hand to hand, with musket, pike, and cutlass. The muzzles of the

guns touched, and the gunners, in working their pieces, often thrust their ramrods into the port-holes of the other ship. The Bon Homme was old and rotten, and soon became almost unmanageable. Water poured into the hold. Only three of the guns could be worked. The ship was really beaten, and only the stout heart of Jones held out. Three times both vessels were on fire. At last, sailors on the yards of the Bon Homme dropped hand-grenades down the hatchway of the Serapis. An explosion ensued; twenty men were blown to pieces, and forty were disabled. The Serapis thereupon struck her colors. The Bon Homme was already sinking, and Jones transferred his men to the captured frigate.

At this time, Jones was in command of five vessels—the Bon Homme Richard, Pallas, Cerf, Vengeance, and Alliance. All except the last were French ships. The Serapis, with her consort, the Countess of Scarborough, was convoying a fleet of merchantmen. During this desperate duel, the Pallas had fought the Scarborough, taking her just after the Serapis surrendered. But the other vessels offered no help. So far from that, the Alliance, Captain Landis, repeatedly fired into the Richard, with the hope of compelling Jones to capitulate, that Landis might have the credit of retaking the Richard and capturing the Serapis.

THE DECATUR MONUMENT.

CHAPTER VII.

SIXTH YEAR OF THE REVOLUTION—1780.

THE hardships of the camp at Valley Forge are proverbial; but the winter of 1779-80, in the huts at Morristown, witnessed, if possible, greater misery. The cold set in early this year, and the winter was the severest of the eighteenth century. The want of bread and meat and the lack of clothing form the burden of the same old, sad story of privation and suffering. Continental money had been issued by Congress to the amount of two hundred million dollars. It was now so much depreciated that forty dollars in bills were worth only one dollar in specie. A pair of boots cost six hundred dollars in these paper promises. A soldier's pay for a month would hardly buy him a dinner. To make the matter worse, the British had flooded the country with counterfeits, which could not be told from the genuine. Many persons entirely refused to take Continental money. The sufferings of the soldiers, and the difficulty of procuring supplies, may be readily imagined.

Washington, though with great reluctance, was forced to make requisitions upon the surrounding country. To the honor of the loyal people of Jersey be it remembered that, in this hour of gloom, they bore these exactions with patriotic submission. More than that, many of the farmers voluntarily sent in provisions, shoes, coats, and blankets; while the women met together to knit stockings and to sew for the needy troops. One Anna Kitchel, wife of a Whippany farmer, was foremost in good deeds.

“ Her potato bin, meal bag, and granary had always some comfort for the patriot soldiers. When unable to billet them in her house, a huge kettle, filled with meat and vegetables, constantly hung over the fire, that no one might go away hungry.”

Such patriotism, however, was not general throughout the country. Discouraged by the length of the war, the apathy of which we have already spoken became even deeper than before. In this extremity, Washington declared that he had “almost ceased to hope,” and that friends and foes seemed to be combining to pull down the fabric raised at so much expense of time, blood, and treasure. The best men no longer went to Congress, and in that body only fifteen or twenty persons transacted the most important business. Its councils were consequently scarcely heeded, and its authority was openly disregarded. The national power, divided among thirteen States, was fast sinking to its lowest ebb—this, too, at a time when the final conquest of the United States by Great Britain was scarcely expected, even by the most sanguine friends of the crown.

On the day after Christmas, Clinton set sail from New York for an attack upon Charleston. After a tempestuous voyage, he reached North Edisto Sound, February 10th. Governor Rutledge and General Lincoln were indefatigable in their efforts to fortify the city. Clinton advanced with great caution, and it was not till the 31st of March that he sat down, with ten thousand men, before the American works on Charleston Neck. The 10th of April, he completed his first parallel, and summoned the city to surrender. Meanwhile, the English fleet had safely crossed the bar, passed Fort Moultrie, and was anchored in the harbor. Lincoln, however, influenced by the entreaties of the inhabitants, decided to remain with his army, although the capture of the city was a foregone conclusion. He therefore replied to Clinton that both duty and inclination moved him to defend his post to the last extremity. It was a useless attempt. Fort Moultrie surrendered without a shot. The English pushed their works vigorously.

As yet, Lincoln had kept up his communication with the country across the Cooper River. But on the night of April 14th, Tarleton fell upon General Huger, who was encamped, with fifteen hundred cavalry, at Monk's Corner, and put him to flight. The patriots, after this discomfiture, retired north of the Santee. Lieutenant-Colonel White, who took command, afterward re-

crossed that river, in order to attack a British foraging party. Ere he could get back, Tarleton was upon him with his terrible dragoons, and, at the ford of the Santee, repeated the catastrophe of Monk's Corner.

Charleston was now entirely surrounded. All hope of aid or retreat was cut off, and, May 12th, the city, with its garrison, was surrendered. By counting soldiers, citizens, old and infirm, Tories and Whigs alike, Clinton made out five thousand paroled prisoners. A carnival of plunder ensued. Slaves were seized; even those who came voluntarily into the English lines being sent to the West Indies. A major-general's share of the booty, we are told, was five thousand guineas.

Expeditions were rapidly sent out to overrun the entire country; one up the Savannah to Augusta, another up the Santee toward Ninety-Six, and a third toward Camden. The advance of the last under Tarleton, May 29th, at Waxhaw Creek, overtook a regiment of Virginians under Colonel Buford, who was retreating into North Carolina, after the fall of Charleston. The Americans offered to surrender; but Tarleton rejected the terms, and, while the patriots were still hesitating, fell upon them with the sword. No quarter was given. One hundred and thirteen were killed, and one hundred and fifty so brutally maimed that they could not be moved. "This bloody day only wanted," says Lee, in his Memoirs, "the war-dance and the roasting-fire, to have placed it first in the records of torture and death." Henceforth "Tarleton's quarter" was proverbial.

The inhabitants now flocked in from all parts to meet the royal army and resume their ancient allegiance. On every side were heard cries of submission and loyalty. Clinton wrote home that "South Carolina was English again." Thinking that he could deal with the State as a royal province, by his famous proclamation of June 3d, he ordered that all, even the paroled prisoners, should be henceforth considered as liege subjects of Great Britain. The entire male population was to be enrolled in the militia; the men over forty being liable to be called upon only in case of invasion, while those under that age were to serve six months each year.

A Carolinian taken in arms against the king, was in this way made liable to be tried as a deserter and executed. Relying upon the promises of the British commander, many had fondly hoped to be allowed to remain at home in peace during the remainder

of the war. They were now told that they must fight, and the only question was whether it should be for, or against, their native country. By this ill-timed rigor the Southern States, which appeared reunited to the crown, were henceforth convulsed with civil war. Brutal tories, having received commissions to raise troops, roamed the country, insulting, plundering, and even murdering those who refused to join their ranks. Patriots were outlawed, and their property was confiscated. Delicate women, who had been accustomed to every comfort, were despoiled of raiment and home, and were glad to find refuge in some hovel too mean to excite the attention of the enemy. No one could be neutral. He who was not in arms for the king, was liable to be assassinated in his own home, even in the presence of his wife and little children. A merchant could not collect a debt, except on taking an oath of loyalty. One of Tarleton's quartermasters cut to pieces Samuel Wyly, in his own house near Camden, merely because he had been a volunteer at the siege of Charleston. One hundred and sixty of the inhabitants of Camden were sent to prison, and twenty were loaded with chains, on their refusal to take up arms against their countrymen. The Continentals captured at Charleston were sent to prison-ships, where, in thirteen months, one-third of them died of disease. Several hundred young men were taken to Jamaica, and forced to serve in a British regiment. Gadsden, Rutledge, and other devoted patriots were sent to St. Augustine.

Reports of these and multitudes of similar outrages, happening month after month for over two long years of British occupation, stirred the most sluggish hearts. Patriots, exiled from home, took up arms, blacksmiths forging their rude weapons, and women, who gloried in the title of "rebels," casting bullets for them out of the pewter utensils they sacrificed from their pantry-shelves. The war at the South henceforth assumed a character unlike that which it possessed in the North at any point; except, perhaps, in the sections exposed to Indian forays, or the so-called neutral ground along the Hudson, between the English and American lines.

The Carolinas, wild and extensive, cut up by streams, full of swamps and tangled woods, and having a mountainous border on the west, were exactly fitted for a bush-warfare, and became the scene of the most romantic adventures and hair-breadth escapes. The inhabitants were nearly equally divided in sentiment, and tories and whigs were bent on each other's destruction. Both

sides organized partisan corps, which rendezvoused in swamps, and sallied out, as occasion offered, to strike a sudden blow, and then escaped with their plunder through by-paths known only to themselves. The country was harried by the continual passage of these predatory bands. The rancor of the royalists provoked retaliation; rude justice was dealt on occasions, and the bitterest hatred was engendered. Daring leaders arose whose names carried terror to their foes and gave strength to the cause they upheld. On the British side were Tarleton with his merciless dragoons, and Ferguson with his riflemen; on the American, were Sumter, the "Carolian Game-cock," whom Lord Cornwallis characterized as his "greatest plague"; Marion, the "Bayard of the South"; and the ever-vigilant Pickens.

Dark and bloody deeds, lit up here and there with a gleam of kindness and faith, characterize this page of our history. Though generally lightly touched upon, they greatly influenced the issue of the contest. Every heart has been aroused in reading Bryant's Song of Marion's Men, those patriots "few, but true and tried," under a "leader frank and bold." The very breath of the forest is caught in the stirring lines:

"Woe to the English soldiery that little dread us near!
On them shall light at midnight a strange and sudden fear;
When, waking to their tents on fire, they grasp their arms in vain,
And they who stand to face us are beat to earth again;
And they who fly in terror deem a mighty host behind,
And hear the tramp of thousands upon the hollow wind.

* * * * *

"Well knows the fair and friendly moon the band that Marion leads—
The glitter of their rifles, the scampering of their steeds.
'Tis life to guide the fiery barb across the moonlit plain;
'Tis life to feel the night-wind that lifts his tossing mane.
A moment in the British camp—a moment, and away
Back to the pathless forest before the peep of day."

But there is another virtue beside courage—that of endurance. Concerning Marion, it has been said that "his simplicity of conduct, preserved under all circumstances, was above praise; the cheerfulness with which he endured privations, surpassed encomium." At one time, a British officer was sent to negotiate some business with him. When it was concluded, Marion politely invited him to remain to dinner—an invitation which the

officer, already charmed with Marion's dignified simplicity, gladly accepted. The repast consisted entirely of roasted potatoes, served upon pieces of bark, and was offered without apology, but with the simple mention of the old adage that "Hunger is the best sauce." The British officer was amazed at such a meagre diet. "Surely, general," he said, "this cannot be your ordinary fare." "It is indeed," was the quiet

A RENDEZVOUS OF MARION AND HIS MEN.

reply; "but on this occasion, having the honor of your company, we are happy to have more than our usual allowance." The officer was so affected by this unselfish patriotism, especially as he afterward learned that Marion served without pay, that, immediately upon his return, he resigned his commission, declaring that it was folly to fight against men who showed such devotion to their cause.

Colonel Horry of Carolina, who belonged to Marion's brigade, was another dauntless patriot. He had an impediment in his speech, which greatly embarrassed him. A ludicrous story is

told of him when, after having waited some time in ambuscade to attack a certain British detachment, he had them at length in his power. The critical moment had come, and he jumped to his feet to give the order to fire. "Fi-fi-fi-fi-fi—" his tongue would go no further. Irritated almost to madness, he shouted, "Shoot, d—n you—shoot! shoot! You know very well what I would say—shoot and be d—d to you!" His own courage reacted upon and inspired all who came in contact with him. At Quimby, Colonel Baxter, himself a brave soldier, called out, "Colonel, I am wounded!" "Never mind, Baxter, stand to your post!" was the reply. "But I can't stand, colonel; I am wounded a second time!" "Then lie down, Baxter, but don't quit your post." "Colonel," cried the same voice, "they have shot me again, and if I stay here any longer, they will shoot me to pieces." "Be it so, Baxter, but stir not!" was the calm response. Baxter obeyed the order, and was actually wounded a fourth time before the engagement was over.

One beautiful spring morning, a splendidly-dressed officer, accompanied by two aids and followed by a score of troopers as a body-guard, dashed up the avenue to a fine old mansion, on the piazza of which sat two ladies and a little child. Politely bowing, the officer said, "Have I the pleasure of speaking to the mistress of this house?" Being answered in the affirmative, and learning that her husband was absent, Tarleton, for it was he, next inquired, "Is he a rebel?" "No, sir," was the quick reply; "he is in the army of his country, and fighting against our invaders; therefore, *not* a rebel." "I fear, madame, that we differ," Tarleton rejoined; "a friend to his country will be a friend to the king, our master." "Slaves only acknowledge a master in this country," retorted the lady, with spirit. An order was at once given to quarter the troops on the plantation, and then, again bowing, Tarleton said, "Madame, the service of his majesty requires the temporary occupation of your property, and, if it will not be too great an inconvenience, I shall take up my quarters in your house." His tone was decisive. The lady simply responded, "My family consists of only myself, my sister, my child, and a few negroes. We are your prisoners." A thousand soldiers—the choicest of English cavalry—were soon encamped upon the grounds. Lieutenant Slocumb, the owner of the plantation, was at that moment, with twelve or fifteen recruits, reconnoitering Cornwallis's encampment, little dreaming that his own beautiful

home was invaded. Mrs. Slocumb prepared an ample dinner for her uninvited guests. They especially enjoyed her excellent peach-brandy. Learning that it was the product of the plantation orchard, an Irish captain said, "Colonel, when we conquer this country, is it not to be divided amongst us?" "Undoubtedly the officers will receive large possessions of the subjugated provinces," was the reply. "Allow me to observe," interposed Mrs. Slocumb, "that the only land any British officer will ever hold in this country will measure but six feet by two." "Excuse me, madame," replied Tarleton; "for your sake I regret to say it, but this beautiful plantation will probably be a ducal seat for some of us." The lady's eyes flashed. "Do not trouble yourself about me," she retorted; "my husband is able to make this anything but a quiet seat for a duke or even a king." At this moment, a rapid volley of firearms resounded from the wood near at hand.

Mrs. Slocumb, who had been in an agony of anxiety lest the lieutenant should return, and, unawares, fall into the enemy's hands, had, immediately on their arrival, despatched an old negro with a bag of corn to a mill on the road her husband must travel, charging him to tell his master of the danger. But "Big George," with the indolence and curiosity incident to his race, had not yet left the hedge-row, behind which he was admiring the British red-coats, shining helmets, and dashing plumes. By adroit remarks, Mrs. Slocumb had also contrived to impress Tarleton with the idea that there was a large number of American troops in the vicinity. "You would not, of course, be surprised at a call from Lee," she observed, "or from your old friend Colonel Washington, who shook your hand rather rudely, it is said, when you last met," pointing, as she spoke, to a scar left by Washington's sabre. At the sound of the firing, all rushed to the door, and Tarleton, mounting his horse, put himself at the head of his regiment. Just then the cause of the disturbance was made clear. Lieutenant Slocumb, coming upon the scouts Tarleton had sent out, had set upon them with his little band, and was chasing them up the avenue to his own house, so intent on his purpose that he saw nothing else. At this moment, Big George came to his senses, and, rushing before his master, shouted, "Hold on, massa! de debbil here! Look you." Slocumb was already surrounded, but with wonderful coolness dashed through the thinnest quarter, scaled the fences, and, leaping a canal amid a shower of balls,

reached in safety the shelter of the wood he had just left. The men started to pursue, but Tarleton, believing a large force to be hidden there, sounded the trumpet for recall, and returned with his officers to the peach-brandy and the coffee. Slocumb lived to do good service thereafter.

Nancy Hart of Georgia was one of the most remarkable characters of these stirring times. An Amazon in stature, her courage, patriotism, wit and temper were in proportion to her altitude. One evening she was at home in her log-house, with her children sitting around the fire, over which a large pot of soap was boiling. As Nancy vigorously stirred the soap, she dispensed to her family the latest news of the war, seasoned with her own spirited sentiments. Suddenly one of the children espied a face between the crevices of the huge log chimney, and silently conveyed the intimation to his mother. As her violent whiggism was known and hated, she readily divined that a tory spy was at hand. Rattling away with renewed zeal, giving sarcastic pictures of the discomfiture of the tories, as she professed to have just received special intelligence, and meantime stirring her soap with increasing fury, she waited till the proper moment arrived, when, quick as lightning, she dashed a ladleful of the boiling liquid plump through the crevice, into the very face of the eavesdropper. Blinded by pain and sudden surprise, he screamed and roared vociferously, while the indomitable Nancy amused herself at his expense, and, with jibes and taunts, bound him fast as her prisoner.

When the partisan warfare had become so hot, and the tories so strong, that whigs were forced to hide or swing, and Nancy's husband had taken to the canebrake with the rest, she still stood at her post, her spirits rising with the tempest. The tories at length gave her a call, and, in true soldier manner, ordered a repast. "Nancy soon had the necessary materials for a good feast spread before them. The smoking venison, the hasty hoe-cake, and the fresh honeycomb were sufficient to have provoked the appetite of a gorged epicure. They simultaneously stacked their arms and seated themselves, when, with a cat-like spring, the dauntless Nancy seized one of the guns, cocked it, and, with a blazing oath, declared she would blow out the brains of the first mortal that offered to rise, or take a mouthful. They all knew her character too well to imagine that she would say one thing and do another. 'Go,' said she to her son, 'and tell the whigs that I have taken six base tories.' They sat still, each expecting

to be offered up, with doggedly mean countenance, bearing the marks of disappointed revenge, shame, and unappeased hunger. Whether the incongruity between Nancy's eyes—when in rage they had a slight obliquity—caused each to imagine himself her immediate object, or whether her commanding attitude and her stern and ferocious fixture of countenance overawed them, or the powerful idea of their non-soldierlike conduct or the certainty of death unnerved them, it is not easy to determine. They were soon

NANCY HART AND THE BRITISH SOLDIERS.

relieved from her glare, but only to be dealt with according to the rules of the times." Another account of this transaction states that Nancy shot two of the Tories, and then saying "shooting was too good for them," ordered the others to be taken to a tree near by and hanged. Nancy Hart rendered several signal services to the patriots. When Augusta was in the hands of the British, and great anxiety was felt concerning their intentions, she assumed male attire, and, feigning insanity, went boldly into the British camp, where she obtained much valuable information to bring back to the American commander at Wilkes. At another time, on a similar mission, she walked to the Savannah River; made a

raft of logs tied together with grape vines, crossed, accomplished her end, and returned with important intelligence. On several occasions she made single prisoners. Once, having met a tory, she engaged him in conversation, and, when off his guard, seized his gun, and compelled him to march before her into the American camp. A county in Georgia now bears her family name, and thus perpetuates her memory.

After the fall of Charleston there was no regular patriot army in the field, but the partisan bands kept up the contest. July 12th, while one Captain Huck, who was in command of a British patrol at Cross Roads, was surrounded by women who were vainly begging the ruffian to spare their homes, Sumter's troop dashed suddenly into the street from both ends, slew the captain and killed or captured the entire party. His numbers increasing, July 30th, this bold leader ventured to attack the British station at Rocky Mount; but having no artillery to batter down the log block-house, was compelled to give up the attempt. Seven days after, he assaulted the post at Hanging Rock. His soldiers had, at the beginning, only two rounds of ammunition, and they would not have had even this but for the heroism of two women. It had been stored in a house where a Mrs. Thomas resided with her daughter and son-in-law. The enemy having attacked the dwelling, the three barricaded the doors, and, the women loading the guns, the man discharged them so rapidly, and with such effect, that the British, supposing a force to be posted there, withdrew. At Hanging Rock, as in many other engagements, the patriots soon supplied themselves from the tories whom they put to flight. At first Sumter carried all before him, but his men becoming disorganized by the liquor they found in camp, he drew off with his prisoners and booty when victory seemed just within his grasp.

A young boy not yet fourteen years of age took part in this conflict. His name was Andrew Jackson, the same who afterward became the hero of many battles, and the seventh President of the United States.

In the spring, Washington sent from his little army a detachment which he could ill spare for the help of the South. The gallant De Kalb was ordered thither with two thousand Maryland and Delaware Continentals. Washington desired that Greene should be appointed to the Southern army, in place of Lincoln; but Congress unanimously designated Gates for this ser-

vice, making him, moreover, as once before, independent of the commander-in-chief, and responsible only to that body.

As Gates was on the way to his new field, he met General Charles Lee, who cautioned him lest his "Northern laurels should turn to Southern willows." But, full of elation, he hastened southward, vamping much of "Burgoyning Cornwallis," and expecting to end the war with another Saratoga. July 25th, he joined the army at Deep River. De Kalb had intended to march through Salisbury and Charlotte, a fertile region abounding in supplies. Instead, Gates took the direct route for Camden, through a wilderness of sand-hills and pine barrens. His men, eating green corn and unripe fruit, became the prey of disease. Emerging from this inhospitable country, he arrived at Clermont, August 13th. He had only about three thousand men, who had never been paraded together, and many of whom were raw militia. Full of conceit, however, and supposing that the enemy would, of course, flee before his terrible name, he advanced to meet Lord Cornwallis, who was then in command of the British, Clinton having returned to New York.

Singularly, both generals had appointed the same time to make a night attack. While marching for this purpose, about half-past one on the morning of the 16th, the advance-guards of the two armies unexpectedly encountered each other in the woods near Camden. After some sharp skirmishing, the main bodies waited for day. At dawn, Cornwallis ordered a charge. The Virginia militia under Stevens, not knowing how to use their bayonets, which they had received only the day before, fled at the first fire. Two-thirds of the army disappeared without returning a shot. Amid the general rout, a regiment of North Carolinians under Dixon refused to flee, and stood firm with the Maryland and Delaware men under De Kalb. At last, that Polish veteran fell, pierced with eleven wounds. His brave comrades for a time fought desperately over his body, but were overwhelmed by numbers. Gates, with no thought of those who were still bravely contending on the field against such terrible odds, fled with the militia, or, as he said, "retired." Late that night, with a solitary companion, General Caswell of North Carolina, he reached Charlotte. The next morning, he kept on to Hillsborough, making, says Bancroft, two hundred miles in three days and a half. The "grand army," as it had been pompously styled, was irrecoverably scattered.

Previous to the battle, Sumter, having again emerged from his retreat in the swamp, had gone below Camden with a strong detachment from Gates's army to capture a convoy of stores designed for the British. In the midst of his success, learning of the disaster at Camden, and seeing his own perilous position in the presence of a victorious enemy, he retreated up the river. But while he was taking a noon-day halt at Fishing Creek, his men bathing and cooking, and he lying asleep in the shade of a wagon, Tarleton burst into the camp, recovered the plunder and prisoners, and scattered or captured his entire force. Two days after, Sumter rode into Charlotte without hat or saddle.

But other partisans were more successful. On the very day of Sumter's defeat at Fishing Creek, Colonel Williams, with the patriots of Ninety-Six, stormed the British post at Musgrove's Mill, garrisoned by five hundred troops; and the day Sumter rode into Charlotte, Marion, near Nelson's Ferry on the Santee, sprang out of his covert upon a convoy of prisoners from Camden fight, captured a part of the guard, and rescued one hundred and fifty Continental soldiers from a fate worse than death.

Early in September, Cornwallis marched into North Carolina via Charlotte and Salisbury, while Ferguson was ordered to move along the base of the mountains, on his way recruiting the loyalists from the uplands of South Carolina. Presently the attention of the latter was drawn toward Augusta. Clark, with one hundred riflemen, had there captured the rich presents designed to rouse the Cherokees to take part in this struggle. Reinforcements from Ninety-Six, however, reaching the British, Clark beat a hasty retreat, some of his men being overtaken. By the orders of Brown, the commander at Augusta, thirteen of these were hung, and as many given up to the Indians to be tomahawked or tortured.

Ferguson, hoping to cut off Clark's party, now pressed closer to the mountains, where he met with an unexpected obstacle. The patriots, fleeing before his ruthless advance, had roused the free backwoodsmen over the mountains with the story of their wrongs. These had gathered, each man with his trusty rifle, a bag of bullets, and a store of provisions and powder—the latter made from nitre found in the caves, and charcoal burned by their wives on their own fireplaces. Under Colonels Shelby and Sevier—afterward first governors, respectively, of Kentucky and Tennessee—Williams, Cleaveland, McDowell, and Campbell, they

suddenly emerged from the wilderness, bent on Ferguson's destruction. He took the alarm, and hurried eastward toward Cornwallis. The trooper-chiefs, selecting nine hundred men with the best horses and rifles, pushed ahead, dismounting only once in thirty-six hours.

On the afternoon of October 7th, the enemy was brought at bay on King's Mountain. There were over eleven hundred, but the backwoodsmen did not wait to count the odds. Forming into four columns, they clambered up the steep, craggy cliffs from all sides at once. Driven back here and there by the bayonets of the regulars, they returned directly, and all the while poured in a murderous fire. The contest lasted an hour, when Ferguson fell, and his men, despairing, surrendered. Four hundred and fifty-six of the British were either killed or severely wounded, and six hundred and forty-eight were taken prisoners. The American loss was only eighty-eight in all. Ten of the tories, notorious assassins and house-burners, were hung by the enraged mountaineers. There were eleven selected, but one of them broke loose as they were being led to execution, and, "though he had to make his way through a thousand of the best marksmen and horsemen in the world, such was the unusual admiration or feeling on the occasion, not one would lift a hand to stop him." Campbell, on learning of this summary vengeance, immediately put a stop to further executions.

The hardy sons of the forest, having accomplished their purpose, quietly returned to their log-cabins and their uneventful lives. King's Mountain proved another Lexington or Bunker Hill. Tarleton, who was coming to Ferguson's aid, heard of the disaster and hastened back to Cornwallis. That general, with no longer any thought of conquering North Carolina, but only of getting back in safety, immediately set out on his return. Militia on every hand beset his rear and flank. Frequently single riflemen would ride up within shot of the British column, take careful aim with their unerring pieces, fire, and then, wheeling, disappear in the woods. Troops were cut off, and food became scarce. For days before the army reached Winnsborough, in South Carolina, two and a half ears of corn for each soldier was the only ration.

Marion now came out of his hiding-places along the Pedee and the Black Rivers, and, defeating a party of tories who were in pursuit of him, threatened the communications with Charleston.

Cornwallis at once sent Tarleton after him. Delighting in this commission, he set off. His line could everywhere be traced by the ruin he left behind him. Groups of houseless women and children, whose homes—some of them spacious and elegant—had been burned by his ruthless orders, clustered about fires in the open air, and in the chill November rain. One lady, the widow of a brave general officer, who was believed to have knowledge of Marion's whereabouts, was actually beaten for not revealing it, and left without a change of raiment by the ashes of her dwelling. At the approach of the enemy, Marion took to his covert in the swamp. Just then, Tarleton was recalled. Sumter had appeared in the Northwest, stopping supplies and defeating a detachment under Major Wemyss, who had ventured to attack his camp at Fishdam, and now menaced Ninety-Six. Tarleton quickly turned to meet the "Game-cock." Sumter, being apprised of this, chose a strong post at Blackstock Hill, where he repulsed the British attack with heavy loss. The patriot chief was, however, severely wounded, and his men retired, carrying their commander with them. Marion proved a source of constant terror to the British army at the South. It is said, indeed, that Cornwallis himself had an especial dread of Marion, and, when outside of Charleston, never sat down in a strange house, but always remained on the piazza or under a tree, that he might constantly watch for this always-to-be-expected foe.

No military movements of great importance took place at the North during this year. A few marauding excursions only are worthy of mention. In the winter, New York Bay and the adjacent rivers were frozen over, so that the city was open to land attack, artillery being able to move anywhere upon the ice. It was expected that Washington would take advantage of this opportunity, but the condition of his army forbade. On the night of January 14th, General Stirling attempted to surprise a British post on Staten Island, but failed, and came back with many of his men severely frost-bitten. Eleven days after, Knyphausen, in command at New York during the absence of Clinton in South Carolina, retorted by two expeditions; one, which crossed over to Newark, captured a company of soldiers stationed there, and burned the Academy; and another, which surprised the picket at Elizabethtown, plundered the inhabitants, and set fire to the church and town-hall.

The pastor of the church which was destroyed was Rev. James

Caldwell, known among the whigs as a "rousing gospel preacher," and among the tories as a "rebel firebrand." Laying his pistols on the desk beside the Bible, he was wont at times strangely to mingle patriotism with piety. He was a great favorite in the Jerseys. His bell rang the alarm when the enemy approached, and under his roof the militia gathered and the wounded were nursed.

February 2d, a detachment set out by night from New York in sleighs, to surprise Young's house, near White Plains. This

was a stone building garrisoned by the patriots, and commanded a road by which provisions would naturally pass along the valley of the Neperan to New York. The snow was two feet deep, and the British were finally compelled to leave their sleighs and trudge along on foot. The alarm was given, and the Westchester farmers quickly gathered; but after a sharp skirmish, the post was stormed and the house fired. The expedition got back to

THE OLD SUGAR-HOUSE, LIBERTY STREET.

King's Bridge after an absence of only twenty-four hours. The prisoners were hurried into the jail and the sugar-house, to endure the horrors of British captivity. Few ever returned home. These expeditions illustrate the way in which the neighborhood of New York, especially the Neutral Ground, was constantly harried through the war.

In the summer the American army was threatened with starvation. Finally, two Connecticut regiments declared their determination to either go home or get food at the point of the bayonet. It was with the greatest difficulty that Washington could induce them to return to duty. In this emergency, Robert Morris sent to camp three million rations. Soldiers' relief associations were also organized by the women of Philadelphia. Those who had

money gave it; the poor contributed their work. Twenty-two hundred shirts, we are told, were thus manufactured, on each of which was inscribed the name of the fair maker.

Knyphausen, learning of the disaffection of the army, with about five thousand men, made a bold push into the Jerseys. The advance landed at Elizabethtown before daylight, June 6th. As the troops came to a fork in the road, a solitary sentinel fired into the dimly-discerned mass. That chance-shot mortally wounded a British general. Soon the booming of heavy guns and the flashing of signal-fires spread the alarm over the country. The yeomanry, hastily forming, fired upon the enemy from behind fences and trees. The British, reaching Connecticut Farms, sacked and burned the town. The wife of Reverend James Caldwell, the "rebel fire-brand," was deliberately shot through the window of the parsonage, while, it is said, kneeling by her bedside, holding the hand of her little child and engaged in prayer. After the army had passed, the neighbors with difficulty rescued the body from the ruins of the burning building. The tragical fate of this estimable woman raised a desire for vengeance similar to that produced by the death of Miss McCrea, three years before.

Washington had now arrived and taken position across the Rahway, and the troops, which the British expected to find thoroughly demoralized, were standing in line, ready to resist the passage of the river. Knyphausen recoiled from their firm aspect. Several days of uncertainty ensued. Clinton having returned from the South, and threatening a movement up the Hudson River, Washington retired to Rockaway Bridge. It was, however, only a feint on the part of the British, and Knyphausen at once advanced upon Springfield. Greene, who was in command, gallantly defended the bridges across the Rahway. On that day, says Irving, "no one showed more ardor in the fight than Caldwell, the chaplain. The image of his murdered wife was before his eyes. Finding the men in want of wadding, he galloped to the Presbyterian church, and brought thence a quantity of Watts's psalm and hymn books, which he distributed for the purpose among the soldiers. 'Now, boys,' cried he, 'put Watts into them!'"

The advance of the enemy was finally checked. Knyphausen, not daring to hazard the difficult passes beyond, again abandoned his attempt. Ere his troops left Springfield, they burned

nearly the entire village. During the retreat, they were incessantly harassed by the militia, while Light-Horse Harry hung on their rear. It was the last time the British set foot in New Jersey.

We now turn to a dark page in the history of the War for Independence. Benedict Arnold, whose bravery at Quebec, Ridgefield, and Saratoga had excited such universal admiration, was stationed at Philadelphia while his wound received at the last-named battle was healing. Though considered at heart a true friend of the country, he was known to have been greatly dissatisfied because, in the early part of the war, his name was omitted from the list of the first five major-generals appointed by Congress. After his gallant action at Ridgefield, he was commissioned major-general, but was placed below the previous five. Saratoga, however, brought him the rank he had claimed, and he was supposed to be content. Having married a Miss Shippen, a tory lady of great beauty and accomplishments, he launched into a style of living far beyond his income. This he endeavored to support by engaging in various commercial schemes, by privateering speculations, and even by sharing in the dishonest gains of sutlers. Haughty and overbearing in his manner and sordid in his disposition, he rendered himself exceedingly unpopular, and on one occasion he was mobbed in the streets of Philadelphia.

The council of Philadelphia finally preferred charges of misconduct against him which were fully substantiated, and in January, 1780, he was sentenced to be reprimanded by the commander-in-chief. Washington performed the disagreeable duty with exceeding leniency, but Arnold made this instance of what he called his country's ingratitude a pretext for treason. It is now known that for nearly a year previously he had been in communication with the enemy. The way to this is supposed to have been paved by the fact that Miss Shippen, at her father's house, had become well acquainted with Major André, General Clinton's aide-de-camp, both having been prominent characters in the famous mischianza pageant at Philadelphia. In the correspondence, Arnold used the pseudonym of "Gustavus," and Major André that of "John Anderson."

Bent upon gratifying at once his revenge and his love of money, Arnold determined to betray into the hands of the enemy the fortress of West Point, then the most important position in the country, and the main depot of supplies. He accordingly

secured from Washington the command of this post, on the plea that his wound would not permit his undertaking active service. The plot being ripe, Arnold requested an interview with a "person fully authorized" to arrange the details. Major André accordingly ascended the Hudson, and went on board the British sloop-of-war *Vulture*, then lying at anchor in the river. Just before dawn on the morning of September 22d, he landed at the foot of Clove Mountain, where Arnold was waiting in the bushes to receive him. The two repaired to the house of one Smith, within the American lines, where they remained until late in the day.

The plan agreed upon was for Clinton to send a strong force to attack the works at West Point, while Arnold was to scatter the garrison, so that no effective defence would be possible. While their conference progressed, fire had been opened on the *Vulture* from a small battery on Teller's Point, and she had dropped down the river. André was therefore compelled to return to New York by land. Furnished with a pass from Arnold and a citizen's dress, he accordingly set out under the guidance of Smith. Everything passed off well. A little distance north of Pine's Bridge, over the Croton, Smith returned, assuring André that he would now meet only parties of British marauders, "Cow Boys," as they were called.

André, pressing forward, full of satisfaction over the result of his hazardous undertaking, had nearly reached Tarrytown, when he was suddenly stopped by a small scouting party of three men, named Paulding, Van Wart, and Williams. Paulding demanded which way he was going. Expecting to meet only British so near the lines, André incautiously replied, "I hope, gentlemen, you belong to our party." "Which party?" was asked. "The lower party," answered André. Paulding giving an affirmative response, André then said, "I am a British officer out on particular business. I hope you will not detain me a moment." The secret was now out, and he was at once ordered to dismount. In dismay, he showed Arnold's pass. At first this would have satisfied his captors; now it was too late. Upon searching him, they found in his stockings, among other papers in Arnold's handwriting, a plan of the fortifications at West Point. "This is a spy," exclaimed Paulding. André now offered any sum they might demand to secure his release. The incorruptible patriots refused the bribe, and, taking him to North Castle, left him in the hands of

Lieutenant-Colonel Jameson. Having done their duty, they departed, without asking any reward, or even leaving their names. With inconceivable stupidity, Jameson wrote to Arnold, informing him of the arrest.

Arnold was at breakfast when he received the note. Calling aside his wife, he told her of his peril. Terrified by his words,

CAPTURE OF MAJOR ANDRÉ.

she fainted. Kissing his boy, who lay asleep in the cradle, he darted out of the house, mounted a horse, by an unfrequented path reached the river, jumped into his boat, and was rowed to the Vulture. Here he basely delivered up his oarsmen as prisoners of war. Clinton, on hearing of the fact, at once ordered them to be released.

Washington arrived a few hours after Arnold's escape. "Whom can we trust now?" was his exclamation when he received the startling news. André was tried by court-martial, and convicted as a spy. His sad fate awakened universal interest, and every effort was made to secure his release. But the inexorable laws of war admitted no pardon. As a last favor, André besought that he might die as a soldier rather than as a criminal. This, too, the custom of both sides forbade. His letter

to Washington, in which he touchingly preferred this request, has been thus beautifully paraphrased by Willis :

“It is not the fear of death
That damps my brow ;
It is not for another breath
I ask thee now ;
I can die with a lip unstirred,
And a quiet heart—
Let but this prayer be heard
Ere I depart.

“I can give up my mother's look—
My sister's kiss ;
I can think of love—yet brook
A death like this !
I can give up the young fame
I burned to win ;
All—but the spotless name
I glory in.

“Thine is the power to give,
Thine to deny,
Joy for the hour I live,
Calmness to die.
By all the brave should cherish,
By my dying breath,
I ask that I may perish
By a soldier's death.”

The sentence was executed at Tappan October 2d. Major Tallmadge, who accompanied him, says, “When he came in sight of the gibbet, he appeared to be startled, and enquired with some emotion whether he was not to be shot. Being informed that the mode first appointed for his death could not consistently be altered, he exclaimed, ‘How hard is my fate!’ but immediately added, ‘it will soon be over.’ I then shook hands with him under the gallows and retired.” Having been given an opportunity to speak, he simply said, “I pray you to bear witness that I meet my fate like a brave man.”

Much sympathy was felt for this unfortunate young officer, who was so vastly superior to the traitor who was the cause of his ignoble death. André was brilliant and accomplished, an artist and a scholar. He had written some spicy satirical poems on military events. The closing verse of one, entitled “The Cow Chase,” wherein Lee and Wayne are the ludicrous heroes, runs thus :

“And now I’ve closed my epic strain,
I tremble as I show it,
Lest this same warrio-drover Wayne
Should ever catch the poet.”

It is a singular coincidence that the last canto of this poem was published the very day of André’s arrest, and that General Wayne commanded the division of the army at Tappan, when the ill-starred satirist proved his mock fears to be sad prophecies.

Arnold received, as the reward of his treachery, six thousand three hundred and fifteen pounds and a major-general’s commission in the British army. The fame of his gallant deeds was forever hidden by the memory of his base deceit, and he was henceforth despised alike by Americans and British.

A curious attempt was made by Washington to get possession of Arnold. The agent employed was John Champe, sergeant-major in Lee’s cavalry. His first step was a pretended desertion. Lee withheld pursuit as long as possible without exciting suspicion, but the vigilant officer of the day discovered Champe’s absence almost immediately. Obligated to simulate an ardent desire to overtake the culprit, Lee, though taxing his wits for causes of delay, could not give Champe more than an hour’s start. The chase was hot, and twice the fleeing deserter was nearly in the clutches of his pursuers; but at last he succeeded in reaching the river, and, swimming for his life, was taken on board a British galley. He was referred to General Arnold, who was forming an American Legion, mostly composed of renegades. Arnold made him recruiting-sergeant, which ensured him frequent access to his house. A plan was laid with two disguised patriots like himself, to whom he had brought letters of introduction, to seize and gag Arnold in his garden, where he walked every night about twelve o’clock. They were then to convey him to the river, as a drunken companion, and row him over to the Jersey shore. All was in readiness. The night arrived, and Lee, who had been kept informed of affairs, waited with three dragoons, in the wood near Hoboken, to convey the traitor to camp. Hour after hour passed, and no boat approached. Day broke, and the disappointed party went back alone. A few days afterward, a letter from one of Champe’s associates explained the failure of the plot. Only the day before the night fixed for its execution, Arnold removed his quarters, and Champe, instead of crossing the Hudson with his prize, as he had fondly hoped, was on board

one of the British transports, from whence he never departed till Arnold landed his troops in Virginia. When, at last, he effected his escape and rejoined his old regiment, his comrades were not a little surprised at the joyous reception given him by Lee. The truth soon became known, and the long-reprobated deserter assumed his true place in the hearts of his fellow-soldiers as a hero and a patriot. Lest, in the vicissitudes of war, he might fall into the enemy's hands and die on a gibbet, Washington, with distinguished marks of esteem, gave him a discharge from the service.

At the close of the campaign of 1778, Lafayette, having been granted leave of absence at the request of Washington, returned to France. He was there received with every mark of respect and consideration. He was almost immediately called to the palace, the queen being anxious to hear about her "Dear Americans." "It is fortunate," said Maurepas, the minister, "that Lafayette did not wish to strip Versailles of its furniture to send to America." Having gained a promise of assistance for the United States, he rejoined Washington, May 11, 1780. He brought the commander-in-chief a commission as lieutenant-general of the army of France and vice-admiral of its navy. July 10th, a French fleet, carrying Rochambeau and six thousand soldiers, arrived at Newport. We shall hear of them the next year at Yorktown.

MONUMENT AT TARRYTOWN.

CHAPTER VIII.

THE LAST YEAR OF THE REVOLUTION—1781.

HE value of the Continental currency had now sunk so low that it was said that a "wagon-load of the scrip would hardly purchase a wagon-load of provisions, while one going to trade was forced to carry his money in a market-basket." Destitute of food and clothing, and without pay for a year, thirteen hundred of the Pennsylvania troops, consisting principally of Irish immigrants, encamped at Morristown, broke

into open revolt on the night of the New-Year, and left camp with the avowed purpose of compelling Congress to redress their wrongs. General Wayne confronted them with his loaded pistols, but, with their bayonets at his breast, they declared, "We love and respect you, but if you fire you are a dead man. We are not going to the enemy, as you would soon see if they should appear, for we should fight under you as bravely as ever." Clinton sent his agents among them offering heavy bounties for desertion. The mutineers indignantly replied, "We are not Arnolds!" and turned them over to Wayne, who, being a great favorite, was allowed to follow the march. On being tendered a reward for delivering up these spies, they replied, "We ask no pay for placing our country above its enemies; we only demand justice in view of our past service and our necessities."

Reed, then president of Pennsylvania, finally settled the difficulty by discharging those who professed to have served their time, the State making arrangements to pay and clothe the re-

mainder. It was afterward found that the men had sworn falsely as to their terms of enlistment in order to secure their discharge.

The New Jersey troops, encouraged by the success of the Pennsylvania line, followed the example. Washington immediately marched some New England regiments from West Point, which, being composed of "native Americans and freeholders, or sons of freeholders," remained true. The revolt was quickly subdued, and two of the mutineers were shot, their own companions being forced to act as executioners.

In this emergency, an agent was sent to France in order to secure a loan. Yet, as Bancroft well remarks, that country was poorer in proportion to its population than the United States. All that was lacking here was a powerful government to organize the strength of the country. In February, Robert Morris was appointed financial agent, and by freely using his private credit he succeeded in restoring confidence in the promises of Congress to pay its honest debts. At his suggestion, the Bank of North America was established, and by careful management he was able to redeem its bills with gold whenever presented.

March 1st of this year was a notable day. Maryland, the last of the thirteen States, then ratified the articles of confederation, thus consummating the Federal Union.

The defeat of Gates at Camden was fatal to his ambition. Soon after, General Greene was appointed his successor, but subject to the orders of the commander-in-chief. Thus, for the first time, was the true position of Washington recognized. Light-Horse Harry with his legion, three hundred and fifty in number, was ordered to the Carolinas. Even this reinforcement could ill be spared. Greene, on his arrival, reorganized the army and established his camp at Cheraw, on the Pedee. Morgan, of whom we have not heard much since the brilliant day at Saratoga, was stationed with a thousand men near Broad River.

An exploit of Lieutenant-Colonel Washington's now greatly encouraged the men. Scouring the country with a troop of light-horse, he came across a body of loyalists under the tory Colonel Rudgley. They were strongly posted in a large log barn, fortified by entrenchments and an abattis. Knowing the weak character of his opponent, Washington fixed a pine log—shaped and painted to look like a field-piece—on the front wheels of a wagon, dismounted part of his troops to appear like infantry, displayed his cavalry, leveled the deadly pine-cannon on the log castle, and

then sent in a flag demanding instant surrender. The affrighted colonel begged for quarter, and surrendered his garrison of one hundred and twelve men at discretion. Cornwallis, mentioning the event in a letter to Tarleton, dryly added, "Rudgley will not be made a brigadier."

In order to cut off Morgan, whose activity threatened his flank, Cornwallis ordered Tarleton to attack him in front, while he marched northward between the Broad and the Catawba Rivers, and severed his communications with Greene. Morgan awaited Tarleton's coming at the Cowpens, so called because of an enclosure at that place used by the neighboring farmers for herding their cattle, which in that mild climate roamed wild through the fields during the entire year. Before daylight on the morning of January 17th, being informed by his spies that Tarleton was near, he awakened his men, breakfasted, and then put them quietly in post. The British coming on impetuously, the militia who were in Morgan's front line yielded after a sharp resistance. The Continentals, however, stood firm. Being at length outflanked by the superior numbers of the enemy, they fell back to take a new position. The English, thinking the day their own, rushed forward, when, suddenly, the Americans faced about, poured in a terrible volley at only thirty yards distance, and then charged with the bayonet. The British were driven pell-mell. Lieutenant-Colonel Washington, with his cavalry, kept up the pursuit for twenty miles. In the eagerness of the chase, he got far in advance of his regiment, when three officers wheeled upon him. Washington owed his life to a sergeant who wounded one, and a little waiter-boy who shot a second. Tarleton, the third, is said to have been wounded by Washington himself.

This defeat was a source of great mortification to Tarleton. He was occasionally reminded of it in a very disagreeable manner. At one time, after having indulged in much braggart talk about his own gallantry, he remarked to a whig lady: "I should like to see your far-famed hero, Colonel Washington." "Your wish, Colonel, might have been fairly gratified," was the prompt reply, "had you ventured to look behind you after the battle at Cowpens." A still more pointed retort was given him by a Mrs. Jones, to whom he observed, "I have been told that Colonel Washington is so ignorant a fellow that he can hardly write his own name." "Ah, Colonel," she replied, "but no one knows better than yourself that he can make his mark."

The American loss at Cowpens was only seventy-two, while that of the English exceeded eight hundred, besides material of war. Cornwallis, hearing of the disaster, put his troops in light marching order, burned the baggage, himself setting the example, and started in hot haste to punish the victors and recapture the prisoners. Morgan, anticipating this, had destroyed what booty he could not carry off, and was already in full march for the Catawba. So keen, however, was Cornwallis's pursuit that the Americans had but just crossed the river when the British van appeared on the opposite bank. That night it rained heavily, and the water rose so high that the impatient Cornwallis was kept waiting till the third day.

Meanwhile Greene joined his faithful lieutenant, and took command. The main body of his army was ordered to meet him at Guilford Court-House, to which point he now hurried Morgan's men. At the Yadkin, just at eve, February 3d, the British advance was again on his heels; but during the night the rain made the river unfordable. Heaven smiled on the patriots and they took heart. Cornwallis lost two days in going up the river to find a crossing. He was soon, however, again in full pursuit. Now began a race on parallel roads for the fords of the Dan—seventy miles away. Colonel Williams, with the flower of the light troops, covered the march. Greene reached the river first, and on the 15th of February Cornwallis arrived only to find that the American rear-guard had crossed in the darkness of the night before. Every face in the patriot army was lighted with joy when their escape was certain. Halting only for one meal per day, sleeping but six hours in forty-eight, with only a blanket for four men, shoeless and ragged, they had fairly beaten the enemy by out-running him. Greene himself, in his all-comprehensive care of the army, had hardly slept four hours in as many days.

One night during this famous retreat, Greene alighted at the Salisbury inn, after a hard day's ride through mud and rain. The army physician, who had charge of the sick and wounded prisoners, met him at the door, and inquired after his well-being. "Fatigued, hungry, cold, and penniless," was the heavy-hearted reply. The patriotic landlady, Mrs. Elizabeth Steele, overheard the words. Lighting a cheerful fire, she spread a warm supper before him, and then, quietly producing two bags of specie, her hoarded treasure, "Take these," she said; "you will want them, and I can do without them." It is hard to decide which was

the happier, the noble-hearted giver or the relieved receiver. Cheered and comforted, Greene renewed his journey with a lightened heart.

The troops lay panting on the opposite sides of the river for a day. Cornwallis then fell back to Hillsborough. The waving of

MRS. STEELE AND GENERAL GREENE.

a handkerchief by a patriot woman, under the cover of the opposite bank, was the signal which announced his retreat. The tables were then quickly turned. Light troops at once recrossed the Dan, and Greene himself soon took the field. The British general wished to force him to battle, but for seven days Greene eluded him, each night changing his camp, though at no time over ten miles distant. Lee and Pickens constantly scoured the country, covering Greene's movements, obtaining accurate intelligence, and repressing the royalists. While hunting Tarleton through the woods beyond the Haw River, they fell in with a body of three hundred tories, who mistook them for the British. Lee rode down their line, congratulated them on their appearance, grasped their colonel by the hand, and was about to explain

the true state of the case, and demand that they should go to their homes or join the patriots, when firing suddenly broke out. Lee was forced to charge, and ninety of the royalists were cut down, some of them while crying, "We are your friends. God save the king."

March 15th, Greene, being reinforced, determined to give Cornwallis battle near Guilford Court-House. He had about three thousand six hundred men, nearly twice as many as his antagonist, but a large part were raw militia. The Americans were drawn up in three lines, several hundred yards apart; the first being composed of North Carolina volunteers, the second of Virginia riflemen, and the third of Continentals. The British at once advanced to the charge. Half of the militia broke without firing a shot. Lee and Washington only, on the flanks, stood their ground long after the centre of their line was occupied by the enemy. The second line, riflemen used to backwoods fighting, held their position bravely till driven from it by the bayonet. The Continentals fought stubbornly. At last the right seemed weakened, and Greene, not wishing to hazard anything, brought up his reserve to cover the retreat. The English were too exhausted to pursue. The American loss was four hundred and nineteen, and the British five hundred and seventy men. That night, with true generosity, the English cared for the wounded, friend and foe alike. But they were scattered through the woods, and the rain fell in torrents. Fifty sufferers died before morning.

Now was exhibited a strange spectacle. The conqueror fled from his own victory. Cornwallis had lost over one-quarter of his men, and was forced to retreat with his weakened army. He accordingly retired toward Wilmington, whence, unwilling to fall back into the Carolinas, he concluded to march into Virginia and join the British troops already in that State. Greene decided not to follow him, but, leaving Virginia to its fate, to reconquer South Carolina.

Lord Rawdon, in command of the British in that State, was at Camden, and thither Greene turned his course. Having encamped on Hobkirk's Hill, only a mile from the enemy, he was attacked before he was fairly in position. He quickly made his arrangements, but a regiment in the centre giving way unaccountably, he was driven from his ground before Colonel Washington, who with the cavalry was to fall on the enemy's rear,

could reach the spot. Greene retired as usual, but not before inflicting a greater loss than he received.

Meanwhile, the partisan leaders were busy. Marion and Lee laid siege to the fort on Wright's Bluff. Having no cannon, in one night they built a tower of logs, from the top of which the riflemen picked off the garrison, and so forced a surrender, April 26th. This capture cut the communications of Camden with Charleston, and the former post was thereupon evacuated. They then attacked Fort Motte, on the Congaree. The British had here fortified and garrisoned the house of Mrs. Motte, an estimable whig woman. In order to dislodge the enemy, she brought to Lee a bow and a quiver of Indian arrows, with which he threw fire upon the shingled roof. The occupants could not fight the flames under the guns of the sharp-shooters, and were soon roasted into a capitulation. A little story is attached to the quiver of arrows which did such effective service. Mrs. Brewton, who was a guest of Mrs. Motte's, had caught it up in the moment of their forced departure, knowing it to be a valued keepsake in the family. As she was passing through the gate, Major McPherson, drawing out a shaft, applied it to his finger, saying, "What have you here, Mrs. Brewton?" "For God's sake, major, be careful," she replied; "those arrows are poisoned." It so chanced that, when applied to the purpose afterward decided upon, the first one missed its aim and fell at the feet of the major. He took it up, angrily exclaiming, "I thank you, Mrs. Brewton." After the surrender, he immediately sought her out, and said, "To you, madame, I owe this disgrace; it would have been more charitable to allow me to perish by poison, than to thus compel me to surrender my post to the enemy."

Forts Orangeburg and Granby now yielded. Augusta was taken by Lee and Pickens the 5th of June. Greene, in person, endeavored to carry Ninety-Six by assault, but was repulsed, and Rawdon, receiving reinforcements, came to its rescue. Events then took the turn so common in Greene's experience. He retired as far as the Ennoree, when, the British giving over the pursuit, he followed them back, with Lee's Legion close on their heels, captured forty-eight dragoons within a mile of their camp, and, June 18th, offered Rawdon battle, which he declined. Greene then fell back to the "benign hills of Santee," as Lee lovingly calls them, to recruit his army.

Greene, after leaving Ninety-Six, wished to communicate

with Sumter, but the intervening country was full of tories, and no one was willing to undertake the perilous mission. At this moment a young German girl, Emily Geiger by name, volunteered for the service. Greene entrusted her with a letter, at the same time informing her of its contents. Mounted on a swift horse, she had made one day's journey and was near the close of the next, when she was hailed by two tories, who arrested her on suspicion. While confined in a room, awaiting the woman who was sent to search her person, she tore up the letter and swallowed it piece by piece. Nothing being discovered by the matron's careful investigation, she received many apologies for her detention, and was allowed to proceed. Thanks to Greene's caution in acquainting her with the import of the written message, she was able to give Sumter the desired information, and Rawdon was soon flying before the Americans toward Orangeburg.

Disgusted with the ill-success of his plans, that officer, on the pretence of poor health, soon returned to England. His last act in Charleston did much to embitter the feelings of the inhabitants of that city. At the time of its capture by the British, Colonel Isaac Hayne was paroled. He was afterward ordered into the British ranks, at a time when his wife and several of his children lay at the point of death with small-pox. The choice was given him to become a loyal subject or to be placed in close confinement. Agonized by thoughts of his dying family, he signed a pledge of allegiance to England, with the assurance that he should never be required to fight against his countrymen. Being again summoned by Lord Rawdon to join the British army, he considered the pledge annulled, and raised a partisan band. He was captured, and, without being allowed a trial, was condemned to die. The citizens of Charleston vainly implored pardon for him. He was allowed forty-eight hours in which to take leave of his children, at the end of which time he was hanged. This barbarous act left a stain on Rawdon's memory which time has only deepened. Retaliation was urgently demanded; but the other British officers did not countenance his inhumanity, and milder measures prevailed.

Colonel Stewart, left in command of the British, took post at Eutaw Springs, where Greene attacked him September 8th. Marion, Pickens, Sumter, Lee, Williams, Campbell, and Washington won new honors on this desperately-fought field. The British were finally fairly beaten. In the moment of victory, Campbell

fell. Informed of the patriots' success, he exclaimed, like Wolfe at Quebec, "I die contented."

On their retreat, however, one party of the enemy took refuge in a brick house, and another in a wood of barren oaks. Cannon were brought against the former, but the gunners were quickly picked off by riflemen; Colonel Washington, rashly charging the latter without waiting for the infantry, was wounded and captured, and half his men fell in the useless struggle. Stewart during the delay rallied his fugitives, and Greene reluc-

THE PARTISAN LEADERS OF THE SOUTH.

tantly drew off his men. One-quarter of the American army and one-fifth of the British were killed or wounded. Both sides claimed the victory. That night, however, the English retired to Charleston.

During the retreat, Manning, a noted soldier of Lee's legion, was in hot pursuit of the flying British, when he suddenly found himself surrounded by the enemy and not an American within forty rods. He did not hesitate, but, seizing an officer by the collar, and wresting his sword from him by main force, kept his body as a shield while, under a heavy fire, he rapidly backed off from the perilous neighborhood. The frightened British officer,

when thus summarily captured, began immediately to enumerate his titles: "I am Sir Henry Barry, deputy adjutant-general, captain in Fifty-second regiment," etc., etc. "Enough," interrupted his captor, "you are just the man I was looking for."

While Colonel Washington was lying helpless under his fallen horse, a soldier was about to bayonet him, when Major Majora-banks rushed forward and saved his life. The gallant officer was himself afterward wounded, and died *en route* to Charleston. A marble monument, erected as a tribute to a generous enemy by the Ravenels, on whose plantation he was buried, now marks the spot. The flag borne by Washington's troop at this battle is still preserved, and was carried by the Washington Light Infantry of Charleston at the Bunker Hill Centennial celebration, June 17, 1875.

Greene had now been in command only nine months, but he had recovered all the South except Savannah, Charleston, and Wilmington. He had not gained a decided victory; yet his defeats had all the effect of successes, and his very retreats strengthened the confidence of his men and weakened that of the enemy. In his own words, he was always able "to fight, get beaten, and fight again."

Anxious to distinguish himself and burning with hatred, the traitor Arnold early led an expedition into Virginia. January 2d, he appeared in Chesapeake Bay. The State had no troops to impede his advance, with generous self-forgetfulness having sent her best soldiers to the help of her Southern sisters. At Guilford Court-House, nearly twenty-five hundred of her men had helped to stay the tide of British aggression. Arnold having burned Richmond without opposition, Lafayette was sent with twelve hundred men to check his progress. General Phillips, arriving from New York with a heavy reinforcement, took Arnold's place, and the work of devastation went on more vigorously than ever. Lafayette, with his small force, could do little. His men being fearful of the climate, he offered any who wished, a permit to go home; but not one would leave him. A soldier, unable to keep up with the march, hired a cart lest he might seem to have deserted. At Baltimore, Lafayette borrowed money to supply his men with shoes and hats, and to purchase linen, which the loyal women of that city made up into summer garments for them. Phillips died, and Cornwallis arriving from the Carolinas, Arnold was sent back to New York.

In September, Arnold was detached against Connecticut, his native State. New London was pillaged and burned, the traitor himself, it is said, watching the fire from a church steeple. Fort Griswold was carried by assault. Colonel Ledyard, the commander, after a brave resistance, ordered his men to lay down their arms; but still the slaughter did not cease. "Who commands here?" called out Major Bromfield, a New Jersey tory, as he entered the works. "I did," said Ledyard, handing him his sword, "but you do now." With fiendish malignity, he seized the weapon and plunged it into the bosom of the heroic colonel. Seventy of the garrison were slain and thirty-five wounded. The yeomanry of the country were fast rising, and Arnold retreated to his boats to escape their vengeance.

With this barbarous scene ended his career in this country. Execrated by his former friends and loathed by his new companions, even children learned to lisp his name with a shudder. It is said that while on his predatory excursions in Virginia, there being at one time a chance of his capture, he asked an officer, "How will the rebels treat me, do you think, should I fall into their hands?" "Pardon my frankness," was the reply, "but they will probably cut off the leg that was wounded in storming our lines at Saratoga, and bury it with the honors of war; having no respect for the rest of your body, they will undoubtedly gibbet it." He carried to England a letter of introduction from Sir Henry Clinton to Lord Germain, but, although he was patronized by George III., he received abundant proofs of contempt from high-spirited noblemen. At one time, Lord Surrey rose to speak in parliament when, his eye resting on Arnold, he drew himself proudly up, and, pointing to the traitor, exclaimed, "I will not speak while that man is in the house!" It is also related that, on being introduced to Earl Balcarras, the proud old Briton refused his hand, saying, as he haughtily turned away, "I know General Arnold, and I abominate traitors!" Many other stories, true or false, are current, but all agree in showing how the blighting curse of his treason followed him to his death. "He saw," says Lester, "the infant republic he had betrayed, emerge from the gloom of her long struggle into wealth, power, and splendor; and left it advancing on to empire as he went darkling down to a traitor's grave. He died in 1801, somewhere in the wilderness of London. Where he was buried, nobody has told."

Cornwallis reached Petersburg May 20th. Never at rest,

though his army had marched at least fifteen hundred miles from their starting-point in South Carolina, within four days after his arrival he took the field against Lafayette. Despising the youth and inexperience of his adversary, he wrote to England, "The boy cannot escape me." The marquis, however, retreated from Richmond across the Rapidan, where he was reinforced by Wayne with the Pennsylvania troops. Cornwallis gave up the chase at Hanover Court-House, and contented himself with sending out a couple of detachments.

Tarleton, with his cavalry, attempted the capture of the Virginia Legislature at Charlottesville; but the members received news of his coming, and all except seven escaped. Governor Jefferson had not been absent from his mansion at Monticello ten minutes when the dragoons dismounted at the door. Simcoe, who was second only to Tarleton as a dashing partisan leader, was directed to seize the stores collected at the Point of Fork. By judiciously spreading his men over the neighboring hills, he deceived Baron Steuben, who was stationed there with about six hundred new levies, into the belief that the whole British army was at hand. The baron accordingly decamped hastily, and the English, crossing the river, destroyed the stores.

Cornwallis now placed himself between Lafayette and the magazines at Albemarle Old Court-House. But the Marquis, during the night, opened what was known as the "Rogues' Road"—a wilderness path, by which absconding debtors had been wont to escape to the South—and, before morning, had taken a strong position, where he could defend the place. Cornwallis then turned toward Williamsburg. Here he received orders from Clinton to send three thousand men to New York, as there were great fears that Washington, by the aid of the French fleet and troops at Newport, would attack that city. Setting out July 4th, for Portsmouth, the royal army reached the Jamestown ford. Ordering only the advance to cross, Cornwallis hid his main camp back of the woods and morasses, and, by means of deserters, gave the impression that merely the rear-guard remained on the left bank. Wayne fell into the snare, traversed a narrow log causeway, and attacked the enemy. The whole British army sprang up before him, and he was at once outflanked. "Mad Anthony," seeing his peril, sounded the charge, and dashed forward with headlong courage. Lafayette came to his rescue. The enemy, overawed by the apparent confidence of the Americans, feared a

stratagem, and dared not pursue. The Americans fell back to Green Springs, and Cornwallis continued on to Portsmouth unmolested.

Clinton, having received reinforcements from England, countermanded the order for troops from Virginia, and directed Cornwallis to establish an entrenched camp at some central point which would form a nucleus for future operations. The army was accordingly transferred to Yorktown and Gloucester, where fortifications were rapidly thrown up.

During this midsummer campaign, Cornwallis had traversed the rich fields of Virginia, plundering houses, burning farms and fences, devastating crops, seizing horses and slaves, and inflicting a total loss of fifteen million dollars.

The French-American army under Washington and Count de Rochambeau was now encamped at Dobb's Ferry. Every effort was put forth to prepare for a combined attack upon New York. While he had maintained a bold front before Clinton, Washington had really, however, been baffled on every hand. At one time there were only two thousand men in camp, a number less than that of the Tories then in the British service. There was danger of even this small force being disbanded for lack of provisions. All the American fleet had been destroyed except two frigates. "Hancock," says Bancroft, "was vain and neglectful of business, while the president of Pennsylvania was more ready to recount what the State had done than what it meant to do." Morris now once more came to the rescue. By giving his own notes for one million four hundred thousand dollars, he obtained funds for the outfit of the troops for the summer campaign.

The news of the departure from San Domingo for the Chesapeake of Count de Grasse, with a fleet of twenty-five ships-of-the-line and several thousand troops, put a new phase on affairs. The very day Cornwallis arrived at Yorktown, Washington resolved to transfer the allied army to Virginia. To the last the fiction was kept up of a movement upon New York. Reconnoissances were made, boats prepared, and ovens set up on the New Jersey shore. On the 19th of August the troops were paraded with their faces toward King's Bridge, when they were wheeled to the right-about, and began their march southward. Soon all the roads leading to King's Ferry were alive with the gleam of arms, the tramping of men, and the heavy rumbling of wheels. Clinton had captured a letter from Washington inform-

ing Congress of his plans for taking New York, and so much was it relied upon that the British general thought these movements a ruse to throw him off his guard. At Philadelphia, Morris could strain his credit no more, and actually borrowed of Rochambeau twenty thousand dollars in hard money to put the American troops in good humor for their long march. While *en route*, Washington rode forward with Rochambeau and Chastellux at the rate of sixty miles per day, and so secured time to stop at Mount Vernon three days. It was his first visit home in over six years.

The net was fast weaving about the unsuspecting Cornwallis. August 30th, Count de Grasse cast anchor within the capes of the Chesapeake. September 5th, the English fleet appearing off the coast, the French immediately offered battle, and inflicted such a loss that the enemy sailed back to New York. De Barras took advantage of this opportunity to slip in with the French transports from Newport containing the artillery for the siege. On the 28th, the allied army, sixteen thousand strong, drove in the outposts and sat down before the entrenchments of Yorktown. That night Washington lay in the open air under a mulberry tree, its root serving for a pillow. October 5th, trenches were opened within six hundred yards of the enemy's line—the French on the left and the Americans on the right.

In the allied camp there were the utmost harmony and goodwill. The French were universal favorites, and everything was cheerfully sacrificed for them—the guests of the nation—while their officers, by the wise provision of Louis XVI., were all made to act under the orders of Washington.

The town was bombarded night and day. Governor Nelson commanded the battery that opened first upon the British. Cornwallis and his staff were at that time occupying the governor's fine stone mansion. The patriot pointed one of his heaviest guns directly toward the house, and ordered the gunners to play upon it with spirit. The vessels in the harbor were fired with red-hot shot. For a time the English replied with great vigor. One shell fell near Baron Steuben, who, leaping into a trench to avoid its effects, was closely followed by Wayne. The latter stumbling as he jumped, fell squarely upon his superior officer. Steuben, whose ready wit never deserted him, gave Wayne not a moment for apology, but remarked, "My dear sir, I always knew you were a brave officer, but I see you are perfect in every point of duty; you cover your general's retreat in the best manner possible."

On the 14th, two advanced redoubts were taken by assault—one by the Americans and the other by the French, in generous rivalry. The former were led by Lieutenant-Colonel Hamilton, who volunteered for the honor, and was the first to mount the rampart. The men did not wait to remove the abattis, but scrambled through as best they could, and, without firing a gun, swept all before them. Lieutenant-Colonel Laurens turned the entrenchment, and with his own hand captured the commandant. Every man who asked it obtained quarter, although the news of the massacre at Fort Griswold had just been received. The battalion of Gatinois was at the head of the French column. It had been formed from a regiment which had won the name of *D'Auvergne sans tache*—

Auvergne without a stain—and when Rochambeau, who had been their old leader, assigned them their post, they said they would die to a man if their former title might be restored to them. The French stopped under fire to have the sappers remove the obstructions. Then they leaped forward, and to the cry of "*Vive le Roi!*" swept the redoubt. Within six minutes the

task was done. "On that night," says Holmes, "victory twined double garlands around the banners of France and America."

Washington, standing in the grand battery with Generals Knox and Lincoln, was an intensely excited spectator of these assaults. One of his aides-de-camp, uneasy lest harm might come to him, ventured to observe that the situation was very much exposed. "If you think so," replied he, gravely, "you are at liberty to step back." Shortly afterward, says Irving, a musket-ball struck the cannon in the embrasure, rolled along it, and fell at his feet. General Knox grasped his arm. "My dear general," exclaimed he, "we can't spare you yet." "It is a spent ball," replied Washington, quietly; "no harm is done." When all was over, and the redoubts were taken, he drew a long breath, and, turning to Knox, observed, "The work is done, and well done." Then he called to his servant, "William, bring me my horse."

The same night both redoubts were included within the second parallel. Two days after, the English made a sally, but were driven back pell-mell. As a last resort, Cornwallis attempted to ferry his men across by night to Gloucester, hoping to break

through the lines there, and escape over the country to New York. A part of his army had crossed, when a storm scattered his boats and put an end to this daring scheme. One hundred heavy cannon were now playing upon every part of the works, which were already so damaged that hardly a gun could be used in reply. An assault was imminent. Nothing was heard from Clinton, who had promised aid by the 5th. There was no other resource, and on the 19th Cornwallis capitulated.

The scene of the surrender was imposing. It was arranged that General Lincoln should accept the submission of the captive general exactly as his own had been received at Charleston

SURRENDER OF CORNWALLIS AT YORKTOWN.

eighteen months before. The allied forces were drawn up on opposite sides of the road for over a mile, the French on the left and the Americans on the right. Washington and Rochambeau, each with his staff, stood at the head of his army. The English, about seven thousand in number, marched between the lines, with slow step, shouldered arms, and cased colors. With deep chagrin and sullen look, the officers gave the order to "ground arms"; the men throwing down their guns as if to break them, until General Lincoln checked the irregularity. Every eye was turned to catch a sight of Cornwallis, but, vexed and annoyed, he feigned sickness, and sent his sword by the hand of General O'Hara.

“From Yorktown’s ruins, ranked and still,
Two lines stretch far o’er vale and hill;
Who curbs his steed at head of one?
Hark! the low murmur: Washington!
Who bends his keen, approving glance
Where down the gorgeous line of France
Shine knightly star and plume of snow?
Thou too art victor, Rochambeau!

“The earth which bears this calm array
Shook with the war-charge yesterday;
Ploughed deep with hurrying hoof and wheel,
Shot down and bladed thick with steel;
October’s clear and noonday sun
Paled in the breath-smoke of the gun;
And down night’s double blackness fell,
Like a dropped star, the blazing shell.

“Now all is hushed: the gleaming lines
Stand moveless as the neighboring pines;
While through them, sullen, grim, and slow,
The conquered hosts of England go:
O’Hara’s brow belies his dress,
Gay Tarleton’s troop ride bannerless:
Shout, from thy fired and wasted homes,
Thy scourge, Virginia, captive comes!”—*Whittier*.

The very day the capitulation was signed, Clinton sailed from New York with the promised reinforcement. He reached the capes of Virginia on the 24th, when, learning of the disaster, he returned crestfallen.

Tidings of the surrender reached Philadelphia at the dead of night. The people were awakened by the watchman’s cry, “Past two o’clock, and Cornwallis is taken!” Lights flashed through the houses, and soon the streets were thronged with crowds eager to learn the glad news. Some were speechless with delight; many wept; and the old door-keeper of Congress died of joy. Congress met at an early hour, and that afternoon marched in solemn procession to the Lutheran church to return thanks to Almighty God. The day after, Washington ordered Divine service to be held at the head of the regiments on account of the “particular interposition of Providence on their behalf.”

Notwithstanding the great provocations which had been given by Cornwallis and his officers, they received only consideration and respect at the hands of their conquerors. But nothing could atone to the fallen British general for the mortification of his de-

feat. One day, when he was standing with his hat off in presence of Washington, the latter kindly observed: "My lord, you had better be covered from the cold." "It matters not what becomes of this head now," was the bitter reply.

Lord North received the news as he would "a cannon-ball in his breast." He paced the room, tossing his arms, and crying, "O God! it is all over!" The hope of subduing America was now abandoned by the people of England, and they loudly demanded the removal of the ministers who still counseled war. The House of Commons voted that whoever advised the king to continue hostilities should be considered a public enemy. Early in May, 1782, Sir Guy Carleton arrived in New York with propositions for a reconciliation between the two countries.

The struggle which commenced in Massachusetts had now closed in Virginia. With the surrender at Yorktown, the war was virtually at an end. The American armies still, however, kept the field, and various minor skirmishes occurred. Greene's men, without regular food, clothing or pay, held the British closely confined in Charleston; while Wayne guarded the garrison in Augusta with watchful vigilance. In August, 1782, Lieutenant-Colonel Laurens was killed at Combahee Ferry while resisting the advance of a foraging detachment from Charleston. The last blood shed in the Revolution is said to have been that of Captain Wilmot, in September, during a skirmish at Stono Ferry.

Preliminary articles of peace were signed at Versailles, November 30, 1782. In order to give England time to adjust her difficulties with France, the final treaty was not executed until September 3d of the following year. Meanwhile, on April 19th, the eighth anniversary of the battle of Lexington, which began the war, Washington, at the headquarters of the army, officially proclaimed its close. Charleston had been evacuated by the British, December 14, 1782, and Savannah, July 11, 1783. The English troops were then collected at New York from all points. On November 25th—a cold, frosty day—the British army and the refugees embarked in boats for Staten and Long Islands, preparatory to taking ship. The same morning, General Knox, who had come down from West Point with some American troops, entered the city from the Bowery. At three o'clock in the afternoon, they took possession of Fort George, upon the Battery, amid the shouts of the crowd and the roar of the guns.

Soon after, Washington and his staff and Governor Clinton

and suite made a formal entry ; the commander-in-chief taking up his headquarters at Fraunces's Tavern—a house still standing on the corner of Pearl and Broad streets. Here, December 4th, Washington bade farewell to his principal officers. It was a tender, touching scene. Passing thence, he set out to offer his commission to Congress. When he entered the barge, and, bidding adieu to the assembled multitude, disappeared from sight, the War of the Revolution ceased and a new epoch dawned.

GEORGE III.

CHAPTER IX.

THE DEVELOPMENT OF THE REPUBLIC.

FEDERAL HALL.

THE first twenty years of the existence of the United States as a nation, or rather the period from the time of the treaty of peace with Great Britain until the end of the eighteenth century, was the most important of any the country has yet seen. The close of the Revolutionary War left the States like a citadel overthrown—its proportions destroyed, its material scattered, without cohesion, almost, if not quite, a complete ruin. It was to be shown whether or not the eminent men who had been so successful in

overturning, would be equally so in building up; it being a question for some time, not whether a structure was to arise stronger, fairer, and better than the older one, but whether there was to be any rebuilding at all.

The situation was peculiar, unlike any other that the history of the world had shown. Most, if not all, the nations of the earth had grown up by degrees from small beginnings. Here was one that was to spring into existence, a first-class power almost from its birth. The material was ready at hand and far removed from the influence or control of the older nations. The event showed that, as God had prepared the work, so had He laborers competent to perform it. They builded, and builded even stronger than they knew.

On the 23d of December, less than a month after the evacuation of New York, Washington resigned his commission as commander-in-chief of the army and returned to his home at Mount Vernon. He had given many proofs of his patriotism, but one of the greatest was his refusal to receive any compensation for his eight years of service at the head of the army. It detracts nothing from the quality of the sentiment involved that, being rich through his marriage with Mrs. Custis, he could afford this gift to his country. He simply asked the reimbursement of his expenses, an exact account of which he had kept, drawn up by his own hand, and now presented to the government.

The situation of affairs, although peace had now come, was by no means flattering to the future of the States. The Articles of Confederation, under which they had been acting during the war, were mere shadows unless sustained by a common danger or the entire willingness of all concerned. In case of any conflict of interest, they were ineffective for adjustment or control. They gave Congress authority to declare everything, but to do nothing. They did not act at all upon the people of the country, except through the several States, and it depended entirely upon the Legislatures whether the measures adopted by Congress should be carried out. Many of them were silently disregarded; many were slowly and reluctantly obeyed; and some were openly and boldly defied.

In all matters of commerce, either domestic or foreign, Congress was powerless. Each State made its own regulations, and consequently the most opposite rules existed at points within a few miles of each other. Local prejudices were aroused and

intensified, and resentments continually excited. Indeed, feeling in many instances ran so high that civil war seemed imminent. Foreign nations, although acknowledging the independence of the States, were not backward in taking advantage of their weakness and the distracted condition of their legislation, imposing upon the trade and navigation of the country such restrictions as best suited their own interests.

But this apathy and opposition were especially felt when money was to be raised for general purposes. Congress could not itself collect the taxes. It could only ascertain the sum needed, and apportion it to the several States for them to levy. During the war, there was great delay in responding to these requisitions; but after peace was declared, there was an utter indifference on the subject. Notwithstanding the most urgent appeals from the best men of the country, it seemed impossible to procure even enough money to pay the interest on the national debt, and the public faith was consequently prostrate.

In fact, the poverty of the public treasury, together with the feebleness and apathy of Congress, threatened the very existence of the government even before the army was disbanded. The troops were not paid, and the condition of those patriotic men who had won the freedom of the country was most lamentable. While Washington was yet at his headquarters at Newburg (March 10, 1783), an anonymous address was distributed among his soldiers. It was plainly but skillfully put, urging them not to disband, but to overthrow the civil authorities and seize upon their rights. Washington was even asked to assume the title of king and grasp the reins of government himself. The calmness and honesty of the Father of his Country were never more grandly shown than at this moment of peril in thwarting the plans of these earnest, but misguided men. A touching incident took place just before he commenced the reading of his memorable address upon this occasion. He removed his spectacles to wipe them, and, turning to those around him, said, "My eyes have grown dim in the service of my country, but I have never yet learned to doubt her justice." Washington finally secured a grant of five years full pay to the officers, instead of half pay for life, and the whole matter was happily adjusted.

Lossing relates an incident of Steuben which illustrates both the extreme poverty of the army at this period, and the generosity of "Marshal Forritz," as his men loved to call him, from

WASHINGTON'S HEADQUARTERS AT NEWBURG.

his foreign pronunciation of the command "Forward!" "Colonel Cochrane was standing in the street, penniless, when Steuben tried to comfort him by saying that better times would come. 'For myself,' said the brave officer, 'I can stand it; but my wife and daughters are in the garret of that wretched tavern, and I have nowhere to carry them, nor even money to remove them.' The baron's generous heart was touched, and, though poor himself, he hastened to the family of Cochrane, poured the whole contents of his purse upon the table, and left as suddenly as he had entered. As he was walking toward the wharf, a wounded negro soldier came up to him, bitterly lamenting that he had no means with which to get to New York. The baron borrowed a dollar, and, handing it to him, hailed a sloop and put him on board. 'God Almighty bless you, baron!' said the negro, as his benefactor walked away."

In the apportionment among the States of the taxes to meet the interest or a portion of the principal of the debt—now about forty-four million dollars—it was discovered that the basis of their quotas had not been justly laid. The standard had been the value of the real estate, instead of the relative population of the several States. To correct this error, Congress suggested that there should be an amendment to the Articles of Confederation. During the discussion, there arose a question as to the relative efficiency of white and colored men in the production of wealth.

By what reasoning the decision was at length reached, at this point of time it is difficult to determine: but in April, 1783, the States were asked to so amend the Articles of Confederation, that, in enumerating their population for purposes of taxation, three white men should equal five negroes. This was subsequently incorporated in the second section of the new Constitution, delicately alluding to the slaves as "three-fifths of all other persons."

For two years after the peace, the States dragged along, growing poorer and poorer every day; getting further and further from one another in sentiment, feeling, and interest; clinging to their State pride and jealousy with a tenacity that showed that the Confederation must soon expire of pure inanity.

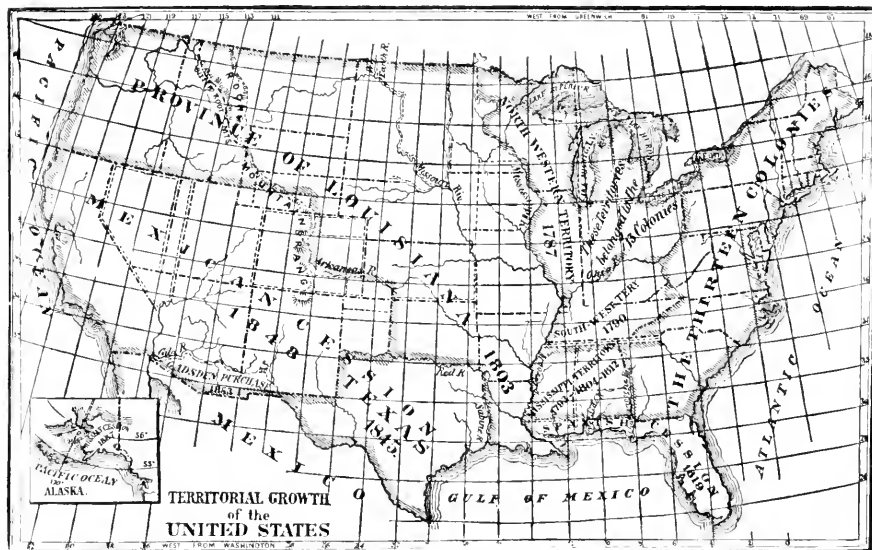

In 1785, the States of Maryland and Virginia appointed commissioners to make some regulations relative to the navigation of the Chesapeake Bay and the Potomac and Roanoke Rivers. Finding its powers inadequate, the committee recommended more extended proceedings. The resolution embodying their suggestions was drawn up and presented by James Madison of Virginia, whence he has been styled the "Father of the Constitution."

This recommendation resulted in an invitation by the Legislature of Virginia to all the States to appoint commissioners for the purpose of establishing a uniform system of commercial relations. Delegates from five States accordingly met at Annapolis, September, 1786, and framed a report advising Congress to call a general convention for a more effectual revision of the Articles of Confederation. The body thus appointed assembled at Philadelphia, May, 1787, all the States except Rhode Island being represented. George Washington was chosen president and William Jackson secretary.

The territory of the United States at this time comprised that vast region between the Atlantic Ocean and the Mississippi River on the east and the west, and between the chain of lakes and the St. Lawrence River and the thirty-first parallel of north latitude on the north and the south. Northwest of the Ohio River was a large territory to which several of the States had a claim, as it lay within their original charter limits, which extended from ocean to ocean. They had, however, ceded their rights to the United States for the common benefit. During the year 1787, Congress passed an ordinance which has become famous. It provided for the government of the Northwestern Territory, as it was called, until certain designated parts should possess sixty thousand inhab-

itants, when they were to be admitted as States. It also ordered that "slavery or involuntary servitude, except for crime," was to be forever prohibited therein.

The "Constitutional Convention" contained many remarkable men. Among them, were Samuel Johnson, Roger Sherman, and Oliver Ellsworth, of Connecticut; Gunning Bedford and George Read, of Delaware; William Few and Abraham Baldwin, of Georgia; Daniel Carroll, James McHenry, and Luther Martin, of

Maryland; Caleb Strong, Elbridge Gerry, and Rufus King, of Massachusetts; John Langdon and Nicholas Gilman, of New Hampshire; Jonathan Dayton, William Livingston, and William Patterson, of New Jersey; John Lansing, Robert Yates, and Alexander Hamilton, of New York; Robert Morris, Gouverneur Morris, and Benjamin Franklin, of Pennsylvania; John Rutledge, Pierce Butler, Charles Pinckney, and Charles Cotesworth Pinckney, of South Carolina; Edmund Randolph, George Mason, James Madison, and George Washington, of Virginia.

Oliver Ellsworth, while in the senate, was called the "firmest pillar of Washington's administration," and was subsequently appointed Chief-Justice of the United States. From Elbridge Gerry came the term "gerry-mandering," or the so arranging of districts that one or the other political party should gain the majority.

Rufus King was three times a candidate for the Vice-Presidency. Robert Morris was the patriot financier who rendered such valuable service during the Revolution. But though "heaven-directed" in public matters, he was most unfortunate in his private concerns. As an instance: he commenced, in Philadelphia, the erection of a magnificent marble mansion, the grounds of which were to occupy an entire square. The cellar was three stories in depth, and the arches and vaults were so labyrinthine that visitors were often lost among them. Before the building had reached the second story, funds failed, and the project was abandoned. Much of the material was taken to erect a row of houses on Sansom Street, some of which are still standing.

It was soon evident that a mere revision of the Articles of Confederation would not satisfy many of the delegates. They thereupon set themselves to the task of originating an entirely new form of government. At first, the notion of a Union, National instead of Federative, was uppermost—a natural swinging of the pendulum to the opposite extreme;—but a happy medium was finally struck, in which the advantages of a consolidated nation were secured, and the benefits of State rights retained. The New Constitution was signed September 17, 1787.

It was to go into effect March 4, 1789, between any nine of the States which should then have adopted it. Delaware, Pennsylvania, and New Jersey ratified it the same year. It was accepted the next year by the other States, except North Carolina and Rhode Island, which followed in 1789 and 1790 respectively.

The adoption of the Constitution was not secured without great opposition. It was powerfully sustained by James Madison, Alexander Hamilton, and John Jay, in a series of papers called the "Federalist," which take rank as a literary performance with the celebrated letters of "Junius." Patrick Henry was bitterly hostile to the new form of government. Even Jefferson himself is reported to have said, somewhat in derision, that the executive it established "was the chief of an elective monarchy, a bad edition of a Polish king." James Monroe, George Mason, and William Grayson, though strong in opposing, became prominent under it when it went into operation.

Presidential elections were held in every State ratifying the Constitution, except in New York, where the legislature, owing to a disagreement between its two branches, omitted to pass a law dictating the mode of choosing electors. The ten States voting

gave sixty-nine electoral votes, all for George Washington; John Adams received thirty-four, and was declared Vice-President. At that time the electors voted for two persons; the one receiving the highest number being chosen President, and the next highest, Vice-President. A majority of the whole number was required for the former, but not for the latter. Adams, although receiving the greatest number of votes, next to Washington, was elected Vice-President by a minority.

April 16th, Washington left Mount Vernon for New York, the seat of government. He desired to journey quietly and unostentatiously, but the public feeling was too strong to be suppressed. The entire route was one spontaneous ovation. Crowds flocked around him wherever he stopped; and corps of militia, with companies of the most eminent citizens, escorted him through their respective States. At Trenton, he was received by a vast throng and a magnificent demonstration, in which figured garlands of flowers and triumphal arches, and young girls chanting with their silvery voices praises to the chief of the Republic. A print of this reception—truthful in design if not artistic in execution—for more than seventy-five years was one of the most popular engravings issued. The Hudson River was crossed in an elegant thirteen-oared barge, manned by as many pilots, symbolical of the thirteen States.

The ceremonies of the inauguration took place on the 30th in Federal Hall, a building standing where the Sub-Treasury is now located. Robert Livingston, Chancellor of the State of New York, administered the oath in the presence of a large concourse of people, who shouted at its conclusion, "Long live Washington, President of the United States." The inaugural address was then delivered, and replied to on behalf of the Senate by John Adams, and on the part of the House by Frederick A. Muhlenberg, the first Speaker.

Notwithstanding the magnificence of the inaugural display, the simplicity of the President's private life is well attested. A letter, written by Judge Wingate and still preserved, gives an account of Washington's first public dinner. "The guests consisted of the Vice-President, the foreign ministers, the heads of departments, the Speaker of the House of Representatives, and the senators from New Hampshire and Georgia, the then two most northern and southern States. It was the least showy meal that I ever saw at the President's table. Washington made

his whole meal on a boiled leg of mutton, it being his custom to eat of but one dish. As there was no chaplain present, the President himself, as he was sitting down, said a very short grace. After the dessert, a glass of wine was passed, and no toast. The President then arose and all the company, and retired to the drawing-room, from which the guests departed as every one chose, without ceremony."

The first session of the First Constitutional Congress was largely occupied in getting the machinery of the government into working order. The subjects of commerce and finance, and the

Jefferson.

Knox

Randolph.

Hamilton.

Washington.

WASHINGTON AND HIS CABINET.

organization of subordinate departments and the judiciary, also demanded attention. There were nominated by the President and confirmed by the Senate: Thomas Jefferson as Secretary of Foreign Affairs (afterward known as Secretary of State); Alexander Hamilton, Secretary of the Treasury; Henry Knox, Secretary of War, and Edmund Randolph, Attorney-General. These officers formed what is called the "President's Cabinet"—a body unknown to the Constitution. John Jay was appointed Chief Justice of the Supreme Court, with John Rutledge of South Carolina, James Wilson of Pennsylvania, Robert H. Harrison of Maryland, and John Blair of Virginia, associates. The appointing power of the

President now came under earnest and excited consideration, and it was determined that, while it was constitutionally subject to the assent of the Senate, the power of removal rested with him alone.

Sixteen articles of amendment to the Constitution were approved by Congress and sent to the States, only ten of which, however, were ratified. The most important were those which related to religious toleration, the right to bear arms, unreasonable searches of property or homes, a speedy trial by jury, and to the declaration that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

The last article was drawn to quiet the apprehensions of the "strict constructionists," as they were called, who feared lest the power of the government should be unduly centralized. Even in the Constitutional Convention political parties had arisen. Well-defined lines were not drawn, however, until the meeting of Congress. One party desired to hold the government to the exact letter of the Constitution. These were called "Republicans," and sometimes "Democrats." The other, or "Federalist," wished to enlarge the powers of the government by inference and implication. The first exercise of the veto power by the President, which occurred during this session, brought out the distinction clearly. It was on a bill fixing the ratio of representation by counting all the people of the States as one mass, instead of the population of each State severally. The veto was sustained by Congress, a subsequent bill on the latter-named principle being passed, which is yet in operation.

Alexander Hamilton, the first Secretary of the Treasury, became the most prominent man of the Cabinet. He was born in the Isle of St. Croix, West Indies. When only twelve years old, he was entrusted with the entire responsibility of a large shipping-house. At fourteen, he came to the United States and entered King's College. Early in the Revolution, he raised a company of artillery, but was soon made an aide-de-camp, and won the honor of being called "the right arm of the commander-in-chief." At the conclusion of the war, he commenced the practice of law in New York City, where he at once rose to distinction.

The chief features of Hamilton's financial policy were the assumption by the general government of the war debt of the several States, and the payment of the indebtedness of the country

dollar for dollar, although a large proportion of the claims was in the hands of speculators. These measures met with bitter opposition, but their adoption was secured by certain compromises, one of which tended to allay the jealousy of the Southern people toward New England. This was the transfer of the seat of government to Philadelphia until 1800, when it was to be permanently located upon the eastern bank of the Potomac.

The third session of the First Congress was accordingly held at Philadelphia on the first Monday of December, 1790. At this time the United States Bank was established, and also a national mint. Both were schemes of General Hamilton, and tended greatly to advance the prosperity of the country.

During the year 1790, the Indians, both at the South and in the Northwestern Territory, gave the government much trouble. Some of the Southern chiefs were induced to visit New York, where a treaty was signed, by which a considerable portion of the territory of Georgia was relinquished to them, much to the discontent of that State. General Harmar, a veteran of the Revolution, being sent to repel the hostile savages at the Northwest, was twice defeated—October 17th and 22d—near Chillicothe. General St. Clair was appointed to succeed him. Leaving Fort Washington with about two thousand men (September, 1791), he entered the wilderness, where, notwithstanding the repeated cautions of the President to “beware of a surprise,” he was caught off his guard, and his army routed with great slaughter.

In the fall of 1793, “Mad Anthony” Wayne took the field with nearly three thousand men. He built Fort Recovery, near the scene of St. Clair's disaster, where he spent the winter. In the summer, moving down the Maumee, on the 20th of August he defeated the Indians in a severely-fought battle. Laying waste their country, he compelled them to sue for peace. By the treaty subsequently made, the Indian title to large tracts west of the Ohio was extinguished.

The Second Congress, which held its first session October, 1791, passed laws providing for a uniform militia system; a bounty to vessels employed in the fisheries; an apportionment of representation in Congress, the ratio being fixed at thirty-three thousand for each representative; and an excise law, imposing a duty on domestic distilled spirits. The last occasioned no little alarm, especially in the valley of the Monongahela, where whiskey was the principal article of commerce. The disaffection there assumed

such proportions that it received the name of the "Whiskey Rebellion." The President was compelled to call out the militia, fifteen thousand strong, which speedily quelled the uprising.

Although Washington desired to decline a renomination, he finally yielded to the earnest wish of his friends. Party spirit ran very high during the second Presidential campaign, the lines between the friends of Hamilton and Jefferson, the two great leaders of the Federalists and the Republicans, being sharply drawn. Washington, however, received the unanimous vote of the electoral college, one hundred and thirty-two. Adams, having seventy-seven votes, was elected Vice-President.

The French Revolution was now at its height, and its influence was strongly felt in the United States. The representative of France in this country was Edmund Charles Genet, better known as "Citizen Genet," a brother of the famous Madame Campan. He landed at Charleston, South Carolina, in April, 1793, but before presenting his credentials to the government, he fitted out privateers and enlisted troops for the French service. He was everywhere enthusiastically received by the people, who demanded that their old ally should be assisted and war forthwith declared against Great Britain. This feeling was intensified from the fact that England still held possession of the forts on the frontier, which, by the treaty of 1783, were to have been given up; while American vessels were seized in French ports, and American seamen impressed into English vessels. It required all the popularity of Washington to stem the tide and hold the government to the neutrality which he had proclaimed.

A satisfactory treaty was finally arranged with Great Britain by a special envoy, John Jay. It was not considered favorable to the United States, as one of its provisions secured to British citizens the payment of debts due them before the war. Party animosity was inflamed. The Federalists were claimed to have been bought by British gold. Washington was accused of being an enemy of his country and reproached in language such, as he said, could scarcely be "applied to Nero, a notorious defaulter, or even a common pickpocket." Fisher Ames of Massachusetts made a memorable speech in Congress in behalf of the treaty. Vice-President Adams thus described it in a letter to his wife: "Judge Iredell and I happened to sit together. Our feelings beat in unison. 'My God! how great he is,' says Iredell. 'Noble!' said I. 'Bless my stars!' continued he, 'I never heard anything

so great since I was born.' 'Divine!' said I; and then we went on with our interjections, not to say tears, to the end—not a dry eye in the House." The treaty was ratified, in spite of all opposition, April 30, 1796.

Genet, being superseded by his government, remained, however, in this country, and married a daughter of George Clinton. He introduced into the United States the idea of democratic societies, similar to the Jacobin clubs of Paris. One of these was the "Columbian Order," or, as it was afterward styled, the "Tammany Society," organized by an Irishman named William Mooney.

Two important treaties were concluded in 1795. One, with Spain, settled definitely the boundaries between the United States, Louisiana and Florida, and gave the right to navigate the Mississippi, and to use New Orleans as a place of deposit for ten years. The other, with Algiers, was not quite so advantageous or agreeable to contemplate. The Dey of Algiers had heard of the new nation which had a commerce, but no navy to protect it. He, therefore, with his corsairs, unhesitatingly pounced upon our merchantmen. Within eight years they had captured fifteen American vessels and made one hundred and eighty officers and seamen slaves. A commissioner, sent to confer with the Dey, received the naïve reply: "If I were to make peace with everybody, what should I do with my corsairs? My soldiers would take off my head for want of other prizes." Colonel David Humphreys of Connecticut, who had the matter in charge, wrote to the government, saying, "If we mean to have a commerce, we must have a navy to defend it." Congress thereupon, in 1794, authorized the purchase or construction of six frigates. Meanwhile, a most humiliating treaty was made with the Dey. The United States actually agreed to give eight hundred thousand dollars for the captives then alive, to make him a present of a frigate worth one hundred thousand dollars, and to pay an annual tribute of twenty-three thousand dollars.

Three new States were received into the Union during Washington's term of office. Vermont, the fourteenth State, was admitted to the Union on the 4th of March, 1791. The first settlement within its border was in the vicinity of Brattleborough, in 1724. The territory was claimed by both New York and New Hampshire, and a bitter conflict arose in consequence. The jurisdiction was decided by the crown to belong to the former State; but the

inhabitants, dissatisfied with this decision, for many years carried on an armed strife with the New York authorities. One of the most prominent leaders in the contest was Colonel Ethan Allen, a man of marked characteristics, who wielded a powerful influence over his fellow-citizens.

The bill admitting Kentucky, the fifteenth State, was passed February 4th, 1792. Its early history is intimately connected with the career of Daniel Boone, one of the most famous of hunters and frontiersmen. He was born in Bucks county, Pennsylvania, in 1735, but spent his youth and early manhood in North Carolina. In 1769, with five companions, he penetrated the wilderness to the west of Virginia, where the perils he underwent among the Indians form a most exciting personal history. In 1775, he founded Boonesborough. This village and Harrodsburgh, also settled about the same time, were the

two oldest towns in the West, with the exception of a few French places on the Mississippi. Kentucky was then made

a county of Virginia. In 1790, it was formed into a separate Territory. On its becoming a State, Boone, on account of a defective title, was unable to hold his land, and removed to Missouri, where he died in 1821. "Kentucky afterward reclaimed his bones, and those of his wife," says Bancroft, "and now they lie buried on the hill above the cliffs of the Kentucky River, overlooking the lovely valley of the capital of that commonwealth. Around them are emblems of wilderness life; the turf of the blue grass lies lightly above them; and they are laid with their faces turned upward and westward, and their feet toward the setting sun."

DANIEL BOONE'S EXPLORING EXPEDITION.

Tennessee, the sixteenth State, was admitted to the Union June 1, 1796. The first settlement was made near Knoxville in 1756, and Nashville was founded in 1783. It was, originally, a portion of North Carolina, but was ceded to the general government in 1784. The inhabitants claimed that the cession was an act of usurpation done by their brethren to accomplish a "good rid-dance," as it were, of poor relations. They declared themselves independent, and set up a government of their own, calling their country the "State of Franklin." North Carolina thereupon repealed the Cession Act, but the people of the new State, intent upon realizing their dreams of future greatness, adopted a constitution and elected members to the legislative bodies. General John Sevier, or Xavier, for he was of French descent, was chosen governor. Early in life, he had settled on the East Tennessee, where he had so many conflicts with the Indians, followed by so many compacts, that he acquired the name of the treaty-maker. The manner in which he gained a wife has hardly a parallel in the romance of matrimony. While in command of a small stockade fort on the Watauga River, and in hourly expectation of an attack from the Cherokee Indians under "Old Abraham," a noted chief, he heard the crack of a rifle, and, looking up, saw a tall, slender girl running toward the fort, closely pursued by the savages. They cut off her approach to the gate, but she leaped the palisades, and, exhausted, fell into the arms of Captain Sevier. Her name was Catherine Sherrill, the acknowledged belle and beauty of that region. She became the loving and loved wife of the captain, and the mother of ten children.

The financial affairs of the "State of Franklin" were on too unsound a basis to promise long life. Its money was made up of certain domestic manufactures and the skins of wild animals. The salaries of the officials were measured in a manner that had the merit, at least, of novelty. Those of the governor, officers of state, and judges were rated at so many fox-skins; and those of the sheriffs, constables, and other inferior officers at so many mink-skins. This was all well enough until some skillful counterfeiter sewed the tails of valuable animals upon the skins of worthless ones, and brought discredit upon the whole currency.

The disagreement between North Carolina and the would-be State threatened war, when, opportunely, there appeared a messenger of peace and good-will, the venerable Bishop Asbury, of the Methodist Church, who had come to attend the first confer-

ence ever held west of the Mountains. The precepts he taught converted many bitter partisans into brethren and friends. In 1790, a territorial government being organized, Sevier was elected to Congress, the first representative of the vast region west of the great mountains.

In September, 1796, Washington, definitely declining to serve a third term, presented to his fellow-citizens his "Farewell Address." It crowned, in a fitting manner, an illustrious life, and its sentiments of patriotism and its sagacious political maxims will remain as a legacy to his countrymen through future generations.

The candidates of the Federal party at the succeeding election were Adams for President and Thomas Pinckney for Vice-President. The Republican, or Democratic, nominee for President was Thomas Jefferson; for Vice-President, the most prominent was Colonel Aaron Burr.

While the election was pending, the new minister from France, M. Adet, addressed to the Secretary of State, and at the same time published in the newspapers, a letter, which once more complicated our relations with his country. He reproached the United States for violation of treaty obligations, and with ingratitude toward France and partiality toward England. He also announced that he had been directed to suspend his ministerial functions with the United States.

Of the one hundred and thirty-eight electoral votes cast, John Adams received seventy-one, and Thomas Jefferson sixty-eight. They were therefore declared elected President and Vice-President respectively.

Washington was present at their inauguration on the 4th of March, 1797, and then withdrew to Mount Vernon, to spend the remainder of his days in retirement. His administration had been attended with a success hardly dreamed of at the beginning. Public and private credit had been restored, and ample provision made for the security and ultimate payment of the public debt; commerce had wonderfully increased; American tonnage had nearly doubled; the products of agriculture found a ready market; exports had risen from nineteen million dollars to fifty-six million dollars, and the imports had increased in about the same proportion.

Some of the social observances originating in the time of President Washington have been adhered to during successive administrations. They were marked for their simplicity and dignity,

although coming under the ban of those who objected even to the minutiae of the conduct of the Republic. Every Tuesday afternoon, Washington gave formal levees, where considerable ceremony was required. One who was present on several of these occasions has left an account of them. They were held in the dining-room of the modest house occupied by the President, from which all seats had been removed for the time, and commenced at three o'clock. On entering, the

visitor saw the tall, manly figure of Washington, clad in black silk velvet, his hair powdered and gathered behind in a large silk bag; yellow gloves on his hands, and holding a cocked-hat with a black cock-

MOUNT VERNON.

ade, and the edges adorned with a black feather about an inch deep. He wore knee and shoe buckles, and a long sword. He stood always in front of the fireplace, with his face toward the door of entrance. The visitor was conducted to him, and his name distinctly announced. Washington received him with a dignified bow, avoiding to shake hands, even with his best friends. As visitors came, they formed a circle round the room. At a quarter past three the door closed, when the President began on the right, and spoke to each person, calling him by name, and exchanging a few words. Having finished the circuit, he resumed his first position, and the visitors approaching him in succession, bowed and retired. Within an hour the ceremony was over. Washington's deportment was uniformly grave; it being sobriety,

stopping just short of sadness. His presence inspired a veneration and a feeling of awe, rarely experienced in the company of any man.

Mrs. Washington's levees, at which there were less form and ceremony, were held every Friday evening, the General being always present.

Patrick Henry was one of those who objected to any display by the President. He was offered several positions under the government, but declined, saying that his habits of life unfitted him to mingle with those who were now aping the manners of a monarchy.

John Adams, the second President of the United States, was born in Quincy, Massachusetts, October 19, 1735. He was a graduate of Harvard College, and a lawyer by profession. He was an indefatigable worker, and during the three years and three months he served in the Continental Congress he was a member of ninety and chairman of twenty-five committees. He was of middle stature, full person, and was bald on the top of his head. His countenance beamed with intelligence, and with moral as well as physical courage. His walk was firm and dignified, and his manner slow and deliberate. He was a man of the purest morals, and a firm believer in Christianity—not from habit, but from a diligent investigation of its proofs.

Adams retained the cabinet left by Washington, viz.: Timothy Pickering, Secretary of State; Oliver Wolcott, Secretary of the Treasury; James McHenry, Secretary of War; and Charles Lee, Attorney-General. There were but few marked features in the remaining years of the eighteenth century. The most important events were connected with the threatened difficulty with France. Charles Cotesworth Pinckney, the American minister, had been dismissed by that government, and orders had been issued for the French marine to prey upon American commerce. An extra session of Congress was thereupon called, and Elbridge Gerry, John Marshall, and Charles Cotesworth Pinckney were appointed envoys to France to make a new attempt at conciliation. They were met by insulting proposals, being required to bribe the members of the Directory at the rate of two hundred and forty thousand dollars each. This proposition was indignantly rejected. Marshall and Pinckney were soon dismissed, and Gerry was afterward recalled by our government. Great excitement was aroused in the United States,

and the motto, "Millions for defence, not a cent for tribute," was repeated with universal enthusiasm. Congress remained in session from November 13th to July 16th—over eight months. Commercial intercourse with France was suspended; a regular army was ordered to be raised, and a navy department organized; Benjamin Stoddart, of Maryland, was appointed first secretary; and General Washington was placed at the head of the army, Alexander Hamilton being selected by him as the active commander.

Fortunately, there was no need for their services; the only warlike demonstrations on the part of the United States being the capture, by the frigate *Constellation*, Commodore Truxton, of the French war-vessels *L'Insurgent* and *La Vengeance*. In 1799, Napoleon Buonaparte became First Consul of France, and with him, his brother, Joseph Buonaparte, acting as one of the commissioners, the United States made an amicable settlement (1800).

NAPOLEON BUONAPARTE.

In the summer of 1798, owing to the violent denunciations of the government by the friends of France, Congress passed the "Alien and Sedition Laws." The former act gave the President authority to order any foreigner, whom he might believe dangerous to the peace, to depart out of the country, under a very heavy penalty for disobedience. It also extended the period required for naturalization to fourteen years. The Sedition law made it a crime for any one to "write, print, utter, or publish any false, scandalous or malicious" statement against either Congress or the President. A number of prominent men were tried under these acts. The harshness with which they were treated inflamed the public mind to a high pitch against the Federals, and served to render the administration of Adams exceedingly unpopular. The legislatures of Kentucky and Virginia passed denunciatory resolutions, which became the corner-stones of the growing Democratic party.

On the 14th of December, 1799, occurred the death of General Washington at Mount Vernon. The news plunged the country

into the deepest grief, and throughout its borders, in city and hamlet, there were manifestations of the public sorrow by solemn services, by the adjournment of all public bodies, and by glowing eulogies on the character and services of the deceased. His remains were deposited in a family vault on the banks of the Potomac, where they still lie entombed.

In the summer of 1800, the seat of the government was removed to the District of Columbia, and here, on the 22d of November, Congress assembled and was addressed by Adams for the last time, as President. The capital was then a strange conglomeration of splendid buildings, half finished, and wretched huts. Mrs. Adams writes as follows: "I arrived in Washington on Sunday last, without meeting any accident worth noticing, except losing ourselves when we left Baltimore and going eight or nine miles on the Fredericksburgh road, by which mistake we were obliged to go the other eight miles through the woods, where we wandered two hours without finding a guide or path. But woods are all you see from Baltimore until you reach this city, which is only so in name." Only one wing of the Capitol had been erected; the "White House" was a mere barrack. Near by was a structure built for the Treasury Department, but it was so small that it did not afford comfortable room for the clerical force, then fifty in number. The records were deposited in a building known as Sear's Store, which soon after burned, and the documents, many of them of great value, were destroyed.

A single packet-sloop brought all the office furniture of the several departments from Philadelphia, besides the "seven large boxes and four or five smaller ones," which contained the archives of the government.

A quaint traveler of the period, speaking of the society of the capital, thus writes: "I obtained accommodations at the Washington Tavern, which stands opposite the Treasury. At this tavern I took my meals, where there were to be found, every day, a number of clerks employed in the different offices of the government, together with about half a dozen Virginians and a few New England men. There was a perpetual conflict between these southern and northern men, and one night I was present at a vehement discussion that ended in a bet."

In the fall of 1800, occurred the third presidential election. The candidates of the Federal party were John Adams for President and Charles C. Pinckney for Vice-President. The candi-

dates of the Republicans were Thomas Jefferson and Colonel Aaron Burr. It was a very heated political contest, and resulted in seventy-three votes for Jefferson; seventy-three for Burr; sixty-five for Adams, and sixty-four for Pinckney. There being a tie, the election was to be decided by the House of Representatives, as provided by the Constitution.

The eighteenth century closed with a population in the United States of five million three hundred and five thousand nine hundred and twenty-five. There was every prospect of continued prosperity and peace. The masses, contented and happy, pursued their avocations with a certainty of protection and safety under the laws. The administration of Adams, now just ending, had secured the respect of nations abroad, if it had not gained the popularity of the people at home.

Among the many interests which had an independent origin during the first twenty years of the republic, were notably several of the churches. The Methodists had an existence, though not an organization, in the country as early as 1776, there being at that time a number of ministers of this denomination in the colonies. The members of this church suffered considerably during the Revolution from what was thought to be an undue partiality to England, owing to their connection with the Wesleyan Church in that country. In 1784, Dr. Coke was sent over from England as superintendent by Wesley, and a formal organization soon followed. In that year, this body numbered forty-three preachers and thirteen thousand seven hundred and forty members.

The Presbyterian Church, having been seriously interrupted by the Revolutionary War, was reorganized in 1788. It had then one hundred and eighty-four ministers and four hundred and thirty-five churches. The following year, the first general assembly was held in Philadelphia.

In September, 1785, the Episcopal Church was organized in the United States, its first Bishop being Rev. Samuel Seabury, D.D., who was consecrated in Scotland in 1784 as Bishop of Connecticut.

In 1786, the Roman Catholic Church may be said to have been founded in the United States, as, in that year, Rev. John Carroll was appointed Vicar-General by the Pope, and took up his official residence at Baltimore. In 1789, he was consecrated as the first Roman Catholic Bishop of the country.

The Unitarians, as a sect, appeared first in 1787, a number

during that year seceding from the Episcopal Church in New England. In 1794, Dr. Joseph Priestley came to America, from which date may be reckoned the growth of this denomination.

Though the commerce of the country was well established, only a mere glimpse of its rich mineral resources and its agricultural capabilities had yet been obtained. The immense coal-fields of Pennsylvania had been discovered, and small quantities of coal had been sent to market at Philadelphia, but its use was not understood, and it was finally broken up and used to mend the roads. Cotton-seed was brought to Georgia from the Bahamas in 1786, and its cultivation commenced immediately. The cotton-gin of Eli Whitney, patented in 1794, increased its production many fold, while the Arkwright machine for the manufacture of cotton, a model of which was brought to this country by one of his apprentices named Slater, still further tended to its extensive cultivation. The first cotton-mill in the United States was erected at Beverly, Massachusetts, in 1787.

Mackenzie gives an interesting account of the origin of the cotton-gin: "In 1768, Richard Arkwright invented a machine for spinning cotton, vastly superior to anything hitherto in use. Next year, a greater than he, James Watt, announced a grander invention, his steam-engine. England was now ready to begin her great work of weaving cotton for the world; but where was the cotton to be found? Three or four years before Watt patented his engine and Arkwright his spinning-frame, there was born in a New England farm-house a boy whose work was needed to complete theirs. Eli Whitney was a born mechanic. It was a necessity of his nature to invent and construct. As a mere child he made nails, pins, and walking-canes by novel processes, and thus earned money to support himself at college. In 1792, he went to Georgia to visit Mrs. Greene, the widow of General Greene of Revolutionary memory. In that primitive society, where few of the comforts of civilized life were yet enjoyed, no visits were so like those of the angels as the visits of a skillful mechanic. Eli constructed marvelous amusements for Mrs. Greene's children. He overcame all household difficulties by some ingenious contrivance. Mrs. Greene learned to wonder at him, and to believe nothing was impossible for him. One day she entertained a party of her neighbors. The conversation turned upon the sorrows of the planter, and that unhappy tenacity with which the seeds of the cotton adhered to the fibre was elaborately bemoaned. With

an urgent demand from England for cotton, with boundless lands which grew nothing so well as cotton, it was hard to be so utterly baffled. Mrs. Greene had unlimited faith in her friend Eli. She begged him to invent a machine which should separate the seeds of cotton from the fibre.

"Eli had never even seen cotton in seed. He, however, walked to Savannah, and there obtained a quantity of uncleaned cotton. Returning, he shut himself in his room, and brooded over the difficulty which he had undertaken to conquer. All that winter he labored, devising, hammering, building up, rejecting, beginning afresh. He had no help. He could not even buy tools, but had to make them with his own hands. At length his machine was completed, rude, but effective. Mrs. Greene invited the leading men of the State to her house, and conducted them in triumph to the building in which it stood. The owners of unprofitable cotton-lands looked on, with a wild flash of hope lighting up their desponding hearts. Possibilities of untold wealth to each of them lay in that clumsy structure. The machine was put in motion. It was evident to all that it could perform the work of hundreds of men. Eli had gained a great victory for mankind. In that rude log-hut of Georgia, Cotton was crowned King, and a new era was opened for America and the world."

During the Revolutionary struggle, as we have seen, the true patriots suffered every inconvenience and privation in order to assist the grand result. Sage and raspberry leaves substituted a beverage in place of imported tea. Coffee and chocolate, sugar and all kinds of spices disappeared from country towns. Salt was scarce, and salt-pans were settled along the sea-coast, where it was made at expensive rates. Women sometimes hid small quantities in their pockets, and thus smuggled it into the country. The mills being dismantled by both parties, people in Virginia and elsewhere were forced to live on pounded corn. Yet, amidst the almost universal distress, there were exceptions of comfort and even luxury. There were degrees of patriotism, and love of self sometimes dominated over love of country. It is related that certain women, not having the self-denial to do without their favorite beverage, had tea surreptitiously served to them in the hot-water jug, the empty coffee-pot standing by its side, to be sent out, in case of unexpected guests, for a supply of hastily-steeped sage or raspberry leaves.

During Washington's administration, soon after the advent of

Citizen Genet, numbers of French people, especially those living in the West Indies, flocked to America. Although they mingled but little socially with Americans, their manners were servilely copied by a certain set, much to the disgust of the staid and sober worthies of the time. The term "French airs," as a sobriquet of contempt, had its origin among the respectable conservatives, who felt outraged by the new dispensation of fashion.

Now came in garments of a loose flowing exterior, which, as a quaint writer has observed, "left it impossible to make any mistake as to the real symmetry of the figures of our belles." The stiff, hooped petticoats, high, towering head-dresses, and compressed waists, gave place quickly to scant skirts, hair arranged after the manner of the Goddess of Liberty, and a style of garment known as that of the "First Empire," very short as to the waist, with low corsage, and a skirt reaching scarcely to the ankle. At this time first appeared what are called pantaloons, in distinction to breeches and stockings. They were garments with feet on them, fitted close to the leg and let into the shoes. But the American gentlemen, less subject to change than their fair sisters, in their cocked-hats, silver-set buckles, broad-skirted coats, black velvet small-clothes, and silk stockings, regarded the new apparel with seeming contempt, and it was more than twenty years before they could be brought to adopt a style that finally led to the wearing of the present bifurcated garments.

To the French, at this time, are we indebted for confectioneries and bonbons, jewelry and trinkets, and an entire change in our notions of dancing and music. They introduced the use of the piano, and created a love for other musical instruments, the violin and the clarionet, while they taught us the beauties of orchestral and concerted singing. The staid, measured English dances, stately, dignified, and monotonous, gave way to the lively quadrille or cotillion, with its frequent and rapid changes. Gold watches and gilded frames for pictures and mirrors came in with them. They established public baths and transferred the liking for cleanliness from the house and its surroundings to the person. They taught us, in our table diet, to use soups, salads, sweet oil, tomatoes, and ragouts, and brought with them our first notions of mattresses and high bedsteads. If they did not succeed in making the United States their allies in the war then waging, they did more—they conquered the people in their homes, and their dominion in the world of fashion continues to this day.

Gold-headed canes and gold snuff-boxes were still particularly delighted in by old gentlemen. It was fashionable to proffer a stranger or an acquaintance a friendly pinch of snuff, and if the box was of peculiar elegance in design or material, so much oftener was it brought out. It is said of Silas Deane, that he had one glittering with diamonds, a present from royalty, which he was exceedingly fond of displaying. His friends often bantered him on the subject, and Charles Thomson, who knew him well, once broke out into a full laugh at the persistency with which the old gentleman urged it upon his notice.

Wigs for men and caps for women disappeared near the close of the century. The wearing of boots was first commenced about this time, two prominent styles being called after the famous generals, Suwarrow and Wellington. "I remember," says a writer, "my first pair of Suwarrows. They made a part of the great equipment with which I came from college into the world. Four skeins of silk did I purchase of a mercer, and equal expense did I incur with the sweeper for aid in twisting them into tassels. I would incur double the expense now to have the same feeling of dignity that I enjoyed then when walking in those boots. I stepped long and slowly, and the iron heels, which it pleased me to set firmly on the pavement, made a greater clatter than a troop of horse, "shod with felt." But if I wore them with pride, it was not without suffering, nor did I get myself into them without labor. Before I attempted to draw them on, I rubbed the inside with soap and powdered my instep and heel with flour. I next drew the handles of two forks through the straps, lest they should cut my fingers, and then commenced the 'tug of war.' I contracted myself into the form of a chicken trussed for the spit, and whatever patience and perseverance Providence had given me I tested to the utmost. I cursed Suwarrow for a Scythian, and wished his boots 'hung in their own straps.' I danced around the room upon one foot many times, and, after several intervals for respiration and pious ejaculation, I succeeded in getting my toes into trouble, or, I may say, purgatory. Corns I had, as many as the most fanatic pilgrim would desire for peas in his shoes, yet I walked through the crowd (who were probably admiring their own boots too much to bestow a thought upon mine) as if I were a carpet-knight, capering upon rose-leaves. I was in torment, yet there was not a cloud upon my brow. I could not have suffered for principle as I suffered for those mem-

orable boots. The coat I wore was such as fashion enjoined ; the skirts were long and narrow, like a swallow's tail, two-thirds at least of the whole length. The portion above the waist composed the other third. The waist was directly beneath the shoulders ; the collar was a huge roll reaching above the ears, and there were two lines of brilliant buttons in front. There were nineteen buttons in a row. The pantaloons (over which I wore the boots) were of non-elastic corduroy. It would be unjust to the tailor to say that they were fitted like my skin ; they sat a great deal closer. When I took them off, my legs were like fluted pillars, grooved with the cords of the pantaloons."

Gentlemen at this time wore no beard, whiskers, or mustaches, but invariably appeared with faces as clean-shaven and smooth as that of a girl, a full beard being held as an abomination, and fitted only for the Hessians, heathen or Turks.

In 1793, the first cigars were smoked in this country, being used in that year in Philadelphia as a preventive of the yellow fever, which raged with considerable violence.

Independence in political feeling was a leaven which soon communicated itself to social relations. The distinction in manner and in dress between different classes, heretofore so marked as to be instantly recognized, now speedily disappeared. Servants became domestics or "helps," and the titles master and mistress, which had been formerly always observed, grew to be confined only to the holders of negro slaves. Equality in legal rights seemed to be understood as applying to all other concerns in life. The maid-servant discarded her short-gown and petticoats, and copied the dress of her mistress both in style and material, as far as her purse would allow. The apprentice began to blush at his leather apron and breeches and his baize vest, and supplied himself, at second-hand or otherwise, with the fac-simile of his master's visiting suit. The title of Mr., from being a distinguished honor, grew to be the essential accompaniment of every name, until it has finally been given indiscriminately to every male in the land, and to omit it, when speaking of a great man, is a sign of distinction.

So rapidly did the new ideas spread, and so marked was their effect, that Lafayette, on his second visit to this country, asked with astonishment, "But where are the people?" He saw only crowds of well-dressed citizens, and sought in vain for the distinctions which were in force during his previous sojourn here.

About this time carpets began to supersede the curved and figured white sand. They were used, however, to cover only a portion of the floor, in the centre of the apartment. The unaccustomed visitor sometimes showed signs of genuine distress at being obliged to walk on them, and sought, by stealing closely along the wall, to avoid soiling the beautiful thing upon the floor.

Large, deep fireplaces were still the rule. Facing their well-controlled and unvarying heat, the housewives would bake such pastry, bread, and biscuits in their open tin ovens as can now hardly be matched; while before them were turned to a crisp brown the Johnny or "Journey" cakes that had been thrown in lumps from some distance upon a broad board, and by their own cohesion stuck fast until done. Dr. Franklin had invented a stove which, as fuel grew scarce, had gradually been coming into use, although a wise and thoughtful physician had named it "Franklin's little demon." The walls of the houses and the ceilings were whitewashed, and only among the most wealthy could be seen the paper hangings just introduced.

The lighting of the houses, but a dim illumination at the best, was accomplished by means of candles. Among the very wealthy, wax ones were occasionally seen, but the most common in use were of tallow dipped or run in moulds, and were set in brass or copper candlesticks. An Argand lamp, in which was burned whale-oil, was a rare luxury. Thomas Jefferson brought the first one from abroad near the close of the century, and presented it to his friend, Charles Thomson.

WASHINGTON AND LAFAYETTE.

CHAPTER X.

AMERICAN NATIONALITY ASSURED—1800-1820.

THE people having failed to elect a President, the House of Representatives, on the 11th of February, 1801, began to ballot therefor. The first count showed eight States for Jefferson, six for Burr, and two divided. By the popular vote, there had been a decided majority in favor of Jefferson, but the "Federalist" party had the greater number of States in the House, and seemed to be determined to defeat the people's will.

Nineteen ballots gave the same result, the House remaining in session all night. On the next day, there were nine ballots and no choice. On the 13th, one ballot was had; on the 14th, four; on the 16th, one—all with the same result. On the 17th, two ballots were cast, and on the latter one—the thirty-sixth in all—Jefferson was elected President, and Burr, Vice-President.

March 4, 1801, the third President took the oath of office, which was administered to him by the eminent statesman, John Marshall of Virginia, Chief-Justice of the Supreme Court of the United States.

Jefferson was born in Albemarle county, Virginia, on the 2d of April, 1743. He graduated at William and Mary College, and fitted for the bar, where his fees during the first year of his practice amounted to over three thousand dollars. In 1774, he published a powerful pamphlet, entitled "A Summary View of the Rights of British America." This was republished in Great Britain under the auspices of Burke. Jefferson was the author

of the Declaration of Independence. The room which he occupied, the desk at which he sat, and the house that sheltered him while employed in its composition, are still pointed out in Philadelphia. To Jefferson we are also indebted for the system of coinage now in use, with the dollar as a unit and the other denominations on a decimal basis, he giving them their several names. In 1784, he wrote a little work, which was greatly admired, called "Notes on Virginia," in reply to certain questions put by a French gentleman, embracing a general view of his State, its geography, government, etc. While Vice-President under Washington, he prepared, at his favorite retreat, Monticello, a manual for the Senate, which became the standard for Congress, as well as for other deliberative bodies.

In person, Jefferson was six feet two inches in height, thin, but well formed, erect in his carriage, and imposing in his appearance. His complexion was fair: his hair, originally red, became in old age white and silvery; his eyes were light-blue, sparkling with intelligence and beaming with philanthropy; his nose was large, his forehead broad, and his whole countenance indicative of great sensibility and profound thought. Though of aristocratic birth, he was intensely democratic. He eschewed breeches and wore pantaloons; fastened his shoes with leather strings instead of buckles; abolished the Presidential levees; concealed his birthday to prevent its being celebrated, as the President's had been hitherto; and even disliked the term, *Mister*. Washington went to the Capitol in a magnificently-decorated carriage drawn by four cream-colored horses, and with servants in livery. Jefferson rode thither alone, on horseback, hitched his horse to a post, and, going in, delivered a fifteen-minutes address. After that he merely sent his "message" by a secretary, as has been the custom ever since. John Jay, in lamenting this tendency to republican simplicity, says that "with small clothes and breeches, the high tone of society departed."

The new cabinet was composed of James Madison, Secretary of State; Henry Dearborn of Massachusetts, Secretary of War; and Levi Lincoln of Massachusetts, Attorney-General. Robert Smith of Maryland soon after succeeded Benjamin Stoddart as Secretary of the Navy, and Albert Gallatin of Pennsylvania followed Samuel Dexter as Secretary of the Treasury—the latter two officers having been retained for a short time from Adams's cabinet.

JEFFERSON GOING TO HIS INAUGURATION.

Albert Gallatin is often connected, in the financial history of our country with Robert Morris and Alexander Hamilton. These

three were the founders of the monetary policy of the Republic. When Gallatin came into the cabinet, he was directed by the President to scrutinize with great care the accounts of the government, in order to discover the blunders and alleged frauds of Hamilton, and to ascertain what charges could be made against him. The direction was obeyed very thoroughly, as the new Secretary, having no great regard for the leading Federalist, came to his task with a good appetite. Struck by the almost absolute perfection of the system of the first head of his department, as revealed by the examination, Gallatin reported to the President that any change would injure it, and that Hamilton had made no blunders and committed no frauds.

Such a report was worthy to come from one who, having rendered some service to Mr. Baring in the negotiation of a loan to France, and being offered some shares which, without advancing

a penny, would have realized him a fortune, made this memorable reply: "I thank you, but I will not accept your obliging offer, because a man who has had the direction of the finances of his country as long as I have, should not die rich." In this connection it is worth remembering that Hamilton, while Secretary of the Treasury, once sent a note to a friend, in which he begged the loan of twenty dollars for his personal use.

Jefferson's accession to office was a complete revolution in the politics of the country, peacefully, but none the less thoroughly effected. The party he represented had been organized under his auspices during the administration of Washington. It claimed the name of Republican, while its opponents called it Democratic, a word recently introduced from France. That term involving the looseness, almost licentiousness of character which had marked the Jacobins of Paris, it was seldom used or countenanced by Jefferson. But, as often happens, this appellation given in derision became a talisman and a watchword.

Various other nicknames have been applied to the party at different times. Thus, in Jefferson's day, its members were occasionally styled Jacobins. During Madison's administration the Republicans were called "Bucktails," from a conspicuous feature in the uniform of a Tammany Indian, that society being even then a power in the politics of the country. Later, as in Jackson's time, they became "Loco Focos," because, at a meeting in Tammany Hall, the lights, having been extinguished, were relit with loco-foco matches, then just coming into use, which several of the members, expecting such an event, had carried in their pockets. Still later they were termed "Hunkers" and "Barn-burners," "Hard Shells" and "Soft Shells."

The central idea around which the party revolved was the diffusion of power among the people. To this touchstone was brought every principle that agitated the politics of the country, whether it related to a national bank, a tariff, taxes, or slavery. It held that in the States themselves resided the original and inherent sovereignty. For certain and only specified purposes, some of this had been delegated in two directions—to the general government, as a bond of union between all of the States, and to the counties, towns, cities, villages, and corporations within their borders, for particular objects. The local authorities were to take care of all home legislation, while the central government was to be made manifest only by acts of a general character.

Jefferson's policy was fully set forth in his first inaugural: Equal and exact justice to all men ; peace, commerce, and friendly relations with foreign nations, entangling alliances with none ; the support of the State governments in their rights ; the preservation of the general government in its constitutional vigor ; a jealous care of the rights of election ; a well-disciplined militia ; honest payment of the debt ; economy in the public expenditures ; encouragement of agriculture and commerce ; freedom of the press ; freedom of the person, and trial by jurors impartially selected.

In June, Jefferson removed Elizur Goodrich, a Federalist, from the office of Collector of the port of New Haven, appointing in his place Samuel Bishop, a Democrat. This was the first displacement for political causes, and, as it happened, was a case of peculiar hardship, as Mr. Goodrich was nearly eighty years of age and quite infirm. In Jefferson's letter defending his action is found the doctrine which Governor William L. Marcy afterward curtly expressed in the apothegm, "To the victors belong the spoils." It also contains a sentence that has become almost a proverb—"If a due participation of office is a matter of right, how are vacancies to be obtained? Those by death are few, by resignation none."

The Sedition Act was now expiring by limitation, and those persons suffering its penalties in the different jails throughout the country were released. The alien law was also modified by reducing the time of naturalization to five years.

Among other congressional measures were the establishment of a military academy at West Point, which had been recommended by Washington ; the discontinuance of the internal tax on distilled spirits and a variety of other manufactures ; the appropriation of seven million and three hundred thousand dollars annually to the sinking fund ; the prohibition of the importation of slaves into any of those States which had themselves forbidden their admission ; and the founding of a public library.

The last-named bill was approved by the President on the 26th of January, 1802, and John Beckley of Virginia, the clerk of the House of Representatives, was appointed librarian. In April of that year, the catalogue of the library embraced two hundred and twelve folios, one hundred and sixty-four quartos, five hundred and eighty-one octavos, seven duodecimos, and nine maps. The nucleus of the library was ordered from London by Samuel

A. Otis, who was for twenty-five years the honored Secretary of the Senate. The books reached this country packed in trunks, and were forwarded to the new metropolis, where they were assigned a room in the "Palace in the Wilderness," as the unfinished Capitol was then derisively called by those who preferred New York or Philadelphia as the seat of government. The location of the library was changed several times, once because the books were damaged by a leaky roof. In the absence of other suitable places in the primitive city, it became a great resort for students, politicians, and even fashionable people.

It is related of Chief-Justice Marshall, that once, in taking a book from an upper shelf in one of the alcoves, he pulled down a number of ponderous tomes, which threw him to the floor. Recovering his footing, the old gentleman dryly remarked, "I've laid down the law out of the books many a time in my long life, but

CHIEF-JUSTICE MARSHALL IN THE LIBRARY OF CONGRESS.

this is the first time they have laid me down!" In one of the many alcoves, where the belles of those days came to receive the homage of their admirers, a wealthy member of Congress, who was preparing himself for a speech, heard near by the voice of his daughter, whom some penniless adventurer was persuading to elope with him. The irate father hastened to put a stop to the proceeding, and adjourned the action *sine die*.

Ohio, the seventeenth State of the Union, was received November 29, 1802. The name was derived from that of its principal stream, meaning "River of blood." It was the first State carved out of the Northwestern Territory. This region was explored in 1680 by the French voyageur La Salle. A company of emi-

grants from New England went through the wilderness to Pittsburg in 1787. Here they built a boat, the *Mayflower*, in which, the next spring, they floated down the Ohio. Landing opposite Fort Harmar, they made the first permanent settlement, which they named Marietta, after Marie Antoinette, the queen of France. The next year, Cincinnati, then called Losanteville, was founded. At the time of the cession of this territory to the United States, Virginia reserved three million seven hundred and nine thousand eight hundred and forty-eight acres near the rapids of the Ohio, for her State troops, and Connecticut three million six hundred and sixty-six thousand nine hundred and twenty-one acres near Lake Erie, thus laying the foundation of her large school fund. In 1800, the jurisdiction over these two tracts was relinquished to the general government, the States selling the soil to settlers. Cleveland was settled in 1796, on a portion of the Connecticut Reserve sold to a company from that State, and surveyed by Moses Cleveland.

In 1802, Jefferson received information that Spain, by a secret treaty, had ceded to France the tract called Louisiana, reaching from the Mississippi River to the Pacific Ocean. Soon after, it was announced that the treaty-right to the use of New Orleans as a place of deposit for the United States had ceased. A war with Spain seemed imminent. Jefferson, bent on a pacific policy, sent James Monroe as minister plenipotentiary to act with Mr. Livingston at Paris, for the purchase of New Orleans and the Floridas. Buonaparte, being then on the verge of a war with England, in which he would be likely to lose his continental possessions, and also being in want of money, instructed his ministers to sell not only New Orleans, but the whole of Louisiana, for fifty millions of francs. Instead of the cession of a town and its considerable territory, Monroe now found a vast portion of the continent at his disposal. He had asked for the mere privilege of navigating the Mississippi, and its entire sovereignty was within his grasp. The sum fixed by Buonaparte being considered too low by M. de Marbois, he stated the price at eighty millions, twenty of which were to be used in paying debts due by France to the citizens of the United States, arising from seizures of ships made in time of peace. The First Consul was so much pleased with the bargain that he made his minister a present of one hundred and ninety-two thousand francs.

Of this acquisition, Livingston said to Monroe, "We have lived

long, but this is the noblest work of our whole lives;" while Napoleon exclaimed, "This accession of territory strengthens forever the power of the United States; and I have just given to England a maritime rival that will, sooner or later, humble her pride."

Much difference of opinion existed in the United States as to the constitutionality of the purchase, and Jefferson himself believed that an amendment to the Constitution was necessary; but the action of his ministers was so generally approved that none was ever presented. The treaty was ratified by the Senate on the 20th of October, 1803, by a vote of twenty-four to seven, and the resolutions in the House providing for the payment of the money and the government of the new territory, passed by a vote of ninety to twenty-five.

Louisiana then comprised one million one hundred and seventy-one thousand nine hundred and thirty-one square miles, with a mixed population of eighty or ninety thousand French, Spaniards, Creoles, Americans, English, Germans, and slaves, besides an uncounted horde of savages. Out of this magnificent domain we have since cut five States, five Territories, and parts of four States and of one Territory. On Jefferson's recommendation, an expedition, under the command of Captains Lewis and Clarke, was sent to explore the new territory. It occupied about two years and three months, and the history of their adventures forms one of the most romantic and thrilling episodes in the annals of the western country. They were eminently successful in geographical discoveries, and brought back the first accurate information respecting this previously unknown half of the continent.

In 1804, the twelfth amendment to the Constitution was submitted to the people, and ratified by thirteen of the States. It ordained that thereafter the electors were to designate which persons were voted for as President and as Vice-President. The idea originated with the Republicans, in order to provide against the chance of another disappointment such as had threatened them in 1801; and it was, of course, opposed by the Federalists.

The Barbary States, notwithstanding the treaty with Algiers, were still committing depredations on the commerce of the United States. Their insolence and audacity were fast becoming unbearable. When Captain Bainbridge, in 1800, paid the annual tribute, the Dey demanded the use of his vessel to convey an ambassador

to the Sultan at Constantinople. Bainbridge remonstrated, but the Dey haughtily said, "You pay me tribute, by which you become my slaves, and, therefore, I have a right to order you as I think proper." His vessel being under the guns of the pirate's castle, Bainbridge was forced to comply. The mission, after all, had something of a recompense, for the captain was the first to display the flag of the Republic on the waters of the Golden Horn and before the minarets of Istamboul; and the Sultan regarded it as a favorable omen of future friendship between the two nations, that his flag bore the device of the crescent moon, and the American that of a group of stars.

The Bey of Tripoli and the Bashaw of Tunis both now demanded tribute of the United States. In 1804, Commodore Preble was sent with a squadron to bring them to terms. He succeeded completely in humbling their pretensions, and peace was declared, although sixty thousand dollars was paid as a ransom for our captive sailors. Lieutenant Decatur performed a brilliant exploit during this brief conflict. The Philadelphia, a United States frigate, had struck on a rock in the Tripolitan harbor, and before she could be extricated was captured, her officers and crew being made prisoners of war. Decatur, with seventy-six comrades, sailed into the harbor on the 16th of February, 1804, right under the guns of the castle, boarded the ship, killed or drove into the sea her turbaned defenders, set her on fire, and escaped without the loss of a man.

Aaron Burr, the Vice-President, was a small, fair-complexioned, brilliant-eyed, fascinating man, eight and forty years of age; a wit, a beau, a good scholar, a polished gentleman, a libertine, and an unscrupulous politician. He was now a candidate for the office of Governor of the State of New York. During the bitter and heated contest, Alexander Hamilton uttered some words in regard to Burr that he considered derogatory; whereupon, maddened by defeat, he challenged Hamilton to a duel. July 11, 1804, the two met at Weehawken, New Jersey, on the same spot where, only a short time before, Hamilton's son had been killed in a so-called affair of honor. Only one shot was exchanged, and Hamilton, who had fired in the air, was mortally wounded.

Burr, being indicted both in New York and in New Jersey, fled to Philadelphia. The heartless character of the man may be seen in the fact that, having renewed proposals of marriage to a young

lady of that city, he wrote to his daughter, "If any male friend of yours should be dying of *cnnui*, recommend him to engage in a duel and a courtship at the same time."

Public sentiment with regard to the duel was divided. By some, it was said of Hamilton, that "he had lived like a man and died like a fool." In the South, where the bloody code of the duello was recognized, Burr was greeted as a hero; and in strong Republican localities as "the slayer of the arch-enemy of Republicanism." At the national capital, the "best society"

DUEL BETWEEN HAMILTON AND BURR.

treated him with respect, and even in the lower House of Congress, a leading partisan said, "The first duel I ever

heard of was that of David killing Goliath. Our little David of the Republicans has killed the Goliath of the Federalists, and for this I am willing to reward him." But the virtuous and moral were filled with

disgust, if not with horror, and echoed the sentiments of a senator who exclaimed, "God grant it may be the last time, as it is the first, that ever a man indicted for murder presides in the American Senate." Burr's political career, however, was ended, and at the close of the session, he stepped down from the second office in the gift of the people, a ruined man.

In the fifth presidential campaign, Jefferson was renominated on the Republican ticket, with George Clinton, of New York, for

Vice-President. The Federalists offered Pinckney of South Carolina and Rufus King of New York. Such was Jefferson's popularity, that the Federal candidates carried but two States, and the Republicans fifteen.

The second session of the Eighth Congress is memorable for two things. First; the attempt to introduce gunboats for coast defence. This was one of Jefferson's favorite projects. No general confidence, however, was felt in the plan, and when a number of the boats were driven on shore and wrecked, their loss was not regarded as a misfortune; while the officers of the navy openly expressed their satisfaction. Second; at this time was seen for the first the caucus system—a word said to have had its origin in the term “calk-house”—a building in Boston where the ante-Revolutionary patriots held their meetings. There was now far less independent discussion, the action of the friends of the administration being determined beforehand in a private meeting.

The defection of John Randolph of Roanoke from the Republican ranks, about 1806, created considerable excitement. He had been a staunch friend of Jefferson's, but the President having refused to appoint him minister to England, Randolph took umbrage, and henceforth assailed the administration at every point. He was a genius of the first order, and famous for his wit and satire. “For over thirty years,” says Benton, “he was the political meteor of Congress, blazing with undiminished splendor; a planetary plague, shedding not only war and pestilence on nations, but agony and fear on members.”

“All parties feared him: each in turn
Beheld its schemes disjointed,
As right or left his fatal glance
And spectral finger pointed.
Sworn foe of Cant, he smote it down
With trenchant wit surpassing;
And, mocking, rent with ruthless hand
The robe Pretence was wearing.”

Randolph originated many queer and quaint phrases that have passed into the political vocabulary, and are still current. In the fierce debates on the Missouri Compromise measures, he gave to the Northern men who sustained the South, the name of “dough-faces”—an appellation that clung to them for years. He enunciated the doctrine of State rights in the single sentence: “When

I speak of my country, I mean the commonwealth of Virginia." While in Russia, on being presented to the Emperor, he said, in his thin, piping voice, "How are you, Emperor? How's madam?" "I am pleased," said a gentleman to him, when meeting him for the first time, "to make the acquaintance of so distinguished a public servant. I am from the city of Baltimore. My name, sir, is Blunt." "Blunt—oh!" replied Randolph; "I should think so, sir," and deigned him no further notice. "I have had the pleasure, Mr. Randolph," remarked another to him, "of passing your house recently." "I am glad of it," was the curt reply; "I hope you will always do it, sir."

Aaron Burr, after his duel with Hamilton, wrote to his son-in-law, Governor Alston of South Carolina: "In New York, I am to be disfranchised, and in New Jersey hanged. Having substantial objections to both, I shall not, for the present, hazard either, but shall seek another country. Where?" This question he never answered, but his restless spirit drove him West, and in that vast region he conceived, as is claimed, the design of forming a new empire. The two persons most conspicuous in his scheme were General James Wilkinson and Harman Blennerhassett; the former betrayed him, and the latter he ruined.

The career of Blennerhassett was as romantic as its end was sorrowful. With a wife of exquisite beauty, and an ample fortune, he left his home in Ireland and came to this country. Attracted by a lovely island in the Ohio River, he beautified and adorned it, and was living there in what is described as "a second paradise." Fascinated by Burr, he was led into the wild venture in which he saw his fortune melt away and his home pass into the hands of others; for the whole gorgeous vision that Burr had conjured up vanished as suddenly as frostwork in the sunbeam. Political animosity sent the first whispers of suspicion over the mountains. Burr was accused of a conspiracy to detach the Western States and form another republic, of which he was to be president. With Blennerhassett and a number of others, he was arrested and brought to Richmond, Virginia. His trial, on a charge of high-treason, began in March, 1807, and continued all summer. No overt act, however, could be proved, and he was acquitted. The other prisoners were thereupon released.

This year is memorable for the success that crowned the efforts of Robert Fulton at steam navigation. Though others had conceived, he was the first to realize the idea. Fitch, seventeen years

before, had placed upon the Delaware a steamboat which made several trips, but the attempt had been abandoned as impracticable. In 1807, however, Fulton's boat, the *Clermont*, was launched upon the Hudson and made regular passages between New York and Albany at the rate of five miles an hour. "The vessel," says a writer, "presented the most terrific appearance. The dry pine-

THE CLERMONT, FULTON'S STEAMBOAT.

wood fuel sent up many feet above the flue a column of ignited vapor, and, when the fire was stirred, tremendous showers of sparks. The wind and tide were adverse to them, but the crowds saw with astonishment the vessel rapidly approaching them; and when it came so near that the noise of

the machinery and paddles was heard, the crews of other vessels, in some instances, shrunk beneath their decks from the terrific sight; while others prostrated themselves, and besought Providence to protect them from the approach of the horrible monster which was marching on the tide, and lighting its path by the fire that it vomited."

It is related of a gentleman, well known in the business circles of New York, that one day, being in haste to reach Albany, and seeing the *Clermont* ready to start, he went aboard. Entering the cabin, he saw a gentleman who, on inquiry, he learned was Fulton. Being told that the fare was six dollars, he counted that sum into his hands. Fulton held the money for some time, looking at it quietly, and then remarked, "This is the first penny I have received in my long effort to bring this discovery to a success. I am too poor, else would we have a bottle of wine together to mark the event." Ten years later, the same gentleman, going up the Hudson in one of the numerous boats that then plied upon the river, again saw Fulton, who, accosting him, proposed that, as times had changed, they should now take that bottle of wine; which they did, recalling with great pleasure the memory of their first trip together.

In 1812, Fulton built at Pittsburg the first steamer to ply upon the Mississippi. Leaving its dockyard in October, it reached New Orleans, after which it was named, in December.

The year 1807 was also marked by the publication by Wash-

ington Irving, the first and best of American humorists, of his earliest work, "Salmagundi, or the Whim-Whams and Opinions of Launcelot Langstaff, Esq., and Others." It was followed in 1809 by his "Knickerbocker's History of New York," which placed him at once among the foremost authors of the age.

France and England were now engaged in a desperate war; and the strife affected the whole civilized world. By its "Orders in Council," England had declared all vessels engaged in conveying West India produce from the United States to Europe legal prizes, and several ports under the control of the French in a state of blockade. Napoleon thereupon issued the "Berlin Decree," which forbade the introduction of English goods into any port of Europe, even by the vessels of neutral powers. Other "Orders in Council" declared the whole coast of Europe in a state of blockade; which Napoleon followed with his "Milan Decree," confiscating all vessels and cargoes violating the "Berlin Decree," and all vessels that should submit to be searched by the English. The United States was the chief sufferer by these vindictive measures, and expostulated, but in vain. "Join me in bringing England to reason," said Napoleon. "Join us in putting down the disturber of the world," replied England.

The feeling in the United States was intensified by an insult offered to the country on the 22d of June, 1807, when the British ship *Leopard* fired into the American vessel *Chesapeake* off the coast of Virginia. The American frigate, being wholly unprepared for battle, soon struck her colors. Four of the crew, three being Americans by birth, were taken, on the pretence that they were deserters. This act was promptly disavowed by the English government, but no reparation was made. On the 22d of December following, Congress passed the celebrated "Embargo Act," by which all American vessels were prohibited from sailing for foreign ports; all foreign vessels from taking out cargoes; and all coasting-vessels were required to give bonds to land their cargoes in the United States.

This bill was violently opposed by the Federal party, and was extremely unpopular in the States engaged in commerce. The opponents, spelling the name backward, nicknamed it the *O grab me* Act. De Witt Clinton, a nephew of the Vice-President, was chairman of an indignation meeting in New York city, and withdrew his support from the administration. John Quincy Adams, who had favored the act, finding his course was not approved by

the Legislature of his State, resigned his seat in the Senate, and informed the President that New England, if the measure were persisted in, would separate from the Union, at least until the obstacles to commerce were removed ; that the plan had already been adjusted, and it would be supported by the people.

Although Jefferson had received addresses from several Legislatures asking him to serve a third term, he declined, preferring to follow the precedent established by Washington. James Madison, Secretary of State, was thereupon nominated for President by the Legislature of Virginia, and he was soon after accepted by the Republican members of Congress. The election resulted in one hundred and twenty-two votes for Madison, and one hundred and thirteen for Clinton as Vice-President. The Federal candidates, who were the same as at the preceding election, received only forty-seven votes.

Before the conclusion of his term of office, Jefferson recommended that Congress should repeal the Embargo Act. This was adopted so far as related to all nations except France and Great Britain.

March, 4, 1809, James Madison was inaugurated fourth President of the United States. He was born in King George county, Virginia, March 16, 1751. Having graduated at Princeton College, he prepared for the bar, but the stirring scenes of the Revolution left him little time for the quiet pursuits of life. In 1780, he took his seat in the Continental Congress. Such became his popularity in his native State, that the law rendering any one ineligible after three-years service was repealed solely that he might be returned a fourth time. Mild and amiable in disposition, he earnestly sought to harmonize the party antagonisms and rivalries of Washington's administration. Many of his public writings, notably the "Resolutions of 1798," passed by the Assembly of Virginia, in opposition to the "Alien and Sedition Laws," and the Report in their defence, rank among the greatest State papers of the country.

Madison was small in stature, and calm and grave in speech. His eyes were blue, clear, and penetrating. He was bald on the top of his head, and he wore his hair powdered. His manner was modest and retiring, and his diffidence for a time materially interfered with his success as an orator. He bore the look of a quiet, unassuming student. His mind was, perhaps, not of the highest order, but it was symmetrical and vigorous. He possessed the

genius of hard work. His memory was wonderful, and his stores of knowledge were perfectly at his command. His character was spotless, and no calumny ever attempted to sully it. In conversation he was pleasing and instructive. Being fond of company, he revived the levees inaugurated by Washington. The graces and beauty of Mrs. Madison attracted the best of the country to her presence, and are still perpetuated in delightful legends of early society at the capital.

Madison formed his cabinet as follows: Secretary of State, Robert Smith of Maryland; Secretary of War, William Eustis of Massachusetts; and Secretary of the Navy, Paul Hamilton of South Carolina. Albert Gallatin was retained as Secretary of the Treasury, and Cæsar A. Rodney as Attorney-General.

The difficulties with England continued. The United States government held that a foreigner could be naturalized, and thus become an American citizen, enjoying all the privileges of citizenship. The British doctrine, on the other hand, was "Once an Englishman, always an Englishman." The English naval officers, therefore, claimed the right of stopping American vessels on the high seas, searching for seamen of English birth, and pressing them into the navy. British ships were stationed before our harbors, and every vessel coming or going was searched. Within eight years, nine hundred American vessels were captured for alleged violations of the English commercial regulations. At one time there were more than six thousand names registered on the books of the State Department of seamen who had been forced into the British navy. Through the indifference of the officers many native Americans were in this way compelled to serve against their country. Madison tried every means to adjust the differences. His pacific policy seemed, in fact, so spiritless, that a Federalist in Congress, losing all patience, declared that "the President could not be kicked into a fight." The English government, it is true, revoked the obnoxious "Orders in Council," but positively refused to yield the rights of search and impressment.

Smarting under these insults, our seamen flung out the motto, "*Free trade and sailors' rights*," and for it they were ready to fight. One day in May, 1811, the frigate President having hailed the British sloop-of-war Little Belt, off the coast of Virginia, instead of a polite salutation received a cannon-shot in reply. The fire was returned, and the sloop was soon disabled. A civil answer was then given.

The feeling against England was greatly aggravated by the current impression that British emissaries were busy in arousing the Indians along the northwestern border. In the Shawnee tribe, at this time, were two brothers, who, considering their race

ELSKWATAWA, THE PROPHET.

and surroundings, deserve to be reckoned with the heroes of history. These were Tecumseh, sometimes called Tecumtha—"the wild-cat springing on its prey"—and Elskwatawa—"the loud voice." They were born of a Creek woman on the banks of the Mad River, near Springfield, Ohio. The former was a chief and a warrior with the genius of a statesman. The latter is better known as the "prophet." He was famous as an orator, and made the superstitions of his people the fulcrum of his power, pretending that he could even ward off the bullets of their enemies in battle. They

sought to combine all the Western Indians in a defensive alliance against the whites.

In 1809, General Harrison, governor of the Territory of Indiana, purchased a large tract on the Wabash. This gave great offence to Tecumseh. Indian outrages became frequent. At the earnest solicitation of the settlers, General Harrison marched, in November, 1811, to Tippecanoe, the prophet's town, with a small body of troops. When within a few miles he was met by ambassadors asking for a conference on the following day. Fearing surprise, he ordered his men to lie upon their arms. During the night, the treacherous savages crept through the tall grass, and, surrounding the camp on all sides, suddenly sprang upon the troops like wolves. A desperate battle ensued, but the Indians were beaten with great slaughter, and the town was destroyed. All the tribes in that region forthwith sued for peace.

In December, 1811, occurred the burning of a theatre in the city of Richmond, where was collected an unusually large and brilliant audience. The governor of the State and several of

the most prominent citizens, with their families, perished in the flames. It created the most profound sensation, both Houses of Congress wearing mourning for a month.

Louisiana was admitted to the Union April 8, 1812. It was then the extreme southwestern State. Its early history is closely connected with that of France, the name Louisiana having been given in honor of Louis XIV. The first permanent settlement within its present boundaries was at New Orleans in 1718. About that time the colony was granted to the great Mississippi Company,

BURNING OF THE RICHMOND THEATRE.—*Fac-simile of an old Print.*)

organized by John Law, at Paris, for the purpose of settling and deriving profit from the French possessions in North America. This gigantic bubble soon burst, but it resulted in a rapid emigration to the banks of the Mississippi. December 20, 1803, after the purchase of Louisiana from the French, the American flag was first unfurled at New Orleans. This vast territory was then divided into two territories—Orleans, including the present State of Louisiana, and the district of Louisiana, which comprised the remainder. On the admission of the former as a State, the name of the latter was changed to Missouri.

Early in 1812, an Englishman named Henry made an exposure

to the President of an attempt in which he had been engaged at the instigation of the Governor-General of Canada, to excite hostility to the administration in the Eastern States, and perhaps produce a rupture of the Union. He was unsuccessful, and finding his scheme repudiated by the English government, he came on to Washington, where he sold out his story and letters for the comfortable sum of fifty thousand dollars, and then made off as quickly as possible. The President sent a message to Congress on the subject, and the so-called "Henry affair" did much to exasperate the authorities against England.

The Vice-President, the venerable George Clinton, died April 20, 1812. His place was filled by William H. Crawford of Georgia, the presiding officer of the Senate *pro tem*.

The Democratic party being largely in favor of a war with England, Madison was assured that unless his opposition ceased he must not expect its support in the ensuing presidential campaign. He accordingly waived his objections, and was renominated by a caucus of eighty-two Republican members of Congress; Elbridge Gerry of Massachusetts being placed on the ticket for Vice-President. The Federalists held a convention in New York, the first of the kind in the Republic. Eleven States were represented. It resolved to support De Witt Clinton and Jared Ingersoll of Pennsylvania, as President and Vice-President respectively. At the election, though the Federalist candidates were sustained by many anti-war Democrats, Madison and Gerry were chosen by a strong majority.

Meanwhile war had been declared against England, June 19th. The act met with violent opposition from the few Federalists in Congress and the disaffected Democrats. Henry Clay, Speaker of the House, and John C. Calhoun were at the head of the "War Party." The Federalists and those opposing hostilities, were led by the venerable Josiah Quincy of Massachusetts, called by his opponents in derision, "Josiah the First, King of New England, Nova Scotia, and Passamaquoddy"; Emott of New York, and others. They were styled the "Peace Party." The war measure was adopted in the House by a vote of seventy-nine to forty-nine, and in the Senate, nineteen to thirteen.

The first hostile shot was thrown only four days later by the ship-of-war President, in command of Commodore Rogers, who fired a chase-gun after the British ship *Belvidera*. A running engagement ensued, but the President finally gave up the pursuit.

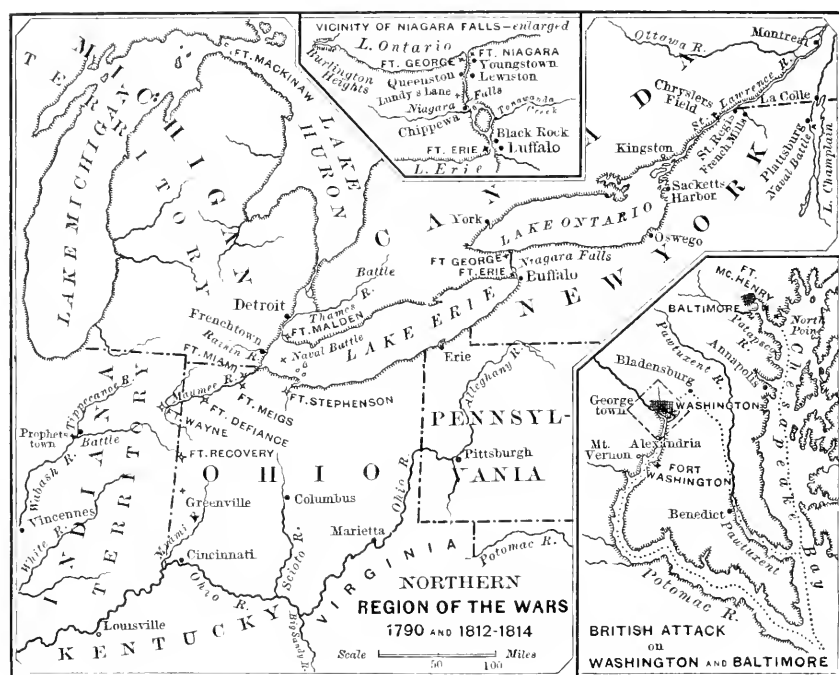

Never was a country more poorly prepared for war than the United States at this period. The President and his cabinet, by habit and inclination, were unfitted for a time of commotion and of great emergency. The dominant party had long been strenuously opposed to a standing army and navy, and both these branches were, therefore, weak and inefficient. Our army numbered but five thousand men, and our navy comprised only eight frigates and twelve sloops, while England had one thousand and sixty sail. The Revolutionary officers were either dead or had become so old and feeble as to be often an injury to the service which they loved so well. The West was all aflame for the war; but at the East a powerful party bitterly opposed it as impolitic and unnecessary. Boston denounced the struggle, and the flags of her shipping were hoisted at half-mast when the news came of the declaration. All New England resounded with outcries against the war-policy and the war-party. The feuds of Democrats and Federalists, the lack of harmony in plans, the want of experience in military affairs, and the weakness of the executive—all conspired to render the result of the contest exceedingly doubtful. Nothing finally saved the country, under the blessing of Providence, but the courage of its soldiery and the valor of its little navy.

The war opened on land with an invasion of Canada at three points—Detroit, Niagara, and on the St. Lawrence River. General Henry Dearborn of Massachusetts was appointed commander-in-chief, his position being at the eastern end of the line. The troops at the west were under General William Hull, and those in the centre under General Stephen Van Rensselaer. All the forces were to co-operate with a view to Montreal as their objective point.

General William Hull, the Governor of Michigan Territory, promptly crossed from Detroit to Sandwich with a few hundred regulars and three regiments of volunteers. Instead of pushing forward to attack Malden or seize Canada, Hull dawdled about, week after week, until the British rallying, captured Mackinaw, when, alarmed by the intelligence, he tamely retreated to Detroit.

On the 16th of August, a beautiful Sabbath day, Brock, governor of Upper Canada, at the head of the British forces, landed and advanced to assault that post. The garrison was in line, and the gunners stood with lighted matches awaiting the order to fire. Suddenly, General Hull, apparently unnerved, directed the white flag—a table-cloth—to be displayed. The officers were

thunderstruck, and even the women expressed their indignation. Hull was, however, averse to shedding blood, and so, without even stipulating for the honors of war, he surrendered not only Detroit, with its garrisons and stores, but the whole of Michigan. Among the arms was a brass cannon, on which was the inscription, "Taken at Saratoga, on the 17th of October, 1777." Some

of the British officers greeted this released captive with kisses. It was, however, retaken on the banks of the Thames the following year.

In 1814, General Hull, having been exchanged, was tried by court-martial, and being convicted of cowardice and neglect of duty, was sentenced to be shot. He was, however, reprieved by the President in consequence of his Revolutionary services, his name being stricken from the army-roll.

The attentive reader of the full history of this disgraceful affair knows not which to blame most, the irresolution of General Hull, the inefficiency of the War Department, or the incapacity of the officers of the eastern forces, who utterly failed to co-operate in

this invasion, and left the English free to concentrate all their troops upon the western army.

Bands of savages now roamed over all the northwest territory. The day before the surrender of Hull, Fort Dearborn, on the present site of Chicago, was surrendered, and part of the garrison massacred. The whole country was alarmed. Ten thousand volunteers were readily obtained and placed under the command of General Harrison, the hero of Tippecanoe.

Late in the summer, General Van Rensselaer, with the "army of the Centre," as it was called, made an attempt to invade Canada. October 13th, he crossed the Niagara at Lewiston to attack the enemy on Queenstown Heights. The landing was desperately resisted. Colonel Scott and Captain Wool led the Americans in charge after charge, driving the British before them. Three times they won the victory. Van Rensselaer then returned to the American shore to bring over the rest of his troops. But the militia, frightened by the bloody tokens of the battle, refused to be taken out of the State, and fifteen hundred able-bodied men stood cowardly by their constitutional rights, while their comrades vainly struggled against the odds of their swarming foes.

Scott, finding himself deserted, mounted a log in front of his men and harangued them. "Hull's surrender," he exclaimed, "must be redeemed. Our condition is desperate. Let us die, arms in hand. Our country demands the sacrifice. The example will not be lost. The blood of the slain will make heroes of the living. Those who follow will avenge our fall, and our country's wrongs. Who dares to stand?" A loud "ALL!" rang along the line. The troops followed him with desperate courage, and of one thousand men who had crossed the river that morning, nearly all were killed or captured.

The next day General Brock, who was killed in the action, was buried. At the request of Scott, then a prisoner, minute-guns were fired at Fort Niagara. "Cannon that but the day before had exploded in angry strife on one another, now joined their peaceful echoes over his grave."

"While a captive in an inn at Niagara," says Headley, "Scott was told that some one wished to see the 'tall American.' He immediately passed through into the entry, when, to his astonishment, he saw standing before him two savage Indian chiefs, who wished to look on the man at whom they had so often fired with a deliberate aim. In broken English, and by gestures, they in-

quired where he was hit, for they believed it impossible that out of fifteen or twenty shots not one had taken effect. The elder chief, named Jacobs, a tall, powerful savage, became furious at Scott's asserting that not a ball had touched him, and, seizing his shoulders rudely, turned him round to examine his back. The young and fiery colonel did not like to have such freedom taken with his person by a savage, and, hurling him fiercely aside, exclaimed, 'Off, villain! you fired like a squaw.' 'We kill you now,' was the quick and

SCOTT AND THE TWO INDIANS.

startling reply, as knives and tomahawks gleamed in their hands. Scott was not a man to beg or run, though either would have been preferable to taking his chances against these armed savages. Luckily for him, the swords of the American officers who had been taken prisoners were stacked under the staircase, beside which he was standing. Quick as thought, he snatched up the largest, a long sabre, and the next moment it glittered unsheathed above his head.

One leap backward, to get scope for play, and he stood towering even above the gigantic chieftain, who glared in savage hate upon him. The Indians were in the wider part of the hall, between the foot of the stairs and the door, while Scott stood farther in, where it was narrower. The former, therefore, could not get in the rear, and were compelled to face their enemy. They manœuvred to close, but at every turn that sabre flashed in their eyes. The moment they should come to blows, one, they knew, was sure to die; and although it was equally certain that Scott would fall under the knife of the survivor before he could regain his position, yet neither Indian seemed anxious to be the sacrifice. While they thus stood watching each other, a British officer chanced to

enter, and, on beholding the terrific tableau, cried out, 'The guard!' and at the same instant seized the tallest chieftain by the arm, and presented a cocked pistol to his head. The next moment the blade of Scott quivered over the head of the other savage, to protect his deliverer. In a few seconds the guard entered with leveled bayonets, and the two chieftains were secured. One of them was the son of Brandt, of Revolutionary notoriety."

General Van Rensselaer now resigning, General Smyth was placed in charge. He issued some grandiloquent proclamations, made several fruitless attempts to get into Canada, was mobbed by the militia, and posted as a coward; he fought a duel with one of his generals, and finally resigned.

General Dearborn determined to redeem the reputation of the army, and, November 20th, made a foray into Canada which turned out the most disgraceful of all. The troops fired into each other, and ran away leaving their dead on the field; the generals never appeared when wanted; then, after these exhausting labors, the army of the North went into winter quarters.

The gloomy look of affairs was, however, brightened by the successes of our gallant little navy. On the 13th of August, the *Essex*, a thirty-two gun ship, commanded by Captain David Porter, met the British sloop-of-war *Alert*. After a brief engagement of eight minutes, the latter struck her colors.

Three days after the surrender of Detroit, the *Constitution*, a forty-four gun ship, in command of Captain Isaac Hull, a nephew of General Hull, engaged the *Guerriere*, a thirty-eight gun ship, under Captain Dacres. The English vessel finally surrendered, but was so badly injured that she was set on fire and abandoned. The charm of British invincibility on the sea was now broken. The dismay in England was only paralleled by the joy in America. It had been currently predicted in Great Britain that before the war had lasted six months, British sloops would lie along American frigates with impunity. That idea was no longer broached.

The *Constitution*, or "Old Ironsides," as she was affectionately called by the seamen, was in active service during the entire war. Cooper says that in two years and nine months she was in three actions, was twice critically chased, and that she captured five vessels-of-war, two of which were frigates, and a third was frigate-built. In all her service, as well before Tripoli as in this war, her good fortune was remarkable. She was never dismasted, never

got ashore, and scarcely ever suffered any of the usual accidents of the sea. Though so often in battle, no very serious slaughter took place on board her. One of her commanders was wounded,

"OLD IRONSIDES."

and four of her lieutenants were killed, two on her own decks, and two on the enemy's; but, on the whole, her entire career, was that of what is called in the navy a "lucky ship." Her good fortune may perhaps be explained by the simple fact that she was always well commanded; moreover, in her last two cruises, she probably possessed as fine a crew as ever manned

a frigate. They were principally New England men, and it was said of them, that they were almost qualified to fight the ship without her officers.

October 13th, Captain Jacob Jones, commanding the American schooner *Wasp*, fell in with the *Frolic*, convoying a squadron of British merchantmen. A severe engagement ensued. When the Americans boarded the enemy, they found the decks covered with the dead and wounded, while every man who was able had gone below, except an old seaman at the wheel. Not twenty persons remained unhurt. Lieutenant Biddle of the *Wasp* hauled down the *Frolic's* colors. A few hours after, however, the *Poictiers*, a British seventy-four gun ship, appeared and seized both the *Wasp* and her prize.

Twelve days later, Captain Decatur, in the frigate *United States*, of forty-four guns, added to his laurels the capture of the *Macedonian*, carrying forty-nine guns.

Another exploit of "Old Ironsides" closed the year. There being more officers than vessels, Captain Hull, in order to afford others an opportunity to share in the glory, magnanimously gave up the command of the *Constitution* to Commodore Bainbridge. Toward the close of December, off the coast of Brazil, he fell in with the British frigate *Java*, of thirty-eight guns. During the action of three hours, the superior gunnery of the Americans told fearfully. The *Java*, one of the best vessels in the British service,

was reduced to a complete wreck; not a spar was left standing; one hundred and twenty-four of her crew were killed or wounded, among them her commander. When surrendered, the vessel was too shattered to be taken to port. The Constitution was slightly injured, and only thirty-four of her crew were killed or wounded.

Besides these exploits of war vessels, privateersmen, fitted out under letters of marque, had done great damage to British commerce, having captured, during the first seven months of the war, three hundred merchantmen and three thousand prisoners.

CAPTURE OF THE FROLIC.

Military operations on land during 1813 were scarcely less disastrous than they were the preceding year. Three armies were raised as before: that of the Centre, under General Dearborn, on the Niagara River; that of the North, under General Hampton, along Lake Champlain; and that of the West, under General Harrison. All three were ultimately to invade Canada. Proctor was the British general, and Tecumseh had command of the Indian allies.

On the 25th of April, an expedition against York (now Toronto) sailed from Sackett's Harbor. A landing was effected after a brisk skirmish, and the town gallantly assaulted. General

Dearborn, being ill, had given the command to General Zebulon M. Pike, a brave and spirited young officer. After the cannonading of the enemy had been silenced, he was sitting upon a stump, expecting every moment to see a white flag displayed, when there was a sudden tremor of the ground, followed by a tremendous explosion. The enemy had blown up their powder magazine and fled. Forty of the English and one hundred Americans were killed. General Pike was mortally wounded, but lived long enough to hear the victorious shouts of his men and to have the flag of the enemy placed under his dying head.

Sackett's Harbor having been left in a defenceless situation, Sir George Prevost, Governor of Canada, led an expedition against it May 28th. General Jacob Brown, in command at the

SACKETT'S HARBOR IN 1814.

Harbor, although he had but a day's notice, collected the militia, and was ready to give the assailants a warm reception. His artillery comprised only a thirty-two-pounder, called the "Old Sow." His troops were raw, and at first retreated, but he rallied them in person, and finally drove the English back to their boats.

General Dearborn having resigned during the summer, General James Wilkinson succeeded to the command of the army of the Centre. It was planned that the army of the North, under Hampton, should advance from Plattsburg and join him in making an attack on Montreal. Wilkinson with his men descended the St. Lawrence in a flotilla, and repulsed the enemy at Chrysler's Field, November 11th; but Hampton would not move his forces, and so the badly-managed expedition failed. Fort George, which was taken by Dearborn soon after the capture of York, was now evacu-

ated, but not until Newark was laid in ashes. The British afterward retaliated by burning Buffalo, Black Rock, and Lewiston.

General Harrison, with the army of the West, was encamped at Franklinton, Ohio, a detachment under General Winchester being stationed at Fort Defiance, on the Maumee. Early in January, the latter went to the defence of the people of Frenchtown, on the river Raisin. He defeated the enemy, but was soon attacked by a body of fifteen hundred British and Indians under Proctor. During the battle, the Indians, in order to get the reward offered by the British commander, scalped the wounded and the dead alike. Winchester, being captured, agreed to the surrender of his men under the solemn promise that their lives and property should be safe. Proctor, however, immediately returned to Malden with the British, leaving no guard over the American wounded. Thereupon the Indians, maddened by liquor and the desire of revenge, with faces painted black in token of their fiendish purposes, rushed into the village, mercilessly tomahawked many, set fire to the houses where others lay, and carried the survivors to Detroit, where they were dragged through the streets and offered for sale at the doors of the inhabitants. Many of the women of that place gave for their ransom every article of value which they possessed. Among the prisoners was Captain Hart, a brother of Mrs. Henry Clay, who offered a friendly chief a hundred dollars if he would conduct him in safety to Malden. He was accordingly placed on a horse, but had just started when a Wyandot claimed him as his prisoner. A quarrel ensued, which was settled by killing the captain and dividing his money and clothes between them! Many of the troops were Kentuckians, and the massacre aroused the feelings of their comrades and friends almost to frenzy. Their rallying cry henceforth, "Remember the River Raisin!" incited them to deeds of valor, and carried fear into the hearts and ranks of the enemy.

General Harrison now erected Fort Meigs at the Maumee Rapids for the better protection of the northwest. Here he was besieged (May 1-5) by Proctor with a large force of regulars, and Indians under Tecumseh. Fortunately, General Clay, with twelve hundred Kentuckians, came to his rescue, and, after a severe contest, raised the siege. The Indians treated their prisoners with their usual brutality. One day while two of the savages were in the act of murdering a helpless captive, Tecumseh darted into the midst, dashed the Indians to the ground, and rescued the unfor-

tunate man. He even dared to rebuke Proctor for his inhumanity, who replied that he could not restrain the Indians. "Go put on petticoats," answered the chief. "You are not fit to command men."

Proctor, having returned to Malden, made great preparations for a new invasion of Michigan. Harrison, apprised of his design, strengthened Fort Stephenson, at Lower Sandusky, for an attack. It was, however, only a stockade mounting a single six-pounder, with a small garrison under Major Croghan, a young man of but twenty-one. August 1st, he was attacked by Proctor's troops sustained by gunboats in the rear. The British commander de-

manded instant surrender at the peril of a massacre. Croghan replied that when the fort was taken a massacre would do no harm, as there would be no one to kill. Repulsed in a desperate assault, Proctor was forced to give up the siege.

The exploits of our infant navy during this year added fresh lustre to that branch of the public service. On the 24th of February, Captain Lawrence, in command of the *Hornet*, fell in with the British brig *Peacock*, near the mouth of the Demerara River. Within fifteen minutes, the *Peacock* struck her colors. She was already sinking,

and, ere her crew could be rescued, the sea yawned and she sank out of sight, carrying with her three American and nine British sailors, victors and vanquished, to a common grave. Captain Lawrence next took command of the *Chesapeake*, which on the 1st of June was lying in the harbor of Boston. Captain Broke, of the flag-ship *Shannon*, challenged him to come out and fight. Lawrence chivalrously accepted, although his ship had just returned from an unsuccessful cruise, and was looked upon as an "unlucky" vessel; while part of his crew was discharged, and the rest, being unpaid, was half mutinous. Lawrence was mortally wounded early in the conflict. When carried below, he uttered those memorable words that will never be heard without stirring the pulse, "*Don't give up the ship.*" But it was ordered otherwise. The English were already leaping on

CAPTAIN LAWRENCE.

the deck, and soon the cross of St. George was flying over the shattered prize. The Chesapeake was taken to Halifax. Lawrence died *en route*, and was there buried by his generous foe with the honors of war. His remains were subsequently brought to New York and interred in Trinity church-yard, where a monument now stands to his memory.

The schooner *Adeline*, commanded by Lieutenant Arthur Sinclair, off Lynn Haven Bay, sunk the British vessel *Lottery* early in the spring. In June, the United States brig *Argus*, under Captain Allen, having taken Mr. Crawford, our minister, to France, sailed on a cruise in British waters. She had captured twenty merchantmen when, on the 13th of August, she was overtaken by the English brig *Pelican*, and in less than half an hour, her captain being mortally wounded and her first lieutenant disabled, she was compelled to strike her colors. The next month, the British brig *Boxer*, off Portland, Maine, was captured by the American vessel *Enterprise*. Both captains being slain, they were taken ashore and buried with equal military honors.

The cruise of Captain David Porter, in command of the *Essex*, was full of interest. He sailed from the Delaware on the 28th of October, 1812, and, having rounded Cape Horn, captured twelve ships and several hundred sailors, many of whom enlisted in his service. Several of the vessels he armed as tenders, forming a little fleet with which he protected our whaling interests in the Pacific. The *Essex* was finally attacked, however, on the 28th of March, 1814, against all the laws of nations, in the neutral harbor of Valparaiso, by a British frigate, the *Phœbe*, and the sloop-of-war *Cherub*. Being captured after one of the most desperately-fought battles of the war, Porter wrote back to the Department, "We are unfortunate, but not disgraced."

In this cruise David Glascoe Farragut, though only twelve years of age, sailed as a midshipman. Captain Porter, in his report of the first engagement, commended the "lad Farragut," and regretted that he was too young for promotion.

The British were at this time masters of Lake Erie. To Oliver H. Perry, a young man of twenty-eight, was assigned the command of the American fleet on the lake. His ships were many of them yet to be built from trees still standing in the forest. By indomitable exertions, he got nine vessels carrying fifty-four guns ready for action. He had to wait some time even then for sailors enough to man his little fleet. In August, he was reinforced by

a company of marines from the Atlantic seaboard, many of them being sent to him overland in four-horse stage-coaches, via Albany and Buffalo. Perry now cruised about hoping to fall in with the British squadron under Barclay.

On the 10th of September, the English fleet, consisting of six vessels bearing sixty-three guns, hove in sight. Perry ran to the masthead of his vessel, itself named the *Lawrence*, a banner on which were inscribed the words of that lamented hero, "*Don't give up the ship.*" Soon a bugle-note sounded from the Detroit, the British flag-ship, and the first gun was fired. The vessels approached closer to each other, and the action soon became general. The *Lawrence* seemed to be singled out to bear the brunt of the

PERRY'S HEADQUARTERS.

English guns, and it was not long before she was terribly shattered, and her men nearly all killed or wounded. Perry with his flag then sprang into a small boat, and standing erect, the target for a score of guns, was rowed to the Niagara. This gallant feat history, art, and song will never weary of celebrating. Taking command of that vessel, he dashed upon the British line, and broke it, pouring such a storm of shot

right and left, that within eight minutes the *Detroit* struck her colors, followed by all her consorts but two, which were taken soon after. With a touch of pardonable pride Perry went back to the *Lawrence*, and on her battle-stained deck received the surrender. Here he wrote on the back of an old letter, resting it upon his navy cap, that memorable despatch to General Harrison:

"We have met the enemy, and they are ours; two ships, two brigs, one schooner, and one sloop.

"Yours with great respect and esteem,

"O. H. PERRY."

The victory filled the Americans with joy, and the British with mortification. On both sides of the ocean it was made the subject of caricature at the expense of the British. It was the first time

in the naval history of Great Britain that an entire squadron had surrendered. The memory of the event was kept fresh in the hearts of our countrymen for many years after by annual celebrations. Even to this day, a song, rude in versification but stirring in verse, commencing,

“ The tenth of September
 Let us all remember,
 As long as the world on its axis goes round,
 Our tars and marines
 On Lake Erie were seen,
 To make the proud flag of Great Britain come down,”

if sung or repeated in the presence of any one living at that time, will revive the enthusiasm

PERRY LEAVING THE LAWRENCE.

that can never be forgotten. On Barclay's ship were found three Indians skulking below. It seems these sharpshooters had been placed in the round-tops to pick off the American officers. Before they had a chance to display their skill, however, cannon-balls came whistling through the rigging, and the would-be heroes of the rifles descended to the deck. As the vessels neared, this post

seas will, perhaps, never again be the separating space between contending nations ; and this victory, which decided their fate, will stand unrivaled and alone, deriving lustre and perpetuity from its singleness. In future times, when the shores of Erie shall hum with a busy population ; when towns and cities shall brighten where now extend the dark and tangled forests ; when ports shall spread their arms, and lofty barks shall ride where now the canoe is fastened to the stake ; when the present age shall have grown into venerable antiquity, and the mists of fable begin to gather round its history, then will the inhabitants look back to this battle we record, as one of the romantic achievements of the days of yore. It will stand first on the page of their local legends, and in the marvelous tales of the border."

OLIVER HAZARD PERRY.

General Harrison did not long wait to gather up the fruits of the victory. Early in October, he started, with a large force of Kentuckians under Governor Shelby, in pursuit of Proctor, who was rapidly fleeing along Lake St. Clair, with the hope of joining the British on Burlington Heights, at the head of Lake Ontario. Tecumseh denounced the British commander as a "squaw" for thus running away, and threatened to desert him. Proctor at last took a stand in a strong position on the River Thames. Harrison, perceiving that he had weakened his line by extending it too far, ordered Colonel Johnson to break it by a charge of his cavalry. The Kentucky horsemen dashed forward, and in less than five minutes after the first shot was fired had routed the enemy. Proctor escaped in his carriage, and within twenty-four hours was sixty miles away. The Indians, hidden in a swamp, continued the struggle. Tecumseh long animated his warriors with his own desperate valor. At last, struck by a ball, he calmly stepped forward, and, sinking at the foot of an oak, died. His followers, appalled at their loss, fled in dismay.

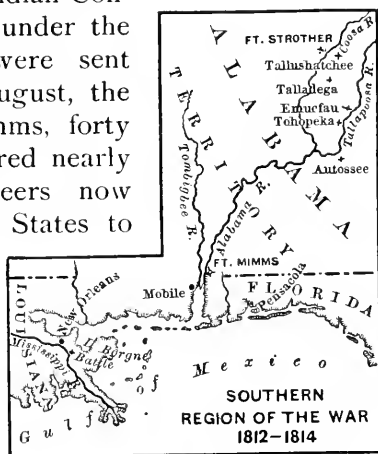

If we can believe a vulgar couplet, which is now and then at this date heard on the street or in the school-yard, running,

“Rumpsey, Dumpsey, hickory Crumpsey,
Colonel Johnson killed Tecumseh,”

the honor of his death belongs to that brave Kentuckian.

During the summer of 1813, the Indians of Georgia and Alabama, incited by the British and Spanish authorities, and also by Tecumseh's project of a great Indian Confederacy, took up arms. Troops under the command of Andrew Jackson were sent against them. On the 30th of August, the savages had surprised Fort Mimms, forty miles north of Mobile, and massacred nearly three hundred persons. Volunteers now flocked in from all the adjoining States to avenge this horrid deed. General Floyd, with the Georgia militia, defeated the Indians at Callabee and Autossee, the Creek metropolis, where the very ground was sacred. General Coffee routed them at Tallushatchee, and Jackson, a few days after, at Talladega. Claiborne, with the Mississippi troops, captured Eccanachaca, “Holy Ground,” which they considered an impregnable stronghold. The next spring the Creeks made their last rally at “Tohopeka,” or the “Horseshoe Bend,” on the Tallapoosa River. Six hundred of the Indians were killed, and the remainder were glad to sue for peace.

The speech of their chief prophet and warrior, Weatherford, on his surrender, deserves to be perpetuated with the utterances of other distinguished men of this unfortunate people. “I am,” said he, “in your power. Do with me as you please. I am a soldier. I have done the white people all the harm I could. I have fought them, and fought them bravely. If I had an army, I would yet fight and contend to the last. But I have none. My people are all gone. I can now do no more than weep over the misfortunes of my nation. Once I could animate my warriors to battle; but I cannot animate the dead. My warriors can no longer hear my voice. Their bones are at Talladega, Tallushatchee, and Tohopeka. I have not surrendered myself thought-

lessly. Whilst there were chances for success, I never left my post, nor supplicated peace. But my people are gone; and I now ask it for my nation and for myself."

Several incidents of this brief campaign strikingly illustrate Jackson's character. On the field at Talladega, he was touched by the cry of an Indian babe, whose mother had died in the battle. He tried to induce some mother among the prisoners to take care of it. "Its mother is dead," was the cold answer; "let the child die too." The general, himself a childless man, then turned nurse. Some brown sugar formed a part of his private stores, and with this he caused the child to be fed. The infant thrived on this simple fare, and he finally took it home with him, and reared it up in his own family.

During the winter the troops under his command suffered much from hunger. One day a starving soldier asked the general for something to eat.

WEATHERFORD IN JACKSON'S TENT.

"I will divide with you," was the reply, as he drew out of his pocket a handful of acorns. At last the soldiers could endure their privations no longer, and they mutinied. Jackson rode down the ranks. His left arm, shattered by a ball, was disabled, but in his right he held a musket. Sternly ordering the men back to their place, he declared he would shoot the first who advanced. No one stirred, and at last all returned to duty.

Early in the spring, the British commenced devastating the southern coast. Admiral Cockburn, especially, disgraced the British navy by conduct worse than that of Cornwallis in the Revolution. Along the shores of Virginia and Carolina, he burned bridges, farm-houses, and villages; robbed the inhabitants of their crops, stock, and slaves; plundered churches of their communion services, and murdered the sick in their beds.

Neither age nor sex was spared by these pirates in British uniform. Frenchtown, Georgetown, Havre de Grace, and Frederickstown were wantonly destroyed.

The New England coast, though closely blockaded, was spared any attack, from a general belief that it would yet return to its allegiance to Great Britain. The bitter opposition there felt to the war was signally exhibited, when the *Hornet* beat the *Peacock*, in the following resolution, which was adopted by the Senate of Massachusetts, on the motion of Mr. Quincy, June 15, 1813: "*Resolved*, as the sense of the Senate of Massachusetts, that, in a war like the present, waged without a justifiable cause, and

THE ATTACK ON OSWEGO.—From an old Print.

prosecuted in a manner that indicates that conquest and ambition are its real motives, it is not becoming a moral and religious people to express any approbation of military or naval exploits which are not immediately connected with the defence of our sea-coast and soil." Another curious incident occurred in this connection. Decatur lay, with three vessels, in the harbor of New London, anxious to escape through the blockading squadron. Whenever he made an attempt, however, no matter with how great secrecy, just at that time blue lights were sure to be seen burning on the bank of the River Thames. Decatur believed them to be warning signals to the enemy, and dared not put out to sea. The Federal party had to bear the odium of this traitor-

ous act, and for a quarter of a century afterward its members were stigmatized with the epithet of "Blue-Light Federalists."

During the year 1814, the war was prosecuted with renewed vigor on both sides. The peace of Paris had released the British fleets and armies so long employed against Napoleon, and left the English at liberty to direct their entire strength against the United States. Fourteen thousand veterans who had fought under Wellington were sent to Canada.

The summer campaign opened with the capture by the British of the fort at Oswego, although it was stubbornly and bravely defended by its commander, Colonel Mitchell. May 5th, the town was bombarded, and a fruitless attempt made to land. The next day the effort was renewed successfully. Mitchell thereupon abandoned the fort, which mounted only five guns, and after annoying the English as much as he could, he retreated to Oswego Falls. Having dismantled the works and burned the barracks, the enemy retired.

July 3d, our army, under Generals Brown, Ripley, and Scott, crossed Niagara River, and captured Fort Eric, opposite Buffalo. Two days after, they defeated the British under General Riall at Chippewa, the English loss being nearly double the American. Just before the final charge, General Scott addressed his men as follows: "The enemy say that the Americans are good at a long shot, but can not stand the cold iron. I call upon you instantly to give the lie to the slander. Charge!"

On the 25th, another engagement took place near Lundy's Lane, a highway running from the Niagara River to the head of Lake Ontario, and opposite Niagara Falls. Our force was less than three thousand, while the British numbered nearly five thousand. General Scott, being in the advance, began the attack about four o'clock in the afternoon, and stubbornly held his ground till reinforcements arrived. Major Jessup turned the enemy's flank, and amid the gathering darkness picked up so many prisoners, among them General Riall, as to impede his progress. Brown, seeing that a battery stationed on the hill near by was the key to the British position, turned Colonel James Miller and said, "Sir, can you take that battery?" "*I will try*," he replied. "Close up, steady, men," was his only command to the gallant twenty-first, as it moved forward up the hill, and captured the guns, amid cheers that were heard above the roar of the mighty cataract. Night had already come, yet the British made three desperate

assaults to recover the position. The men whom Wellington had so often led to victory were fairly driven back each time, and at last could not be rallied for another struggle. The Americans, however, gained no substantial benefits from this success. Scott and Brown being wounded, General Ripley retreated to Fort Erie. General Gaines now took command. He was assaulted by the British August 15th, Colonel Drummond leading the at-

COLONEL MILLER AT LUNDY'S LANE.

tacking corps with the cry "Give the Yankees no quarter!" The colonel was shot, and his men fled. A fierce sortie by the garrison, September 17th, finally broke up the siege, and the British retired behind their entrenchments at Chippewa. The American army, having destroyed Fort Erie, went into winter-quarters at Buffalo, thus closing this brilliant campaign.

We turn now to the army of the East. The British had here attempted to revive the plan of Burgoyne's famous campaign. The army of invasion consisted of fourteen thousand men under Sir George Prevost and a fleet of four armed vessels and thirteen gunboats under Commodore Downie. General Macomb and Commodore McDonough were in command of our land and naval forces at Plattsburg. The Americans retired across the Saranac on the approach of the enemy. On Sunday morning September 11th, they were attacked by land and water.

In the solemn hush before the battle, McDonough piped all hands on deck and read to them the Episcopal service. The impressiveness of the occasion added a strength and beauty to the noble liturgy. A man who dared, in the navy of that day, to perform such an act, was surely worthy to lead.

The struggle raged for two hours, when McDonough adopted the difficult expedient of wearing his vessel around, so as to present a fresh broadside to the enemy. The English tried the same manœuvre, but failed. The battle was then soon decided. The British commodore was killed, his guns were silenced, and his larger vessels captured. Scarce a spar was standing in either fleet, and the ships were ready to sink. Meanwhile the English land forces had suffered defeat, and about dark they retreated. Thus ended the invasion, not less successfully for us, but less disastrously for the English than did its Revolutionary compeer.

The operations of Admiral Cockburn, with his worthy associate, General Ross, were continued this year along the coast. In August, General Ross ascended the Potomac to Washington. An attempt was made to stop him at Bladensburg, but our troops, under General Winder, fled disgracefully. The day was hot, and the British were in no condition to pursue. The Americans lost during the retreat only one man—an officer—who, it is said, ran till he died.

THE RUINS OF FORT ERIE—BUFFALO IN THE DISTANCE.

The "Bladensburg Races" as the battle was satirically styled, left the way open to the capital.

The President was on the field, and sent his servant to warn Mrs. Madison of her danger. She resolved to save the full-length portrait of Washington which now adorns the blue-room of the White House. It was cut out of its frame and borne away by the gentlemen. So precipitate was her flight, that a dinner-table was left spread for forty guests. Unexpected ones occupied it. They were hungry Britons.

The principal British officers entered the House of Representatives, and Cockburn took the chair. "Gentlemen," he cried,

BRITISH SOLDIERS BURNING BOOKS IN THE LIBRARY OF CONGRESS.

"the question is, Shall this harbor of Yankee democracy be burned? All in favor of burning it will say, Aye!" The response was in the affirmative, and there was no negative. "Light up," said he, and the work of destruction was commenced. In the course of a few hours, nothing remained of the splendid Capitol and the presidential mansion but their smoke-blackened walls. Two million dollars worth of property is said to have been destroyed during this incursion, disgraceful alike to America and England.

The British now sailed around by sea to attack Baltimore. The fleet bombarded Fort McHenry, while the land forces were to move upon the city. In both of these attempts the enemy was unsuccessful. During the bombardment, Francis S. Key, who

had gone to the British fleet with a flag of truce to procure the release of a friend, and who was not permitted to return lest he might carry back valuable information, watched the flag of his country waving above Fort McHenry. The British commander had boasted to Key that the place could hold out only a few hours, and then Baltimore must inevitably fall into his hands. The next morning the flag was still waving defiantly and triumphantly in the face of the foe. The incident inspired Key to write the words of a song which will be sung as long as the flag is known :

“ Oh, say, can you see, by the dawn's early light,
What so proudly we hailed at the twilight's last gleaming,
Whose broad stripes and bright stars, through the perilous fight,
O'er the ramparts we watched were so gallantly streaming?
And the rocket's red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there ;
Oh, say, does that star-spangled banner yet wave
O'er the land of the free and the home of the brave? ”

The harbor of Stonington, Conn., was in like manner bombarded by the enemy, but, the militia assembling, no landing was effected by the British troops. During nearly the whole of the year, also, that part of Maine which lies east of the Penobscot River was occupied by the English. The United States frigate Adams, and many merchant vessels lying in the Penobscot were destroyed or fell into their hands.

A convention held at Hartford, December 15th, excited great attention. It was composed of delegates from the New England States. Its deliberations were secret, and were supposed to be disloyal, so that nearly every member was henceforth excluded from all political position in the nation. Indeed, it became one of the chief causes of the ruin of the Federal party. A report was current at the time that there would be an attempt to take New England out of the Union and establish a kingdom. It is now known, however, that the convention only considered certain alleged usurpations by the general government, several amendments to the Constitution, and the defence of the eastern coast against the attacks of the British navy, then becoming so threatening. The convention adjourned, having recommended the call of a second the ensuing year. What would have been the result of these deliberations cannot be known, as peace put a practical stop to all anti-war measures and removed their worst grievances.

November 13th, Elbridge Gerry, the Vice-President, expired suddenly in his carriage while proceeding to the Capitol. He died honorably poor and was universally mourned. John Gaillard of South Carolina was appointed President of the Senate.

The treaty of peace was signed by the commissioners at Ghent on the 24th of December, 1814. It did not settle the great question of the war, viz., the impressing of seamen, but there was a tacit understanding, and it was never revived. The news did not reach this country until the following February. Meanwhile had occurred one of the most brilliant victories ever achieved by the American arms.

During the year 1814, General Andrew Jackson, after subduing the Creek Indians, was engaged in Florida settling affairs with the Spanish authorities, who had been suspected of co-operating with the British in urging the Indians to war and furnishing them with arms and ammunition. He captured Pensacola and drove from its harbor a British fleet. Learning that the English would next attack New Orleans, he proceeded to that city and made the most vigorous preparations for its defence.

December 14th, the expected British fleet entered Lake Borgne and captured the American gun-boats stationed at that point. Thence, passing through an unfrequented bayou nearly to the Mississippi, the advance reached the river only nine miles from the city. That night Jackson bravely attacked the enemy in their camp, but was repulsed. The next day he fell back behind his entrenchments, which extended from the river to an impassable swamp. An assault on the 28th having failed, the British brought up cannon and planted several batteries. Their fire, however, produced little effect. In throwing up their works, the British had used hogsheads of sugar instead of sand-bags, but the American balls quickly broke them in pieces. On the other hand, Jackson at first made his entrenchments partly of cotton bales, but a red-hot cannon-ball having fired the cotton and scattered the burning fragments among the barrels of gunpowder, it was found necessary to remove the cotton entirely. The only defence of the Americans in the ensuing battle was a bank of earth five feet high, and a ditch filled with water.

January 8th, General Pakenham, the commander-in-chief of the British, advanced with his whole force, twelve thousand strong. Behind their breastworks, three thousand Tennessee and Kentucky riflemen, the finest marksmen in the world, were awaiting

his coming. When within range, a vivid stream of fire flashed from the whole American line. Every shot told. The enemy was thrown into confusion, and the plain was strewn with the dead and dying. In the vain attempt to rally his troops, General Pakenham was killed, General Gibbs, the second in command, was mortally and General Keene severely wounded. General Lambert, on whom the command devolved, being unable to check the flight of his troops, retired to his encampment, and ten days

THE BATTLE OF NEW ORLEANS.

afterward the whole army hastily withdrew to their ships. The British had lost over two thousand men, and the Americans but thirteen.

During the attack on Jackson's lines, the British had carried an American battery on the right bank of the river, which commanded the American position and gave them virtual control of New Orleans; but the defeat of the main body had been so signal that they made no effort to pursue their success.

A cable despatch would have saved this fearful bloodshed. "O tardy science!" exclaims Parton, in his *Life of Jackson*; "O Morse, O Cyrus Field, why were you not ready with your oceanic telegraph then, to tell those men of both armies that they

were not enemies, but friends and brothers, and send them joyful *into* each other's arms, not in madness *against* each other's arms? The ship that bore this blessed news was still in mid-ocean, contending with its wintry winds and waves. How much would have gone differently in our history if those tidings had arrived a few weeks sooner!"

An incident showing the stern justice and the rugged character of General Jackson occurred soon after. A member of the legislature, on the 10th of February, caused it to be stated in the Louisiana Gazette that peace had been declared. Jackson arrested him, charging that this statement excited mutiny among the soldiers. A writ of *habeas corpus* having been granted the prisoner by Judge Hall, Jackson, instead of obeying the writ, arrested the judge and sent him out of the city. On being restored to his office, the judge ordered Jackson to appear and show cause why he should not be committed for contempt in disregarding the writ. General Jackson came in citizen's garb before the court, and being fined one thousand dollars, paid it. It was, however, subsequently refunded to him by the government, with interest.

The last two naval actions of the war were in our favor. These were the capture in February, 1815, by the frigate Constitution, of two British sloops-of-war, the Cyane and Levant, off the island of Madeira, and in March, by the Hornet, of the brig Penguin off the coast of Brazil. "Thus terminated at sea," says Alison, the British historian, "this memorable contest, in which the English, for the first time for a century and a half, met with equal antagonists on their own element; and in recounting which the British historian, at a loss whether to admire most the devoted heroism of his own countrymen or the gallant bearing of their antagonists, feels almost equally warmed in narrating either side of the strife."

The Americans who were captured during the war, and impressed seamen who refused to serve in the British navy, had been kept at Dartmoor, a prison situated on a lonesome moor not far from Portsmouth, England. They were treated with great rigor. Their sufferings, especially during the severe winter of 1813-14, were bitter. Headley says that the stream running through the prison-yard and the buckets of water in the rooms, were frozen solid. Most of the prisoners, being protected only by rags and destitute of shoes, could not go out into the yard at all, as it was covered with snow several feet deep, but lay

crouched in their hammocks day and night. The strong were bowed in gloom and despair, and the weak perished in protracted agonies. To fill the measure of their sufferings, the commanding officer issued an order compelling them to turn out at nine o'clock in the morning and remain in the open air till the guard counted them. This took nearly an hour, during which time the poor fellows stood barefoot in the snow, benumbed by the cold, and pierced by the bleak wind. Unable to bear this dreadful exposure, the prisoners cut up their bedding, to make garments and socks for themselves, and slept on the cold floor. Morning after morning, hardy men, benumbed by the cold, fell lifeless in the presence of their keepers. Peace came, but these suffering men were not released. Restless and uneasy, collisions began to occur with their brutal keepers. April 4, 1815, they received no bread. The next day they broke into the depot of supplies. On the 6th, the guard fired upon them repeated volleys, killing seven and wounding sixty of these unarmed men. This "Dartmoor massacre" for a time threatened to renew hostilities between the two countries, but the matter was finally amicably settled.

The Barbary States had taken advantage of the war to renew their piratical depredations. Decatur, being sent thither with a squadron, captured the largest vessel in the Algerine navy, visited Algiers, Tunis, and Tripoli in succession, and compelled the release of our prisoners; exacted payment for the losses we had already sustained, and the relinquishment of all demands for tribute in future. Since then we have had no trouble with the Barbary pirates.

Peace found the country in a deplorable condition—trade ruined, commerce gone, no specie, banks without credit, and a general depression. Yet, such were the resources of the country, that it almost immediately entered on a career of unexampled prosperity. Cotton rose from ten to over twenty cents per pound. Soon the ocean was whitened with the sails of our ships. Land rapidly increased in value. Explorations, especially connected with the fur trade, were pushed at the northwest. Emigration multiplied. In 1816, the United States Bank was rechartered to continue for twenty years, and an act was passed providing for paying the national debt, over one hundred and twenty million dollars, by annual instalments of ten million dollars.

The Federal party was now almost entirely broken up by its

opposition to the war. Rufus King, its candidate for the Presidency, received only thirty-four votes. The Republicans nominated James Monroe, with Daniel D. Tompkins as Vice-President. They were elected by one hundred and eighty-three votes.

December 11, 1816, Indiana was admitted to the Union, forming the nineteenth State. It well merits the name given it, as within its borders were fought many of the most desperate and decisive Indian battles. As early as 1702, some French Canadians descended the Wabash River, establishing several posts, Vincennes being among them. Little is known, however, of the early history of the country until 1763, when it was ceded to the English. It formed a part of the great Northwest Territory. When Ohio was set off in 1800, the remainder was called Indiana. In 1805, Michigan was carved from it; and in 1809, Illinois.

President Monroe was inaugurated March 4, 1817. He was born in Westmoreland county, Va., April 28, 1758. From early manhood he had mingled in the public affairs of the country, his life being a portion of its history from the commencement of the War of the Revolution. He had been the friend and adviser of Jefferson and Madison, and possessed the entire confidence of the people. He was tall and well-formed, with light complexion and blue eyes. He was laborious and industrious in his habits, though by no means brilliant.

In the selection of his Cabinet, Monroe showed excellent judgment, taking for his advisers men of commanding ability and the widest influence. They aided largely in giving to his administration a character which rendered it "the golden age" of our political history. The Secretary of State was John Quincy Adams, a master of diplomacy, who had grown up in this field, having been representative at the Hague when so young that he was called "General Washington's Boy Minister." The Secretary of the Treasury was William H. Crawford of Georgia, a man of commanding appearance, brilliant talents, and sterling patriotism. The Secretary of War was John C. Calhoun, one of America's greatest statesmen. The Secretary of the Navy was Benjamin W. Crowninshield of Massachusetts who was succeeded by Samuel L. Southard of New Jersey, the youngest man ever appointed to a place in the Cabinet, being only twenty-nine years of age, but full of promise, thoroughly accomplished, and the pride of his native State.

For his legal adviser, the President had the distinguished Wil-

liam Wirt, who was as clear-minded and sound-hearted in council as he was brilliant in the forum. Outside the cabinet, the administration possessed such supporters as Daniel D. Tompkins, Vice-President; John Marshall, Chief-Justice; and Henry Clay, Speaker of the House.

Soon after his inauguration, Monroe, imitating the example of Washington, made his memorable journey through the Northern States to examine the military posts, and acquire a thorough acquaintance with the capabilities of the country in case of future hostilities. He wore the uniform of a colonel of the Revolutionary army—three-cornered hat, scarlet-bordered blue coat, and buff breeches. He was everywhere received with consideration and cordiality, and in many places with enthusiasm and great civic and military displays. His simple dignity of manner, and his evident sincerity of purpose, rendered him popular with all. "Embittered and hot-tempered leaders of parties, who for the last seven years had hardly deigned to speak to each other, or even to walk on the same side of the street, met now with smiling faces, vying in extravagance of republican loyalty. The 'era of good feeling' having thus begun, the way was rapidly paved for that complete amalgamation of parties which took place a few years after."

During the first twenty years of the present century, there was hardly a branch of industry or a valuable interest that did not receive an impulse. The war had led to the establishment of extensive manufactories to supply the place of the English goods cut off by the blockade. These continued to thrive after peace was declared, though trade was for a time depressed by the quantity of foreign goods thrown on the market. The feeling of the people was well expressed by Henry Clay on the Senate floor, in his memorable speech, April 6, 1810, where he first took ground in favor of protecting the interests of American manufactures: "There is a pleasure, a pride," said he, "(if I may be allowed the expression, and I pity those who cannot feel the sentiment), in being clad in the productions of our own family. Others may prefer the cloths of Leeds or London, but give me those of Humphreysville." While speaking, he was clothed in the product of an American loom.

Almost every State saw the institution of colleges and universities. Among these were the University of Georgia, established in 1801; Washington College, Pennsylvania, 1802; Ohio Univer-

sity, 1804; University of South Carolina, 1806; Hamilton College, New York, 1812; University of Virginia, of which Jefferson was proud to be called the father, 1819; and Madison University, New York, and Colby University, Maine, 1820. In 1821, a school for

the education of women was established in Troy, N. Y., by Mrs. Emma Willard. It was a pioneer institution, and its remarkable success placed its founder foremost among the teachers of the country and the benefactors of her sex.

Emma Willard

In the year 1806, five students at Williams College (Samuel J. Mills, Jas. Richards, Francis L. Robbins, Harvey Loomis, and Bryan Greene), being in a grove, where they had met for meditation and prayer, were driven by a sudden storm to the friendly shelter of a haystack. Here, in their conversation, came up the

subject of the moral condition of Asia, in which country they were interested from being engaged in the study of its geography. Mills suggested the idea of carrying the Gospel to the people of that vast region. His companions favoring the notion, they joined in prayer and sung a hymn. Soon after, they formed in the college the first Foreign Missionary Society ever organized in America. Delegates were sent to other colleges to kindle the same spirit, and in four years after that "Haystack prayer-meeting," the American Board of Foreign Missions was established.

The American Bible Society had its origin in 1816. On the 8th of May, sixty gentlemen met in the Consistory Room of the Reformed Dutch Church in Garden Street, New York, and resolved that "it is expedient, without delay, to establish a general Bible Institution for the circulation of the Holy Scriptures with-

out note or comment." Many of the most distinguished clergymen of the day were present at the birth of the society, and lived to see it fulfil its important work.

Benjamin Lundy, in 1815, founded an anti-slavery association, called the "Union Humane Society," and afterward started a newspaper, "The Genius of Universal Emancipation." He was the originator of anti-slavery periodicals and lectures.

The first savings bank was established in Philadelphia, November 1816. Others were soon put in operation in every city of the Union. Besides the accumulation of savings, they taught the people thrift and economy, and so have been of great service.

In 1819, the Savannah, a steamer of three hundred and fifty tons burden, crossed the Atlantic, making the passage in thirty-one days. She was heavily sparred, and depended largely upon her sails, yet the voyage marked the commencement of a new era in navigation.

In 1795, after the admission of Vermont and Kentucky, the number of stripes in the American flag had been increased to fifteen. This was the form used during the War of 1812-14. April 4, 1818, a bill was approved reducing the stripes to thirteen, and making the number of stars equal to that of the States, a new one to be added for every new State, on the 4th of July succeeding its admission. On the 13th of April the new flag was first hoisted over the Hall of Representatives in Washington.

The Seminole Indians having committed many depredations, General Jackson was sent against them with a force of two thousand five hundred men. He burned their villages, marched into Florida, then held by Spain, and took possession of Pensacola. Two traders, Arbuthnot, a Scotchman, and Ambrister, a British lieutenant of marines, were arrested for inciting the savages to hostility. They were tried by court-martial, and, being found guilty, the former was hanged and the latter was shot. Jackson also hanged two prominent Indian chiefs. The Spanish authorities complained of his conduct, and it was made the subject of congressional inquiry, but his course was approved by large majorities in both Houses.

The execution of these two British subjects produced intense excitement in England. There was great apprehension of a third war with the United States. Stocks fell. The Federal government was bitterly denounced. Jackson was declared to be a "tyrant, ruffian, and murderer," and was thus placarded through

the streets of London. The journals, without distinction of party, swelled the general chorus. But in the midst of this din of passion, the ministry, perceiving the justice of Jackson's course, stood firm. "At a later day of my mission," remarked Rush, then our representative at the English court, "Lord Castlereagh said to me that a war might have been produced on this occasion, '*if the ministry had but held up a finger.*' On so slender a thread do public affairs sometimes hang!"

In February, 1819, a treaty was concluded with Spain, by which she ceded Florida to the United States on the payment of five million dollars.

Four new States were received into the Union during Monroe's first term. Mississippi was admitted December 10, 1817. It is named from the Mississippi River, the "Great Father of Waters." The State was first settled by the French in 1716, but in 1763 was ceded to Great Britain, and became a part of Georgia. It was organized as a Territory in 1798.

Illinois, the twenty-first State, was admitted December 3, 1818. Its name is derived from its principal river, signifying "River of men." After Ohio and Indiana and the Territory of Michigan had been taken from the Northwest Territory, the remainder was styled the Illinois Territory, and comprised the present States of Illinois, Wisconsin, and a part of Minnesota. Its first permanent settlement was made by the French at Kaskaskia in 1682. It came to the English from the French in 1763, and to the United States in 1787, with the rest of the Northwestern Territory. Previous to this there had been a fort on the present site of Chicago, as appears from a map published in Quebec, 1683. The fort was styled Checagou, an Indian name derived from Cheecaqua—strong—the title of a line of chiefs, and also of an onion which grows on the river banks. Fort Dearborn was built by the United States in 1804. Here occurred, during the war of 1812-14, the Indian massacre already mentioned. The fort was then burned, but was rebuilt in 1816, and was garrisoned until the red men moved beyond the Mississippi. For years after the admission of the State, this great metropolis was only a trading-station surrounded by the wigwams of the savages.

Alabama, the twenty-second State, was received December 14, 1819. Its name signifies "Here we rest." The early history of this region is interwoven with that of French discovery. The first settlement was made in 1702, when a party of Frenchmen,

under Bienville, built a fort on Mobile Bay. The present site of Mobile was occupied in 1711, the place having been an Indian village called Mavilla, and the scene of De Soto's most disastrous defeat. Having been ceded to the United States, Alabama was first incorporated with Georgia, and afterward with the Mississippi Territory.

Maine was admitted March 15, 1820. The English under Cabot, in 1498, the French under Verrazani, in 1524, and the Spaniards under Gomez, in 1525, are known to have made cursory visits to this region. In 1623, a permanent settlement was made at the mouth of the Piscataqua by a colony under Sir Ferdinand Gorges and Captain John Mason, which was followed by others at Saco, Biddeford, Scarborough, Cape Elizabeth, and Portland. Massachusetts claimed this territory, and in 1677, to secure it, bought out the rights of the heirs of Gorges for six thousand two hundred and fifty dollars. Nova Scotia formed a portion of the purchase, but this was relinquished, the remainder being held until separated in 1820.

CHICAGO IN 1820.

Party strife having lulled, the "era of good feeling" was signalized by the re-election of Monroe by the vote of every State in the Union. Daniel D. Tompkins was also again chosen Vice-President. With all this satisfactory condition of the present and brilliant promise for the future, that same year an apple of discord was cast into the politics of the country, the effect of which was felt for more than half a century. In March, 1818, a petition was presented to Congress from the Territory of Missouri, asking authority to form a constitution for a State. It was not acted upon at that session, but in February, 1819, Mr. Tallmadge, a Republican of New York, moved an amendment prohibiting the further introduction of slavery into the new State. A fierce debate of three days followed. The spirit exhibited is well illustrated by the remarks of two members. Mr. Cobb of Georgia said: "A fire has been kindled which all the waters of the ocean cannot put out, and which only seas of blood can extinguish." To which Mr. Tallmadge replied: "If civil war, which gentlemen so much threaten, must come, I can only say let it come! . . . If blood is necessary to extinguish any fire which I have assisted to kindle, while I regret the necessity, I shall not hesitate to contribute my own." The Senate struck out the amendment, and the measure was lost.

The next year, a bill having been introduced for the admission of Maine, a clause was adroitly attached authorizing Missouri to form a constitution without restrictions. They were separated, and on the 3d of March following both passed. To the Missouri bill, however, had been attached a section prohibiting slavery in all territories of the United States north of latitude $36^{\circ} 30'$. This clause, known in our history as the *Missouri Compromise*, was warmly advocated by Henry Clay. Often did he rise during those days of strife as a mediator between contending factions, "imploring, entreating, beseeching" for peace and brotherhood. At one time, it is said, he spoke four hours and a half, pouring forth a continued stream of impassioned eloquence.

The situation of the country at the end of the first twenty years of the century was very flattering. Its population in round numbers was nine million six hundred thousand. Previous to the war, its submission to the wrongs and insults of France and Great Britain had excited throughout Europe a contempt for the American character. The general opinion was that the spirit of liberty and independence shown in the Revolution had been extinguished

by a love of gain and commercial enterprise, and that there were not enough courage and resolution left to sustain the national rights and the national honor. But the war with England dissipated this impression, and inspired profound respect for a nation that gave so many proofs of its ability to cope with the mistress of the seas on her favorite element. The unanimity of parties, the high character of our statesmen, and the rapid growth of the country—all conspired to give the people confidence at home and to win deference abroad. The position of the United States among the peoples of the earth was now assured.

THE OLD BLOCKHOUSE, CHICAGO.

CHAPTER XI.

INTERNAL DISSENSIONS.—1820-40.

WHILE the fire of party feeling had apparently died out, through the removal of old sources of disagreement, new issues were fast rising to kindle the embers to a more intense heat than ever. Slavery, State rights, and the tariff were already looming up along the political horizon with dire distinctness. Added to this, in spite of the rapid development of the country, its financial condition was alarming. Benton's

statement of the "gloom and agony" of these years gives a vivid picture of the situation. "No money, either gold or silver, no measure or standard of value left remaining. The local banks (all but those of New England), after a brief resumption of specie payments, again sunk into a state of suspension. The Bank of the United States, created as a remedy for all those evils, now at the head of the evil, prostrate and helpless, with no power left but that of suing its debtors, and selling their property, and purchasing for itself at its own nominal price. No price for property or produce. No sales but those of the sheriff and the marshal. No purchasers at execution sales but the creditor or some hoarder of money. No employment for industry. No demand for labor. No sale for the product of the farmer. No sound of the hammer but that of the auctioneer knocking down property. Stop laws, property laws, replevin laws, stay laws, loan-office laws, the intervention of the legislator between the creditor and the debtor; this was the business of legislation in three-fourths of the States of the

Union—of all south and west of New England. No medium of exchange but depreciated paper; no change even but little bits of foul paper, marked so many cents, and signed by some tradesman, barber, or innkeeper; exchanges deranged to the extent of fifty or one hundred per cent. DISTRESS, the universal cry of the people; RELIEF, the universal demand thundered at the doors of all legislatures, State and federal."

On the occasion of the recognition of the independence of Mexico and five provinces in South America, which had thrown off the yoke of Spain, the President enunciated a principle since famous as the MONROE DOCTRINE. In a message to Congress in 1823 upon this subject, he says: "The American continents, by the free and independent position which they have assumed and maintained, are henceforth not to be considered as subjects for future colonization by any European power."

Agitation had already commenced as to Monroe's successor in the presidential chair. There were no less than five prominent candidates, all from the ranks of the old Republican party—John Quincy Adams, William H. Crawford, John C. Calhoun, Henry Clay, and Andrew Jackson. Adams had the support of New England; Crawford and Calhoun divided that of the South, and Clay and Jackson that of the West.

The nomination of Jackson by the legislature of Tennessee was at first a matter of jest and sport. It was soon found, however, that the hero of New Orleans was exceedingly popular with the masses. An incident which occurred at Washington was thought to have contributed to set the ball in motion. "A gentleman," says Spencer, "who was connected with the family of General Washington, having purchased, at the sale of his furniture, a pair of pistols which had been presented to the General by Lafayette, was disposed to give them to General Jackson, whose character he greatly admired; but, unused to public speaking, he requested Colonel C. Fenton Mercer to act as his representative. This was accordingly done by a short speech in the presence of a number of persons, to which the general made a most grateful and felicitous reply; all of which being published in a Washington paper, was soon diffused by the press to every corner of the Union, and it was afterward the boast of the actors in this little drama that they had mainly contributed to make Andrew Jackson President of the United States."

Political circles were now convulsed by manœuvres and in-

trigues. A nomination by congressional caucus being considered injurious to the prospects of certain aspirants, the system was denounced. Crawford was the only one of the candidates thus endorsed, and this was considered by many as the cause of his defeat. The election resulted in ninety-nine votes for Jackson, eighty-four for Adams, forty-one for Crawford, and thirty-seven for Clay, thus referring the decision to the House of Representatives. John C. Calhoun, receiving one hundred and eighty-two votes, was declared Vice-President. Though Jackson had a popular majority, yet when the choice came to be made in the House of Representatives, Adams was selected. It was charged that Clay threw his influence against Jackson, partly on account of a personal animosity, but largely because he had been promised by Adams, in the event of his election, the position of Secretary of State. This was, of course, denied by Clay and his friends; but partisan speakers and papers rang the changes upon it for years.

Pending the election, Lafayette, the "hero of two worlds," visited this country. He found the people for whom he had fought in his youth approaching the fiftieth year of their national life. From the moment of his arrival at New York, August, 1824, until September, 1825, when about to depart in the frigate *Brandywine*, named in his honor, his journey was one continued march of triumph and joy. The people fêted and caressed him, while Congress voted him two hundred thousand dollars in money and a township of land. He visited the tomb of Washington; and, on the fiftieth anniversary of the battle, laid the corner-stone of the Bunker Hill monument.

Missouri, the twenty-fourth State, was admitted August 10, 1821. Its name is derived from that of its principal river, and means "muddy water." In 1755, St. Geneviève was founded by the French. Pierre Liguette Laclède, having obtained from the governor of Louisiana the right to trade with the Indians on the Missouri, in 1764 established a post which he styled St. Louis, in honor of Louis XV. of France. On Laclède's death, Auguste Chouteau became his successor. In 1780, St. Louis was a depot of a profitable fur trade, having a population of about eight hundred persons. French manners and customs prevailed. The houses were generally built of logs, roughly hewn and set on end. In 1804, the stars and stripes were raised over the embryo city. It was not incorporated as a town until 1809. The first brick house was erected in 1813.

With the conclusion of Monroe's administration, the Republic, as if to mark the completion of half a century of its existence, passed from under the control of men who had been distinctly associated with the Revolution, into the hands of a new generation.

There are some curious circumstances connected with the first five Presidents of the Republic. In the ages of John Adams, Jef-

LAFAYETTE AT THE TOMB OF WASHINGTON.

erson, Madison, and Monroe, there was a regular sequence, each being eight years older than his successor. Like Washington and John Quincy Adams, they were all inaugurated in their fifty-eighth year, and, with the exception of the latter named, closed their terms of office in their sixty-sixth year. Had John Quincy Adams been re-elected, his second term would also have expired at that age. One to whom we are indebted for this investigation, makes here the shrewd inquiry, "Did he mark the turning-point in our national career?" Of the first five Presidents, the only one who had a son, lived to see him elected to the same high office, an event which has not occurred since, and does not seem

likely ever again to happen. Virginia, the "Mother of Presidents," furnished four of the first five, and, singularly enough, all—Washington, Jefferson, Madison, and Monroe—were born within a few miles of one another.

John Quincy Adams was inaugurated sixth President of the United States, March 4, 1825. He was dressed, it was noted, in a plain black suit of American cloth.

Adams was born at Braintree, Massachusetts, July 11, 1767. He gives the following account of the origin of his name: "My great-grandfather, John Quincy, was dying when I was baptized, and his daughter, my grandmother, requested I might receive his name. This fact has connected with my name a charm of mingled sensibility and devotion. It was filial tenderness that gave the name. It was that of one passing from earth to immortality. These have been through life perpetual admonitions to do nothing unworthy of it." He had a splendid education, not only such as is drawn from books and schools, but from the companionship of wise and distinguished men. He early entered upon a political career, and held in succession nearly every prominent office in the gift of his fellow-citizens. In personal appearance, he was of middle stature and full form; his eyes were dark and piercing; his countenance was pleasing and beamed with intelligence.

The new cabinet consisted of Henry Clay, Secretary of State; Richard Rush of Pennsylvania, Secretary of the Treasury; James Barbour of Virginia, Secretary of War; William Wirt, Attorney-General; and Samuel L. Southard of New Jersey, Secretary of the Navy.

From first to last, the administration of Adams met with determined and bitter opposition. Scarcely a suggestion made by the President was adopted. The friends of General Jackson were largely in the majority in both Houses, and believing that Adams had succeeded by means of a bargain, and being also determined to prevent his re-election and secure the triumph of Jackson, they threw discredit upon all his measures.

During this year, troubles sprang up in Georgia among the Creek Indians, with whom a treaty had been made, extinguishing their title to lands in that State, and giving them large tracts west of the Mississippi. It was claimed that the chiefs who signed the agreement were not properly authorized. An appeal was made to Washington, and the President sent General Gaines to prevent an outbreak. Meanwhile the governor of Georgia, having begun a

survey of the land, used high language toward the administration. The matter was finally allowed to rest till the meeting of Congress, when a new treaty was negotiated.

The United States having been invited to send commissioners to a congress, at Panama, of the South American provinces which had thrown off the Spanish yoke, the President accepted. During the debate upon the question in Congress, the administration was bitterly denounced. John Randolph declared, "I am defeated, horse, foot, and dragoons—cut up and clean broke down, by the coalition of Blifil and Black George—by the combination, unheard of till now, of the Puritan and the black-leg." This bitter diatribe led to a duel between Randolph and Clay, in which neither was injured, but in which their "honor was satisfied."

The question of internal improvements was vigorously agitated at this time. Large appropriations were made for a canal route across Florida; for sundry post-roads; for repairing the national road between Cumberland, Maryland, and Ohio; for improving the navigation of the Ohio River; and to the asylum for the deaf and dumb in Kentucky. The government took one hundred and fifty thousand dollars of stock in the Dismal Swamp Company; surveyed harbors on the seacoast, and deepened channels; reserved lands for seminaries of learning in Louisiana, in Florida, and in Arkansas; and granted tracts in Illinois and Indiana to aid in building canals.

The constitutionality of such appropriations, then as now, was earnestly discussed, and the opposition was vigilant and belligerent. A funny story is told in this connection. There was a bill before the Pennsylvania Legislature in regard to some public improvements, which was strenuously opposed by the member from Berks county, and with so much zeal that its passage was endangered. Nicholas Biddle, afterward President of the United States Bank, moved an amendment, appropriating ten thousand dollars for the improvement of the Alimentary Canal. The member from Berks rose instantly, and, notwithstanding the titters that grew audible over the House, declared his purpose to oppose any appropriation for the Alimentary Canal or any other canal, as it was unjust, oppressive, and unconstitutional. The amendment was immediately withdrawn and the bill passed.

The most magnificent enterprise that marked this period was the Erie Canal, to complete which took eight years of time and ten million dollars of money. An Irishman named Christopher

Colles is entitled to the credit of having made the first suggestion of this great undertaking. He came to New York before the Revolution, and in 1785 issued a pamphlet called "Proposals for the Speedy Settlement of the Western Frontier of New York." It contained a plan for the canal, but it was considered utterly impracticable. In 1810, De Witt Clinton advocated the measure in the senate of New York, and it afterward found strong supporters in General Schuyler, Gouverneur Morris, Martin Van Buren, and others. It still met, however, with opposition and ridicule. An epigram of the period, alluding to Clinton, shows something of the spirit existing:

"Oh, a ditch he would dig, from the lakes to the sea,
The eighth of the world's matchless wonders to be.
Good land! how absurd! But why should you grin?
It will do to bury its mad author in."

Work was not commenced upon it until the 4th of July, 1817, when Governor Clinton, in the presence of many thousands of citizens and amid great demonstrations of joy, threw the first spadeful of earth. Even then the people were incredulous. It was a common remark, "If I can live until Clinton's ditch is done, I shall be content." The first portion navigated by boats was the line of one hundred and seventy-four miles between Rochester-ville—now Rochester, then a hamlet of less than three thousand inhabitants—and Little Falls; the first boat passing east on the 29th of October, 1822.

On the 26th of October, 1825, the whole canal was formally opened by a magnificent celebration. The governor, State officers, and invited guests took passage from Buffalo for New York in a gorgeously-decorated boat, accompanied by a numerous fleet. As they started, the news was telegraphed in advance, by means of about fifty cannon placed ten or a dozen miles apart. An hour and thirty minutes from the firing of the first gun, the report reached New York. Along the entire route, day and night, the people were assembled to greet the excursionists. They arrived at Albany on the 2d of November, and thence all the steamboats on the Hudson River escorted them to the metropolis. One of the ceremonies near Sandy Hook was the emptying of a keg of Lake Erie water into the Atlantic, thus typifying the union of the waters of the lake with those of the ocean.

In the year 1825, the Capitol at Washington was completed.

The outer walls had been uninjured by the fire of 1814, and an architect named Latrobe was appointed by Congress to superintend its reconstruction. He remained in charge until 1817, when he was succeeded by Charles Bullfinch. The foundation of the central building was laid March 24, 1818, the entire edifice being finally finished according to the original plan. Congress in the meantime held its sessions, first in the building used by the Post-office Department; afterward in a building on the east side of Capitol Park. The latter situation was thus occupied for fifteen years, and became known as the "Old Capitol." It acquired a not very pleasant reputation during the civil war as a government prison.

MONTICELLO, THE HOME OF JEFFERSON.

In 1826, the Republic reached its semi-centennial, and the anniversary of its birthday was generally celebrated. But the occasion had other observances than the ringing of bells, the firing of cannon, or the shouts of a joyous people. On that day died the two patriots, John Adams and Thomas Jefferson. A short time before, a gentleman called upon Adams and requested a toast for a banquet on the coming celebration. "I will give you, Independence forever," said the old man. "Will you not add something to it?" asked the visitor. "Not a word," was the reply. The toast was presented at the dinner, and received with deafening cheers. Almost at the same moment, the soul of the statesman passed away. His last words were, "Thomas Jefferson still survives."

It was not so; from his beautiful home at Monticello, he had gone an hour or two before. As midnight of the 3d approached, his friends had stood, watch in hand, hoping for yet a few moments of life, so that his death might be hallowed by taking place on the 4th. Their pious wish was granted. He still lived as the slow hours wore on; and it was not till past noon that he peacefully breathed his last.

The year 1827 witnessed the building of the first railroad in the United States at Quincy, Massachusetts. It was operated by horse-power, and was three miles in length, from the granite quarries to the Neponset River. In the same year, another road, nine miles long, was laid out from the coal mines at Mauch Chunk, Pennsylvania, to the Lehigh River. The next year, the Delaware and Hudson Canal Company constructed a road from their coal mines to Honesdale, a locomotive being imported from England. It was the first steam-engine used in the United States

THE FIRST RAILROAD TRAIN IN THE UNITED STATES.

It is still in good preservation, and will be exhibited at the Centennial Exposition. Other railroad enterprises rapidly followed; notably those of the Baltimore and Ohio road, begun in 1828, and of the Albany and Schenectady, in 1830. The South Carolina road, from Charleston to Hamburg, a distance of one hundred and thirty-five miles, opened in 1833, was then the longest line in the world.

The administration was in favor of what is known as the "American System," *i. e.*, the protection of home manufactures by means of duties laid upon foreign goods. This was naturally acceptable to the East, largely devoted to manufacture; and obnoxious to the South, equally devoted to agricultural pursuits. During the year a tariff bill was passed which was so onerous that it was called in many quarters the "Bill of Abominations." We shall hear of it again in connection with the nullification acts of 1832.

The political campaign of 1828 was animated and bitter in the extreme. Although the friends of Adams put forth every effort for his re-election, he refused, with commendable delicacy, to use

the patronage or influence of the Executive to further their ends or to ensure his own continuance in the presidential chair. Many of the office-holders under him were openly at work for Jackson, and appointments were made by the President of men who were avowed friends of his opponent.

The term Federal now disappeared, the supporters of Jackson adopting the name of Democrat, and their opponents that of "National Republicans." The election resulted in the choice of Jackson for President and Calhoun for Vice-President, the former receiving one hundred and seventy-eight, and the latter one hundred and seventy-one, out of two hundred and sixty-one votes.

It is a noticeable fact that in the last three administrations, the President had been the Secretary of State for the preceding one. Clay, at this time filling the office, was said to be in "the succession." The order was now broken.

The administration of Adams had been a peaceful, and, in spite of the financial embarrassments of the country, a prosperous one. The public debt had been diminished over thirty million dollars, while there was a surplus of five million one hundred and twenty-five thousand six hundred and thirty-eight dollars in the treasury.

Andrew Jackson, the seventh President of the Republic, took the oath of office March 4, 1829; for the first time in the history of this country, the out-going President absenting himself during the inauguration of his successor. Jackson was born of Scotch-Irish parents at Waxhaw Settlement, S. C., March 15, 1767. In his youth, he experienced the bitterness of poverty and the absence of parental care. Removing to Tennessee in 1788, he speedily acquired the respect of the hardy settlers of that region, and occupied several prominent offices. He gained his wide popularity, however, as a soldier. It was on the field that he won the sobriquet by which he is best known, that of "Old Hickory."

When the people thus bestow upon a citizen a homely title, by which he is almost as well known as by his own name, it is exceedingly significant both of his character and their confidence. There are many illustrations of this in our history, such as "Tippecanoe and Tyler too," in 1840; "Old Rough and Ready," in 1848; "Buck and Breck," in 1856; and "Uncle Abe," in 1860. The familiarity is not of that kind which breeds contempt, but is magnetic and excites enthusiasm. The popular voice seems thus to cry out, "He is one of us. We will support him."

Jackson was rough, uneducated, and irascible. During the trial of Burr in Richmond, while he was haranguing a crowd, Winfield Scott, having inquired the name of the speaker, received for a reply, "A great blackguard from Tennessee, one Andrew Jackson." He was impatient of restraint, incapable of fear, and a principal in a number of duels. Yet he was affable, humane, considerate, and, at the bottom, a Christian—if not until the later years of his life a professing one, at least always having great respect for those who were religious.

While he was yet connected with the army, an officer complained to him that some soldiers were making a great noise in a tent. "What are they doing?" asked the general. "They are praying now, but have been singing," was the reply. "And is that a crime?" asked Jackson, with emphasis. "The Articles of War," said the officer, "order punishment for any unusual noise." "God forbid," replied the general, with much feeling, "that praying and singing should be an unusual noise in my camp; I advise you to go and join them."

"I arrived at his house," says Colonel Benton, "one wet, chilly evening in February, 1814, and came upon him in the twilight, sitting alone before the fire, a lamb and a child between his knees. He started a little, called a servant to remove the two innocents to another room, and explained to me how it was. The child had cried because the lamb was out in the cold, and begged him to bring it in, which he had done, to please the child, his adopted son, then not two years old."

A son of the famous Daniel Boone was once detained in Nashville for some weeks, and had taken lodgings at a small tavern. Jackson heard of it, went to Nashville, and, carrying him to his home as a guest as long as his business should keep him in that section, said, "Your father's dog should not stay in a tavern, where I have a house."

In person, Jackson was as angular as he was in character. He was tall, straight, and spare. His dark blue eyes, with brows arched and slightly projecting, possessed a marked expression, and when he was excited, they sparkled with peculiar lustre and penetration.

Jackson's election was shorn of half its brightness for him by the loss of her who would have helped him to bear the trust with fidelity and honor. His wife was one of the purest and noblest of women, and yet, in the heat of the political contest just ended,

slander had dared to sully her name. She had been the wife of a dissolute man, from whom she had obtained a divorce, immediately after which Jackson married her. A number of years later, he learned that what he had understood to be a divorce was only the granting of a petition to sue for one. He immediately procured a license, and had the marriage ceremony performed the second time. The influence she had exerted over him while she lived, seemed to strengthen and deepen when she was no longer with him, and his rough nature was chastened and softened thereby. He clung to her memory, cherishing with fondness everything that had possessed her affection, and wearing her miniature next to his heart until the day of his death. In no one way was the change in him more marked than in his language. He never again used that expletive that has become historical, "By the Eternal," nor any other that could be considered profane.

Jackson's cabinet was composed of entirely new men: Martin Van Buren of New York, Secretary of State; Samuel D. Ingham of Pennsylvania, Secretary of the Treasury; John H. Eaton of Tennessee, Secretary of War; John Branch of North Carolina, Secretary of the Navy; John M. Berrien of Georgia, Attorney-General; and it having been determined to make the Postmaster-General a member of the cabinet, William T. Barry of Kentucky was appointed to that position.

The change in the cabinet was no more complete than that which followed in the public offices of the government. Formerly displacements had been confined to the most prominent positions, but now they reached the lowest. Under Washington's administration, there had been nine officers removed, of whom one was a defaulter; under John Adams's, ten, one being a defaulter; under Jefferson's, thirty-nine; under Madison's, five, three being defaulters; under Monroe's, nine, six for cause; and under John Quincy Adams's, two, both for cause; the whole number of removals by the six Presidents being seventy-four. During the

ANDREW JACKSON.

recess, before the meeting of the Twenty-first Congress, Jackson removed one hundred and sixty-seven political opponents from office, appointing his friends to the positions. Within less than a year, four hundred and ninety-one postmasters alone were displaced.

Some politicians in whom the general had confidence, wishing him to remove the collector of the port of Salem, Massachusetts, the name of his successor was accordingly sent to the Senate. "Do you know," asked Colonel Benton of the President, "who it is whom you are about to remove?" "No," replied he, "I can't think of his name; but I know he is an incompetent man, and a New England, Hartford Convention Federalist!" "Sir," said Benton, "the incumbent is General Miller, who was a brave soldier on the Niagara frontier." Jackson excitedly exclaimed, "Not the brave Miller who said, 'I'll try,' when asked if he could take the British battery?" "The same man, sir," responded Benton. "Old Hickory" pulled a bell violently, and when the servant appeared, he said, "Tell Colonel Donelson I want him—quick." "Donelson," said the President, as soon as he entered, "I want the name of that fellow nominated for collector at Salem withdrawn instantly. These politicians are the most remorseless scoundrels alive. Write a letter to General Miller, and tell him he shall hold the office as long as Andrew Jackson lives. Stay—I'll write it myself; the assurance will be more gratifying from a brother-soldier." That promise was faithfully kept.

In September, 1829, the owner of the schooner *Michigan*, the largest and rottenest craft on Lake Erie, hit upon a plan to get it off his hands, and at the same time turn an honest penny. He induced the proprietors of hotels on both sides of Niagara Falls to buy the schooner and send it over the falls. For several days previous to the novel event, the stages and canal-boats, and wagons from the country, were crowded. Farmers left their fields, and business men their counters. On the appointed day, half a dozen excursion steamers were called into service. Each had its throng of expectant people and a band of music. The task of towing the *Michigan* to the rapids was entrusted to one Captain Rough and five oarsmen. They put up some effigies, and then let loose on board a buffalo from the Rocky Mountains, three bears from Green Bay and Grand River, two foxes, a raccoon, a dog, a cat, and four geese. When they cut the tow-line, this extraordinary crew did what many other crews have

DANIEL WEBSTER.

done—ran from one end of the deck to the other in despair. The ship started off majestically, amid the huzzas of the eager spectators who crowded the high shores on either side. She darted through the first rapids as true as any pilot could have guided her. Two of the bears then plunged into the rapids, swam to land, and were caught. The remaining one attempted to climb the rigging. As the vessel descended the second rapids, her mast went by the board. She then swung partly around and presented her broadside to the foaming waters. Here she remained stationary for a few moments, poised on the waves. Then she shot to the third rapids, where she bilged, but carried her hull, apparently whole, between Grass Island and the British shore to the Horseshoe, over which she plunged, stern foremost. The ship was dashed into a thousand pieces. The cat, the dog, and the foxes were never heard of more; but the geese were found below on the bank quietly oiling their feathers. The effigy of Andrew Jackson was also uninjured—like the geese, as some papers dryly remarked—and was greeted with shouts as it threw its arms about and knocked its knees together in the eddies.

December 29, 1829, Mr. Foot of Connecticut introduced into the Senate a series of resolutions in relation to the public lands. The discussion which followed lasted several weeks and took a wide range, including almost every issue that party feeling or political ambition could raise. Robert Y. Hayne of South Carolina, a brilliant and engaging orator, in the course of a speech, January 19th, attacked the policy of the government toward the Western States, favored the idea of giving the public lands to the settlers, and objected to a tariff in preference to direct taxation. Daniel Webster of Massachusetts replied, deprecating the light value which seemed to be placed upon the Union, and defending the tariff and the action of the East with regard to it, as well as to the public lands and all Western interests. Two days after, Hayne rejoined, declaring that Webster had once opposed the tariff which he then advocated; supporting the institution of slavery: deprecating the consolidation of the Union; asserting the right of a State to resist the execution of a law she deems unconstitutional; and taunting the East with the Hartford Convention and its opposition to the war of 1812-14. January 26th, Webster delivered his second great speech, and the one which gave him the proud title of the "Defender of the Constitution." After justifying his own course and the history of Massachusetts, he closed

with the memorable words, "Liberty and union, now and forever, one and inseparable!"

The feelings entertained by the mass of the people during this lengthy debate are well evidenced by an incident related of a farmer-friend of Webster, who regarded him with something akin to worship. He had watched the proceedings in Congress with anxious solicitude. Day followed day, and made themselves into weeks, and yet his hero had not spoken. He felt that the country's safety depended upon Webster, and his silence indicated

HAYNE AND WEBSTER.

that nothing could be said on the side of the Constitution, and portended disaster to the Republic. At length came the speech of Hayne denouncing the Union. He took to his bed, convinced that Webster was crushed. In a few days, Webster's reply was brought to him. For some time he refused to read it; but finally, glancing at a portion, he suddenly seized the paper and perused the first few calm and dignified sentences: "When the mariner has been tossed for many days in thick weather and on an unknown sea, he naturally avails himself of the first pause in the storm, the earliest glance of the sun, to take his latitude and ascertain how far the elements have driven him from his true course. Let us imitate his prudence, and, before we float further on the waves of this debate, refer to the point from which we departed, that we may at least be able to conjecture where we now are. I ask for the reading of the resolution." It was enough. In the

joy of the moment, he threw the paper high in air, and cried out to his son, "Boy, bring me my boots. Webster has spoken!" From that instant he was a well man.

During the first session of the Twenty-first Congress, Jackson used the veto-power four times, while Washington had employed it only twice during his entire presidency, and the Adamses and Jefferson not at all.

The President became personally alienated from Calhoun on learning that he had been opposed to him during the Seminole campaign; and politically, on account of his support of the doctrine of nullification. Calhoun being a candidate for the next presidency, with a strong following, a rupture arose in the cabinet, which led to the resignation of all its members. Scandal, ever busy with Jackson's private as well as public life, attributed the disagreement to the influence of Mrs. Eaton, wife of the Secretary of War, with whom many ladies, especially the wives of the Calhoun leaders, refused to associate. Jackson attempted to control these matters of social etiquette, but only aggravated the feeling.

The new cabinet consisted of Edward Livingston of Louisiana, Secretary of State; Lewis Cass of Michigan, Secretary of War; Louis McLane of Delaware, Secretary of the Treasury; Levi Woodbury of New Hampshire, Secretary of the Navy; and Roger B. Taney of Maryland, Attorney-General.

James Monroe died in New York July 4, 1831. This sad event, occurring on the fifty-fifth anniversary of the nation's birth, five years after that of Adams and Jefferson, afforded occasion for grave reflection, and seemed pregnant with some mysterious moral lesson.

In this year, John Quincy Adams took his seat in the House as representative from Massachusetts. It was the only instance that had happened of one who had been the Chief Executive afterward taking part in the deliberations of the legislative branch of the government. He was returned by his constituents eight times. The influence and fame of the "Old Man Eloquent" grew continually, in spite of his "stormy petrel" character. At his death in 1848, he had served his country in high public trusts for fifty-three years—a longer period than any other statesman in our history.

Perhaps the most important event of the year, judged by its influence in forming the germ of those dissensions that culminated

thirty years afterward, was the establishment in Boston by William Lloyd Garrison of "The Liberator," a weekly journal devoted to the advocacy of the most decided and uncompromising anti-slavery views. Its motto was, "My country is the world, my countrymen are all mankind." Though finding some sympathizers, it was condemned nearly everywhere at the North, and in the South excited the most intense exasperation. Garrison was threatened with assassination, and was in peril of his life even in Boston.

The United States Bank, the creation of Hamilton, was the custodian of the public funds and the centre of a constantly expanding paper currency. Jackson always regarded this institution as an unsound stimulus to trade, a promoter of unhealthy speculation and extravagant habits, and a huge moneyed monopoly, possessing a tremendous latent power of corruption, and capable of becoming the "scourge of the people." As its second charter would expire in 1836, a new one was granted in 1832. The bill, however, was vetoed by the President, and Congress sustained his action.

When the first charter expired in 1811, the amount of its unredeemed bills was two hundred and five thousand dollars. In 1823, twelve years having elapsed, the court decided that the stockholders should no longer be liable. A fund of five thousand dollars was, however, reserved for any instances of peculiar hardship which might arise. The whole amount presented was eleven hundred dollars, of which the greater portion was in the hands of an invalid Revolutionary soldier, and not paid until 1825. Curiously enough, a note of ten dollars was redeemed only about twelve years since.

Many of the agricultural States had protested against the tariff of 1828. In June, 1832, Congress passed a new protective bill. South Carolina instantly took the lead in opposition. Her legislature nullified the act of Congress, and prepared to resist the collection of the revenue at Charleston. Jackson at once issued a proclamation calling upon the people of South Carolina to return to their loyalty, and ordering the naval and military forces of the Republic to Charleston to enforce the laws. This prompt action put an end to the threatened secession. As a pacifying measure, Clay came forward in Congress with his celebrated "Tariff Compromise," which provided for a gradual reduction of all duties above the revenue standard. Clay, being

told that his action would injure his prospects for the presidency, nobly replied, "I would rather be right than be President."

June 21, 1832, occurred in New York the first case in this country of that scourge of mankind, the Asiatic cholera. As it swept over the land, it appalled the stoutest-hearted, and for a

HENRY CLAY ADDRESSING THE SENATE.

time carried dismay into the ranks of the medical profession. In New Orleans alone, there were sixteen hundred and sixty-eight deaths in thirteen days.

A treaty had been made with the Sacs and the Foxes, by which they agreed to cede their lands to the government and to remove beyond the Mississippi. As they were reluctant to leave, the governor of Illinois called out the militia to enforce its provisions. The Indians were exasperated, and in March, 1832, the Sacs, Foxes, and Winnebagoes recrossed the Mississippi under their chief, Black Hawk, and committed many depredations. The United States troops defeated the Indians in several skirmishes, followed them into their lurking-place, and captured Black Hawk and other chiefs. The captives were taken to the principal cities of the East, that they might see the power of the government against which they were contending. They returned home, advising their people to bury the hatchet, and the warriors accordingly retired to Iowa.

The friends of the administration were agreed that Jackson should be nominated for another term; but to decide who should have the second place, a Democratic convention, the first in this country, was held at Baltimore, May, 1832. Martin Van Buren of New York was chosen. The "National Republicans," composed of the enemies of Jackson and the friends of Calhoun, met at Baltimore December 5, 1831, and put in nomination Henry Clay for President, and John Sergeant of Pennsylvania for Vice-President.

There was still another ticket in the field, that of the Anti-Masonic party, which arose in this wise: In 1826, William Morgan of Batavia, N. Y., was taken from his home at night and never heard of afterward. The Masonic fraternity was charged with having murdered him for violating his oath and publishing the secrets of the order. Much mystery surrounds the case even to this day. At the time it caused an intense excitement. The issue between the Masons and their enemies became a political one. A party was organized, which eventually brought into prominence such men as Thurlow Weed and William H. Seward. A national convention was called at Philadelphia, which named for the presidency William Wirt of Maryland, and for the vice-presidency Amos Ellmaker of Pennsylvania.

The election gave General Jackson two hundred and nineteen votes; Henry Clay, forty-nine; John Floyd, eleven; and William Wirt, seven; for Vice-President, Van Buren, one hundred and eighty-nine; John Sergeant, forty-nine; William Wilkins, thirty; Henry Lee, eleven; Amos Ellmaker, seven. The vote of South Carolina was given to Floyd and Lee.

THE UNITED STATES BANK.

Jackson, feeling that his administration had received the unmistakable approval of the nation, struck another blow at the United States

Bank. Being informed that it was using large sums for political purposes, he conceived that the public money was unsafe in its keeping. In opposition to Congress and the advice of his cabinet, he accordingly, in 1833, removed the deposits from its vaults. A panic ensued; distress prevailed through the coun-

try ; countless petitions poured in against the measure ; Congress protested ; yet through it all the old hero struggled, confident that he was right. During the depression, two attempts were made upon his life—one by a crazy house-painter, who had been told that Jackson was the cause of his being out of employment ; the other by a naval lieutenant named Randolph. In the Senate, the President was supported by the sturdy Thomas H. Benton of Missouri and the accomplished John Forsyth of Georgia. But against these was that trio of statesmen—Clay, Calhoun, and Webster, who made memorable the age in which they lived.

Jackson's opponents now organized themselves as Whigs. The name had belonged to the patriots of the Revolution, which was not so long passed that its memories had lost their fragrance. The derivation of the term is forgotten. Among the probable ones are : a bibulous origin, from a Scotch drink of that name ; a religious one, from the initial letters of the motto of the Covenanters, "We hope in God" ; and a political one, from the Covenanters themselves, who were called Whiggamors or Whigs, and who, in 1648, marched upon Edinburgh, whence all who opposed the English court came to be called Whigs. The cardinal principles of the new party were a high protective tariff, a national bank, and a generous policy of public improvements.

The opposition procured the passage in the Senate of a resolution declaring that the President, in removing the public deposits, had assumed authority not conferred by the Constitution and laws, but in derogation of both. Three years after, a motion of Benton's was adopted expunging it from the records, and it now stands with a square of broad black lines about it, and over its face, written in bold characters, the order of the Senate directing its cancellation.

On the night of November 13, 1833, occurred the grandest display of shooting meteors on record. The falling stars filled the heavens thick as snow-flakes. Fire-balls darted through the air, one in North Carolina being as large as the moon, while at Niagara Falls another hung over the cataract, darting streams of fire into the falling waters. A Southern planter thus narrates the effect of the phenomenon on the minds of his slaves : " I was suddenly awakened by the most distressing cries that ever fell on my ears. Shrieks of horror and calls for mercy I could hear from most of the negroes of the three plantations, amounting in all to about six or eight hundred. While earnestly listening for the

cause, I heard a faint voice near the door calling my name. I arose, and, taking my sword, stood at the door. At this moment, I heard the same voice, still beseeching me to rise, and saying, "O my God, the world is on fire!" I then opened the door, and it is difficult to say which excited me the most—the awfulness of the scene or the distressed cries of the negroes. Upward of one hundred lay prostrate on the ground, some speechless, and some with the bitterest cries, but with their hands raised, imploring God to save the world and them. The scene was truly awful; for never did rain fall much thicker than the meteors fell toward the earth."

The winter of 1834-5 was remarkable for its severity. The 7th of February was long quoted as the "cold Saturday." At several places in New York, mercury congealed in the thermometers. The Chesapeake Bay was frozen over. The Savannah River at Augusta, Georgia, was coated with ice. Orange trees as far south as St. Augustine, and fig trees one hundred years old in Georgia, were killed. The snow in many of the Southern States was a foot deep.

The venerable John Marshall, for nearly thirty-five years Chief-Justice of the Supreme Court of the United States, died July 6, 1835. The President appointed as his successor Roger Brooke Taney of Maryland, who held the position until 1864; the chief judicial office of the Republic being thus in the hands of only two men for over sixty years.

This decade witnessed a complete revolution in the management of the daily press. Previous to 1833, the newspaper of the day was but a journal of opinion and fancy, rather than one of incident and fact. It was devoted to political essays; personal abuse of opponents; panegyrics on the partisan leaders with whom it happened to agree or to whom it was indebted for money or influence, and whose speeches and orations it published in full; letters from abroad and frequent fiction, with the smallest possible space devoted to actual occurrences. It was high in price, large in size, and exceedingly dull in matter. The purely literary periodical press possessed many of the same characteristics. On the 3d of September, 1833, the first number of the New York Sun was issued, at a cent per copy, by Benjamin H. Day, who, from this circumstance, is entitled to be called the father of the penny press and cheap literature in the United States. It was a small sheet, but was filled with news. Its sale

gave employment to the first news-boys whose voices were ever heard in our streets. On the 6th of May, 1835, the *Sun* was followed by the *Herald*, at the same price, published by James Gordon Bennett, who originated many of the departments now so common, such as the city news and the reports of the money market. He was the first to collect intelligence from all parts of the country. In April, 1841, the *New York Tribune* was founded by Horace Greeley. These three journals were the exponents of the new order of things in the periodical press, and speedily had followers in Baltimore, Philadelphia, Boston, and other prominent cities. Their cheapness and ability created that taste for reading which has grown into a passion and become a marked characteristic of our countrymen.

Wednesday night, December 16, 1835, a fire broke out in Comstock & Andrew's store, on Merchant street, New York. For fourteen hours it raged unchecked, destroying property to the extent of twenty million dollars, and leaving forty-five acres of land covered with ashes. But one building remained standing in the burnt district, looking in its loneliness like an oasis in a desert. It was Benson's fire-proof, copper store, at No. 83 Water Street.

Trouble had now again arisen with France. Five million dollars were due the United States for injuries done to our commerce during Napoleon's war. Payment being neglected, Jackson interfered with his sharp, stern will, ordered our minister to leave the French court, and recommended Congress to authorize reprisals. France resented this spirited action, but paid the money. Denmark, Naples, Spain, and Portugal, also, in good time, settled their bills of a similar nature.

During this year, the Seminoles in Florida, under the lead of Osceola, a half-breed of great bravery and talents, broke into open hostility. They were discontented with a proposed removal beyond the Mississippi, but the immediate cause was the seizure of Osceola's wife as a slave, while on a visit to Fort King. The chief was so defiant, that General Thompson, the government agent, put him in irons. Dissembling his wrath, Osceola consented to the treaty; but no sooner was he released than, burning with indignation, he plotted a general massacre of the whites. General Thompson was shot and scalped while sitting at dinner, under the very guns of Fort King. The same day, Major Dade, marching to the relief of the fort with over one hundred men, was waylaid near the Wahoo Swamp. In the midst of the fight, the Indians

fell back for a consultation. The troops immediately began to build a breastwork of logs, but before it was knee-high the savages returned yelling and firing, and soon carried the little entrenchment. A young officer, it is said the only one of the party not dead or mortally wounded, tendered them his sword, but was immediately shot. In the following February, General Gaines visited the scene of the massacre. He found the little breastwork, mute witness of the desperate energy of the hour, its logs pierced

THE DADE MONUMENT AT WEST POINT, NEW YORK.

with bullets, and behind it the men, kneeling or lying as they were when they received the fatal shot. The dry air of the Florida winter had preserved their bodies unchanged. He buried them all in a common grave, and placed their solitary cannon upright at the head of the mound. A beautiful monument was afterward erected at the Military Academy of West Point, to the memory of Major Dade and his heroic men.

Beaten in several engagements, the Indians fled to the Everglades. Expeditions that failed to find the enemy, and murders and surprises by an invisible foe, disheartened the army and discouraged the country. Osceola was the soul of the resistance. To every appeal for peace, he replied, "Here I hunted when a boy; here my father lies buried; here I wish to die." In October, 1837, while holding a conference with General Jessup, under a flag of truce, he was seized and taken to Fort Moultrie, where he died the next year. Colonel Zachary Taylor defeated the Indians

in a sanguinary battle, at Okechobee, on Christmas day, 1837. Treaty after treaty was made and broken; bloodhounds were imported from Cuba, to the disgust of all Christian hearts; and a fitful war was waged till 1842. Meanwhile the most of this once powerful tribe had been transported beyond the Mississippi.

The year 1835 deserves to be commemorated as the time when the Republic was out of debt. The next year, the surplus in the Treasury, about thirty-seven million dollars, was distributed among the States, on their pledge to return the amount when wanted. This influx of capital stimulated business to a hot-house growth. Seven hundred banks flooded the country with paper-money. Speculation ran riot, especially in western lands. The sales of government land increased from one or two million dollars per year to twenty millions. New cities were laid out in the wilderness, and fabulous prices were charged for building lots, which existed only on paper. Everybody could get credit, and everybody had a project for making a fortune.

Arkansas, the twenty-fifth State of the Union, was admitted June 15, 1836. It takes its name from a tribe of Indians once living within its borders. It was settled by the French, under the Chevalier de Tonti, as early as 1685, and in the transfers and cessions of territory, followed the fate of the other portions of Louisiana.

In 1836, Congress accepted the trust of James Smithson, an Englishman, conferring upon our government a legacy of five hundred and fifteen thousand one hundred and sixty-nine dollars, for the "general diffusion of knowledge among men." The Institution at Washington which bears his name was founded with the proceeds of this magnificent bequest.

At the Presidential election, Jackson's policy was once more endorsed by the people; Martin Van Buren being chosen his successor by one hundred and seventy votes out of two hundred and ninety-four. The Whigs, unable to combine, had three candidates in the field, viz., William Henry Harrison, John McLean, and Daniel Webster. There being no majority for Vice-President, the election was finally thrown into the Senate, when Richard M. Johnson of Kentucky, the Democratic candidate, was chosen.

Michigan, the twenty-sixth State of the Union, was admitted January 26, 1837. The name is derived from an Indian term signifying "Great Lake." The first white men within its borders were French missionaries, fur-traders, and Canadian voyageurs.

The oldest settlement is Sault Ste. Marie, founded by Father Marquette in 1668. Michigan formed a part of the Northwest Territory, and then of the Territory of Indiana; but in 1805 was set off by itself. Its early history is intimately connected with that of General Lewis Cass, who came to Detroit in 1815, and invested his whole fortune (twelve thousand dollars) in lands lying near the village, as it was then. Before he died, the tract was worth two million dollars. He was governor of the Territory for sixteen years, during which he was a sort of frontier king. He made and administered law; ruled over white and red men; and negotiated nineteen treaties with the Indians, buying from them great parts of Michigan, Wisconsin, and Indiana. Clad in his hunting shirt, he traversed the woods and prairies of the northwest, sometimes in a birch-bark canoe, but oftener on foot; on one occasion traveling four thousand miles in two months.

March 4, 1837, Martin Van Buren was inaugurated the eighth President of the United States. The outgoing and incoming Presidents rode together to the Capitol in a beautiful phaeton made from the wood of the frigate Constitution. In his address, Van Buren noticed the fact that he was the first Chief Magistrate born since the Revolution, and declared his intention to follow in the "footsteps of his illustrious predecessor." During the ceremony, Jackson, sitting uncovered in the genial March sun, was the principal object of regard. For once, the rising was eclipsed by the setting sun, and when, two days after, the venerable man left the Federal city, the great throng who had gathered to see him depart, were too full of regrets to speak, and gazed on him in silence as he lifted his hat from his white locks, and with his hand waved them an adieu. Something of the same feeling, amounting almost to reverence, fills the hearts of American citizens even now, at the mention of the name of Andrew Jackson.

Van Buren was of Dutch descent, and was born at Kinderhook, N. Y., December 5, 1782. He early fitted for the bar, but the natural bent of his mind was toward politics, in which he soon rose to an admitted leadership. In his own State, he reduced the management of his party to a science, systematizing it as thoroughly as an army, and making the most perfect organization ever known in this country. If Clay, Calhoun, and Webster rank among the first statesmen of the time, Martin Van Buren is entitled to a place among its most expert and successful politicians.

Financial ruin was the legacy left by the preceding administration. Speculation had begotten extravagance. Foreign goods had been imported heavily. These had to be paid for in gold and silver, which were sent abroad in large quantities. Just before the close of his term, Jackson issued the famous "specie circular," requiring payments for the public lands to be made in hard money. This swept the gold and silver into the Treasury. Then came the inevitable crash and the panic of 1837, with the financial ruin of hundreds and thousands of business men. During the first three weeks in April, two hundred and fifty houses in New York stopped payment. In two days, the failures in New Orleans reached twenty-seven million dollars. Property of all kinds declined in value. Eight of the States in part or wholly failed. Even the United States government could not pay its debts. Consternation seized upon all classes. Confidence was destroyed, and trade stood still.

After the dissolution of the United States Bank, the State banks were used as places of deposit for the public funds. Van Buren's favorite plan was the establishment of the sub-treasury system now in use. The measure was not passed until near the close of his term, and was one of the chief causes of his failure to be re-elected, as the moneyed interests of the country unitedly opposed the scheme.

A movement was now in progress in Canada looking to a separation of that colony from the mother country, and many of our people were disposed to assist their neighbors over the line. The President, as the rights of neutrality demanded, issued a proclamation forbidding any of the citizens of the United States from taking part in the conflict, and warning them that if they did, they should be left to the mercy of the government whose dominions they were invading. A body of American sympathizers having taken possession of Navy Island in Niagara River hired a steamer called the *Caroline* to convey their provisions and war materials. On the night of December 29, 1837, a party of British troops attempted to seize this vessel at her moorings at Schlosser. A desperate fight ensued; but she was at last set on fire and left to drift over the falls. A cannonading was carried on for some time between the adventurers on Navy Island and the British troops on the Canadian shore. A sufficient force to dislodge the so-called patriots having collected, they forthwith decamped. Other conflicts took place at various points along the

line. At first, doubtless, many joined the cause from a love of liberty, but soon the enterprise degenerated into a scheme of bold outlaws longing for plunder and violence.

The year 1839 saw a great advance in ocean navigation. During the summer, the steamer *Great Western*, built in England, the first vessel designed expressly for ocean traffic, and the first one on which the sails were regarded merely as auxiliary, arrived in the harbor of New York.

WILLIAM HENRY HARRISON.

The Democrats renominated Van Buren for the Presidency, but chose no Vice-President. The Whigs held at Harrisburg, December 2, 1839, one of the most memorable political conventions of our history. Success at various State elections augured victory in the next presidential campaign. A nomination, therefore, seemed almost equivalent to a final decision. The prominent candidates were Henry Clay, William Henry Harrison, and Winfield Scott. At first, Clay received a plurality of votes; but after three days balloting, Harrison was nominated; John Tyler of Virginia was placed second on the ticket. Clay's friends insisted that he was beaten by trickery. The truth, however, was that while his popularity was unquestioned, his action upon the

tariff of 1833 was thought to threaten his success at the polls.

"Give Harrison a log-cabin and a barrel of hard cider," said some of his Democratic opponents, "and he will never leave Ohio to be President of the United States." His supporters caught up this expression, and log-cabins and hard cider straightway became Whig watchwords. The name of the prophet's town (see page 370) was applied to the victor himself, and the jubilant refrain,

"Tippecanoe, and Tyler too,
And with them we'll beat little Van,"

was shouted in song all over the land. The party headquarters in

every town were located in a log-cabin, the "latch-string" was out, and the cider-barrel on tap for all. A miniature log-cabin became a favorite badge, and was worn as an ornament by Whig ladies, who boasted that their candidate did not occupy a palace and use gold spoons and forks, but was content to live in a cabin and drink hard cider. Mass meetings and political processions then first became general, and aroused the greatest enthusiasm. This canvass, therefore, marks an era in the method of conducting elections in this country.

Though Van Buren came into office with a heavy majority, the people denied him a re-election by almost as strong an expression of their new preference. He received only sixty votes, while Harrison and Tyler obtained each two hundred and thirty-four. Such a signal revulsion has rarely occurred in the political history of the country. After controlling the government for a continuous period of twelve years, the Democratic party found itself driven from power, and its old opponent installed in its place.

THE BIRTH-PLACE OF MARTIN VAN BUREN.

CHAPTER XII.

CULMINATION OF DOMESTIC DIFFICULTIES.

1840-60.

WILLIAM HENRY HARRISON, the ninth President of the United States, was inaugurated March 4, 1841. His popularity was manifested in other ways than by the large vote he received at the polls. It has been the custom to name children after those persons who were especially prominent at the time of their birth or christening. In any community, one can thus shrewdly conjecture the ages of a large propor-

tion of the people on learning their Christian names. The generations of Washingtons, John Adamses, and Jeffersons have nearly run out, but the Andrew Jacksons and William Henrys or William Henry Harrison's still flourish among the middle-aged. That the latter has been used as a Christian name more extensively than any other, is an indisputable evidence of the personal popularity of "Old Tippecanoe." Never had the national capital beheld such a crowd as thronged to witness his inauguration. An immense procession of civic and military societies and citizens escorted him from his hotel to the Capitol. Harrison himself was mounted on a white charger, and was surrounded by officers and soldiers who had served under him in the war of 1812-14.

There was something about the new President that attracted every one who came into his presence, inspiring at once confidence, respect, and affection. He was tall, slender, and pecu-

liarly graceful in his movements. He had a fine dark eye, remarkable for its keenness, fire, and intelligence; while his countenance was strongly expressive of the vivacity of his mind and the benevolence of his character.

General Harrison was born February 9, 1773, at Berkeley, Va. Early losing his father, he was left to the guardianship of Robert Morris. He had begun to prepare for the practice of medicine, when the Indian barbarities along the frontier aroused his military spirit, and he applied for a commission to Washington, who had intimately known his father and family. In 1795, he was made captain, and was placed in charge of Fort Washington, on the site of the present city of Cincinnati. Here he wooed and won the "sweet Anne Symmes," daughter of the proprietor of the "Great Miami Purchase," then living in a spacious log-house at the North Bend of the Ohio. The father objected to the match; but returning home one day after a brief absence, he learned that Harrison had meanwhile wedded his daughter. "Well, sir," he said, somewhat sternly, "I understand you have married Anne." "Yes, sir," responded Harrison. "How do you expect to support her?" the father inquired. "By my sword and my own right arm," quickly responded the young officer.

Harrison was not a politician, and, in making his appointments, he complained bitterly of party tyranny. He especially disliked Henry Clay, who, when Secretary of State, had repulsed his application for an appointment to a diplomatic mission. It is said that Clay told him that he was the "most importunate office-beggar that the head of a department was ever tormented by."

The governorship of Iowa had been pledged by Harrison to John Chambers, the suitor for the hand of his son's widow. Daniel Webster, then Secretary of State, had also promised it to General Wilson of New Hampshire. At a cabinet meeting, the President was informed that the members had agreed to support their colleague. "Ah! that is the decision then?" asked Harrison. Receiving an affirmative reply, he wrote a few words on a slip of paper and handed it to Webster to read aloud. That gentleman glanced it over and seemed a little embarrassed, but commenced, "William Henry Harrison, President of the United States——" The general, rising to his feet, interrupted him with, "And William Henry Harrison, President of the United

States, tells you, gentlemen, that John Chambers shall be governor of Iowa." And he was.

Harrison was not destined to enjoy long the position which his fellow-citizens had so almost unanimously conferred upon him. After a brief illness, he died on Sunday morning, April 4th, just one month after his inauguration. His last words, spoken as if to his successor, were, "Sir, I wish you to understand the principles of the government. I wish them carried out. I ask no more." It was the first time in our history that a President had died in office; and the news was received with every demonstration of regard and mourning.

THE TOMB OF HARRISON.

Among the causes popularly assigned for the death of Harrison, were the importunities of office-seekers and the persistent hand-shaking, so characteristic of our country. The truth is, he was a feeble old man at the time of his election. He reached the capital in the midst of a driving snow-storm, and walked from the depot to his hotel with head uncovered. So broken-down was he by excitement, fatigue, and exposure, that during the inauguration ceremonies it became necessary to remove him to a side-room, and bathe his temples with brandy preparatory to his taking the oath.

John Tyler succeeded to the presidential chair, being sworn into office the second day after Harrison's death. He had shed tears at the Harrisburg Convention on the failure of that body to nominate Henry Clay. Among the Whigs, there was much surprise shown at his selection; and it had been a matter of wonder to the thoughtful that a convention so prudent and conservative should have chosen such an obstinate obstructionist. "Why,"

said Adams, "this man stood up alone in the Senate, and opposed Jackson's force proclamation, resisting the united body at midnight, prompted by some whim that nobody could fathom."

Tyler was the sixth President of the United States born in Virginia. He was graduated at William and Mary College, and prepared himself for the bar. He served his State as a member of legislature, as Governor, and United States Senator. When the British were in the Chesapeake Bay, during the War of 1812, he raised a company of soldiers to protect his neighborhood. The troops were never brought into action, and his military career was a short and bloodless one. From this circumstance, he obtained the title of "Captain Tyler," often applied to him in ridicule. Tyler was rather tall and thin, with light complexion, blue eyes, and prominent features. His manners were plain and affable, and in private life he was amiable, hospitable, and courteous.

His administration seriously disappointed the expectations of the party which had elevated him to power. Upon the question of a re-charter of the United States Bank, he was speedily in antagonism with Congress. A bill reviving that institution being vetoed, Congress passed another based entirely on the President's suggestions, and complying with all his requirements. His veto of this caused the resignation of every member of the cabinet except Webster, then Secretary of State. He remained in order to complete the delicate and important negotiations then pending with England concerning the northeast boundary between Maine and New Brunswick. The Ashburton Treaty, concluded in 1842, settled this question, and redounded greatly to the credit of Webster. He then, also, retired from the cabinet. The whole country was thrown into a white heat of excitement over this conflict between the executive and the legislative branch of the government.

While Tyler thus lost the confidence of the party by which he was elected, he failed to gain that of his political opponents. He assumed a style too aristocratic to please the taste of the times. He permitted himself to be called in conversation "Your Excellency," as a matter of right. His coach was drawn by four horses, while two, and sometimes one, had sufficed for his predecessors. This was said, however, to have been prompted less by personal vanity than a desire to gratify his young wife. For, although of mature age, he was married during his term of office, the only event of the kind that has yet occurred in our history.

In 1842, there was a strange outbreak in the State of Rhode Island, known as "Dorr's Rebellion." The government of that State was based on the charter granted by Charles II., the elective franchise being limited to those holding a certain amount of real estate. Thomas Wilson Dorr, favoring a more liberal suffrage, called a convention which framed a new constitution. It was ratified by fourteen thousand votes; a new assembly was elected, and Dorr was chosen Governor. He attempted to take possession of the capital by force, but was resisted by the charter party, led by Governor Samuel W. King. Dorr drew up his little army on a hill. Pointing to the State troops, who were advancing, he urged his men to fight until the last extremity, and, if compelled to retreat, to retire in good order, and with their faces to the foe; adding in a low voice, "As I am a little lame, I guess I will go now." The civil war inaugurated in this spirited manner proved a bloodless one. In three days the matter ended. Dorr fled to Connecticut. The authorities of Rhode Island offering a reward of four thousand dollars for his apprehension, he was arrested, tried for treason, and sentenced to imprisonment for life. He was pardoned, however, in 1847, and afterward restored to citizenship. He died in 1854, but he had lived to see his State under a liberal constitution, and his party in legal possession of the government.

The Anti-Rent difficulty in New York, at this time, attracted much attention. Lands belonging to the great patroon estates (page 56) were held on a kind of feudal privilege, the rent being merely nominal, as a handful of wheat or a fat chicken per acre. Persons had occupied these farms for a series of years, had improved them with buildings and fences, and in many instances no rent had been demanded. When the owners, their agents, or those to whom they had disposed of their interest, at length asserted their claims, there arose a great outcry. Associations were formed, and, in some cases, armed resistance was offered by bands of persons disguised as Indians. The difficulty was carried into politics, and then into the courts. The State Constitution of 1846 abolished all feudal tenures, and forbade the leasing of agricultural lands for a period exceeding twelve years.

The Mormons also came into prominence about this time. Their founder was Joseph Smith of Palmyra, New York. He claimed to have had, on the night of September 21, 1823, a supernatural revelation, by which he was directed to a spot where he

VIEW OF NAUVOO CITY.

found buried a series of golden plates covered with inscriptions, which he translated by means of two transparent stones (Urim and Thummim) discovered with them. The result was the Book of Mormon, said to be the history of the Jews who settled this continent anterior to the Indians. Going west in 1831, with a few converts, he settled at Kirtland, Ohio, which was to be the seat of the New Jerusalem. Difficulties having arisen, the whole body of believers finally fled to Missouri. Bitter conflicts ensued with the State authorities; the militia was called out, and the Mormons were forced to leave. They were kindly received in Illinois, where they built the city of Nauvoo, and laid the foundation of a temple. Incurring again the enmity of their neighbors, and coming into conflict with the laws, fresh difficulties arose. Smith surrendered himself to the authorities, but was murdered by a mob. Brigham Young was then chosen president of the body. In 1846, the city was bombarded for three days. The Mormons, driven out at the point of the bayonet, went first to Council Bluffs, Iowa. Thence, in 1847-8, they crossed the plains to Salt Lake Valley, where they established a flourishing colony. The Mormons accept the Holy Bible as received by all Christian people, but believe the Book of Mormon to be an additional revelation, and also that their chief or prophet receives direct inspiration from God. They practice polygamy, claiming

that the Scriptures justify, while one of their revelations directly commands it.

A melancholy catastrophe occurred February 28, 1844. The President and his cabinet, with a number of senators and representatives and distinguished officers, had gone on board the steamship Princeton, lying in the Potomac, to witness the experimental firing of a large gun, called the "Peacemaker." Unfortunately, it exploded, killing Abel P. Upshur, Secretary of State, and Thos. W. Gilmer, Secretary of the Navy. The former had been in office less than a year, and the latter only thirteen days. The shattered remains of the gun were deposited in the Brooklyn Navy-Yard, and remained there for many years. To one asking of the soldier on duty, what they were, he always replied that it was the old Peacemaker, called so because it made pieces of everything it was aimed at, and finally made pieces of itself.

In 1844, Caleb Cushing, our commissioner to China, negotiated a valuable treaty with that country. The United States was the first Christian government permitted by the "Celestials" to establish itself within their borders.

While crossing the ocean in the autumn of 1832, there came to the mind of Samuel F. B. Morse the conception of the magnetic telegraph. Scientific men had gathered all the material for this invention. It was his to make it practical, and thus reap the harvest of their sowing. The story of his long struggle to bring his discovery to public notice, and finally the appropriation of thirty thousand dollars by the Congress of 1842-3, near midnight of its closing session, form a thrilling episode not only in the history of our country but of the whole world. In 1844, an experimental line was completed between Washington and Baltimore. On the 27th of May the first message ever forwarded by a recording telegraph was sent in the sublime words, "WHAT HATH GOD WROUGHT?" It was dictated by Miss Ellsworth, who had brought to Professor Morse, in his discouragement, the news of the appropriation by Congress.

In May of this year, the Democratic Convention met at Baltimore, and nominated for President, James K. Polk of Tennessee, and for Vice-President, George M. Dallas of Pennsylvania.

The first public messages ever sent by telegraph were forwarded during this convention. They were a notice to Silas Wright, in Washington, of his nomination for the office of Vice-President of

the United States, and his response declining it. Hon. Hendrick B. Wright, in a letter to Benson J. Lossing, says: "As the presiding officer of the body, I read the despatch; but so incredulous were the members as to the authority of the evidence before them, that the Convention adjourned over to the following day to await the report of a committee sent to Washington to get *reliable* information upon the subject."

The Whig candidates were, for President, Henry Clay, and for Vice-President, Theodore Frelinghuysen of New Jersey. The friends of Tyler, principally office-holders, placed him in nomination, but he was forced to decline, appealing, as he said, "from the vituperations of the present day to the pen of impartial history." The Anti-Slavery party put in the field for the presidency James G. Birney of Michigan.

The question of the campaign was the annexation of Texas, which had applied for admission to the Union. The result was the triumph of the Democrats, who had unhesitatingly accepted this issue. There were enough votes in New York State given for the Anti-Slavery candidate to turn its electoral votes for Polk and Dallas; making their vote one hundred and seventy.

Florida, the twenty-seventh State of the Union, was admitted March 3, 1845. Its name is derived from the Spanish word meaning *blooming*. The country was settled by the Spaniards, and remained in their possession, except between 1763 and 1783, when it was held by Great Britain, until 1819, when it was ceded to the United States.

Among the last acts of Tyler's administration was the approval of the joint resolution of the two Houses of Congress providing for the annexation of Texas, though the formal admission of the Lone Star State dates December 29, 1845. Texas was settled by the Spaniards in 1715 and called the New Philippines. Several missions were established, but the Comanche and Apache Indians were the terror of the border, and hindered the progress of the country.

Many instances are given of the desperate courage of these tribes. After a battle in which the Comanches were severely beaten, one of the chiefs shut himself with his squaw in an old Spanish house, and refused to surrender. Efforts were made to spare him, and the prophet of his tribe was sent to assure him that every avenue of escape was cut off. His reply was an arrow shot among the troops, killing one of their number. Composition

balls were thrown into the house through the roof, setting fire to the building. Suddenly he appeared at the open door, and with desperate energy rushing forth, nearly succeeded in making his escape. He dealt death-blows to the last, slaying three men before he was shot. His squaw having been killed, he had buried her, placing his warrior's saddle at her head.

When Louisiana was ceded to the United States in 1803, Texas became a disputed territory, as the dividing line between

HOUSE IN WHICH THE FIRST CONGRESS OF TEXAS MET.

the Spanish and French possessions had never been definitely determined. For years the country was without any settled government. Almost the sole judiciary was "Judge Lynch," and the only protection for well-disposed settlers was extemporized "vigilance committees." Its people were like those who gathered about David in the wilderness—"every one that was in distress, and every one that was in debt, and every one that was discontented." Whenever a man in the States, unfortunate through imprudence or design, or sought after for crime, suddenly disappeared, there were usually left behind him the cabalistic letters G. T. T., which, translated, meant, Gone To Texas.

In 1820, Moses Austin of Durham, Conn., obtained a grant of land from the government of Spain for the purpose of making a settlement. He did not live to complete his design, but his son,

with a party of immigrants, founded the city which bears his name. In 1830, there were twenty thousand Americans in the State. Meanwhile, Mexico had thrown off the Spanish yoke. The authorities, jealous of the growing prosperity of the Texans, forbade further immigration. Various oppressive acts followed, until the settlers were driven to declare their independence. Santa Anna, having set up a republic in Mexico, tried to subdue Texas, but his army was defeated at Gonzales October 2, 1835, and a few days after at Goliad.

November 22, 1835, a convention at San Felipe organized a regular government. In this body Sam Houston made his appearance. He was a Virginian by birth, but removed to Tennessee with his widowed mother, and for a long time lived among the Indians as an adopted warrior. When leaving to seek his fortune in Texas, he said to a friend, "Elias, remember my words. I will bring that nation to the United States, and if they don't watch closely, I will be the President of the White House yet."

When Austin resigned his position as commander of the Texan forces, Houston was placed at their head. He soon took the citadel of Bexar—the Alamo—and dispersed the entire Mexican army.

Santa Anna now invaded the country with nearly eight thousand men and laid siege to the Alamo, then held by only one hundred and forty Texans under Colonel Travis. The place was taken by storm, the Mexicans losing sixteen hundred soldiers. All the garrison fell fighting at their posts except seven who were put to the sword after having surrendered. Among them was David Crockett, the famous backwoodsman and hunter. Santa Anna then attacked Colonel Fanning, who was stationed at Goliad with five hundred men. Overwhelmed by superior forces, the soldiers surrendered on condition that they should give up their arms and return to the United States. In spite of this agreement, they were all massacred in cold blood.

General Houston, with the main army of the Texans, was brought to bay at San Jacinto April 21, 1836. He had only seven hundred and eighty-three men all told, few of whom had ever seen a battle. Charging with the cries "Remember the Alamo! Remember Goliad!" he drove the Mexicans to flight, killing six hundred and thirty and capturing nearly all the rest. The next day Santa Anna was taken while endeavoring to escape.

Houston rebuked him for his perfidious massacres, but protected him from the revenge of the army.

A treaty made with the captive general secured the independence of Texas. It was afterward repudiated by the Mexican government, which still claimed the country. Houston was elected President of the new Republic, being inaugurated October

SANTA ANNA REBUKED BY HOUSTON.

22, 1836. The next year, a proposition was made for admittance into the United States; but it was declined by President Van Buren. A similar overture in 1844 received a more favorable reply, and on the 4th of July, 1845, a new constitution was framed preparatory to the admission of the State as the twenty eighth of the Federal Union.

March 4, 1845, James Knox Polk was inaugurated the eleventh President of the United States. He was born in Mecklenburg county, N. C., November 2, 1795. His family name was originally Pollock. He early removed to Tennessee, which State he represented in the House for fourteen years, being speaker twice. Having declined a re-election, he was chosen governor.

His nomination for the presidency was accidental, the convention on the first ballot not giving him a single vote. He seemed to consider his selection, however, a personal triumph over Van Buren, who was strongly urged for the nomination, and his

appointments were apparently based on this view. He also manifested a desire to show that he was not under the influence of General Jackson, although, as that hero and patriot had been called "Old Hickory," so was Polk termed "Young Hickory." He gave to James Buchanan the place of Secretary of State, notwithstanding Jackson had said to him during a visit at the Hermitage, "Don't trust Jeems Buchanan; I caught him in a falsehood once myself." He also appointed as Secretary of War Governor William L. Marcy of New York, because of his enmity to Van Buren.

Polk's manner of living was simple in the extreme. A foreign gentleman of culture, who visited at the White House during his administration, has left the following description: "The saloon might be taken for that of a retired wood-merchant. An old piano, which has seen several generations of presidents and lady-presidents, a few straw chairs, six mahogany arm-chairs, two sofas, a lamp, curtains of white muslin, a crystal lustre, the portrait *obligato* of Washington—this is all. Mrs. Polk does the honors of this sumptuous saloon with a kindness which merits better furniture. She rises, converses, shakes hands, is very amiable, and, above all, she endeavors to be so. As to the President's equipages, they are far from requiring a numerous crowd of coachmen, valets, and grooms. If he orders the horses to be harnessed, his orders run no hazard of being misinterpreted; he owns nothing but a carriage open to the wind, which is defended from the rain, the sun, the cold, only by flying curtains of leather. Two peaceable horses draw his vehicle."

Speaking of an interview with the President, he says, "As soon as the office-seeker had retired, the President rang the bell for his negro. Receiving no answer, Mr. Polk, suspecting the difficulty, came himself to meet the visitor, and this without the slightest display of anger or ill-humor. Mr. Polk is not tall; his gray eyes are quick and animated; his manners are those of a gentleman; his smile is intelligent and arch. He gave the visitor his hand, and made him sit beside him at a table, entering into conversation at once, for one can converse with the President of the United States. In Europe it is different; on similar occasions one replies, but does not converse. From time to time he interrupted himself, and turned aside his head to obey a necessity as inexorable for a President who chews as for the humblest citizen."

June 8, 1845, Andrew Jackson died in his seventy-ninth year.

His last hours among the living were calm and peaceful as was the holy day on which he passed away, and he left a memory that is as precious as his life was noble and honorable.

The naval school at Annapolis was formally opened during this year. Thus was laid the foundation of an institution for the instruction of officers for the navy, of which the country has often since had reason to be proud.

Two troublesome affairs had been left on Polk's hands by the preceding administration. One of these was the boundary line between Oregon and the British possessions. During the last presidential campaign, "Fifty-four forty, or fight!" had been a popular alliterative cry; our government claiming northward to that parallel of latitude. The Democratic party was pledged to demand "the whole or none" of that vast region. Fortunately, wiser counsels prevailed, and a compromise was effected, the boundary line being fixed at the forty-ninth degree.

The difficulty with Mexico growing out of the annexation of Texas was not so easily arranged. In anticipation of trouble, Brevet-General Zachary Taylor, then stationed at Fort Jessup, Louisiana, had received orders to form an "army of occupation." In August, 1845, he advanced with about four thousand men to Corpus Christi, at the mouth of the River Nueces, which was claimed by Mexico to be the western boundary of Texas. This precautionary measure was not intended by our government as a hostile demonstration, strict orders having been given to General Taylor not to commit any overt act. Meanwhile the Mexican minister had demanded his passports.

In January, 1846, General Taylor was directed to move his forces to the Rio Grande, the boundary claimed by Texas and our government. Greeley asserts in his "American Conflict," that the President and his cabinet shrank from the responsibility of this step, but hoped Taylor would take one of the numerous hints which they gave him to that effect. He, however, disregarded them, and only acted on positive orders. March 28th, he arrived at the east bank of the river, where he built a fort (afterward called Fort Brown), directly opposite and within cannon-shot of Matamoras. Thereupon General Ampudia, in command of the Mexican forces, ordered him to retire to the River Nueces within twenty-four hours, "else arms and men alone must decide the question." Taylor received the message with the grim satisfaction that every warrior feels who scents the battle from

afar. A few days afterward, General Arista, who succeeded Ampudia, notified General Taylor that "he considered hostilities commenced, and should prosecute them." The Mexican cavalry were scouring the country in all directions. Falling in with Colonel Cross, who was out riding beyond our lines, they stripped him of his accoutrements and brutally murdered him, pounding out his brains with the butt-end of a pistol. Captain Thornton, being sent with a small body of dragoons to search for him, was attacked, and the whole party were killed or captured. This was the first blood shed in the war.

Taylor's depot of supplies was at Point Isabel, about twenty miles east of his camp. Fearful lest this might be captured, he hastened thither with the bulk of his army, leaving at the fort only three hundred troops under Major Brown. Having secured his supplies, he set out on his return the same evening with about two thousand men and ten cannon. Reaching Palo Alto about noon the next day, he came upon the Mexicans, six thousand strong, drawn up in admirable order to oppose his progress. The conflict lasted all the afternoon, but the American artillery, at the risk of having their caissons blown up, dashed off into the burning prairie, and under cover of the smoke, which the wind blew into the faces of the enemy, took a position where they could enfilade the Mexican ranks, and thus force them to a hasty retreat. Our loss was forty-seven wounded and nine killed, including Major Samuel Ringgold, who was universally beloved. "Leave me alone," said he to his brother-officers who gathered around him when he was wounded; "you are wanted forward."

About four o'clock the next afternoon, May 9th, Taylor came again upon the enemy at Resaca de la Palma. They were reinforced and in great ardor, strongly posted in a ravine, about sixty yards wide, flanked by dense chaparral—matted shrubs of prickly cactus. Taylor was anxious to reach the fort that evening, as he distinctly heard its guns only three miles away. After a few moments to rest his troops, he opened the battle, outnumbered though he was quite three to one. The Mexican guns were splendidly served, and our forces were severely cut up. The fate of the day depended upon their capture. Taylor accordingly rode forward to his dragoons and shouted to their leader, "Captain May, you must take that battery!" "I will do it, sir," was the gallant reply. Placing himself at the head of his command, May dashed forward through a fire that cost him half his men, leaped over the cannon,

sabred the gunners, and captured their commander, General La Vega, as he was in the act of firing a gun. The infantry followed up the attack. The Mexicans fled pell-mell, and many were lost in crossing the river.

On reaching the fort, everything was found safe, though the garrison had sustained a heavy bombardment, and its heroic com-

CAPTURE OF THE MEXICAN BATTERY BY CAPTAIN MAY.

mander had fallen. In his honor, it was called Fort Brown. In a few days the Americans crossed the river, and occupied Matamoros.

With the first shot of the war had commenced those horrible atrocities on the part of the enemy which have made the name of Mexican almost synonymous with cruelty and barbarity. The bodies of the dead on the battle-field were stripped and mutilated in a dreadful manner. General Taylor called the attention of the Mexican commander to the matter, and received for reply that "the rancheros and the women who followed the army did it; and he could not control them." General Taylor replied, "I am coming over, and will control them for you."

President Polk, early in May, announced to Congress that Mexico had "invaded our territory, and shed the blood of our fellow-citizens on our own soil." He was at once authorized to accept fifty thousand volunteers. Ten millions of dollars were

placed at his disposal. An outburst of patriotic fervor swept over the country. Three hundred thousand men offered their services.

The plan adopted by the military authorities was to attack Mexico on three different lines. One column, under Taylor, was to advance from Matamoras; another, under General Kearney, was to march through New Mexico to California; and a third, under General Wool, was to conquer the northern provinces of Mexico.

In September, Taylor advanced from Matamoras with six thousand troops. On reaching Monterey, he found this city strongly fortified and garrisoned by ten thousand men, eager to avenge the disgrace of Palo Alto and Resaca de la Palma. Taylor quickly laid his plans. General Worth was sent to carry the Saltillo road in the rear of Monterey. Opening a new path over the mountains, he captured the fortified heights guarding that route, the Bishop's Palace—a stone building obstinately defended—and in two days had reached the walls of the city and cut off its supplies. The grand assault was made on the 23d. Breaking down the doors, the troops entered the houses, dug their way with crowbars from building to building, and ascending to the flat roofs fought hand-to-hand with the terrified enemy. In the face of a tremendous fire from the barricades and artillery, which swept every street, the army at last made its way to the Plaza, and unfurled the stars and stripes. Ampudia, the Mexican commander, thereupon surrendered the city, and his men were allowed to march out with the honors of war. General Taylor being assured that Mexico would soon make proposals of peace, granted an armistice for eight weeks.

A correspondent of the Louisville Courier wrote a touching incident of this battle. He says: "In the midst of the conflict, a Mexican woman was busily engaged in carrying bread and water to the wounded men of both armies. I saw the ministering angel raise the head of a wounded man, give him water and food, and then bind up the ghastly wound with a handkerchief she took from her own head. After having exhausted her supplies, she went back to her house, to get more bread and water for others. As she was returning on her mission of mercy, to comfort other wounded persons, I heard the report of a gun, and the poor innocent creature fell dead. I think it was an accidental shot that struck her. I would not be willing to believe otherwise. It made me sick at heart; and, turning from the scene, I involun-

tarily raised my eyes toward heaven, and thought, Great God ! is this war? Passing the spot the next day, I saw her body still lying there, with the bread by her side, and the broken gourd, with a few drops of water in it—emblems of her errand. We buried her; and while we were digging her grave, cannon-balls flew around us like hail.”

The military operations at the west had been no less brilliant and successful. General Kearney started from

A SCENE AT MONTEREY.

Fort Leavenworth with one thousand men, and after a long and weary march of nine hundred miles, reached Santa Fé. New Mexico submitted without a blow. After organizing a system of government, Kearney then set out with his command for California. He had proceeded three hundred miles, when he met Kit Carson, who informed him that Colonel Fremont and Commodore Stockton had already conquered that province. Sending back the most of his men, he kept on toward the Pacific with one hundred dragoons.

Colonel Doniphan with the main body of Kearney's command marched directly across the country from Santa Fé, and finally joined General Wool at Saltillo. *En route* he fought two battles against a force quadruple his own, and conquered Chihuahua, a city of forty thousand inhabitants. When his soldiers' term of service

expired, he led them back to New Orleans and discharged them. They had been enlisted, marched five thousand miles, and disbanded, all within a year. It was one of the most eventful campaigns on record.

General Wool, the inspector-general of the army, had the care of all the volunteers. After collecting recruits and forwarding reinforcements to Taylor, he set out from San Antonio, September 20th, with about three thousand raw troops. These he disciplined and trained as he marched over desert regions and through mountain gorges. The last day of October he emerged at Monclova, seventy miles from Monterey, with a "model army."

The first year of the war had thus proved most successful for the arms of the United States. Meanwhile, however, the opposition to the annexation of Texas, growing out of the fact that its accession had increased the slave-holding area, had not ceased. August 8, 1846, the President addressed Congress for an appropriation of three million dollars, to enable him to negotiate a treaty with Mexico. To the bill granting this request a proviso, drawn by Judge Brinckerhoff of Ohio, was attached as an amendment. It was to the effect that "There shall be neither slavery nor involuntary servitude in any territory which shall hereafter be acquired or be annexed to the United States, otherwise than in the punishment of crime, whereof the party shall have been duly convicted." Also, "That any person escaping into the same, from whom labor or service is lawfully claimed in any one of the United States, such fugitive may be lawfully reclaimed and conveyed out of said territory to the person claiming his or her labor or service."

It was known that the introduction of this amendment would be repugnant to the feelings of the Speaker of the House, and it was apprehended that he might not recognize Brinckerhoff, who was one of the most pronounced anti-slavery men in Congress. Copies of the proviso were, therefore, distributed among members favorable to its passage, David Wilmot of Pennsylvania being among the number. He happened to catch the Speaker's eye, and this famous proposition received his name. It passed the House, but failed in the Senate.

The Mexicans had no desire for peace. They occupied the breathing-spell granted by Taylor in making preparations for a more vigorous war. Santa Anna, who had been in exile at Hayana, was recalled. The armistice having expired, Taylor

morning of the 22d of February. The battle cry was, "The memory of Washington." The Mexicans began the engagement, and there was desultory fighting through the day. At two o'clock the next morning, Santa Anna attempted to turn Taylor's right flank; then he launched a column on the centre; next he dealt a heavy blow on the left flank; finally he led his entire reserve in a terrific charge upon the centre, hoping to carry the gorge, the key to Taylor's position. The Americans were almost overwhelmed by their assailants; but the artillery held its ground, and the Mexican lancers, torn to pieces by repeated discharges of grape-shot fired at point-blank range, broke and fled. Night came, and the American army lay on its arms. Morning revealed the enemy in full flight.

While the Mexicans were, in general, cruel and treacherous in their treatment of our soldiers, living and dead, it is pleasant to note, for the sake of our humanity, some of the exceptions which occurred. One has already been mentioned. Whittier, in his "Angels of Buena Vista," commemorates another. While the conflict was raging, some Mexican women were hovering near, waiting for an opportunity to minister to the wounded. After the firing ceased, they ventured on the field,

"And their holy task pursued,
Through that long, dark night of sorrow, worn, and faint, and lacking food;
Over weak and suffering brothers with a tender care they hung,
And the dying foeman blessed them in a strange and Northern tongue.

"Not wholly lost, O Father, is this evil world of ours;
Upward through its blood and ashes spring afresh the Eden flowers;
From its smoking hell of battle, Love and Pity send their prayer,
And still thy white-winged angels hover dimly in the air!"

Many anecdotes are told concerning General Taylor's exploits in this battle, which were used with great effect in the next presidential campaign. On the first day, a Mexican officer, coming with a message from Santa Anna, found Taylor sitting on his white horse, with one leg over the pommel of his saddle. The officer asked him, "What are you waiting for?" He answered, "For Santa Anna to surrender." After the officer's return, a battery opened on Taylor's position, but he remained coolly surveying the enemy with his spy-glass. Some one suggesting that "Whitey" was too conspicuous a horse for the battle, he replied that "the old fellow had missed the fun at Monterey, and he

should have his share this time." Mr. Crittenden, having gone to Santa Anna's headquarters, was told if General Taylor would surrender, he should be protected. Mr. Crittenden replied, "General Taylor never surrenders." In the crisis of the fight, the enemy made a desperate attack on a battery commanded by Braxton Bragg. General Taylor is said to have ridden up to him and cried out, "A little more grape, Captain Bragg." This polite and epigrammatic expression, the like of which seldom fell from "Old Rough and Ready's" lips, has become historical. What he did say, as repeated to the writer by one who heard it, was much more emphatic and a great deal more profane.

The account of the battle given some years afterward by General Taylor himself, is of interest, not so much, perhaps, as showing the movement of the forces in detail, as giving a general idea of the matter. It was told to Judge Butler, who had lost a brother, the colonel of the celebrated Palmetto Regiment, in one of the most gallant charges of the battle. The judge was naturally anxious to know the particulars of the engagement, and General Taylor had promised to gratify him on a day fixed, when he should dine with him. As soon as they were alone, he opened the subject :

"Yes, yes, judge," said the general, "your brother was a brave man, and behaved like a true soldier. But about the battle—you want to know how it was fought?"

"Yes, general, if you will be so kind. I wish to learn how your troops were disposed on the field, and how you posted them to resist a force so overwhelming. Santa Anna must have outnumbered you four or five to one."

"The difference was greater than that, I think, but we didn't stop to count the Mexicans. I knew there was a heavy force, and longed for a couple of regiments more of regulars."

"Undoubtedly; but what was your order of battle?"

"Why, why, you see, judge, we went to fighting early in the morning the first day, and we fit all day long, losing a good many men, and at night it looked pretty bad."

"Well, what next?"

"When it got dark, I rode over to Saltillo to look after our stores and to provide against a surprise."

"Why did you go yourself? Why not send one of your aids?"

"You see, judge, everything depended on not having our supplies cut off, and I wanted to see after things myself."

"How was it the next morning when you came on the field?"

"Not much change since the night before."

"Who was the first man you met?"

"General Wool."

"And what did he say?"

"'All is lost.'"

"What was your reply?"

"'May be so, general—we'll see.' And upon that we went to fighting again, and fit all that day, and toward night it looked better."

The judge, looking rather blank, asked, "What next?"

"Well, the next morning it was reported to me that Santa Anna and all his men had disappeared in the night, and I was devilish glad to be rid of them so."

Two weeks after the battle of Buena Vista, General Winfield Scott landed an army of twelve thousand men near Vera Cruz. With the exception of Quebec, this is the most strongly fortified city in America. The Mexicans had such faith in its strength that they left a garrison of only five thousand troops, bidding them remember that the city was named Vera Cruz, the Invincible. The American guns opened fire on the 22d of March. In four days a breach was made. Preparations for an assault had already commenced, when a white flag was displayed on the walls, and negotiations were begun which resulted in a capitulation on the 29th.

April 8th, our forces advanced toward the city of Mexico. No resistance was met until the army reached the village of Plan del Rio, near the mountain-pass of Cerro Gordo. Here Santa Anna was entrenched with a large army. His position seemed impregnable; but by the skill of our engineers, Lee and Beauregard, a path was cut through the forest around the base of the mountain, and cannon were drawn up the precipice by ropes to a height overlooking the enemy's lines. Thence a plunging fire was opened upon them, simultaneously with an assault in front. The Mexicans abandoned their works, their general fleeing on mule-back so hastily as to leave behind him his private papers and his wooden leg. The next day the army entered Jalapa. Thence advancing, it captured the castle of Perote, on a peak of the Cordilleras, and, May 15th, took possession of Puebla. The inhabitants, flocking to see the troops, were grievously disappointed by the plain blue which contrasted so greatly with the

ON THE SUMMIT OF THE CORDILLERAS.

gaudy Mexican uniform. They could account for the defeat of their armies only by saying, "The American leaders are gray-headed men."

The time of enlistment of many of his regiments expiring, Scott was now compelled to check his victorious career. It was not until the beginning of August that he resumed the march with ten thousand men. The route was a toilsome one over steep ascents to the crest of the Cordilleras, where the beautiful valley of Mexico burst upon their view. Rapidly descending, the army soon reached Ayotla, only fifteen miles from the capital. Thenceforward the route bristled with fortifications. To avoid them, a new road was cut to the south. Rounding Lakes Chalco and Xochimilco, Scott reached San Augustin, only ten miles from the city.

Then began the siege. From the 20th of August to the 13th of September, history records a series of brilliant assaults. The entrenched camp of Contreras, the *tête du pont* of Churubusco, the foundry of Molino del Rey, the fortress of Casa Mata, and the frowning citadel of Chapultepec, mark the successive stages in the triumphant progress of the American arms. On that last

day, the troops swept all before them, chasing the defeated Mexicans through the gates into the very suburbs. Night alone saved the city. Concealed by the darkness, Santa Anna fled. At sunrise in the morning, the army entered the city, and soon the flag of the Union was waving over the Halls of the Montezumas.

Foremost among the defenders of Chapultepec, were the students of the military school. Amid the storm of the assault, these gallant lads were seen fighting heroically to drive back the invader from the scene of their study and their sports. "Pretty little fellows!" wrote an officer, "I am sad when I think of their faces dabbled with blood or convulsed with the agony of a gunshot wound, or when I remember the mothers whose sons, hardly more than babies, were in that cruel fight."

Within six months, Scott had stormed the strongest places in the country, won battles against armies double, treble, and even quadruple his own, and marched without a single reverse from Vera Cruz to Mexico. He had lost fewer men, made fewer mistakes, and caused less devastation in proportion to his victories, than any invading general of former times.

The capture of Mexico finished the war. The treaty of Guadalupe Hidalgo was concluded February 2, 1848. New Mexico and Upper California were ceded to the United States, and the western boundary of Texas was fixed at the Rio Grande. In return, our government agreed to pay fifteen millions of dollars, and to assume debts due American citizens by the Mexican government to the amount of three million five hundred thousand dollars. The war had cost us about twenty-five thousand men and one hundred and sixty million dollars.

The pen with which President Polk signed the treaty was presented by his widow to the Tennessee Historical Society.

During this war several young officers distinguished themselves who, fifteen years later, on a broader field, attracted the attention of the world. Among them were Grant, McClellan, Lee, Beauregard, Hill, Jackson, Hooker, Longstreet, Buell, Johnston, Lyon, Anderson, Kearney, Reynolds, French, Sherman, Thomas, Ewell, Sumner, and Davis. Of those officers especially mentioned by Scott in his despatches, fourteen became generals in the Confederate service and sixteen in that of the Federals.

John Quincy Adams died February 23d. Though eighty years of age, he was still at work, and his final illness seized him

at his desk in the House of Representatives. His dying words were, "This is the last of earth! I am content!"

The Democratic nominee for President was Lewis Cass of Michigan, and for Vice-President, William O. Butler of Kentucky. The Whigs, despairing of electing a statesman, like Webster, Calhoun, or Clay, determined upon one whose military reputation would carry weight with the masses, as it did in the case of Harrison eight years before. General Taylor was therefore selected as their candidate for President, Millard Fillmore of New York being placed on the ticket for Vice-President.

The Anti-Slavery, or "Free Soil" party, so called because its motto was "Free soil to a free people," met at Buffalo and nominated Martin Van Buren for President, and Charles Francis Adams, son of John Quincy Adams, for Vice-President. It polled only three hundred thousand votes, but is of interest as the germ of what became subsequently the Republican party.

The election resulted in favor of the Whig ticket, the Free Soilers casting enough votes in the State of New York to give its thirty-six electoral votes to Taylor and Fillmore, accomplishing an opposite result from that of four years before.

Iowa, the twenty-ninth State, was admitted to the Union December 28, 1846. It was named from a tribe of Indians, meaning "The Drowsy Ones." In 1788, a French Canadian named Julian Dubuque acquired here a large tract of land, and engaged in fur-trading and lead-mining. The region was not thrown open to settlers until after the Black Hawk War. The first permanent settlement was made at Burlington, 1833, by emigrants from Illinois. Dubuque was also founded during the same year. Iowa was successively a part of Missouri, Michigan, and Wisconsin Territories, and when organized as a Territory itself, included all of Minnesota west of the Mississippi River. When admitted as a State, it was reduced to its present limits.

Wisconsin, the thirtieth State, was admitted to the Union, May 29, 1848. It takes its name from its principal river, signifying "The gathering of the waters." In 1639, the French missionaries, trappers, and traders explored and occupied the country west of Lake Michigan. The first settlement was at Prairie du Chien—the dog-prairie. The region was held under French dominion until ceded in 1763 to England. Canadian laws governed the territory, and the English kept possession with a military force at Green Bay until 1796, when it reverted to the

United States under the treaty. From 1809 to 1818, it was a portion of the Territory of Illinois; it then became attached to Michigan, and in 1836 received a separate organization.

Zachary Taylor was inaugurated Monday, March 5, 1849. He was the seventh President of the United States born in Virginia. After the Revolution, his father, a colonel in that struggle, removed to Kentucky. On the "dark and bloody ground" young Taylor imbibed those instincts which made him afterward such a successful leader against the Seminoles in Florida. During the war of 1812, with only twenty men, he so gallantly defended Fort Harrison, on the Wabash, against a large body of Miami Indians, that Madison made him major by brevet—the first honor of the kind ever conferred in the American army. In 1840, he became a planter at Baton Rouge. He was a Jeffersonian in principle, but was not a partisan. Indeed, it was said during the presidential campaign, that he had not voted for forty years, and that a nomination by the Democrats would have been equally acceptable to him. When interrogated as to his political principles, he replied in substance, "I am General Taylor, the conqueror of Buena Vista." His inaugural was a plain document, as became one more used to the sword than the pen. A single sentence has been often quoted: "We are at peace with all the world and the rest of mankind." Yet its strong sense and fervent patriotism made it highly acceptable to the people.

The new cabinet was composed of able men—John M. Clayton of Delaware, Secretary of State; William M. Meredith of Pennsylvania, Secretary of the Treasury; George W. Crawford of Georgia, Secretary of War; William B. Preston of Virginia, Secretary of the Navy; Thomas Ewing of Ohio, Secretary of the Interior (the first appointment to this office); Jacob Collamer of Vermont, Postmaster-General; and Reverdy Johnson of Maryland, Attorney-General.

The Secretary of the Navy proved an apt scholar, and administered the affairs of his department successfully, but at the time of his appointment he was singularly ignorant of its details. On one occasion he was paying his first official visit to the Gosport Navy Yard at Norfolk. Commodore Skinner, in command, was a "sea-dog" who to a rather insignificant person added a contempt for forms and dress. He received the Secretary on the *Pennsylvania*, the finest ship in the service. The boatswain was a large, handsome man, attired in the uniform of his grade, and

was conspicuous among the crowd of officers. Mr. Preston took him to be the commander, rushed up, and, seizing his hand, shook it with great warmth. This blunder produced much merriment, and when, a few moments later, the Secretary, looking down the

SECRETARY PRESTON AND THE BOATSWAIN.

main hatchway and discovering the peculiarity of the ship's construction, exclaimed, "My —! she's hollow!" it was too much, even for the stern discipline of a man-of-war, and an explosion of laughter followed that reached from the forecastle to the quarter-deck.

About this time, an invention was brought prominently before the people which has revolutionized the domestic

affairs of the world and released woman from much of the tyranny of the needle. In 1845, Elias Howe, one of the benefactors of his race, made a sewing-machine essentially like the one now in use. Meeting with little success in its sale, he went to Europe, where he lived for some years in great destitution. On his return in 1849, he found that he had a competitor in I. M. Singer, who had made some improvements in the machine and was rapidly introducing it to the notice of the public. Howe claimed his own, and after much litigation it was allowed. Both of these inventors began poor, and gained fortunes—Howe, two million dollars, and Singer, nineteen million.

The first session of Congress under the new administration, known as the "Congress of 1850," was a memorable one. Some of the most brilliant statesmen in our history—Clay, Calhoun, Webster, Benton, Dickinson, and Seward—were prominent in its deliberations. Slavery was then, as it continued to be during the decade, the ail-absorbing topic of discussion. Its shadow haunted every question of the day; it was a "Banquo" that would never

"down" at any bidding. The present issue was upon the admission of California as a free State. Debate waxed hot. A dissolution of the Union seemed at times inevitable. "Five bleeding wounds," as Clay termed them, were opened to the gaze of the world. The famous "Omnibus Bill," brought forward by the "Great Pacificator," as Clay was henceforth called, was intended to be a healing-plaster for them all. He proposed the admission of California as a free State; the formation of territorial governments for Utah and New Mexico, without any provision concerning slavery; the payment of ten million dollars to Texas to give up its claim to the Territory of New Mexico; the prohibition of the slave-trade in the District of Columbia; and a fugitive slave law, enacting that slaves escaping to a free State should be returned to their owners.

This plan of compromise was sustained by the matchless eloquence of Clay and the unanswerable arguments of Webster. During the debate, William H. Seward of New York attacked the measure in his famous "Higher Law" speech, which was condensed by an opponent in a single sentence: "A senator rises in his place, and proclaims that he holds his credentials from Almighty God, authorizing him to reject all human enactments."

The effect of the bill, which finally passed, was to repeal the Missouri Compromise of 1820, leaving the inhabitants of the incoming State to regulate the question of slavery.

In the midst of this exciting debate, the country was startled and saddened by the death of General Taylor. He was the second President who had died in office. His administration was too brief to determine fully its character or influence. He possessed an old-fashioned patriotism that breathed the very spirit of Washington, and he favored every measure that tended to perpet-

GENERAL ZACHARY TAYLOR.

uate the Union. His last public appearance was at the celebration of the birthday of our national liberties, only five days before his death; and his last official act was to sign the Clayton-Bulwer treaty between this country and Great Britain, which settled their respective rights and privileges relating to canal communication across Central America. Confronting death with the declaration, "I am prepared; I have endeavored to do my duty," the war-worn hero, beloved by many and the enemy of none, passed away. It was his first and last surrender.

The Vice-President, Millard Fillmore, took the oath of office the next day, and at once filled the vacancy. He was born in Cayuga county, New York, January 7, 1800. He learned the fuller's trade, taught school for several years, and was finally admitted to the bar. He afterward practised law at Buffalo with marked success. His public life had consisted of one term as State comptroller and four as congressman. His nomination to the vice-presidency, as well as his action in office, tended to increase the feeling between the two factions of the Whig party in New York, and make it of national significance. The "rock of offence" was slavery. Those who believed with Fillmore in the Compromise measures of Clay were called "Silver-Grays" or "Snuff-takers"; while those who followed the lead of Seward were denominated "Seward-Whigs" or "Woolly-heads."

The new President selected as his cabinet Daniel Webster of Massachusetts, Secretary of State; Thomas Corwin of Ohio, Secretary of the Treasury; C. M. Conrad of Louisiana, Secretary of War; W. A. Graham of North Carolina, Secretary of the Navy; Alexander H. H. Stuart of Virginia, Secretary of the Interior; N. K. Hall of New York, Postmaster-General; and J. J. Crittenden of Kentucky, Attorney-General.

California was admitted to the Union as a free State, September 9, 1850. A Spaniard named Cabrillo visited the country as early as 1542. Later, Sir Francis Drake sailed along the coast on one of his buccaneering expeditions, and spent a part of the summer of 1579 in the harbor of San Francisco. He called the region New Albion, but the English took no advantage of his discoveries. The name California first occurs in the writings of Diaz, an officer who served under Cortes in the conquest of Mexico. Some have thought it to be derived from the Latin words *Calida Fornax*, or the Spanish *Caliente fornalla*, both meaning "hot furnace." The Spaniards made the first permanent settlements about 1768; a number

of Franciscan friars founding religious establishments, or presidios, for the conversion of the natives. They taught the Indians to cultivate the vine, the fig, and the olive, and to build houses of sun-dried bricks called adobe. In 1822, the Mexicans overthrew the Spanish power in California, and the fathers were stripped of all their influence and property. The entire population in 1831 was about twenty-three thousand, of whom eighteen thousand were Indian converts. Many emigrants from the United States now began to settle in its fertile valleys. It was, however, an isolated land, visited only by an occasional ship to buy hides and tallow. In 1846, Colonel Fremont, then on an exploring tour through Oregon and California, received orders to watch over the interests of the United States in that region, as there was reason to suppose that the country might be transferred to Great Britain. He had only sixty-two men in his party, but the frontier-men raised the "bear flag" and flocked to his aid. In conjunction with Commodore Stockton and General Kearney, he took possession of California, and held it until it was ceded to the United States at the close of the Mexican War.

On the 2d of February, 1848, a man by the name of James Marshall, superintendent of a new saw-mill belonging to Captain John A. Sutter, came riding wildly into Sacramento. He trembled as he showed to his employer a thimbleful of shining particles of gold which he had just picked up in the mill-race, where he had been at work. They tried to keep the matter a secret, but it was soon out. All ordinary employments were laid aside. Ships were deserted by their crews, who ran to the mines, sometimes, it is said, headed by their officers. The news spread over the world. Thousands rushed to this real El Dorado, over the desolate plains, across the sickly isthmus, and around the stormy cape. In a little over a year, California had a population entitling it to admission as a State. The bay of San Francisco was soon surrounded by an extemporized town of shanties and booths. The city flourished "like the magic seed of the Indian juggler, which grew, blossomed, and bore fruit before the eyes of the spectator." Most of the immigrants were energetic, daring, reckless men, and its early history is filled with violence, wrong, and bloodshed. A "vigilance committee" was finally organized, which took the management of affairs into its own hands, arresting, trying, and punishing offenders without fear or favor. For five years justice was administered in this unauthorized but effectual manner. In 1856,

the last vigilance committee surrendered its power to the regular officers of the law.

San Francisco has been six times nearly destroyed by fire, the total loss being estimated at twenty million dollars. Sacramento and other large towns have suffered in like manner. Yet such have been the thrift and energy of the people, that hardly a month

San Francisco.

Pacific Ocean.

BIRD'S-EYE VIEW OF SAN FRANCISCO.

would elapse before almost every trace of the disaster had disappeared. The whole history of the State seems to belong rather to the realms of fancy than to the sober fields of reality.

Although the Compromise measures of Clay produced a temporary lull in the slavery agitation in Congress, they convulsed the country at large. "The complex, cumbersome, expensive, annoying, and ineffective Fugitive Slave Law," as Benton termed it, satisfied neither party. At the North, generally, it was silently disregarded. In many places, however, it was bitterly opposed, and the legislatures of some of the States afterward passed "Personal Liberty Bills," by which it was practically nullified. On the other hand, the slave-holding States were exasperated by the tone of the abolitionists, and the difficulties which they met whenever they attempted to recover their fugitive slaves. Riots occurred at Boston, Buffalo, Syracuse, and other points, and the whole country was stirred by the tides of passion.

The power of fiction was never more strikingly illustrated than in the influence exerted by a novel which first appeared in the summer of 1850 in the *National Era*, a weekly newspaper published in Washington. The opening chapters of "Uncle Tom's Cabin" attracted immediate attention, and the story, which its author, Mrs. Harriet Beecher Stowe, had intended to be brief, at the wish of the publisher and the urgent demand of the public, expanded into two volumes. It touched the popular pulse at a sensitive moment, and wherever it was read it intensified the feeling on the engrossing question of the day. The sale of the work was unparalleled. Half a million copies are said to have been sold in this country, and as many more in Europe. It has been translated into all the principal languages of the world, there being thirteen or fourteen different editions in Germany alone.

During this decade, a bright galaxy of literary stars came to the meridian. For years William Cullen Bryant had shone serenely as the one truly American poet; while Washington Irving and J. Fenimore Cooper, the first American novelist, were the national prose-writers, and divided with each other the honors of a European recognition. Longfellow, our poet-laureate, now began to be heard in those strains that are destined to "echo down the corridors of time"; Whittier, the Quaker poet of New England, with his verses full of love for humanity, had sung his way to the hearts of the people; Edgar Allan Poe, the unfortunate, had written "The Raven" and "The Bells"—hints of what he might have done had he overcome his besetting sin—and had closed his unfortunate career, all untimely; Nathaniel Hawthorne, attracting attention in 1846 through his "Mosses from an Old Manse," by the "Scarlet Letter" and "Marble Faun" had won a place at the head of novelists; Prescott's "Ferdinand and Isabella," "Conquest of Mexico," and "Philip II.," had proved him a master of historical composition; and Bancroft had begun our one great National History. In other, also, than purely literary fields was this period especially active. Albert Barnes in Biblical research and commentary; Agassiz in natural history; Henry in electricity; Silliman in chemistry; Hall and Dana in geology; and many other authors and scientific men, contributed to human knowledge with a prodigality that seemed to leave small gleanings for those who were to follow.

What is known as the "Manifest Destiny" of our country, *i. e.*, the possession and control of the whole American continent, be-

came a favorite theme with the rising generation of politicians. Cuba especially, said they, should belong to the United States. They imagined that the people of the "ever faithful isle" were anxious for annexation, and that only a demonstration was necessary to induce the Cubans to rise tumultuously and throw off the Spanish yoke. As the natural outcropping of this mistaken idea, a filibustering expedition was formed at New Orleans. About six hundred adventurers sailed under the command of General Lopez, disguised, however, as emigrants bound for Chagres. They landed at Cardenas on the 19th of May, 1850, defeated the Spanish troops, and captured the governor and his palace. But Lopez, disappointed in not receiving any accessions to his numbers, and unable to hold that which he had won, was glad to escape with some of his followers, leaving the rest to the tender mercies of the Spanish authorities. The United States promptly disavowed the attempt. The next year, Lopez, with four hundred and eighty men, landed on the northern shore of Cuba. His little army was soon scattered. He was hunted down by blood-hounds, captured, and garroted.

In 1850, the world-famous Swedish singer, Jenny Lind, arrived in America on the Atlantic, one of the Collins steamers, an American line that had just been established. On the 12th of September, she gave her opening concert at Castle Garden, New York, the receipts being about thirty thousand dollars. The fact is significant, since she was the first of that constantly-increasing number of foreign vocalists who so largely promote a taste for musical culture among our people.

Charles Sumner of Massachusetts first took his seat in the Senate of the United States in 1851. Already widely known as a scholar and philanthropist, he at once took a foremost rank in the councils of the nation.

In April of this year the Erie Railway was opened. At the commencement of the enterprise, the State of New York loaned the company bonds to the amount of three million dollars. A subsequent act relieved the road from their payment on condition that a single track should be completed and engines passed over it from the Hudson River to Lake Erie before the middle of May, 1851. A train having on board the directors went from New York to Dunkirk, four hundred and seventy miles, April 28th and 29th, thus releasing the road from its obligation, and virtually making its earnings three million dollars for two days.

On the 4th of July, the corner-stone of the extension of the Capitol at Washington was laid by President Fillmore, with appropriate and imposing ceremonies, Daniel Webster delivering the oration. The cost of the building when completed was over twelve million dollars.

The return of the *Advance* and *Rescue* in the fall excited a world-wide interest. These vessels had been sent out by Mr. Henry Grinnell of New York, a year and a half before, to search for Sir John Franklin. The party had undergone great hardship and peril, but had not lost a life. To the regret of all, the quest had been unsuccessful. This expedition made known to the public the name of Dr. E. K. Kane, who had acted as its surgeon, a young man whose patient investigations, intelligence, and high culture received the praise of all who read the delightful Narrative which he published. Principally through his enthusiasm, an expedition was fitted out for him by Mr. Grinnell, which sailed from New York May 30, 1853, and did not return until October 11, 1855. He failed in the main object of his search, but discovered what was supposed to be an Open Polar Sea.

Near the close of the year 1851, there arrived upon our shores the distinguished Hungarian exile, Louis Kossuth. He was received at New York with honors such as had been paid to no foreigner since the time of Lafayette. The people everywhere welcomed him as the exponent of European democracy, and thronged to hear his impassioned appeals in behalf of his native land. He secured about one hundred thousand dollars, with which he returned. Events not favoring a political revolution, he made himself comfortable, it is said, with our patriotic contributions.

As to the United States China opened first her closed ports and doors, so was it with her neighbor, Japan. The detention in captivity of our sailors shipwrecked on its inhospitable shores demanded relief. A fleet was accordingly sent to Japan, under the command of Commodore Perry, a brother of the hero of Lake Erie. In the summer of 1853, his vessels entered the port of Yeddo, the first steamers that had ever floated on Japanese waters. After great embarrassments, he negotiated a treaty which secured for American merchants two ports of entry.

The last year of Fillmore's administration was marked by the death of two of our most illustrious citizens. Henry Clay died June 29, 1852, aged seventy-five. To the very last, his efforts

were directed to the preservation of the Union and to offices of peace and good-will. His cordial manner, his splendid personal presence, the magnetism of his oratory, and the fascination of his conversation had made him more beloved than any public man our country has ever seen. His death was taken home to the hearts of the people as if he were a member of each household. Calhoun had died two years before, and Daniel Webster, the last of the great trio, followed Clay in less than four months.

ASHLAND, THE HOME OF HENRY CLAY.

The feeling of the nation at the loss of Webster, the grandest orator and the greatest statesman of his age, is well expressed in the beautiful words of Everett: "It is all over! The last struggle is past; the struggle, the strife, the anxiety, the pain, the turmoil of life is over; the tale is told, and

finished and ended. It is told and done; and the seal of death is set upon it. Henceforth, that great life, marked at every step; chronicled in journals; waited on by crowds; told to the whole country by telegraphic tongues of flame—that great life shall be but a history, a biography, 'a tale told in an evening tent.' In the tents of life, it shall long be recited; but no word shall reach the ear of that dead sleeper by the ocean shore. Fitly will he rest there. Like the granite rock, like the heaving ocean, was his mind! Let the rock guard his rest; let the ocean sound his dirge!"

The Democratic party met in convention at Baltimore June 1st, and nominated for President, General Franklin Pierce of New Hampshire, and for Vice-President, William R. King of Alabama. It passed the celebrated rule which occasioned so much disturbance at subsequent conventions, that two-thirds of all the delegates present were necessary to a nomination. The contest for the selection of candidates lasted four days, and the forty-ninth ballot was taken before a result was reached.

The Whig convention, also held at Baltimore in June, was the last one of that party. It nominated for President, General Winfield Scott, and for Vice-President, William A. Graham of North Carolina. The other candidates were Daniel Webster and Millard

Fillmore. Webster, when the result was announced to him, replied, "Feathers and tar," the former alluding to the love of display and decoration which was popularly supposed to be one of the characteristics of General Scott, and the latter to the chief product of the State from which the candidate for Vice-President came.

Both parties pledged themselves distinctly to the compromise measures of 1850. The "Free Soilers" held a convention at Pittsburg, and put in nomination for the presidency, John P. Hale of New Hampshire, and for the vice-presidency, George W. Julian of Indiana. The Democratic ticket was successful, Pierce receiving two hundred and fifty-four out of two hundred and ninety-six votes.

Franklin Pierce was inaugurated fourteenth President of the United States, March 4, 1853. He was in the fiftieth year of his age, being the youngest person yet chosen to that office. He had occupied no very prominent place in American politics, and a significant query of the time was, "Who is Franklin Pierce?" He was born at Hillsborough, N. H., November 23, 1804. He was a graduate of Bowdoin College and a lawyer by profession. He had served his State for four years in her legislature, two terms in the House of Representatives, and one term in the Senate. During the Mexican war, he fought with credit under Scott, being wounded at Churubusco.

March 7th, the Senate, in special session, confirmed the cabinet appointments. William L. Marcy of New York became Secretary of State; James Guthrie of Kentucky, Secretary of the Treasury; Robert McClelland of Michigan, Secretary of the Interior; Jefferson Davis of Mississippi, Secretary of War; James C. Dobbin of North Carolina, Secretary of the Navy; James Campbell of Pennsylvania, Postmaster-General; and Caleb Cushing of Massachusetts, Attorney-General.

Shortly after his inauguration, the President attended, July 14th, the opening exercises of the World's Fair at the Crystal Palace in New York. It was the first exhibition of the kind ever held in this country. The display of articles was creditable and the attendance was large, but the expenses were so great as to swallow up the entire investment of the stockholders. The end was most disastrous. In October, 1858, the building was burned, destroying much property, especially many valuable works of art, among which were the colossal group by Thorwaldsen of

"Christ and his Apostles," and the statue by Kiss of the "Amazon and the Tiger."

A difficulty arose with Austria during this year concerning Martin Koszta, a Hungarian who had fled to this country and declared his intention to become an American citizen. Returning to Smyrna on business, he was arrested and carried on board an Austrian vessel. Captain Ingraham, of the American sloop-of-war *St. Louis*, happened to arrive in port and learning the facts, demanded his instant surrender. Koszta was given up, but a lengthy diplomatic correspondence ensued with the Austrian government. The result was to evince the determination of the United States to defend its citizens from insult in every part of the world.

The map used in making the treaty with Mexico proved to be imperfect, and a misunderstanding arose concerning the Mesilla valley, which was claimed by both governments. A new treaty was thereupon negotiated with Mexico by James Gadsden of South Carolina, by which the United States secured the coveted territory on the payment of ten million dollars.

The great event of this administration was the passage, in May, 1854, of a bill presented by Stephen A. Douglas of Illinois, to organize the Territories of Kansas and Nebraska. It involved a principle which he termed "Popular or Squatter Sovereignty," by which a new State should decide for itself whether or not slavery should exist within its borders.

The sectional excitement, which had lulled for a time, flamed out anew. During subsequent discussions in the Senate, Sumner made some reflections upon Senator Butler of South Carolina, and after adjournment on the 22d of May, 1856, Preston S. Brooks, a member of the House and a nephew of Butler's, assaulted Sumner in his seat, inflicting severe injuries. The North declared the bill a repudiation of the Missouri Compromise. The South, with the Douglas men, averred that the Compromise of 1850 had superseded the older act. Both sides poured parties of armed emigrants into Kansas. A society incorporated by the legislature of Massachusetts sent thither, during 1855, one thousand three hundred persons. Soon white-topped wagons, carrying the families of emigrants, with all their possessions, went streaming in long trains over the prairie.

The Territory was thus rapidly settled. One who visited Leavenworth in 1854, described the scene as follows: "There

was one steam-engine, 'naked as when it was born,' but at work, sawing out its clothes. There were four tents, all on one street, a barrel of whiskey under a tree, and a pot on a pole over the fire. Under another tree, a type-setter had his case before him, and was at work on the first number of the new paper; and within a

SCENES IN KANSAS.

frame, without a board on side or roof, was the editor's desk and sanctum. When we returned, we saw a 'notice,' stating that the editor had removed his office from under the elm tree to the corner of 'Broadway and the Levee.' This

Broadway was, at that time, much broader than the streets of old Babylon; for, with the exception of the fort, there was probably not a house on either side for thirty miles." Lawrence was a city of tents. Two Massachusetts women had opened a boarding-house upon the hill. "In the open air, on some logs of wood, two rough boards were laid across for a table, and on wash-tubs, and kegs, and blocks, they and their boarders were seated at their meal."

Meanwhile disturbances had occurred at the elections. Missouri, which lay neighbor to the scene, had sent over men who

simply voted and then returned across the river. As the result, a pro-slavery government was organized at Lecompton. The free-State inhabitants refusing to take part in this, established an anti-slavery one at Topeka. Soon there were two sets of authorities. Civil war ensued. "Jay-hawkers" harried the country. Murders were frequent. No one dared to travel a public highway without an escort. The exploits of the famous partisan leaders, John Brown, Montgomery, Hamilton, Law, and others, make a page of our history which one would gladly pass over in silence. The deeds of horror recorded therein give a fearful import to the phrase of the times—"Bleeding Kansas." Thus, May 19, 1858, Hamilton, with a small party, entered the little town of Trading Post and carried off nine persons. Taking these into a ravine called Marais des Cygnes, he ranged them in a line and gave the word for his men to fire. Five of the prisoners were killed instantly. The others feigned death, and so escaped.

Within five years, six governors—Reeder, Shannon, Geary, Walker, Denver, and Medary—attempted the difficult task of restoring order in this Territory. Finally, at Wyandotte, July 29, 1859, Kansas adopted a free constitution, and during the administration of Buchanan was admitted into the Union.

In 1855, William Walker conducted a party of fillibusters from San Francisco to Nicaragua, where a rebellion was in progress. There he artfully secured his election as president. Deceived by his success, hundreds joined his standard. But his party was eventually overpowered, many of his men died of disease, and, in 1857, the miserable remnant was brought back by English and American vessels.

There had arisen a violent prejudice against foreign-born citizens, and especially Catholics. Numerous collisions took place in consequence. In New York, a ruffian named Baker killed another called Poole. The murdered man being an American, and his assailant a foreigner, the event was lifted into national importance. The feeling drifted into politics, and the "Know-Nothing" organization—a secret society—was formed. Its party cries, "Put none but Americans on guard!" "Let Americans rule America!" caught the popular ear. It carried the elections in nearly all the Northern States, and in the spring of 1855 it was the only opposition to Henry A. Wise, the Democratic candidate for governor in Virginia. In the Old Dominion, however, it was so thoroughly defeated, that its prestige began at once to wane.

The contest for Speaker of the House of Representatives having lasted for two months, with one hundred and thirty-three indecisive ballots, a plurality rule was agreed upon, February 2, 1856, under which Nathaniel P. Banks of Massachusetts was elected. He had been a Democrat, but was then an Anti-Slavery American or "Know-Nothing."

The Democrats in convention at Cincinnati nominated for President, James Buchanan of Pennsylvania, and for Vice-President, John C. Breckenridge of Kentucky. The Americans or Know-Nothings put in the field for President, Millard Fillmore, and for Vice-President, Andrew J. Donelson of Tennessee. Both of these parties, in their platforms, pledged themselves to sustain the Compromise measures of 1850 and the subsequent legislation of 1854.

All the opponents of slavery united under the name of Republicans. They held a convention at Philadelphia, June 17th, and selected as their candidate for President, John C. Fremont of California, and for Vice-President, William L. Dayton of New Jersey.

The election resulted in favor of Buchanan and Breckenridge. On the popular vote, they had a minority of nearly four hundred thousand, but in the electoral college, a clear majority of sixty votes. The Republican ticket received a popular vote of one million three hundred thousand.

James Buchanan was inaugurated the fifteenth President of the United States, March 4, 1857. He was born at Stony Batter, Pennsylvania, April 22, 1791; was graduated at Dickinson College, and soon after prepared for the bar. From earliest manhood he had been in public life, serving as member of Congress, Senator, minister to Russia and to England, and as Secretary of State. He belonged to the old school of men and politicians; and his age, his varied experience, and acknowledged abilities led the people to entertain high hopes of the incoming administration.

JAMES BUCHANAN.

The cabinet was composed as follows: Lewis Cass of Michigan, Secretary of State; Howell Cobb of Georgia, Secretary of the Treasury; John B. Floyd of Virginia, Secretary of War; Isaac Toucey of Connecticut, Secretary of the Navy; Jacob Thompson of Mississippi, Secretary of the Interior; Jeremiah S. Black of Pennsylvania, Attorney-General; and Aaron V. Brown of Tennessee, Postmaster-General.

A difficulty having arisen in Utah, owing to the unwillingness of the Mormons to submit to the decisions of the Federal judge, in 1857, Colonel Albert Sydney Johnston, with a sufficient force, was sent thither to maintain the laws of the United States. Before the arrival of the troops the matter was satisfactorily adjusted, the governor appointed by the President being accepted. The army was not withdrawn, however, for two years thereafter.

The famous Dred Scott decision at this time added fresh fuel to the anti-slavery agitation. Dred Scott was a slave belonging to a surgeon in the army, who had taken him and his family to reside at Fort Snelling and afterward returned into Missouri. Suit was brought for his freedom on the ground of his having gone into territory where slavery was prohibited. Judge Taney affirmed that negroes were not citizens, and that Congress had no power under the Constitution to forbid slavery in the Territories. His decision contained the expression that "negroes have no rights which the white man is bound to respect," on which the changes were rung during the ensuing campaign with great effect.

Minnesota, the thirty-second State, was admitted into the Union May 11, 1858. It was so called from its principal river, which bears the Indian name for cloud-colored, or sky-tinted water. In 1680, Louis Hennepin, a Franciscan priest, with some fur-traders, floated down the Illinois river in a bark canoe, and then ascended the Upper Mississippi as far as the Great Falls, to which he reverently gave the name of St. Anthony. The region was not thoroughly explored until 1766, when Captain Jonathan Carver of Connecticut passed a winter among the Indians at the mouth of the Minnesota, near what is now New Ulm. This Territory belonged to the Louisiana purchase, and followed its fortunes. Fort Snelling was built in the summer of 1819. In 1837, lumbering was commenced on the St. Croix. The first building on the site of St. Paul was erected in 1838. The Territory was organized in 1849. After the cession, in 1851, of the lands held by the

Sioux Indians, there came a large influx of emigrants, and the country was rapidly settled and developed.

Oregon, the thirty-third State of the Union, was admitted February 14, 1859. The name is supposed to have originated from the term *oregano*, wild marjoram, which grows profusely on the coast. It was originally applied to all the territory on the Pacific between 42° and $54^{\circ} 40'$ north latitude. By the treaty with England in 1846, the northern boundary was cut down to the 49th degree. The Territories of Washington and Idaho were afterward carved out of its extensive bounds. In 1792, Captain Robert Gray sailed up the beautiful river which still bears the name of one of his vessels, the Columbia. The famous expedition of Lewis and Clark in 1804 brought back the first intelligent account of the wonders of the Pacific coast. In 1811, the American Fur Company, of which John Jacob Astor was president, founded Astoria, the first settlement in the State. Emigration set but slowly into the Territory until, in 1839, a band of Methodist missionaries settled in the Willamette Valley.

In 1850, Congress passed the Donation Law, which gave three hundred and twenty acres of land to every *bona fide* settler, and the same to his wife, on condition of occupying the land before December 1st, and remaining upon it four years. An additional act gave one hundred and sixty acres to one settling before December 1, 1853. Eight thousand claims were registered under these laws. Marriageable daughters were probably never in such demand as in Oregon during those three years. Girls even of fourteen were eagerly sought out, and for some time thereafter the Territory had a large proportion of very young wives and mothers.

In the year 1859, an event occurred which, according to the stand-point one occupies, appears a deed of philanthropy or the act of a lunatic. John Brown had been prominent in the guerilla warfare of Kansas, acquiring the title of "Ossawatimie," from a desperate defence which he made at that place against a party ten times stronger than his own. He had long held the idea that he was the destined liberator of the Southern slaves. Renting a house about six miles from Harper's Ferry, he collected guns and pikes, and prepared for his fool-hardy adventure. In the night of October 16th, with twenty-one men, he seized the arsenal at the Ferry, and arrested the chief inhabitants of the town as hostages for the safety of his command. His plan was to arm

the slaves who should rally to his aid, and, taking refuge in the mountains, to maintain a partisan warfare. But, like Lopez in his descent upon Cuba, he found those whom he had come to aid loath to rise at a mere demonstration of force. Not a negro joined him. The militia rapidly assembled. Two days after, a body of United States marines attacked the arsenal. Brown defended himself to the last. "With one son dead by his side, and another shot through, he felt the pulse of his dying son with one hand and held his rifle with the other." Ten of his party were killed and he received six wounds. He finally surrendered, was tried for treason, condemned, and executed. On the way to the gallows, he stopped to kiss a little slave-child.

It shows the feverish state of the public mind, and the positive feeling of enmity which existed between the two sections, that in the North a certain glamour was thrown about the character of Brown and his violation of law and destruction of life; while at the South it was commonly believed that this was only the first outcropping of a general plot to incite insurrection among the slaves.

It was all, however, but an indication of a coming tempest, and the John Brown raid assumes some character as having been an omen such as trouble and conflict, since the world began, have always sent out in advance of their definite appearance.

The Republican party, at its convention at Chicago, May 16th, nominated for the presidency, Abraham Lincoln of Illinois, and for the vice-presidency, Hannibal Hamlin of Maine. It held that Congress should prohibit slavery in the Territories. The "Americans," who still sustained an organization, under the name of the "Constitutional Union" party, met at Baltimore May 10th, and put in nomination for the presidency, John Bell of Tennessee, and for the vice-presidency, Edward Everett of Massachusetts. Its platform was, "The Constitution of the country, the Union of the States, and the enforcement of the laws." The Democratic delegates assembled at Charleston April 23d. The session was continued until May 1st, when there had been fifty-seven ballots cast and no choice made. A portion of the convention, dissatisfied with one of the resolutions of the platform approving "squatter sovereignty," seceded, and organizing anew, adjourned to meet at Richmond, Va., on the 11th of June, where it chose for the presidency, John C. Breckenridge of Kentucky, and for the vice-presidency, Joseph Lane of Oregon. Those who remained

adjourned to Baltimore, where, on the 18th of June, they nominated for president, Stephen A. Douglas of Illinois, and for vice-president, Herschel V. Johnson of Georgia. The former wing of the party believed that Congress should protect the rights of slaveholders in the Territories, and the latter that slavery or no slavery was a matter which concerned the inhabitants of the Territory only.

The election resulted in favor of the Republican ticket. The successful candidates received one hundred and eighty out of three hundred and three electoral votes; their popular vote being one million eight hundred and fifty-seven thousand six hundred and ten, and for the other three tickets, two million eight hundred and four thousand five hundred and sixty.

The selection of a "sectional President," as Lincoln was called, was the signal for immediate action. The leaders at the South had always held to the doctrine of State rights, maintaining that the Union was only an association which could be dissolved at pleasure. A convention was at once called in South Carolina, which passed an ordinance of secession December 24, 1860. The other cotton States rapidly followed. Mississippi enacted a similar ordinance on the 9th of January, 1861; Florida and Alabama on the 11th; Georgia, the 19th; Louisiana, the 26th; and Texas on the 1st of February.

ABRAHAM LINCOLN.

A Peace Congress, consisting of delegates from twenty-one States, assembled at Washington February 4th, ex-President Tyler being chosen chairman. The uselessness of all efforts at reconciliation was shown by the fact that on that very day a convention was held at Montgomery, comprising delegates from the seven seceded States. There they entered into a new compact, which they called "The Confederate States of America," and established a provisional government, choosing Jefferson Davis of Mississippi for president, and Alexander H. Stephens of Georgia for vice-president. The Federal property in the several seceded States was seized, and every arrangement perfected for carrying on a separate government.

Ex-President Pierce had assured Davis that if a disruption of the Union should come, the fighting would not be along Mason and Dixon's line merely, but in the streets of northern cities, between the friends and the enemies of the South. It was a prevalent opinion, as expressed by President Buchanan, that, while a State had no right to go out of the Union, the government could not use coercive measures to keep it in, if, in its sovereign capacity, it should decide to go.

Fort Pickens, at Pensacola, and Fort Sumter, in Charleston harbor, were still held by the United States. The former was saved to the North by the promptness of Lieutenant Slemmer, and the latter, by Major Anderson. Both of these officers, at the first approach of danger, had abandoned their weaker fortifications, and thrown themselves with all their forces into strong positions, where there was a chance for defence. An attempt was made to send supplies to Fort Sumter, but the steamer "Star of the West," which was conveying them, was fired upon by the Confederates and driven back.

The whole future of the country depended upon the policy and acts of the incoming administration, and its first step was awaited with almost breathless interest.

FORT SUMTER.

Abraham Lincoln

CHAPTER XIII.

FIRST YEAR OF THE CIVIL WAR—1861.

INCOLN left his home in Springfield, Illinois, for Washington, February 11, 1861. His parting words to the people among whom he had lived so long and who knew him best, were full of solemnity: "My friends, I cannot sufficiently express to you the sadness I feel at this moment. To you I owe all that I am. Here I have lived more than a quarter of a century; here my children were born; here one of them lies buried. I know not how soon I shall see you again. A duty devolves upon me perhaps greater than that which has devolved upon any man since the days of Washington. He never could have succeeded except for the aid of

Divine Providence, upon which he at all times relied. I hope that you, my friends, will pray that I may receive that Divine assistance, without which I cannot succeed, but with which success is certain."

On the anniversary of Washington's birthday he stopped at Philadelphia to raise a flag over Independence Hall. It was announced that he would proceed on the morrow, but the excited condition of the populace in Baltimore led many to fear an attempt at assassination. He, therefore, secretly took the night **train** the same eve, and reached the capital early the next morning. The inauguration ceremonies on the 4th of March passed off quietly under the protection of troops commanded by Lieutenant-General Scott. The President, in his address, asserted that the United States is not a League, but a Union; denied the right of secession; and declared his determination to occupy all the places belonging to the government, and to collect the duties and the imposts. The closing words, read in the light of history, seem almost prophetic: "We are not enemies, but friends. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature."

Abraham Lincoln was born in Larue county, Kentucky, February 12, 1809. In 1816, his parents removed to Indiana, settling in the forest near the present village of Gentryville. As Abraham grew up, he aided his father in clearing their new farm. His schooling was comprised within a single year. He, however, diligently read the few books he could secure—Robinson Crusoe, Pilgrim's Progress, Æsop's Fables, the History of the United States, the Life of Washington, and the Statutes of Indiana. At sixteen, he was managing a ferry across the Ohio for six dollars per month. Six feet four inches in height, a famous wrestler, a good story-teller and stump-speaker, he was already a marked character. In 1830, the family emigrated to Illinois, and erected a log-house at the north fork of the Sangamon. Here they cleared fifteen acres of land, young Lincoln splitting the rails for the fences. The next year, with some relatives, he built a flat-boat, and carried a load of goods to New Orleans. During the Black Hawk War, he served as captain of a company; at its close, having been

discharged in Wisconsin, he made his way home partly on foot and partly on a raft down the Illinois river.

A few years of adventure and incident brought him to the age of twenty-five, when he was elected to the legislature. In that body he remained four terms, twice being the Whig candidate for speaker. He studied law at night, borrowing books of his friends after office-hours. Admitted to the bar, he at once became prominent. He was sent to Congress in 1846, where he opposed the annexation of Texas and the war with Mexico. His famous "spot resolutions" called upon the President to inform the nation of the place where the Mexicans had "shed

LINCOLN'S EARLY HOME IN ILLINOIS.

the blood of our fellow-citizens on our own soil." In 1858, he was the acknowledged leader of the Republican party in the State, being nominated for United States Senator in place of Stephen A. Douglas. They canvassed the State together, and such was the ability manifested in their discussion of the questions at issue, that the debate became of national interest. From that time Lincoln's life is interwoven with the history of the country.

Lincoln was a representative of the masses. For the first time the people had elected to the presidential chair one of their own number. He was the product of American institutions. Coming up out of the rude life of the frontier, dragged back by poverty and social surroundings, he lifted himself by the force of an honest heart and inflexible will to a place among the few who have moulded the national destiny. Genial, sincere, free from vices, with a fund of sense, quick to read character, fertile in resources, patient of repulse and injury, and steadfast in duty, he took the helm amid a tornado that would have swept by the board a magistrate guided only by expedients. "Four years of battle-days" proved him to be what the nation was slow to perceive, the man of his time.

His first cabinet was composed of William H. Seward of New York, Secretary of State; Salmon P. Chase of Ohio, Secretary of

the Treasury; Simon Cameron of Pennsylvania, Secretary of War; Gideon Wells of Connecticut, Secretary of the Navy; Caleb B. Smith of Indiana, Secretary of the Interior; Montgomery Blair of Maryland, Postmaster-General; Edward Bates of Missouri, Attorney-General. In 1862, Edwin M. Stanton succeeded Mr. Cameron; and John P. Usher of Indiana, Mr. Smith. In 1864, William Pitt Fessenden of Maine succeeded Mr. Chase.

Events were now rapidly hurrying on to the one certain issue, war. Officers of the army and navy were daily resigning their positions, and accepting commissions from the secession authorities. March 12, Forsyth of Alabama and Crawford of Georgia came to Washington as representatives of the Confederate government, authorized to settle amicably the disputed questions. The Federal authorities refused to recognize them officially; but Seward was in frequent communication with them.

At Washington all was doubt and uncertainty. There was no declaration of policy. The authorities feared to act lest they should precipitate the strife. As yet only the seven cotton States had seceded, but the eight remaining slave States threatened to go out if coercion were employed. So the tide was left to drift on as it would. There were no preparations for war, and few seemed to think an armed conflict possible. In striking contrast to this indecision, the Confederate government was taking the most vigorous action, gathering troops and collecting supplies. It had a plan, and pursued it steadily. All the utterances of its chiefs indicated a determination that nothing could shake. What they called the "League of the States" was broken, and they neither wanted nor would accept any mending of the severed links. General Pierre G. T. Beauregard, in command at Charleston, was throwing up batteries before Sumter, and even practicing his gunners in getting the range, the shells bursting over and around its walls.

The Washington authorities, after a month's hesitation, finally directed a fleet to carry provisions to that beleaguered fortress. This being announced to the Confederate government at Montgomery, orders were at once sent to General Beauregard to demand of Major Anderson a surrender. Upon his refusal, fire was opened from all the forts and batteries. The first gun of the war was discharged at half-past four o'clock Friday morning, April 12th, the match being held by Edmund Ruffin of Virginia, a white-haired old man who had been a personal friend of Calhoun. At

seven o'clock, Captain Abner Doubleday fired the first shot in defence of the Union. The bombardment lasted thirty-four hours. The walls of the fort were seriously injured, and the main gates destroyed; the barracks having caught fire, the magazine was so surrounded by the flames that Anderson ordered the powder to be thrown into the sea. The garrison, only sixty-four in all, worn

ATTACK ON FORT SUMTER FROM MORRIS ISLAND.—(From a Sketch taken by an Eye-witness.)

out by labor, choked and blinded by smoke, having well-nigh exhausted their ammunition, and with no food except salt pork, were forced to surrender. They were permitted to march out after firing a salute of fifty guns to the flag before hauling it down. Strange to say, though forty-seven heavy guns and mortars had played incessantly upon the works, throwing two thousand three hundred and sixty shot, and nine hundred and eighty shells, not a man had been injured.

The news of the first shot fired upon Sumter stirred the nation like an electric shock. All hesitation vanished, and people at once took sides for or against the Union. The peace-makers

were put down, and the voice of reflection was silenced. At the South, the Union men were overwhelmed by the war party, and the violent secessionists took control. At the North, Republicans and Democrats combined for the support of the government. Lincoln issued a call for seventy-five thousand troops; it was answered by three hundred thousand volunteers eager to enlist. Virginia, Arkansas, North Carolina, and Tennessee now linked their fate with the Confederacy.

It soon became evident that Virginia would be the battle-field of the war. The Confederate capital was removed to Richmond. Virginian troops seized the United States armory at Harper's Ferry, and the Navy-Yard near Norfolk. Lieutenant-Colonel Robert E. Lee, General Scott's favorite aid, and son of "Light-horse Harry," threw in his fortunes with his native State, and was at once put in charge of her military forces. Regiments were pushed forward from the South, and in the early summer there were in the Old Dominion nearly fifty thousand men under arms.

Meanwhile, Northern soldiers were hurrying to the defence of the national capital. On the 19th of April, a Massachusetts regiment was mobbed while passing through Baltimore, and several men were killed. Thus the first blood of the civil war was shed on the anniversary of Lexington and Concord. For a time Washington was isolated from the nation. The famous Seventh regiment of New York, and General Butler with the Eighth Massachusetts, landed at Annapolis, seized and repaired the railroad, and moved on toward the Potomac. Finding a wrecked locomotive, Butler asked if any one could put it right. "I can," said one, "because I made it." In fact, these men represented every trade and art, and could do any work required. Other regiments followed. May 10th, Baltimore was occupied by the Federal troops, and regular communication with Washington was re-established. The secession fever in Maryland rapidly diminished. Kentucky refused to go out of the Union, but proclaimed a strict neutrality. Both sides soon invaded the State, and it was torn with civil strife.

To ensure the safety of Washington, Arlington Heights were seized, and Colonel Ellsworth with his Zouaves took possession of Alexandria. Seeing the Confederate flag flying from the roof of a hotel in that place, he went up stairs and tore it down. While descending, he was shot by the landlord, who in turn fell by the hand of a private soldier. Fortress Monroe was strongly gar-

risoned, thus securing this depot and the entrance to the Chesapeake. The Confederate troops under Magruder were driven from Hampton, and some negroes being captured they were declared by General Butler "contraband of war," whence arose the popular appellation, "contrabands." Soon after, a Federal detachment sent against Big Bethel was repulsed, with the loss of the gallant Major Winthrop, a promising young author, who was shot by a North Carolina drummer boy.

The part of Virginia lying west of the Alleghanies was strongly Union. When the secession ordinance was passed, a convention was held at Wheeling, which decided that West Virginia should secede from the commonwealth and establish a new State. Confederate and Union troops poured in, and soon the novel paradox was presented of a seceded State resisting secession, and a nation then at war to prevent secession itself fighting to uphold it. The battles of Philippi, Rich Mountain, Carrick's Ford, Carnifex Ferry, and Cheat Mountain, gave the Federalists control of the State. West Virginia was ultimately admitted into the Union, June 20, 1863.

Governor Jackson made vigorous efforts to carry Missouri into the ranks of the disunionists. Captain, afterward General, Lyon, in command of the regular troops, foiled his design, broke up a secessionist camp near St. Louis, saved the United States arsenal in that city, and afterward defeated Colonel Marmaduke at Booneville. Missouri soon became the battle-ground of the contending parties at the West. "No less than sixty battles and skirmishes were fought on its soil during the year." Troops being pushed up from Texas and Arkansas under McCulloch and Price, the Federalists were defeated at Carthage and Wilson's Creek, and Colonel Mulligan was forced to surrender the national garrison at Lexington. Lyon was killed in the second-named encounter while gallantly heading a charge.

General Fremont, who was then appointed to the command of the western department, was a popular officer, but he was not in harmony with the government, and he had confiscated the property and the slaves of those in arms against the United States. Just as he was on the eve of a battle at Springfield, he was replaced by General Hunter, who, in turn, was quickly superseded by General Halleck. The skill of the latter officer, with the aid of such men as Sigel, Blair, and others, in a measure restored the Union supremacy.

In December, Brigadier-General Grant first came into notice. He led an expedition down the river from Cairo to break up, at Belmont, a Confederate encampment of troops who had crossed over from Kentucky under General, formerly Bishop, Polk. At the moment of success, reinforcements being received by the enemy, Grant was forced to retreat.

By midsummer, Scott had collected and organized at Washington a considerable army. The North grew impatient of delay, and the cry of "On to Richmond!" was echoed on every side. Many of the troops were enlisted for only three months, and it seemed desirable to make some use of their services before they returned home. Accordingly, about the middle of July, the Grand Army of the Potomac, under General Irvin McDowell, was sent out to attack the main Confederate force commanded by General Beauregard at Bull Run near Manassas Junction. The two armies were about the same strength, thirty thousand men.

McDowell's plan was for Heintzelman's and Hunter's divisions to cross at Sudley's Spring Ford and turn the Confederate left; while Tyler's division was to make a feint at the stone bridge in front, and at the proper moment to cross over and finish the victory. The troops started at half-past two o'clock, Sunday morning, the 21st. But they had to force their way along foot-paths and unused roads, and the attack did not begin until after ten o'clock, when they were already weary with the march of many miles and oppressed by the heat of a sultry day. Notwithstanding, they went into this, their first battle, gallantly. The Confederates were steadily driven back, the bridge was cleared, and Tyler's men crossed. The enemy's left wing was routed, and the first stage of the battle was over. Then came the second. The Confederates rallied on a plateau a mile and a half in rear of their first line. Here they were reinforced by General T. J. Jackson's brigade. General Bee, rushing up to Jackson, said, "They are beating us back." "Well, sir, we will give them the bayonet," was the calm reply. Turning to his men, Bee shouted, "There's Jackson standing like a stone wall!" "From that time," says Draper, "the name he had received in a baptism of fire displaced that he had received in a baptism of water, and he was known ever after as 'Stonewall Jackson.'" Generals Johnston and Beauregard now galloped on the field. The former seized the colors of the Fourth Alabama and offered to head a charge; the latter

leaped from his horse and, turning to his men, exclaimed, "I am come to die with you!" Around the plateau the battle surged with varying success. The Confederates had brought every man and gun into the contest. The Union troops had gained the plateau, been swept away, but had regained a footing on the crest. The supreme moment had come.

GENERAL "STONEWALL" JACKSON AT THE HEAD OF HIS BRIGADE.

The battle had reached the third stage. It was, however, already decided, and that away in the Shenandoah Valley. General Patterson had been sent there with twenty thousand men to watch General Joseph E. Johnston's command at Winchester. His antagonist, proving too wary for him, escaped with a large part of his force, and reached Beauregard in time to take part in this struggle. On this eventful afternoon, Kirby Smith, with the residue of Johnston's army, was approaching Manassas by rail. Hearing the sound of a heavy battle, he stopped his engine, and hurried thither across the fields. And now, at the crisis of the contest, he suddenly fell upon the Union flank. "Here's Johnston from the Valley!" was the cry that ran down the ranks. The battle that seemed so nearly won, was lost in a moment. The ranks broke, and soon the field was blue with fugitives. As the crowd converged upon the bridge over Cub Run in the rear, a shell burst among the wagons and overturned a caisson. The road was blocked and the panic-stricken soldiers became wild

with terror. All organization was lost; traces were cut; cannon abandoned; ambulances emptied of their wounded; and guns and equipments thrown away. Horse, foot, artillery, and wagons became inextricably entangled. Mounted men put spurs to their steeds and plunged through the struggling mass. Congressmen and ladies who had come out to see the fight, and officers and privates who had run from it, streamed over the country breathless with haste and speechless with fright. Many never stopped till they were safe over the Long Bridge.

Intense was the chagrin of the fugitives when they found that there had been no active pursuit by the Confederates. The Union rear-guard, an entire division which had taken no part in the battle, covered the retreat and fell back in good order. The Confederate leaders were much blamed at the South for not making an immediate advance upon Washington. The reasons afterward given by General Johnston in vindication of their policy show that it would have been a most hazardous undertaking, and one ardently to be desired by the Union army. The Federal loss was about three thousand, and the Confederate, two thousand men.

The effects of this battle were singular. The vanquished reaped all the real advantage. "The victory," said Johnston, "cost us more than the defeat did our antagonists." "It was the greatest misfortune," declares Pollard, "that ever befel the Southern Confederacy." The phrase, "One Southerner is equal to five Yankees" became current. The war seemed ended, and crowds left the army for home. The new government was considered to be established, and a strife began over the location of the capital, Nashville offering as a bait a costly presidential mansion. At first, the North was chagrined and disappointed, but it soon rallied with a more earnest determination. The march to Richmond was seen to be something more than a mere holiday procession of the military. While the streets of the capital were crowded with stragglers, the House of Representatives unanimously passed the following: "*Resolved*, That the maintenance of the Constitution, the preservation of the Union, and the enforcement of the laws, are sacred trusts which must be executed; and no disaster shall discourage us from the most ample performance of this high duty." Five hundred thousand men and five hundred million dollars were voted to carry on the war. The successes of General McClellan in West Virginia having won him the confidence of the people, "The Young Napoleon," as he was popu-

larly called, was placed in command of the Army of the Potomac. Soon after, General Scott, on account of increasing infirmities, resigned, and McClellan took his place at the head of the forces of the United States.

No military action of importance occurred in Virginia during the rest of the year. October 21st, a Federal reconnoitering detachment was overwhelmed at Ball's Bluff and forced down the slippery banks, where, the old scows used for crossing the river being sunk, half the troops were cut off. Among the killed was Colonel Baker, United States Senator from Oregon. Late in December, General E. O. C. Ord, in command of a foraging party, was successful in a severe skirmish at Dranesville.

The war was vigorously waged by sea and along the coast, from the beginning. Soon after the breaking out of hostilities, President Lincoln declared the Southern ports blockaded. The American navy was small, and at this time the Brooklyn was the only efficient vessel at hand for use. Ships were rapidly fitted out, and soon armed squadrons were watching along the entire Southern coast. They were not able, however, to hermetically seal a shore whose length exceeded three thousand miles, with many inlets and intricate approaches, and vessels continually ran the blockade.

The Confederate government had issued letters of marque, authorizing ships upon the high seas to prey on Northern commerce. In June, the privateer Savannah escaped from Charleston, but took only one prize before she was captured by the United States brig Perry. The next month the Petrel, a former revenue cutter, also from Charleston, got to sea, and soon bore down upon a ship which she took to be a lumbering old merchantman. In truth, it was the frigate St. Lawrence, with port-holes closed and men concealed below. The Petrel eagerly pressed on in pursuit, and finally opened fire upon the innocent-looking craft. Suddenly the St. Lawrence revealed her true character, and poured a broadside into the saucy privateer which sunk her ere all her crew could be rescued. The most successful of the privateers was the Sumter, Captain Semmes, which got safely out of New Orleans, July 1st. Semmes made several captures, was entertained by Confederate sympathizers at Nassau, and finally reached the Bay of Gibraltar. Here he was blockaded by the United States steamer Tuscarora until he sold his vessel in despair.

A combined naval and land expedition under Commodore

Stringham and General Butler, August 29th, seized the forts at the entrance of Hatteras Inlet, North Carolina. Later, a second and larger expedition commanded by Commodore Dupont and General T. W. Sherman, after a severe bombardment, captured the earthworks at Port Royal entrance and Tybee Island, South Carolina. During this engagement the ships described a circle between Forts Beauregard and Walker, each vessel delivering its fire as it slowly sailed by, then passing on, while another took its place. The line of this circle was constantly changed to prevent the Confederate cannoneers from getting the range of the vessels. The troops, dismayed by the terrible fire, escaped to the woods, and thence to Charleston. The neighboring planters followed, and when Sherman took possession of Beaufort soon after, he found "only one white person there, and he was drunk."

The foreign relations caused both governments great anxiety. England and France quickly issued a proclamation of neutrality, but acknowledged the Confederates as belligerents, while the United States insisted that they should be considered as insurgents. After the battle of Bull Run, the recognition of the Confederacy by the European powers was considered at the South almost certain, especially as England suffered so greatly from the stoppage of the cotton supply. Messrs. Mason and Slidell, who were appointed commissioners to the foreign courts, having run the blockade, took passage at Havana on the *Trent*, an English mail-steamer. The next day, Captain Wilkes, of the United States steamer *San Jacinto*, intercepted the *Trent* and captured the envoys. On the reception of the news, the British government began at once to prepare for hostilities. The United States authorities, however, promptly disavowed the act, which, in fact, was directly opposed to the principles of the war of 1812, and surrendered the commissioners. The threatening cloud of foreign intervention was thus brushed away.

THE SAN JACINTO INTERCEPTING THE TRENT.

CHAPTER XIV.

SECOND YEAR OF THE CIVIL WAR—1862.

MCLELLAN had shown great ability in organizing the men and material poured out so lavishly by the North. The Army of the Potomac, February 1st, numbered over two hundred and twenty thousand troops, admirably equipped. During the fall and early winter, the weather was excellent, and everybody expected an advance. None was made. The phrase "All is quiet on the Potomac" became a proverb. The President, impatient of this

delay, gave expression to the common expectation of the country by his order of January 27th, directing that on Washington's birthday there should be a "forward march" of all the troops of the United States.

During the preceding year, the war had been carried on entirely at random. Henceforth the movements of the armies were more in accordance with a definite plan. Three objects were kept prominently in view. These were the opening of the Mississippi River, the enforcement of the blockade, and the capture of Richmond.

At the West, the Confederates had a line of defence extending from the Mississippi to the Cumberland Mountains. The right was at Mill Spring and Cumberland Gap, and the left at Columbus, which was so strongly fortified that it was called the Gibraltar of America. Forts Donelson and Henry held the Tennessee and Cumberland Rivers. A force at Bowling Green protected the railroad southward to Nashville. General Halleck, in command of the western troops, adopted the plan of piercing this line

at the centre, thereby forcing the evacuation of Columbus. He would thus open the way to Nashville, recover a part of the Mississippi, and finally threaten the Memphis and Charleston railroad, the great route between the eastern and western parts of the Confederacy.

The western armies, with the ardor so characteristic of the people, were ready to march long before the time fixed by the President. General George H. Thomas opened the campaign, January 18th, by repulsing a dashing Confederate attack at Logan's Cross Roads. This was followed by the evacuation of the strong position at Mill Spring. Commodore Foote, with a fleet of gun-boats and transports carrying seventeen thousand men under General Grant, left Cairo February 2d, and ascended the Tennessee. The troops disembarked about four miles below Fort Henry, and marched up both banks of the river, while the fleet bombarded the fort. Under the terrific rain of bombs and balls, the place soon became untenable. General Tilghman, having sent away his garrison to Fort Donelson before the arrival of Grant's army, gallantly resolved to sacrifice himself to secure the retreat of his men. He remained behind with a mere handful of artillerymen, manning his guns until defence was hopeless. He then hauled down his flag, surrendering at discretion. During the action, a shot tore through the side of the steamer Essex and pierced her boiler. The vessel was instantly filled with steam, which killed both the pilots at their posts and severely scalded Captain W. D. Porter and nearly forty of his crew.

Commodore Foote, with his fleet, then returned to the Ohio and came up the Cumberland River, while Grant crossed over by land to co-operate in the reduction of Fort Donelson. This was a large field-work, covering one hundred acres and mounting sixty-five guns. It crowned a bluff one hundred feet high, which commanded the river for a distance of two miles. On the land side was a line of rifle-pits and batteries, protected by abattis and interlaced brush, extending along the wooded hills two and one-half miles.

On the 13th, soon after Grant's arrival, McClelland's division assaulted a battery, but was repulsed. A bitter storm of hail and snow came on at dark, but the hardy western troops lay down in line of battle with no fires nor tents, and many of them with no blankets. The wounded who could not crawl off were left in the narrow space between the two armies, where their piteous cries

were heard through the night. The next afternoon, the gun-boats, moving up to within three hundred yards, engaged the water-batteries. The plunging fire from the bluff, however, told heavily. The flag-ship was struck by fifty-nine shots, and the crippled boats finally withdrew, the commodore himself being wounded. The Confederate works were uninjured, and no one in them was seriously hurt.

So far everything had gone against the Union army, but it had received heavy reinforcements, until it amounted to "thirty thousand, may be forty thousand men." The Confederates, therefore, despaired of a successful defence, and General Floyd (Buchanan's late Secretary of War) called a council, at which it was decided to break through the investment and force a way to Nashville. The next morning, an hour before day, having massed his men heavily on the left, General Pillow sallied out on Grant's right wing, while Buckner made a vigorous attack at the centre. The Confederates were successful, and the Wynn's Ferry road lay open before them. By some strange fatality, they did not seize the object for which they had been fighting. Meanwhile Grant, who had visited the fleet to consult with Commodore Foote, came upon the field, and seeing that the critical moment had arrived, ordered a general advance along the whole line. His men swept all before them, recovered the battle-field, and, at the left, General Smith secured a foothold on the hill, the very key of the fort. A half hour more of daylight, and Donelson would have been taken.

That night the thermometer sank to 10° above zero. The troops on both sides, with neither fire nor shelter, shivered in the pitiless storm, while the ground on which they lay was covered with a sheet of ice. But, sadder yet, the wounded by hundreds strewed the fields, staining the snow with a crimson tint, and slowly stiffening and freezing as the life-current ebbed away. General Wallace's men, who were nearest, spent nearly the whole night in ministering to the wants of friend and foe.

Under cover of the darkness, Generals Pillow, Floyd, and Forrest escaped from the fort. General Buckner, who succeeded to the command of those who disdained to flee, found many of his men so exhausted that they fell asleep when standing in line of battle, even under fire. In the morning, he wrote to General Grant, asking the terms of capitulation. Grant replied that none would be accepted except an "unconditional surrender," and that he

“proposed to move immediately upon his works.” Buckner had no choice, and the garrison accordingly laid down their arms.

These victories accomplished the result which was expected. Bowling Green and Columbus were evacuated. The Confederates fell back to Corinth, the great railroad centre for Mississippi and Tennessee, where their forces were gradually collected under the command of Generals Albert Sydney Johnston and Beauregard. General Buell, in command of the Depart-

SURRENDER OF FORT DONELSON.

ment of the Ohio, at once advanced and took possession of Nashville, which became his headquarters. The next movement of the Union army was to secure the Memphis and Charleston railroad, thus cutting off Memphis and recovering another section of the Mississippi River. Grant having had some difficulty with Halleck, his army was turned over to General C. F. Smith, who ascended the Tennessee and encamped at Pittsburg Landing. This officer fell ill of a mere scratch which he received in getting upon a boat, and, his health having been injured by exposure during the siege of Fort Donelson, died soon after. Mean-

while Grant was restored to the command, and Buell was ordered to reinforce him, preparatory to an advance upon Corinth.

The Confederate generals, detecting this plan, decided to fall upon Grant's army before Buell could arrive. They accordingly set out quietly from Corinth at three o'clock in the morning of April 3d, with about forty thousand men. On Saturday night, the 5th, the army lay concealed within three-quarters of a mile of the Union pickets. "It would have required a keen eye,"

says the Comte de Paris, "to discover at the bottom of a ravine the only fire which had been kindled in camp; where every one was preparing in silence, and without light, for the conflict of the next day. Its flickering flame projected on the surrounding trees the shadows of a few officers wrapped up in cavalry cloaks. These were the leaders of the Confederate army, assembled to discuss the chances of the battle which

THE MIDNIGHT COUNCIL OF WAR.

was to restore to them the whole valley of the Mississippi;—Johnston, who seemed already to bear upon his gloomy brow the presentiment of his approaching death; Beauregard, full of ardor and of confidence, which he was endeavoring to impart to the others; Hardee, the practiced officer, whose European military education invested him with a peculiar authority; Braxton Bragg, as stiff, and even haughty, toward his equals as he was stern to his inferiors; Bishop Polk, who only remembered the early years of his youth passed at the West Point Academy; finally, Breckenridge, the politician, very lately Vice-President of the United States, an improvised general, who was learning his profession in this great and rough school. Their deliberations were long. At last the soldiers, who were watching them at

a distance, saw them separate, and each direct his steps toward his own headquarters. 'Gentlemen,' said Beauregard, 'to-morrow we shall sleep in the enemy's camp.'" The Federal troops were scattered over a plateau extending three or four miles back from the river. This was cut up with ravines, woods, and a very maze of roads and by-paths. It was known that the enemy was in force at Corinth, only a score of miles away, and during Saturday the woods had been found alive with scouts; yet no breastworks had been thrown up; no abattis, there made so easily, had been constructed; no careful reconnoitering parties sent forward; and no efficient system of spies and advance-pickets established. That night the Union army, about thirty-three thousand strong, slept in quiet, never dreaming of impending peril.

Just at daybreak, the pickets were driven in. Close on their heels came the shells, and then, pouring at double-quick from the woods, the Confederate lines of battle. Surprised, but not panic-stricken, the Union troops formed their ranks as best they could, to meet the shock. Some regiments broke and fled at the first fire; others maintained their ground with the steadiness of veterans. To resist the desperate attempts of the Confederates to turn the Federal right-flank, the Union troops withdrew from point to point, until they were more than a mile in the rear of their first position. General Prentiss with three regiments, becoming separated from the rest of his command, was taken prisoner. His division had been organized only eleven days, and many of his men had received no ammunition. Sherman, by his reckless bravery inspiring his raw troops with his own undaunted resolution, held them in place till the middle of the afternoon, when he fell back to a new line guarding the bridge, by which General Wallace's brigade was expected to arrive from Crump's Landing, five miles below.

There seemed no hope for the Union army. It had been pushed to the very edge of the river. Beneath the bluff, at the landing, huddled a mass of five or six thousand fugitives, pale, trembling, cowardly, whom no entreaties nor menaces could move to the aid of their brave companions. One more bold dash, and the Confederates would drive all pell-mell into the water. Grant, who, as at Donelson, was absent from the field, had arrived at eight o'clock, only to find an already beaten army. He then did his utmost to reorganize his men and establish fresh points of defence. At half-past two General Johnston was wounded. He

still kept his horse, however, and was only taken off to die. It was some time ere Beauregard got his troops in hand. Grant used this precious delay to the utmost. Scattered guns were massed in a semicircle upon a bluff commanding the road to the landing. These were worked by volunteers—soldiers, officers, and a surgeon. Behind them gathered the troops who yet stood firm. In front was a deep ravine, wet and slippery, at the foot of which were anchored two gun-boats, the Lexington and the Tyler. Just at eve, the Confederates essayed this last obstacle. But struggling through the mud and water, torn by musket-ball and cannon-shot from above and eight-inch shell from below, few reached the brow of the bluff. Just then the advance of Buell's army, Ammen's brigade, came upon the field at the double-quick. They repulsed the final charge and drove the enemy headlong down the slope.

The Confederates were indeed checked, but they had reaped all the substantial fruits of victory. They had taken the Union camps, three thousand prisoners, thirty flags, and immense stores.

All the night of that lurid Sunday, a day sacred to the Prince of Peace, the gun-boats threw their enormous shells into the woods, where the wearied Confederates were seeking rest. Stragglers plundered and reveled in the captured tents, and the wounded, gray and blue, lay in their pain. The woods caught fire, and the flames, creeping among the leaves and up the dead trunks, gave place only to torrents of rain, which so often follow a heavy engagement.

The next morning the tide turned. Lew Wallace, whom Grant expected to come upon the enemy's flank and decide the battle, as Blücher did at Waterloo, had spent the whole day in wandering about to find the Union army; but he was now on the field with five thousand fresh troops. Buell's army, twenty-two thousand strong, was in line. The wearied Confederates were in no condition to resist their overwhelming attacks. Beauregard, contesting, step by step, every tree and ridge, was driven from the field. He retired, however, in good order, and, unmolested, returned to Corinth. He had lost nearly eleven thousand men, and Grant thirteen thousand.

An eye-witness of this retreat says: "In this ride I saw more of human agony and woe than I trust I shall ever again be called to behold. The retreating host wound along a narrow and almost impassable road. Here was a long line of wagons loaded with

wounded, piled in like bags of grain, groaning and cursing; while the mules plunged on in mud and water, the latter sometimes coming into the wagons. Next was a straggling regiment of infantry, pressing on past the train of wagons; then a stretcher, borne upon the shoulders of four men, carrying a wounded officer; then soldiers staggering along, with an arm broken and hanging down, or other fearful wounds. To add to the horrors of the scene, the elements of heaven marshaled their forces—a fitting accompaniment of the tempest of human desolation and passion which was raging. A cold, drizzling rain commenced about nightfall, and finally turned to pitiless, blinding hail. I passed wagon-trains filled with wounded and dying soldiers, without even a blanket to shield them from the driving sleet and hail, which fell in stones as large as partridge-eggs, until it lay on the ground two inches deep. Some three hundred men died during that awful retreat, and their bodies were thrown out to make room for others who, although wounded, had struggled on through the storm, hoping to find shelter, rest, and medical care."

History reveals a page on which, now the "cruel war is over," no American can look without a moistening of the eye, a fluttering of the heart, and a secret pride that we are all one again. The "incomparable infantry," as Draper styles them, which so nearly snatched the victory from the Union banners on the bloody plateau of Pittsburg Landing, exhibited a patient endurance and a heroic valor which made them the admiration of the Northern soldiers who met them on so many hard-fought fields. In a letter written by a lady to a friend after a visit to Camp Douglas, Chicago, is a touching description of the appearance of the prisoners taken at Shiloh, as this battle is often called from a little church near by: "I have not told you how awfully they were dressed. They had old carpets, new carpets, rag carpets, old bed-quilts, new bed-quilts, and ladies' quilts for blankets. They had slouch hats, children's hats, little girls' hats; but not one soldier had a soldier's cap on his head. One man had two old hats tied to his feet instead of shoes. They were the most ragged, torn, and worn, and weary-looking set I ever saw. Every one felt sorry for them, and no one was disposed to speak unkindly to them." To read of their sufferings and endurance is like perusing a misplaced page of Revolutionary times.

General Halleck now assumed command of the Union army, which was increased to one hundred thousand men, and, by slow

stages, followed the Confederates. Beauregard, finding himself outnumbered, evacuated Corinth, and, May 30th, Halleck took possession of that important railroad centre.

Closely connected with the movements of the army of the Tennessee were the efforts made to reopen the navigation of the Mississippi, which the South had carefully fortified at every strategic point from the Ohio to the Gulf, a distance of a thousand miles. The Confederates, on retreating from Columbus, fell back to New Madrid and Island No. 10. General Pope, with the Union forces, descending the Missouri side of the river, invested the former place March 3d. The garrison, however, precipitately abandoned their position, "leaving their supper untouched and their candles burning," and retired to Island No. 10. Here they were bombarded by Commodore Foote for three weeks, with little effect; three thousand shells having killed only one man. Pope's engineers, meanwhile, were digging a canal twelve miles long and fifty feet wide across Donaldson's Point. Half of the way was through heavy timber, where the trees had to be cut off four feet below the surface of the water. This heavy task was accomplished in nineteen days. Steamboats and barges were then safely transferred below the newly-made island, while the Carondelet and the Pittsburg ran the batteries. Under the protection of these gun-boats, Pope crossed the Mississippi in the midst of a fearful storm, took the Confederate works on the opposite bank, and prepared to attack the principal fortifications in the rear. The garrison, nearly seven thousand strong, finding their retreat cut off, surrendered on the last day of the conflict at Shiloh.

DONALDSON'S POINT
AND ISLAND NO. 10.

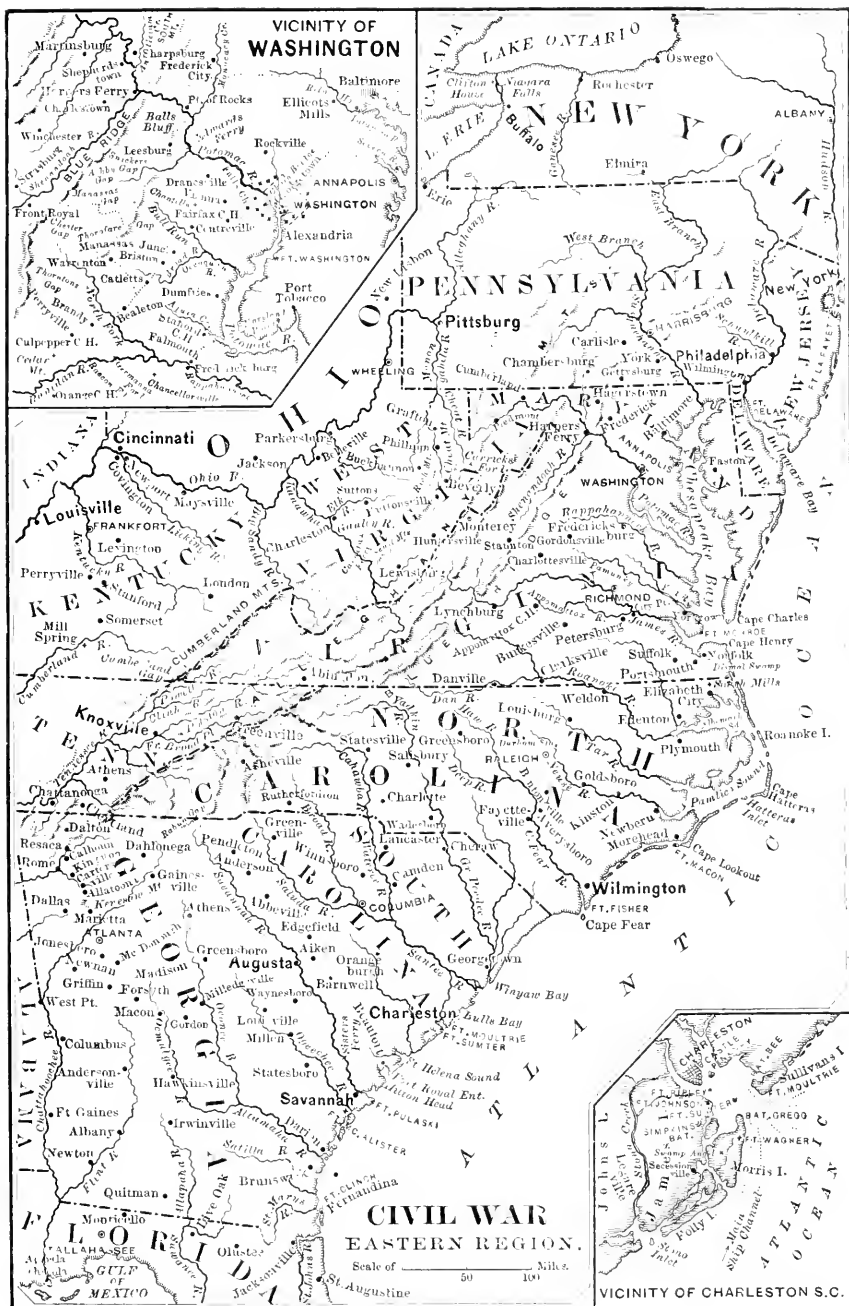

Commodore Foote then descended the river, and, May 10th, defeated the Confederate fleet above Fort Pillow after a desperate engagement. In consequence of the retreat of the Confederate army southward, that fort was evacuated. The Union gun-boats proceeded southward, and, June 5th, off the levee at Memphis, engaged the flotilla which defended that city. It was a singular combat, recalling the sea-fights of the Romans. A Union ram, the *Queen of the West*, striking the *General Price*, a Confederate ram, sank her at once; in turn, the *Queen* was run into by the *Beauregard*, and disabled; thereupon the *Monarch* made at the *Beauregard*, and sank her. All the Confederate vessels except one were destroyed. Memphis then surrendered, thus giving to the Union army the control of the Memphis and Charleston railroad.

General Halleck having been called to Washington, the command-in-chief fell to General Grant, who held Memphis, Grand Junction, and Corinth. The Confederate army was soon after concentrated under Bragg at Chattanooga, Price at Iuka, and Van Dorn at Holly Springs. We shall follow the attempts they made to break through the rapidly contracting line of the Federal investment. The South was determined to reconquer the border States, which had been so early lost, and to carry the burdens of war beyond her own limits.

In the latter part of August, General Braxton Bragg set out from Chattanooga upon a grand raid into Kentucky. General Buell moved northward to Nashville, where, by intercepted despatches, he learned that Louisville was the objective point of the expedition. Then ensued between them a race of nearly three hundred miles. At Frankfort, Bragg was joined by Kirby Smith, who had marched from Knoxville, routed a Union force under General Manson at Richmond, Kentucky, and had then moved North as far as Cynthiana, where he threatened to attack Cincinnati, but was repelled by the extensive preparations made by General Lew Wallace. Bragg was detained by the burning of a bridge at Bardstown, and so Buell reached Louisville first.

The Union army was here heavily reinforced until it numbered one hundred thousand, double the strength of the enemy. Buell, however, waited to reorganize and get thoroughly ready before he moved. Bragg took advantage of the delay to declare Kentucky a Confederate State; to appoint a provisional government; and to scour the country, seizing cattle, bacon and grain, breaking open stores and taking the goods on paying for them in Confederate money, and forcing the inhabitants to join his army. Buell was at last compelled by the Washington authorities and the pressure of public opinion to make a move, when he slowly followed Bragg, who as leisurely fell back. At Perryville, Bragg fiercely turned upon his pursuers, and a desperate battle was fought. In the darkness, however, Bragg retreated, and finally escaped with his plunder, which filled a wagon train forty miles long. At this juncture (October 30th), General Buell was superseded by General William S. Rosecrans.

Previous to this appointment, important events had taken place within Grant's command. He had sent the veterans of Donelson and Shiloh to Buell's help, and his army was greatly depleted. But thinking that Rosecrans, then at Tuscumbia,

could destroy Price at Iuka, before Van Dorn could come from Holly Springs to prevent, he directed him to make the attempt. It proved a bloody failure. Price and Van Dorn thereupon united their forces, forty thousand strong, and, October 4th, attacked Rosecrans, who had fallen back into Corinth with only half that number. Price's column moved forward in the shape of an immense wedge. Its point pierced the Union centre and reached Rosecrans's headquarters in the town. But on its sides, spread out like great wings, the Federal batteries opened upon the right and left. The Confederate troops, covering before the storm, "bent their necks downward and marched steadily to death, with their faces averted, like men striving to protect themselves against a driving hail." They were flanked on every side, and no human courage could stand the tempest. The whole Union line finally charged upon them, and a gleaming row of steel swept their torn and ragged ranks back to the edge of the forest.

Van Dorn's attack on the Union left should have been simultaneous with Price's upon the centre, but he was delayed until that was repulsed. Twenty minutes after, the Texas and Mississippi troops made a brilliant charge upon Fort Robinette. Steady and unyielding, they advanced to within fifty yards of the entrenchments, received a shower of grape and canister without flinching, and were only driven when the Ohio brigade poured a full volley of musketry into their ranks. They were then rallied by Colonel Rogers, who led them back through the abattis, where, with the colors in one hand and a revolver in the other, he sprang upon the embankment and cheered on his men. An instant more, and he fell, with five brave fellows who had dared to leap to his side. A hand-to-hand struggle ensued with bayonets, clubbed muskets, and brawny fists. The charge, however, was checked, and the Eleventh Missouri and the Twenty-seventh Ohio, jumping over the entrenchments, chased the broken fragment of the Southern column back to the cover of the woods. The Union army, being reinforced, continued the pursuit for forty miles. The Federal loss was about twenty-four hundred, and the Confederate more than double that amount.

We now follow Rosecrans to Nashville, where he concentrated Buell's forces after assuming command of that army. He reached the city November 10th. It is pleasant to notice that, orders having been given to transfer his headquarters on the 9th, the general, remembering that it would be Sunday, countermanded

them. His example fixed in the minds of his men the very whole some idea that the Sabbath should be sacred in war as in peace. Rosecrans's efforts to discipline and equip his dilapidated army were indefatigable. To one of the men, who gave as an excuse for being barefooted that he could not get shoes, he replied :

HEROISM OF COLONEL ROGERS.—BATTLE OF CORINTH.

“Can't get shoes! Why? Go to your captain and demand what you need! Go to him every day till you get it. Bore him for it! Bore him, bore him, bore him! Don't let him rest. Let the captains bore their colonels; let colonels bore their brigadiers; brigadiers their division generals; division generals their corps commanders; and let the corps commanders bore *me*. I'll see then if you don't get what you want. Bore, bore, bore, until you get everything you are entitled to.”

The last of December, Rosecrans moved southward with

forty-six thousand troops to check Bragg, who was already *en route* upon a second grand foraging tour, with over sixty thousand men according to Union accounts, and thirty-five thousand by his own. The two armies met near Murfreesborough on the closing day of the year. Both generals had formed the same plan for the approaching contest. This was to mass his strength on the left wing, and with that to crush the enemy's right. The advantage clearly lay with the army which struck first. Bragg secured the initiative. As the Union left was crossing Stone River to attack the Confederate right, the strong Confederate left fell heavily on the weak Union right. The shock was as unexpected as it was impetuous. Two batteries were taken without firing a gun. There was some resistance, but the right was swept away like forest leaves in an autumn gale. The blow then fell on the centre. Here Phil. Sheridan held the fate of the battle. Outflanked on either side, he wheeled back until his lines finally formed a wedge that pierced the advancing column, and could not be driven. He broke four charges. He fought until his three brigade commanders were killed, his cartridge-boxes emptied, and one-quarter of his command lay bleeding and dying, when, with fixed bayonets, his men slowly withdrew from the cedar thicket, still unconquered and clamoring for ammunition. As they passed Rosecrans, for whom they had saved the day, Sheridan said, gloomily, "Here's all that's left of us, general."

Meanwhile, Rosecrans had been busy. With consummate skill, he had arranged a new line of battle along the railroad and turnpike. The gray-coats soon emerged from the thicket, driving a cloud of fugitives before them. Rosecrans's men held their fire as was the wont in Revolutionary days. When the Confederate columns drew near, there suddenly burst upon them a sheet of flame from cannon and musket. Four times they tried to face this "burning sirocco," and four times they fell back to the protection of the cedars. Late in the afternoon, Breckenridge went across the river to make a final assault on the Union left; but in vain.

New Year's day 1863, found the two armies still face to face. Late in the afternoon of January 2d, Breckenridge's troops, having recrossed the river, suddenly emerged from the woods in three heavy columns. The tactics of Wednesday were repeated and now the Union left was forced to the stream. But as the Southerners came within the range of the Federal guns on the opposite bank, their lines were torn with a fire before which they broke

and fled. The next night, Bragg retreated, leaving to Rosecrans the blood-stained field. This was one of the most fiercely-fought battles of the war, the loss being one-quarter of the number engaged.

Meantime, Grant, having been reinforced, had continued the task of reopening the Mississippi. His plan was to advance along the Mississippi Central Railroad, while Sherman should descend the river with Commodore Porter's fleet, and all combine in an attack on Vicksburg. Everything was progressing favorably, when Van Dorn, by a brilliant dash with his cavalry, December 20th, captured Grant's depot at Holly Springs, and destroyed two million dollars worth of supplies. This broke up the entire arrangement. Sherman, ignorant of the disaster, landed on the Yazoo River, and made an attack on Chickasaw Bayou, north of Vicksburg, but suffered a disastrous repulse. General McClermand then assumed command, and as the army returned, an expedition was sent up the Arkansas River, which captured Fort Hindman, January 11, 1863.

The effort just described to open the Mississippi from the North was seconded by a powerful expedition from the Gulf. Early in the spring, Captain, afterward Commodore, Farragut, with a fleet of forty-seven armed vessels carrying several thousand troops under General Butler, attempted the capture of New Orleans. The mortar boats anchored under the banks and bombarded Forts Jackson and St. Philip, which defended the approach to the city by the river. To conceal the vessels, they were dressed with leafy branches, which rendered them undistinguishable from the green woods. The direction had been accurately calculated, so that the gunners did not need to see the points toward which they were to aim. For six days and nights they continued to throw into the forts about fourteen hundred thirteen-inch shells every twenty-four hours. So severe was the fire, that "windows at the Balize, thirty miles distant, were broken. Fish, stunned by the explosion, lay floating on the surface of the water. Overcome with fatigue, the commanders and crews of the bomb-vessels might be seen lying fast asleep on deck, with a mortar on board the vessel next to them thundering away." The bombs penetrated the ground in and about the forts eighteen or twenty feet, and, exploding, lifted the earth high in air. Very little real damage, however, was done to the works, as the earth fell back to its place again.

Finding that this bombardment, terrible as it seemed, was really full of sound and fury, signifying nothing, Farragut boldly resolved to run the fleet past the defences. The gun-boats were accordingly armored extempore by looping two layers of chain-cables along the sides, while the boilers were protected by bags of sand and coal. The Confederates had closed the river by a heavy chain supported on several old hulks anchored in the stream. This cable was cut during the night, and the current soon opened a passage. At three o'clock in the morning of April 24th, the ships advanced, pouring grape and canister into the forts

BIRD'S-EYE VIEW OF NEW ORLEANS.

at short range, and receiving in return heavy volleys from all the batteries on shore. After running a fearful gauntlet of shot, shell, and the flames of fire-rafts, they next encountered the Confederate fleet of thirteen armed steamboats, the steam-battery Louisiana, and the iron-plated ram Manassas. The flag-ship Hartford caught fire, and was forced on shore; but the men kept their places at the guns, the flames were extinguished, the ship was backed off and again pushed to the front. After a desperate struggle, twelve of the Confederate flotilla were destroyed, and the Federal fleet then steamed up to New Orleans.

The Southern troops had nearly all been sent to take part in the battle of Shiloh, and the city now lay helpless under the Union guns. Vast quantities of cotton, together with loaded steamers

and the shipping of the port, were burned by the Confederate authorities. Pollard says: "No sooner had the fleet turned the point and come within sight of the city, than the work of destruction commenced. Vast columns of smoke darkened the face of heaven and obscured the noon-day sun; for five miles along the levee fierce flames darted through the lurid atmosphere. Great ships and steamers wrapped in fire floated down the river, threatening the Federal vessels with destruction. Fifteen thousand bales of cotton, worth one and a half million dollars, were consumed. About a dozen large river steamboats, twelve or fifteen ships, a great floating battery, several unfinished gun-boats, the immense ram Mississippi, and the docks on the other side of the river, were all embraced in the fiery sacrifice." Amid this scene of dire destruction the alarm-bells were perpetually tolling.

The forts below, being threatened by the troops under Butler, soon after surrendered. Farragut then ascended the river, took possession of Baton Rouge and Natchez, and, running the batteries at Vicksburg, joined the Union fleet above.

The contest in Missouri culminated early in the season. The Confederates under General Price, having been roughly handled in February by General Pope, had retreated into Arkansas, keenly pursued by the Federals under General Samuel R. Curtis. Price had been joined by some Arkansas and Texas troops under General Benjamin McCulloch. He was also reinforced by General Albert Pike with a brigade of Indians, and by Major-General Van Dorn, who took command of the army, then nearly twenty thousand strong. He resumed the offensive, and struck at the division of General Franz Sigel in Bentonville. That officer retired with great skill upon General Curtis, who concentrated his troops in a strong position at Pea Ridge. A desperate struggle took place March 7th, which lasted all day, the Union troops being worsted. The next day Curtis made a new disposition of his forces, carrying everything before him until the middle of the forenoon, when the enemy suddenly disappeared from the front. So skillfully was the retreat conducted by obscure ravines, that it was afternoon before the Federal officers could find out what road Van Dorn had taken. The Union loss was about thirteen hundred; the Confederate could not have been less, and included Generals McCulloch and McIntosh killed, and Generals Price and Slack wounded. Soon after this, both the Union and Confederate armies were weakened by detachments sent to take

part in the terrible struggle going on in Tennessee. No important battles, therefore, occurred either in Arkansas or in Missouri. There were some minor engagements, but they had little effect on the issue of the war. The whole country, however, was harried by guerilla bands, which plundered friend and foe alike. Missouri became a land of desolation and death.

As this was the only appearance of the Indians on the battle-fields of the war, it is interesting to notice their behavior. It is said that the white officers had great difficulty in keeping them in order, and that their principal service was in consuming rations. They were greatly alarmed by the guns which ran around on wheels, by the falling of the trees behind which they had taken shelter, and by the roar of battle which drowned their loudest war-whoop.

During the winter of 1861-2, another important step was taken toward the enforcement of the blockade along the Atlantic coast. General Burnside, with eleven thousand men, and Flag-Officer Goldsborough, in command of the fleet, conducted an expedition against Roanoke, memorable as the scene of Raleigh's lost colony. This island was the key to the rear defences of Norfolk. "It unlocks," said General Wise, "two sounds, eight rivers, four canals, and two railroads;" and commands the seaboard from Capes Henry to Hatteras. The Confederate forts were captured February 8th, and their fleet was destroyed. Elizabeth City and Newbern were occupied. Finally, on the very day Farragut appeared before New Orleans, Fort Macon, at the entrance to Beaufort harbor, was taken. The coast of Upper North Carolina, with its intricate network of water communication through Pamlico and Albemarle Sounds, fell into the Union hands; while the blockading squadron secured a convenient depot of supplies and a safe rendezvous from storms.

Port Royal, which was captured in the autumn of 1861, became during this year the base of operations against Florida and Georgia. These States had been denuded of their strength to reinforce the Confederate armies, the former alone having furnished ten thousand men. They, therefore, became an easy prey to the powerful expeditions which were sent against them. Fernandina, Fort Clinch, Jacksonville, Darien, and St. Augustine were captured.

In the spring, General Quincy A. Gillmore laid siege to Fort Pulaski. The walls of this stronghold were seven and a half feet

thick, and the Union batteries were a mile, and some two miles away. Yet the pointed balls from the rifled guns penetrated from twenty to twenty-six inches into the masonry, and honeycombed it completely; while the solid ten-inch shot, pounding like trip-hammers, knocked out the loosened pieces. In fifteen hours of fighting, the fort was compelled to surrender. This capture effectually closed the port of Savannah. At the end of the year, every city of the Atlantic sea-coast, except Savannah, Charleston, and Mobile, was held by the Federal armies.

We now turn from the minor operations, as it were, of the fleet, to the great naval event of the war. When the United States navy-yard at Norfolk was abandoned, the steam-frigate *Merrimac*, the finest in the service, was scuttled. The Confederates afterward raised her, razed her deck, and fitted her with an iron prow and a sloping roof plated with four and a third inches of iron. She was christened the *Virginia*, though still generally known as the *Merrimac*. About noon, March 8th, the last day of the desperate struggle at Pea Ridge, this strange craft, looking not unlike a great house sunk in the water to its eaves, steamed out into Hampton Roads. She was convoyed by several gun-boats. Disdaining to fire a shot, she steered directly for the sloop-of-war *Cumberland*, whose terrific broadsides glanced harmlessly, like rubber balls, from the monster's iron roof. Her sharp beak, striking squarely under the bow, made a hole large enough for a man to enter. This terrible blow disabled the *Cumberland*, but her heroic crew continued to work their guns, until the vessel, with all on board, plunged beneath the water. Her flag was never struck, and floated from her masthead after the ship had gone to the bottom.

Warned by the fate of his companion, the captain of the frigate *Congress*, on the approach of the *Merrimac*, ran his vessel ashore; but the iron-clad, taking a position astern, deliberately fired shells into her till the helpless crew was forced to surrender. Meanwhile, the steam-frigate *Minnesota*, coming to the relief of her consorts, grounded. Exposed to the fire of the gun-boats and an occasional shot from the *Merrimac*, she lay at the mercy of her foes. The *Merrimac*, at sunset, returned to Norfolk, awaiting, the next day, an easy victory over the rest of the Union fleet. All was now delight and anticipation among the Confederates; all was dismay and dismal forebodings among the Federals.

That night the *Monitor* arrived in the bay, after a tedious

voyage from New York, where she had been building, in order to meet the long-expected Merrimac. This "Yankee cheese-box on a raft," as it was called, was the invention of Captain Ericsson. It was the hull of a vessel with the deck a few inches above the water. The upper part, which was exposed to the enemy's fire, projected several feet beyond the lower portion, and was made of thick white oak covered with iron plating five inches thick on the sides and one inch on deck. In the centre of the ship was a curious round, shot-proof tower, made to revolve slowly by machinery connected with the engine, thus turning its two heavy guns in every direction.

Sunday morning dawned, bright and beautiful. Heedless of its sanctity, the Merrimac again appeared to complete the destruc-

NAVAL DUEL BETWEEN THE MONITOR AND THE MERRIMAC.

tion of the Minnesota. Suddenly, from under the lee of that ship, the Monitor darted out, and hurled at the monster two one hundred and sixty-six pound balls. Startled by the appearance of this unexpected and queer-looking antagonist, the Merrimac poured in a broadside, such as the night before had destroyed the Congress; but the balls glanced off the Monitor's turret, or broke and fell in pieces on the deck.

Then began the battle of the iron ships. It was the first of the kind in the world. Close against each other, iron rasping against iron, they exchanged their tremendous volleys. One heavy bolt hit the Monitor's turret squarely, but broke and left the head sticking in the iron armor. Repeatedly the Merrimac tried to run down the Monitor, but her huge beak only grated over the iron deck, while the Monitor glided out unharmed; and in return, each time as she slipped away, gave her answer

from both the huge eleven-inch guns in her turret. Drawing so little water, she nimbly steamed about her adversary on every side seeking a weak point to put in a ball. Again and again the Merrimac sought to grapple with the Minnesota, but the Monitor quickly interposed. At last, despairing of doing anything with her doughty little antagonist, and being herself somewhat damaged, the Merrimac steamed back to Norfolk. As she drew off, she hurled a parting shot which, striking the Monitor's pilot-house, broke a bar of iron nine inches by twelve, and seriously injured the eyes of the gallant commander, Lieutenant Worden, who was at that moment looking out through a narrow slit and directing the fire of his guns. As he recovered his consciousness, his first words were, "Did we save the Minnesota?"

The effect of this victory was most important. Had the Monitor not appeared, the Merrimac would in all probability have destroyed the rest of the Union fleet, thence she might have ascended the Potomac and laid the Capitol under her guns; steamed to New York and sunk its shipping; or broken up the blockade and made an egress for cotton. A different result might have changed the issue of the war.

The fate of these two historic vessels was strangely mean and unworthy. The Merrimac was blown up on the evacuation of Norfolk a few months after, and the Monitor foundered at sea.

Having now traced the war at the west and along the coast, we return to the army of the Potomac. McClellan made no forward movement on Washington's birthday, notwithstanding the general order. It was not till March 10th that his forces were set in motion. Through the mud and rain they at last plodded to Manassas, only to find to their chagrin that the position had been abandoned the day before, and that the entrenchments behind which the Confederates had sat for nearly a year were quite insignificant, and armed largely with Quaker guns—*i. e.*, wooden logs shaped and painted to imitate cannon. By the skillful strategy of Johnston, the enemy had escaped without the loss of a wagon or a man.

Against the President's judgment, McClellan had long insisted that the easiest way to reach Richmond, the objective point of the war at the east, was by the Peninsula. Having gained a reluctant consent to execute his plan, the army of the Potomac was rapidly transferred down the river, from Washington to Fortress Monroe, by a fleet of three hundred and eighty-nine vessels. McClellan,

being relieved of all responsibility except that of his immediate command, left the capital April 1st. Having arrived at the fortress, he undertook the second "On to Richmond" movement.

The Union army was over one hundred thousand strong. The troops were full of enthusiasm. Weary of their tedious and inglorious encampment around Washington, they were glad to take the field. The orders to march the next morning with five-days rations were, therefore, heard with cheers, and the exultant men heaped high the fires with rails and tree-tops. The camp that night presented a beautiful scene—the very poetry of war. The new moon hung low in the western sky, and the bright stars looked down wonderingly through the soft, pure air. The forest trees cast long shadows over stacked arms, and watch fires, and pacing sentinels, and groups of boys in blue—some writing home to loved ones, some cooking, some burnishing their arms, and some cracking the merry jest. Bands of music were playing, and through the trees stole, strangely blended, the strains of "Dixie" and of "Auld Lang Syne." Hours passed, and one by one the stars sank, the fires died away, and the soldiers dropped on the grass to rest, until, at last, quiet

settled down over the white city of tents.

At Yorktown, McClellan found General Magruder with a Confederate division of about five thousand men, exclusive of small garrisons, defending a line thirteen miles long, reaching entirely across the Penin-

MAP OF THE PENINSULA.

sula. Instead of breaking through at some weak point with his overwhelming force, he set his magnificent army down in the swamps, to begin a regular siege. Heavy guns were ordered from Washington; miles of corduroy road were built; and the open fields were filled with ditches and entrenchments. Meanwhile, General Joseph E. Johnston had reinforced the Confederates with the troops from Manassas; while the Federals, unused to the climate, were sickening and dying by thousands. The spade was found quite as useful in digging graves as in raising fortifications. Just as McClellan was ready to open fire, Johnston

BUILDING A CORDUROY ROAD THROUGH A SWAMP.

quietly retired up the Peninsula toward Richmond. Again, as at Winchester and at Manassas, he had given his enemy the slip.

A rapid pursuit was at once made. The Confederate rear-guard, afterward reinforced by Longstreet's division, took post at Williamsburg, in order to gain time for the baggage trains. At this point, Fort Magruder, with thirteen redoubts, commanded all the roads leading northward. About half past five o'clock in the morning of May 5th, General Joseph Hooker, "Fighting Joe," as he was called, came up with his division, and at once ordered an attack. For nine long, bloody hours he continued the struggle. His ammunition was exhausted, and the living gathered the cartridges from the boxes of the dead. Thirty thousand Union troops, many of them in line of battle and anxious to share the danger, stood within sound of his guns, and yet none of them were sent to his help. In the afternoon, General Philip Kearney threw his men to the front, and took the brunt of the struggle. Later, General D. N. Couch arrived with his division. McClellan came upon the field with his brilliant staff after the contest was decided.

That night the Union troops, exhausted by the day's march and fight, lay in the rain and mud, many of them without food, shelter, or fire. In the morning, to their surprise, they awoke

not to renew the battle, but to find the fort empty. Johnston, having accomplished his end, had quietly drawn off his men, and they were already out of reach.

The scene which the field presented upon that bright, sunny day was a far different one from that of the happy, starlight evening which preceded the Union march up the Peninsula. The dead and wounded of both armies lay thick through the swamp and the miry road in front of Magruder. The trees were scarred by bullets and shells. Knapsacks, haversacks, guns, horses and equipments, the wreck of battle, strewn the ground. At one point, behind a fence, a hundred dead bodies lay in a broad windrow, as they had stood in rank. Here one soldier was surrounded by five whom he had slain ere he fell. There a man was shot while eating his lunch; part of the broken biscuit yet remained in his hands; over the remainder his mouth had stiffened in his sudden death-agony. By the roadside reposed a boy apparently not over fourteen; the lower part of his body was buried in the mud, but the rain had washed his upturned face, and it looked calm and peaceful, as if, in a quiet slumber, he were still dreaming of home and mother. Close by was a strong man, stretched at full length, with stiffened limbs and corded muscles, as though fighting to the last even against death. Another had received the fatal shot while, with extended arm, he was in the act of ramming down a ball; by a strange coincidence he had fallen against a tree that supported him in nearly an upright position; and there he stood, still and white, like a grim figure in a tableau. A rifleman was biting off his cartridge as the deadly ball entered his breast; he merely pressed more tightly his teeth and clutched his fingers over the crumpled paper. Back of a fallen tree, seven soldiers, each with a ghastly red spot in the forehead, reclined side by side, as if taking a noon-tide rest.

Fatigue parties were busy burying the dead and bringing in the wounded. The latter had often, in their blind fear, crawled away into the woods and hidden under the leaves and logs, where they were found only by the most careful search, whence, damp and mouldy, they were borne in on stretchers. A barn was taken as a hospital. The floor was covered with the maimed, whose matted hair, soiled garments, and undressed wounds touched every heart. By the door were three tables surrounded by surgeons, while cut-off limbs, ragged and torn, lay in heaps upon the ground. There was no soft bed, no delicate food, no cooling

drinks, no tender care; instead, there were heaps of corn-husks, "hard-tack" and salt pork, rough men who could only *try* to be gentle, and, above all, the hot sun pouring on the roof and heating the air, alive with groans and shrieks and foul with sickening odors. The dead were buried side by side in long trenches, near where they had fallen. Over one grave a comrade was seen to twine some green boughs, smooth the earth, and then, reverently, to place at the head a piece of paper with the name written upon it, a simple tribute of a loving heart.

The next day the scene was strangely changed. High officers were gayly prancing by, dashing Zouaves flitting around like butterflies, heavy batteries lumbering along the road, brass bands discoursing brilliant music; while long lines of plain blue uniforms and uplifted bayonets led off the eye to the distance, where the glittering steel blended into a mass of burnished metal. The abattis before Magruder, by some chance, had been fired, and the flames had crept over the battle-field, consuming in one funeral pyre friend and foe. Dense, black volumes of smoke rolled up to the heavens and rested like a pall over that scene of slaughter. Beneath, the fire hissed and sparkled, wrapping the unburied dead in a shroud of flame, while long tongues leaped out and lapped up the dry leaves, or coiled around and crawled up the huge pines, which burned and crackled until they looked in the heated air like blood-red pillars.

McClellan, now unopposed, slowly followed the retreating army. Nearly two weeks were consumed in marching less than fifty miles. This brought the Union advance within sight of the steeples of Richmond. In that city all was confusion. The Confederate Congress hastily adjourned. Davis sent his family to Carolina, and the trains were crowded with fleeing women and children. General Irvin McDowell, who was at Fredericksburg with thirty thousand men, was daily expected to reinforce McClellan. General Fitz John Porter had been sent out upon the Union right, and, after a sharp skirmish, had taken Hanover Court-House, in order to facilitate the junction. McClellan was apparently only awaiting the advent of this reinforcement before making the final and long-anticipated assault upon the Confederate capital.

Johnston saw the danger, and, too shrewd to let the blow fall as intended, resolved to parry it. Stonewall Jackson, being reinforced, was ordered to descend the Shenandoah and threaten

Washington. This indefatigable officer went down the valley like a whirlwind, captured Front Royal, and then dashed after General Nathaniel P. Banks at Strasburg, who escaped with his men across the Potomac only by marching in one day thirty-five miles. Washington was thrown into a ferment of excitement. The government took military possession of all the railroads. Troops were called from every direction to save the Capitol. Fremont at Franklin, Banks at Harper's Ferry, and McDowell at Fredericksburg, three major-generals and sixty thousand men, were

ordered to intercept Jackson. But that valiant leader was as skillful in retreat as he was bold in advance, and rapidly fell back, burning the bridges behind him. He had a slight brush with his pursuers at Cross-Keys, and another at Port Republic, where, dexterously dodging between Fremont and McDowell he darted across the Shenandoah, and then hurried back to take his place under Johnston in the Peninsula.

GENERAL GEORGE B. MCCLELLAN.

Meanwhile, stirring events had transpired before Richmond. McClellan

had incautiously pushed his left wing across the Chickahominy and taken possession of Seven Pines and Fair Oaks. Just then a terrible storm came on, which flooded the swamps and turned that sluggish creek into a roaring river. Johnston seized the opportunity, and concentrated his army on the exposed wing. General Silas Casey's division, which was the first attacked, had never before been under fire, and now received the shock of nearly double its number of Longstreet's veterans. The first warning of the battle was from two rifle-shells, which suddenly flew screaming over the camp. The men stood hurriedly to arms, as the rapid picket-firing told of the nearness of the danger. They gallantly held some slight entrenchments in their front until the second line under Couch had time to take position. The

Confederates, however, swept all before them, and seemed likely to seize Bottom's bridge upon the Chickahominy, and thus entirely cut off the left wing from the centre. In this moment of peril, General Sedgwick's division of Sumner's corps crossed upon a tottering log bridge, and hauled over a battery of twenty-four Napoleon guns. Following the roar of the cannon, they soon came into the thickest of the fight, checked the Confederate column, and drove it back headlong upon Fair Oaks station. Just at sunset, General Johnston was badly wounded by a shell. The loss of their commander was fatal, and, though the Confederates renewed the contest the next morning, they were easily repulsed.

Conspicuous for his bravery in this engagement was General Kearney, who had lost an arm at the gates of Mexico. Taking his bridle in his teeth and his sword in his left hand, he led his men in the most dashing charges. During the thickest of the battle,

"Up came the reserves to the mellay infernal,
Asking where to go in—through the clearing or pine?"

To which the gallant Kearney, who "snuffed, like his charger, the wind of the powder," shouted back,

"'Oh, anywhere! Forward! 'Tis all the same, Colonel:
You'll find lovely fighting along the whole line!'"

McClellan made no attempt to follow up his success at Fair Oaks. Nearly a month of inactivity succeeded. Almost three months had elapsed since he landed at Fortress Monroe. His unaccountable delay had given the Confederates time to pass the conscription law, enroll troops, and collect the largest force they had yet put in the field. General Robert E. Lee, who succeeded Johnston in command of the "Army of Northern Virginia," having thoroughly fortified Richmond, was anxious to strike a blow which should be more telling than the one delivered at Seven Pines. General Stuart, with fifteen hundred picked cavalry, was accordingly detached to gather information concerning the defences on the right and rear of the Federal line. This dashing officer drove the outposts from Hanover Court-House, destroyed a great quantity of stores along the York River railroad leading to White House—the Union depot of supplies—made the entire circuit of McClellan's army, and, throwing a bridge across the Chickahominy, came safely back into camp. He had found

no works to hinder his march, and Lee's plan was quickly formed. He decided to fall with all his strength upon the Union right wing at Mechanicsville, while Jackson, now daily expected from the Shenandoah, should advance still farther to the left, cut off the Federal communications with White House, and then attack their rear.

McClellan, alarmed by the news of the advance of Jackson, and disappointed in the non-arrival of McDowell, on whom he had counted to strengthen his right wing, but who was detained for the defence of Washington, resolved to abandon the York River railroad and "change the base" of supplies to James River, seventeen miles distant. To do this it was necessary for the right wing to hold its position firmly, while the remainder of the army, with the trains, forty miles long, should traverse the narrow and difficult route through the White Oak Swamp.

GENERAL ROBERT E. LEE.

Ere this movement began, Lee's blow had fallen. On the 26th of June, Generals A. P. Hill and Longstreet crossed the Chickahominy and attacked the Union right at Mechanicsville. The contest lasted till nine o'clock at night, when the Confederates were repulsed at every point. At dawn the next morning, however, General Porter withdrew the Federal forces to a strong position at Gaines's Mill, which covered the bridges connecting with the main body of the army. In the afternoon, the Confederates renewed their attacks. Jackson, having joined them, fell upon the Union flank with fearful force. It was only by the most desperate exertions, and by repeated reinforcements, that Porter managed to prevent a total rout. That night, under cover of the darkness, he retired to the south bank.

Up to this time Lee had been in doubt as to his opponent's intentions, whether he would try to hold his position on the north bank of the Chickahominy, or, what was most feared, throw all his strength into the left wing and suddenly hurl it into Richmond, which was but slightly guarded. A retrograde movement being now apparent, Lee ordered Jackson to cross the Chickahominy

and press upon the Federal rear, while other columns were pushed along the roads which intersected the line of march.

On Sunday, June 29th, Magruder struck the flank of the "vast caravan" at Savage's Station. Here Sumner held the ground till dark. Large quantities of supplies were destroyed, and a railroad train and locomotive, piled with military stores, was fired and set loose on the track, the shells exploding as it flew wildly along, and, at last, dashed off the broken bridge into the Chickahominy. When night came, abandoning twenty-five hundred sick and wounded in the hospitals, the Union troops fell back through the White Oak Swamp.

The next day, Longstreet and A. P. Hill, having passed around the swamp, encountered the line of march at Frazier's Farm. General McCall's division was then passing. The Confederates threw themselves with reckless valor upon the column, but could not break it. Jackson coming up on the Federal rear, found the bridge over White Oak Creek destroyed, and the crossing held by General Franklin. Thus the admirable arrangements of McClellan foiled every effort of his adversaries. During the night the Union army collected for a final stand at Malvern Hill.

Here, upon an elevated plateau cleared of trees, about one and a half miles long and three-quarters of a mile wide, the shattered fragments of the army of the Potomac gathered in solid array. On the sides of the amphitheatre-like slope the cannon were arranged in tier above tier, sweeping every inch of the glaxis in front, while gun-boats lay on the left, ready to hurl their ponderous shells upon the advancing enemy.

The Confederates, flushed with success, repeatedly charged upon this impregnable position, but they were repulsed with horrible slaughter. Strangely enough, under cover of the darkness and a fearful tempest, the Union troops were ordered to flee like a routed army from their own victory. General Kearney echoed the sentiment of many a patriot amid the disorder of that midnight flight when, rising in his stirrups, he exclaimed, "I, Philip Kearney, an old soldier, enter my solemn protest against this order to retreat. We ought, instead, to follow up the enemy and take Richmond. And, in full view of all responsibility of such a declaration, I say to you all that such an order can only be prompted by cowardice or treason!"

The Confederates, staggered by the blows they had received, made no further opposition, and the wearied fugitives found rest

at Harrison's Landing, where they huddled under the cannon of the friendly gun-boats. Lee had raised the siege of Richmond, and, with not over seventy-five thousand men, had driven to a calamitous retreat an army that, even after all the disasters of the seven-days fight, still mustered eighty-six thousand under its colors. The losses of this brief campaign had been fearful, certainly not less than forty thousand on both sides.

It was expected that Lee would now march upon Washington. McClellan was therefore ordered to transfer his army to Acquia Creek, in order to reinforce General Pope, who was stationed on the Rapidan in command of the forces collected for the defence of the national capital. Lee immediately turned to crush Pope before the troops from the James River could reach him. Meanwhile, Jackson having been sent forward, defeated General Banks at Cedar Mountain, August 9th; but, unable to maintain his position, he fell back upon Lee's advancing army. Pope, perceiving the fearful odds concentrating upon him, retired behind the Rappahannock. Lee thereupon divided his army, sending Jackson through Thoroughfare Gap to march around Pope's right wing and destroy his communications with Washington; while Longstreet, with his division, held his attention in front.

Pope then turned all his strength on Jackson, hoping to cut off that redoubtable leader while thus separated from the main body. But mysterious causes, among which jealousy has been alleged, prevented the Army of the Potomac from co-operating fully with Pope, and he found himself at last, August 29th, on the old battle-field of Manassas, face to face with the whole Confederate army under the firm hand of Lee. The positions of the antagonists were changed from those of the previous year, and the Federals held the ground formerly occupied by the Confederates. That very afternoon, says Draper, McClellan suggested to Lincoln "to leave Pope to get out of his scrape;" the President, reading the message, fell back in his chair, his honest heart horror-stricken at the thought. After two days of fighting, the Federal forces, staggering under repeated blows in front and flank, reeled back to Centreville. Jackson thereupon set out to turn again Pope's right wing. A sharp conflict occurred at Chantilly, September 1st, in the midst of a furious thunder-storm. Phil. Kearney, dashing forward in advance, met a Confederate soldier, of whom he made an inquiry. Seeing his mistake, he wheeled, when the soldier fired, and this gallant officer fell mortally wounded.

"Oh, evil the black shroud of night at Chantilly
That hid him from sight of his brave men and tried!
Foul, foul sped the bullet that clipped the white lily,
The flower of our knighthood, the whole army's pride!
Yet we dream that he still, in that shadowy region,
Where the dead form their ranks at the wan drummer's sign,
Rides on, as of old, down the length of his legion,
And the word still is, Forward! along the whole line."—*Stedman.*

Pope steadily retired before the enemy. Exhausted by constant marching and fighting, overwhelmed by numbers, destitute of ammunition and of food, the remains of the army at last found shelter behind the entrenchments at Washington. Pope was here relieved of his command and the national forces again placed under McClellan, who, in spite of his failure on the Peninsula, was exceedingly popular with the troops.

DEATH OF GENERAL KEARNEY.

Lee, his army flushed with success, now crossed the Potomac, and advanced to Frederick, the bands playing the air of "Maryland, my Maryland." That day, September 5th, Bragg entered Kentucky on his grand raid. The movements were made in concert. The North was to be struck at two points simultaneously. We have described the result of the western attempt; the eastern, despite its brilliant beginning, proved yet more unsatisfactory to the Confederate cause.

McClellan, rapidly reorganizing the Federal forces, and inspiring them with the enthusiasm of his personal presence and influence, once more took the field against his old antagonist. Meanwhile, Lee had sent Jackson, with twenty-five thousand men, to capture Harper's Ferry, after which he was to rejoin the

main body at Hagerstown, preparatory to an invasion of Pennsylvania.

McClellan, steadily following Lee, entered Frederick, September 12th, just after its evacuation by the Confederates. Here, by a singular piece of good fortune, he secured a copy of Lee's order of march. Put in possession of the plan of his adversary, he saw the danger of the garrison at Harper's Ferry. Leaving it, however, to its fate, he moved slowly after the main body. At the South Mountain Gap, the Confederate rear-guard stubbornly resisted his progress. But, outflanked, it retreated under cover of night, and in the morning the Union army poured into the valley beyond. Harper's Ferry was then being surrendered to Jackson.

Lee, now fairly brought to bay, took a strong position behind Antietam Creek. His situation was perilous. Jackson, with a large portion of the army, had not yet rejoined him. McClellan, however, waited a day, and that gave an opportunity for a part of the detached troops to arrive. Even then, Lee had only forty thousand against McClellan's eighty thousand. Moreover, half his men were in rags, and thousands, barefooted, had traced their path thither in crimson; while on the other side of the Potomac was a weary, gaunt, and still more ragged crowd, left behind because of inability to keep pace with the rapid progress of the army.

McClellan's plan was for General Hooker to fall upon the Confederate left; while Burnside, as soon as affairs looked favorable, was to carry the bridge over the creek and attack their right. At early dawn, Hooker's men made an impetuous rush, driving Jackson's brigades into the woods, where their reserves, lying behind rocky ledges of limestone, occupied an almost impregnable fortress. A desperate struggle ensued. Both antagonists were nearly destroyed. When the broken fragments were drawn off, the windrows of blue and gray showed where the lines of battle had been mowed down by the reaper, death. Reinforcements came up; on the Confederate side, Hood's and then McLaw's and Walker's divisions as they arrived from Harper's Ferry; on the Union side, Mansfield's, Sumner's, and finally Franklin's corps. As each came on the field, the tide turned, and so ebbed to and fro, marking its bloody passage with bruised and mangled corpses. It was not till one o'clock in the afternoon that Burnside crossed the bridge. Meanwhile, Lee had been able to concentrate all his force to resist the attack on his left, and now

Hill, coming up from Harper's Ferry, easily repulsed this assault. The next day, neither commander seemed disposed to renew the struggle. That night Lee retired across the Potomac. This battle, indecisive as it seemed, had overthrown all his plans for an invasion of Pennsylvania.

STORMING THE BRIDGE AT ANTIETAM.

Six weeks after the struggle of Antietam, at the imperative order of the President, the Union army crossed the Potomac. Its pursuit of Lee, however, was slow.

McClellan had long since

lost the confidence of the President as well as of General Halleck, then at Washington, and it was resolved to supersede him. A messenger bearing the despatch arrived at McClellan's tent in Rectortown, during a heavy snow-storm, at midnight, November 7th. The general read the letter, and, handing it over to his successor, said, indifferently, "Well, Burnside, you are to command." The army of the Potomac was now a hundred and fifty thousand strong. Burnside was reluctant to accept the responsibility, declaring that he was unfit to handle so large a body of men; and he, at last, yielded only to positive orders.

The plan which Burnside adopted was to move toward Richmond along the north bank of the Rappahannock, while making a feint in the direction of Gordonsville. Lee, perceiving his real intention, advanced in a parallel line. When the main body of the Federals reached Fredericksburg, where they were to cross, they saw in front of them the red flags and gray ranks of their old adversaries. After several days, the pontoons, which had been delayed through some inattention at Washington, came to hand. An attempt to lay them failed, because of a galling fusillade kept up by the Confederate sharp-shooters, hidden in the houses along the bank. A tremendous artillery fire was then opened upon the town, and under its cover a company of daring volunteers crossed in boats and expelled the riflemen at the point of the bayonet. The bridges were quickly completed, and on the morning of December 13th the Union army was massed in and about the village of Fredericksburg. So dense a fog lay in the valley that Longstreet approached near enough to the Federal lines to hear the commands of the officers.

The Confederates, eighty thousand strong, occupied a series of heights carefully entrenched, with artillery sweeping the plain at the foot. Burnside's design was for General Franklin, who had crossed the Rappahannock two miles below with over fifty thousand men, to attack the Confederate right wing under Jackson; while Sumner should carry Marye's Height on the Confederate left. Through some misunderstanding, Franklin sent only Meade's corps. The column had not gone far when it encountered an annoying obstacle. Stuart had placed a single gun under Major Pelham at the junction of the Richmond and River roads to worry the flank of the advancing force. Four Federal batteries opened fire upon him; but the major, though a young man of only twenty-three years, held his ground and kept up a rapid and destructive cannonade until ordered away. General Lee, watching his gallant conduct, exclaimed, "It is glorious to see such courage in one so young." This obstruction being brushed aside, the column charged bravely up the hill, broke through the enemy's line, and penetrated to the reserves. From lack of support, however, this assault utterly failed. It was the only one that promised success, as it would have turned the stronghold in front of Fredericksburg.

The chief interest of the battle centres about the repeated charges upon Marye's Height. Just before noon, Sumner sent

French's and Hancock's corps forward into the plain. When half-way across, the Confederate batteries converged their fire upon them from every side. An observer says that the gaps made in the ranks could be seen at the distance of a mile. "The long lines moved through the focus of death, quivering, but still advancing, their own guns on the north bank of the river giving them what help they might, a canopy of iron." When the Federals had nearly reached the base of the hill they were struck by a storm of bullets from two Confederate brigades securely posted behind a long, solid stone wall. The weakened ranks yielded to the tempest, and sought refuge in a protecting ravine. Thrice again they rallied and rushed forward with desperate valor, but in vain. It was a pitiless, useless slaughter, and the survivors fled leaving half their number strewing the bloody field.

In this attack, Meagher's Irish Brigade especially distinguished itself. The London Times's correspondent says: "Never at Fontenoy, Albuera, nor Waterloo was more undoubted courage displayed by the sons of Erin than during those frantic dashes against the almost impregnable position of their foe. That any mortal man could have carried the position, it seems idle to believe. But the bodies which lie in dense masses within forty-eight yards of the muzzles of Colonel Walton's guns are the best evidence of what manner of men they were who pressed on to death with the dauntlessness of a race which has gained glory on a thousand battle-fields, and never more richly deserved it than at the foot of Marye's Height, on the 13th day of December, 1862."

There was no hope of success, yet Hooker, though he pleaded against it, was ordered to renew the fruitless struggle. Accordingly, toward night, General Humphreys's division was thrown forward. Shouting and hurrahing, the troops swept within sixty yards of the fatal stone wall. There the column staggered and broke. It was all over within fifteen minutes after the first gun was fired, but seventeen hundred and sixty out of four thousand men had fallen. Darkness mercifully put an end to this horrible massacre.

General Burnside, brave to a fault, had determined to form his own corps, the Ninth, into columns of regiments, and make, the next morning, a new assault upon Marye's Height. Sumner, it is said, persuaded him to abandon this hazardous design. The following night, the troops, discouraged but not dismayed, crept back across the bridges to their old camping-ground. They had

lost over twelve thousand men, and the Confederates not half that number. Both armies then went into winter-quarters.

To add to the bloody record of this year of battles, the Sioux Indians, becoming dissatisfied with the payment of money claimed by them, in bloody imitation of their pale brothers, took the war-path. Little Crow and other chiefs perpetrated barbarous massacres in Dacotah, Iowa, and Minnesota. Hundreds of the inhabitants were butchered, and thousands, driven from their homes, saw all they possessed perish by the torch. The savages were finally routed. Thirty-nine of the captives were tried and condemned to death. They were hung on a common scaffold at Mankato, Minnesota, December 26th.

In the Southern States, domestic life now began to feel the stringency of the blockade. The money issued by the Confederate government had steadily depreciated in value. Flour brought forty dollars per barrel, salt a dollar per pound, and a pair of boots fifty dollars. Woolen clothing was scarce, and the army depended largely on captures from the ample Federal stores. "Pins were so rare that they were picked up with avidity in the streets." A spool of thread came to be worth twenty dollars, a pound of sugar seventy-five dollars, and one of black pepper three hundred dollars. Paper was so scarce that matches could no longer be put in boxes. Butter, eggs and white bread became luxuries even for the rich.

THE MONITOR AT SEA.

CHAPTER XV.

THIRD YEAR OF THE CIVIL WAR—1863.

ON New Year's day, the Emancipation Proclamation issued by Lincoln the preceding September went into effect. All the slaves within the seceded States were declared free. It is said that the original draft of this document was prepared in July, when the Union forces were in the midst of reverses. Carpenter repeats the President's words thus: "I put the draft of the proclamation aside, waiting for a victory.

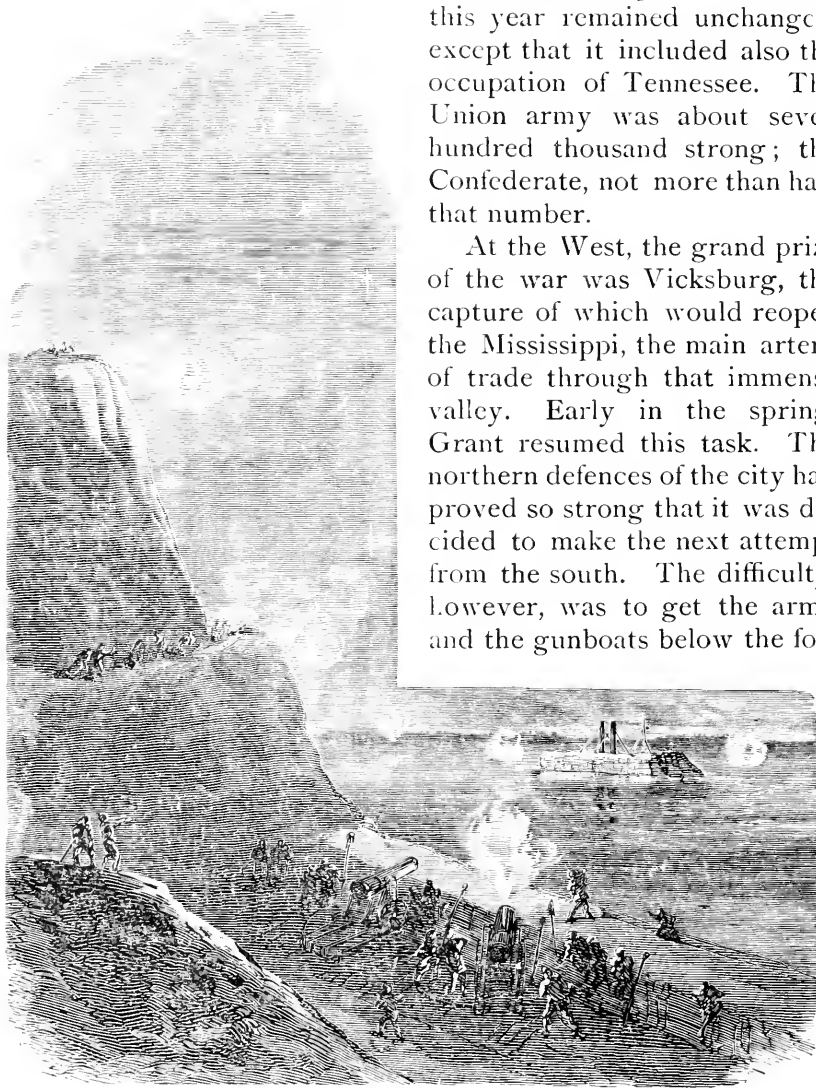

Well, the next news we had was of Pope's disaster at Bull Run. Things looked darker than ever. Finally came the week of the battle of Antietam. I determined to wait no longer. The news came, I think, on Wednesday that the advantage was on our side. I was then staying at the Soldier's Home. Here I finished writing the second draft of the proclamation; came up on Saturday; called the cabinet together to hear it, and it was published the following Monday. I made a solemn vow before God that if General Lee was driven back from Maryland I would crown the result by the declaration of freedom to the slaves."

No measure of the war was more bitterly opposed than the project of arming the slaves, which was now adopted by the Federal government. It was denounced at the North; while at the South, the Confederate Congress threatened with death any white officer captured while in command of negro troops, leaving the men to be dealt with according to the laws of the State in which they were taken. Yet, so willing were the negroes to enlist, and so faithful did they prove themselves in service, that by

December over fifty thousand had been enrolled, and before the close of the war that number was quadrupled.

The Federal plan for the war this year remained unchanged, except that it included also the occupation of Tennessee. The Union army was about seven hundred thousand strong; the Confederate, not more than half that number.

At the West, the grand prize of the war was Vicksburg, the capture of which would reopen the Mississippi, the main artery of trade through that immense valley. Early in the spring, Grant resumed this task. The northern defences of the city had proved so strong that it was decided to make the next attempt from the south. The difficulty, however, was to get the army and the gunboats below the for-

RUNNING THE BATTERIES AT VICKSBURG.

tifications. Various efforts were made to "flank the Mississippi." One plan was to cut a canal across the great bend in the river opposite Vicksburg, and so turn the Mississippi from its bed as

had been done at Island No. 10; another, was to dig a channel from the river to Lake Providence, whence there is water communication to the Red River; a third channel was proposed, by the way of various bayous from Milliken's Bend to New Carthage; and a fourth through the Yazoo Pass and Moon Lake, and thence *via* the Cold Water, Tallahatchie, and Yazoo Rivers to the rear of the works at Haines's Bluff.

These plans proving futile, it was finally decided to march the army down the west bank of the river, while the gun-boats and transports took the risk of running the batteries. Seventy miles of corduroy road were constructed through the morass, on which the troops were safely passed below. On the nights of the 16th and 22d of April, the fleet successfully ran the gauntlet of the eight miles of batteries commanding the channel. It then ferried the army across the river at Bruinsburg.

Cutting loose from his base, Grant now hastened his column northward, defeating the advance of Pemberton's army at Port Gibson, May 1st. Learning that General Joseph E. Johnston was coming to Pemberton's assistance, he rapidly pushed between them to Jackson, that, while holding back Johnston with his right hand, with his left he might drive Pemberton into Vicksburg, and afterward capture his whole army. Pursuing this design, he defeated Johnston at Jackson, May 14th, and then, turning to the west, drove Pemberton from his position at Champion Hills, May 16th, and finally at Big Black River, May 17th. In seventeen days from the landing, Grant had marched two hundred miles, fought four battles, taken ninety guns and six thousand prisoners. "That night," says an eye-witness, "Grant and Sherman had an interview, seated on a fallen tree, in the light of a pile of burning fence-rails, while the eager and swift-marching men of the Fifteenth corps filed by them and disappeared in the darkness." Their plans were soon laid, and on the morning of the 19th the investment of Vicksburg was complete.

Two desperate and bloody assaults having failed, a regular siege was begun. Mines and countermines were dug. The garrison could not show their heads above the entrenchments without being picked off by the watchful riflemen. A hat held for two minutes at a port-hole was pierced with fifteen balls. Shells searched out all parts of the city, the cannon of the army and fleet during the siege firing one hundred and fifty-three thousand three hundred and twenty-three shots. To escape the iron storm

which incessantly poured upon them, the inhabitants burrowed in caves until the city looked like a "prairie-dog's village." Meat gave out entirely, and the troops were reduced to half rations. Percussion-caps became scarce, and at one time there were

only ten to a man. At last the garrison, exhausted by forty-seven days and nights of ceaseless labor in the trenches, could hold out no longer. Seeing that Grant was ready to make the final assault, Pemberton asked for terms of surrender. The two commanders met under an oak tree between the lines, at three P. M., July 3d.

MAP OF VICKSBURG AND VICINITY.

The next day the city capitulated with twenty-seven thousand men. The Union loss was less than nine thousand all told.

Meanwhile, Port Hudson had been besieged by General Banks. Gardner, who was in command, made a valiant defence, but on learning of the fall of Vicksburg, he also surrendered. The entire length of the Mississippi was now clear, and one great object of the war was accomplished. July 16th, the steamer *Imperial* made the voyage from St. Louis to New Orleans. It was the first in two years.

Late in June, Rosecrans took the field against his old antagonist, Bragg. By his strategic movements he drove the Confederates back to Chattanooga. Here Bragg had a chance to be shut up within entrenchments, as Pemberton was at Vicksburg; but, a more acute tactician, he knew the superior value of an army in the field, and so evacuated the place in good time. The Union forces pressed forward, and in the eager chase, became carelessly stretched out over a line forty miles long. Bragg, powerfully reinforced, suddenly turned upon his pursuers. The Federals rapidly concentrated, and the two armies met, September 19th, in the valley of the Chickamauga—the river of death.

Bragg's plan was to turn the Union left, where General Thomas commanded. Against him he massed the bulk of his force under General Polk. The first day's contest was indecisive. Early the next morning the struggle was renewed. Rosecrans was forced to move brigade after brigade to his left in order to resist the tremendous pressure at that point. About noon, General Wood having withdrawn too hastily, Longstreet pushed a brigade into

the gap before the rest could close up the line of battle, and swept the Federal right and centre from the field. Rosecrans himself was borne away, and, reaching Chattanooga, he telegraphed to Washington that his army was defeated.

Thomas, however, the "Rock of Chickamauga," held his ground. All through the long afternoon the entire Confederate army surged against him, but to no effect. At one time he seemed lost. Longstreet discovered a defile in the hills, and began to pour his men upon the Federal rear. Just then Granger came up with the Union reserves, and Thomas showed him the enemy that moment debouching into the plain. Quick as thought, Granger threw upon the foe a brigade of cavalry, and ordered a battery forward to check the tide till the other troops could be brought up to the point of danger.

In this crisis heroes seemed to multiply. Colonel George, of the Second Minnesota, being asked, "How long can you hold this pass?" replied, "Until the regiment is mustered out of service." A part of Steedman's division wavering before the terrible fire, that general seized the colors, and shouting, "Go back, boys, go back, but the flag can't go with you," wheeled his horse and rode straight toward the enemy.

At sunset, the Confederates made their last charge. The Union troops had expended their ammunition, but repelled the attack with the bayonet. At night, Thomas deliberately withdrew to Chattanooga, picking up five hundred prisoners on the way.

The Union army, defeated in the field, was now shut up in Chattanooga, where Rosecrans threw up entrenchments. Bragg occupied the hills commanding the place, and cut off its communications. Ere long, the Federal supplies were exhausted. Ten thousand animals died, and the troops were threatened with starvation. It was doubtful whether they could hold the place. Rosecrans had been displaced, and Thomas was in command. Grant, now in charge of the military division of the Mississippi, hastened to his rescue. Fearful lest Thomas might surrender before reinforcements could reach him, he telegraphed him to defend his post. The characteristic reply was, "I will stay till I starve."

Every effort was then made to relieve the beleagured city. Hooker, with two corps of the Army of the Potomac, was carried by rail from the Rapidan to the Tennessee, about twelve hundred miles, in seven days. Grant arrived from New Orleans, October

23d. Affairs soon wore a different look. A bold dash on the morning of the 27th cleared the road to Bridgeport, and restored communications with the river below. Sherman now came fighting his way from Mississippi. Eighty thousand men awaited Grant's orders to break through their environment. Yet by a strange misapprehension, Davis, when visiting Bragg's lines a fortnight before, thought that the Union army was in a trap, and had sent Longstreet with fifteen thousand men to attack Burnside at Knoxville.

Monday morning, November 23d, was clear and bright. Thomas's troops, twenty-five thousand strong, were drawn up before Chattanooga. The men had on their best uniforms, and the bands discoursed the liveliest music. The surrounding hills

CHATTANOOGA AND VICINITY.

and entrenchments were crowded with eager spectators. The Confederates stationed on the heights could see every movement; and their pickets, resting on their muskets, watched the parade. Suddenly the drums beat the charge, the Union army broke into a double-quick, the review was turned into a battle, and that line of blue two miles long "swept true as a sword-blade" over the field. Soon there came dropping shots, then volleys of musketry and the deep roar of

artillery. After a sharp resistance, Orchard Knob, a craggy knoll in front of the Confederate position, was seized and crowned with batteries.

The Confederate line, twelve miles long, rested its left on Lookout Mountain, over two thousand feet high, and its right upon Missionary Ridge, so-called because, many years ago, it was the location of Indian mission-schools. A series of earthworks in the valley between, connected the two flanks.

Grant's plan was for Sherman to attack the extreme right of this position, and Hooker the left; then, when Bragg, in order to resist these blows, had sufficiently weakened the centre, to pounce upon that point and pierce it.

On the night of the 23d, Sherman crossed the river, and early in the morning, under cover of a mist which hid his men, moved up to the foot of the Ridge and seized the northern extremity. Hooker charged the works on Lookout Mountain in flank, taking many prisoners. The troops had been ordered to stop on the

lower plateau of the hill, but, carried away by the ardor of the attack, they swept round to the front, and, passing under the muzzles of the guns on the summit, drove the enemy before them. Through the mist that filled the valley, the anxious watchers below caught only glimpses of this far-famed "battle above the clouds." That evening, Hooker's camp-fires gleamed like jewels on Lookout Mountain's brow. The Union soldiers, amid cheers and songs, laid down to rest, feeling that on the morrow would be the decisive contest.

During the night the enemy abandoned the crest of the mountain. At dawn, Captain Wilson and fifteen men of the Eighth Kentucky crept up among the rocky clefts and unfurled the Stars and Stripes. As the fog lifted, the Confederate camp in the valley was seen to be deserted also, and their line to have shrunk back to Missionary Ridge.

While the guns were roaring along Lookout Mountain the day before, the soldiers said, laughingly, "Old Hooker is opening the hard-tack line." Sure enough, about noon, the screech of a steamer was heard down the river, and soon the vessel crawled up to the dock at Chattanooga. "It was a sorry craft," says a writer, "but it seemed the sweetest-voiced and prettiest piece of naval architecture that ever floated upon the Tennessee."

At sunrise, Hooker pushed down across Chattanooga Creek, advancing in Bragg's rear, south of the Ridge. All this time, Sherman was steadily pounding on the Confederate right, so heavily that Bragg mistook it for the real attack, and accordingly depleted his centre to meet it. Grant from his post on Orchard Knob saw that the crisis of the battle had arrived, and promptly launched Thomas's corps on the enemy's centre. The signal for the assault had been arranged—six cannon-shots, fired at intervals of two seconds. The fateful moment arrived. "Strong and steady the commands rang out. 'Number one, fire! Number two, fire! Number three, fire!' It seemed the tolling of the clock of destiny, and when at 'Number six, fire!' the roar throbbed out with the flash, the dead line that had been lying behind the works all day, all night, all day again, came to resurrection in the twinkling of an eye, leaped like a blade from its scabbard, and swept toward the Ridge."

The orders were to take the rifle-pits at the foot of Missionary Ridge, then to halt and re-form; but the men forgot all that, carried the works at the base, and dashed on up the ascent. Grant

caught the inspiration, and directed a grand charge along the whole front.

“————— it was a splendid sight to see,
For one who had no friend, no brother there.”

Up they went without firing a shot, and heedless of plunging ball and hissing bullet; clambering over rocks; leaping chasms; crawling under fallen trees; stumbling over the dead; creeping along, hand over hand; all lines broken, and the flags far ahead,

A CHARGE AT MISSIONARY RIDGE.

each one surrounded by a group of the bravest. Just as the sun sank below the horizon, the advance surged over the crest; a hundred men followed, and an instant later captured the guns and turned them on the retreating foe.

Bragg, after the rout of his army, resigned. The possession of Chattanooga gave to the Federal cause the control of East Tennessee, and, what was of far greater importance, a ready entrance into Georgia, Alabama, and the Carolinas.

“The day after the battle was Thanksgiving,” says B. F. Taylor, in his prose-poem, “Camp and Field”; “and we had services in Chattanooga—sad, solemn, grand. The church-bells hung dumb in their towers, indeed, but for all that, there were chimes so grand that men uncovered their heads as they heard them. At twelve o’clock, the great guns at Fort Wood began

to toll. Civilians said, 'Can they be at it again?' and soldiers replied, 'The guns are not shotted, and the sound is too regular for work.' I hastened out to the fort, and the guns chimed on. What it was like flashed upon me in a moment: the valley was a grand cathedral, Fort Wood the pulpit of the mighty minster, and down the descending aisle in front rose Orchard Knob, the altar. The dead were lying there, far out to the eastern wall, and God's chandelier hung high in the dome. They were the accents of praise I was hearing; thirty-four syllables of thanksgiving the guns were saying: '*Oh, give thanks unto the Lord, for He is good; for His mercy endureth forever!*' And the hills took up the anthem and struck sublimely in.; from the Ridge it came back, '*Give thanks unto the Lord,*' and Waldron's Height uttered it, '*for His mercy endureth,*' and Lookout Valley sang aloud, '*forever, forever,*' and all the mountains cried, '*Amen!*'

"And the churches of Chattanooga had congregations that day. Those who composed them had come silent and suffering and of steady heart: had come upon stretchers; come in men's arms, like infants to the christening. Ambulances had been drawing up to the church-doors all night with their burdens, and within those walls it looks one great altar of sacrifice. The doors are noiselessly opening and closing, and I see pale faces—bloody garments. Right hands lie in the porch that have offended and been cut off; castaway feet are there, too, but there is nothing about sinning feet in the Sermon on the Mount! It is not the house of wailing on whose threshold I am waiting; it is the house of patience. Five still figures, covered by five brown blankets, are ranged on the floor beside me. Their feet are manacled with bits of slender twine, but a spider's thread could hold them. I lift a corner of the blankets, and look at the quiet faces. Do men look nearer alike when dead than when alive? Else how could it have chanced that one of these sleepers in Federal blue should resemble another in Confederate gray nearly enough for both to have been 'twinned at a birth?' They are not wounded in the face, and so there is nothing to shock you; they fell in their full strength. Tread lightly, lest they be not dead, but sleeping. The silence within oppresses me; it seems as if an accent of pain from some sufferer in that solemn church would be a welcome sound, and I think of a brave bird wounded unto death that I have held in my hand, its keen eye undimmed and full upon me, throbbing with the pain and dying, and yet so silent!"

The same brilliant writer narrates a touching incident connected with the battle of Chattanooga. The Third Ohio regiment, which was captured with Streight's command in April of this year, while *en route* to Richmond stopped over night at a town where the Fifty-fourth Virginia was encamped. Naturally, the Confederates came strolling about "to see the sorry show of poor supperless Yankees. They did not stare long, but hastened away to camp, and came streaming back with coffee-kettles, corn-bread and bacon—the best they had, and all they had—and straightway little fires began to twinkle, bacon was suffering the martyrdom of the Saint of the Gridiron, and the aroma of coffee rose like the fragrant cloud of a thank-offering. Loyal guests and rebel hosts were mingled; the hungry prisoners ate and were satisfied. Night and the Union boys departed together; the prisoners in due time were exchanged, and were encamped within rifle-shot of Kelly's Ferry, on the bank of the Tennessee.

"And now comes the sequel that makes a beautiful poem of the whole of it. On the day of the storming of Mission Ridge, among the prisoners was the Fifty-fourth Virginia, and on the Friday following, it trailed away across the pontoon bridge and along the mountain road, nine miles to Kelly's Ferry. Arrived there, it settled upon the bank like bees, awaiting the boat. Some of the Union boys were on duty at the landing when it arrived. 'What regiment is this?' they asked, and when the reply was given, they started for camp like quarter-horses, and shouted, as they rushed in and out among the smoky cones of the 'Sibleys,' 'The Fifty-fourth Virginia is at the Ferry!' The camp swarmed in three minutes. Treasures of coffee, bacon, sugar, beef, preserved peaches, everything, were 'turned out in force,' and you may believe they went laden with plenty, at the double-quick, to the Ferry. The same old scene, and yet how strangely changed! The twinkling fires, the grateful incense, the hungry captives; but guests and hosts had changed places; the star-lit folds floated aloft for 'the bonny blue flag;' and a debt of honor was paid to the uttermost farthing. If they had a triumph of arms at Chattanooga, hearts were trumps at Kelly's Ferry. And there it was, and then it was, that horrid war smiled a human smile, and a grateful, gentle light flickered for a moment on the point of the bayonet."

While Rosecrans was marching to his fate, as we have seen, at Chickamauga, General Burnside, having been relieved of the com-

mand of the army of the Potomac, was assigned to the Department of the Ohio. He advanced from his headquarters at Cincinnati into East Tennessee, and, with little loss, conquered it for the Union. In November, however, Longstreet arrived with his corps from Chattanooga. The Confederates were in a deplorable state, ragged, shoeless, hatless, blanketless, and hungry; but they were veterans, and Burnside's forces were driven within the entrenchments of Knoxville. Two fruitless assaults had been made upon the city, when Sherman came to the rescue from the victory at Chattanooga. As his advance arrived in sight, Longstreet's men filed out of their camp in full retreat.

Between September 27th and December 4th, Sherman's corps, hastening to the relief of Chattanooga, had marched four hundred miles from the Big Black River in Mississippi, often without rations, sometimes barefoot, and three successive nights without sleep. They had fought during that week of battles, and thence they had traveled over terrible roads one hundred and twenty miles to the assistance of Burnside. "It was," says Draper, "the harbinger of the March to the Sea."

General Hooker succeeded to the command of the Army of the Potomac, January 26th. He found the troops greatly demoralized. Many had lost all heart in the cause. At one time, three thousand officers and eighty thousand privates were absent from the ranks, while the daily desertions numbered two hundred. The army was now carefully reorganized and disciplined until, as the commander declared, it was "the finest on the planet." The last of April, Longstreet with two divisions having been detached to the James, the Confederate force was reduced to sixty thousand, some say as low as forty-five thousand. As Hooker had one hundred and twenty thousand men at least, he saw the opportunity. His plan was for General Sedgwick to pass the river at Fredericksburg, as if to renew Burnside's enterprise, while he threw the main body across the Rappahannock above Chancellorsville, and then swept down on the Confederate rear. All worked admirably. The 30th found the "gray cavalier" still on the heights at Fredericksburg, while over seventy thousand men in blue were grouped under the Stars and Stripes about Chancellorsville. Hooker exultingly exclaimed, in a congratulatory order to his troops, that they now occupied "a position so strong that the enemy must either ingloriously fly, or come out from behind his defences and give us battle on our own ground, where certain destruction awaits him."

The next day the Union army moved out of the Wilderness into an advantageous position in the open country, where it could communicate with Sedgwick by Banks's Ford. All anticipated a vigorous advance. Unexpectedly, however, Hooker changed from the offensive to the defensive, fell back into the Wilderness, and took post again at Chancellorsville. Here he made ready to

LEE AND JACKSON PLANNING THE BATTLE OF CHANCELLORSVILLE.

receive battle in a wild and desolate region—a thicket of undergrowth so dense that the “men had to flatten their bodies to glide between the stunted oaks;” a jungle traversed only by narrow roads and bridle-paths, where neither cavalry nor artillery could operate, and every movement of an antagonist was effectually hidden.

Lee, seeing the real intention of Hooker, now rapidly swung his army into position. On the eve of May 1st, “seated upon some cracker-boxes under a pine tree” with his famous lieutenant, Jackson, he devised a method of attack. It was decided to take once more the risk of dividing the army in the face of the enemy; and that, while Lee made a show of fighting in front, Jackson with twenty thousand men should make a detour of fifteen miles through the woods and turn the Federal right.

Early in the morning the movement was begun. The line of march was about a mile in advance of the Federal position. General

Daniel E. Sickles, saw the Confederates steadily streaming over a hill in his front, and, making a dash forward, captured the Twenty-third Georgia Regiment, which was guarding the flank of the column; but as the road there turned southward, it was supposed the Confederates were retreating to Richmond. Screened by the wood and by Stuart's cavalry-scouts, Jackson kept on, completely circummarching the Federal right. Then, carefully forming his line of battle in silence, he suddenly burst out of the thicket like a whirlwind. The Union troops, scattered through their camps, were busy cooking their suppers. Before they could unstack their guns, the enemy sprang upon them. Howard's entire corps was panic-stricken. Arms, knapsacks and accoutrements were thrown away. Artillery-horses wildly plunged off at a gallop, and the wagons, striking against tree-trunks, were overturned and blocked the way. Amid this crowd of rushing fugitives, General A. Pleasanton came up with five hundred cavalry. He ordered Colonel Keenan to charge with the Eighth Pennsylvania. The gallant officer knew that it was his death-warrant, but smilingly said, "I will," and dashed into the wood. In ten minutes he was prostrate, while the most of his men lay bleeding around him. These were precious minutes, however, and they had been improved. Pleasanton's battery of horse-artillery had been wheeled into position, and other guns had been brought up. When the enemy emerged into the opening, the cannon, double-shotted and trained low, opened fire upon them with terrible force. The Confederates, having become inextricably mingled in the forest, recoiled. Jackson ordered Hill's brigade to the front, and himself rode forward in the bright moonlight to reconnoitre. As he returned, his men mistook the party for Federal cavalry, and, firing upon it, he was mortally wounded.

General A. P. Hill continued the Confederate attack, but he, also, was wounded, and General Stuart, the famous cavalry leader, took command of Jackson's corps. "The men had been accustomed," says Cooke, "to see their commander pass slowly along their lines on a horse as sedate-looking as himself, a slow-moving figure, with little of the 'poetry of war' in his appearance. They now found themselves commanded by a youthful and daring cavalier on a spirited animal, with floating plume, silken sash, and a sabre which gleamed in the moonlight, as its owner galloped to and fro, cheering his men and marshalling them for

the coming assault. As he advanced with joyous vivacity, his sabre drawn, his plume floating proudly, one of the men compared him to Henry of Navarre at the battle of Ivry. But Stuart's wild gayety destroyed the romantic dignity of the scene. The next day, he led the men of Jackson against General Hooker's breastworks, bristling with cannon, singing, 'Old Joe Hooker, will you come out of the wilderness?''

During the night, Hooker took a new position. His line was shaped like the letter **U**, with both flanks resting on the river. As the mist of Sunday morning lifted, Stuart seized Hazel Grove, a little hill in front, and planted thirty cannon upon it. It was the very key to the battle-field; yet Hooker had just ordered Sickles to abandon it. The whole Confederate army now surged against Sickles's and Slocum's men. The former, finding his ammunition running low, sent back for reinforcements; but none came. Hooker was standing on the veranda of the Chancellorsville House, when a cannon-ball struck the pillar against which he was leaning; he was stunned by the blow, and for an hour, in the heat of the fight, the army was deprived of its commander. Sickles repulsed five charges with the bayonet while forty thousand Federal troops lay idle, with no enemy before them. Lee and Stuart had now fought their way to a union, and together bore down on the Chancellorsville House. At ten o'clock, the Union forces were driven back at every point.

The Confederate army being drawn up on the plateau, Lee rode in front of the line. As he stopped near Chancellorsville House, the flames were leaping out of every window of the burning building. The woods had caught fire, and the blaze was crackling through the thicket where the dead and wounded lay thickest. Clouds of smoke swept over the field, strewed with the horrid *débris* of battle. Cool and collected amid this fearful scene, he was just giving the order for a grand charge when he was stopped by the startling news that Sedgwick had taken Fredericksburg.

Drawing back, he turned against this new antagonist, and, by severe fighting that night and the next day at Salem Church, compelled him to recross the river. Wednesday, Lee returned to renew the conflict with Hooker. That general had lain idly in his entrenchments while this struggle with Sedgwick was going on, and had then retreated. During the night, the Army of the Potomac had spread pine-boughs on the bridges to dull the noise

of the trains, and quietly crept back to its old camping-ground opposite Fredericksburg. It numbered about seventeen thousand less than when it set out on this adventure; while the Confederate force was weakened by about thirteen thousand men.

The South had achieved a victory, but it was far more than counterbalanced by the loss of her favorite leader. Stonewall Jackson died a week after this great battle, which had been mainly decided by the tremendous blow he delivered on the Federal right. Jackson was a sincere Christian, and his character commands the respect due to exalted integrity wherever found. He was accustomed in all he did to ask the Divine blessing and guidance. His old body-servant said that he "could tell when a battle was at hand by seeing the general get up a great many times in the night to pray."

STONEWALL JACKSON IN HIS TENT.

His ejaculatory prayers during the heat of a conflict were often heard by those near him. At a council of war held in Manassas, after he had made his successful move to Pope's rear in the campaign of 1862, he listened quietly to the opinions of the other members, and then asked until the following morning to mature his own plan. A general officer present remarked to another, as they retired, "Jackson wants time to pray over it." About twelve o'clock that night, this officer, having occasion to go to the general's headquarters, found him on his knees, pleading earnestly for wisdom to direct him. The next day, he came before them with a plan which instantly commended itself to all. The distinguished

officer who relates this incident was so deeply affected by it as to be led to make a public profession of religion.

Jackson was a diligent student of the Bible, frequently rising before day that he might find time to study a portion before going to his other duties. He delighted in religious conversation, and engaged in it at times least expected by those who did not know him. Once, while manœuvring to flank the enemy, he entered into a warm conversation with a young officer of his staff on the power of Christian example. Being interrupted by an orderly who reported "the enemy advancing," he paused only long enough to give the laconic order, "Open on them," and then resumed the conversation, which he continued for some time, breaking it only now and then to receive despatches and give the necessary replies.

A chaplain relates that on the eve of Fredericksburg, he saw an officer wrapped in a plain overcoat, lying in the rear of a battery, quietly reading his Bible. He approached and entered into conversation on the prospects of the impending battle, but the officer soon changed the conversation to religious topics, and the chaplain was led to ask, "Of what regiment are you, chaplain?" To his astonishment, he found that the quiet Bible reader was none other than the famous Stonewall.

The circumstances of Jackson's death, as narrated by his surgeon, Dr. McGuire, are exceedingly touching. Conversing with Captain Smith, he alluded to his wounds, and said, "Many would regard them as a great misfortune; I consider them as one of the blessings of my life." Captain Smith replied, "All things work together for good to those that love God." "Yes," he answered; "that's it, that's it."

The general's joy at the coming of his wife and child was very great, and made him unusually demonstrative. Noticing the sadness of his wife, he said to her tenderly, "I know you would gladly give your life for me, but I am perfectly resigned. Do not be sad; I hope I may yet recover. Pray for me, but always remember to use the petition, 'Thy will be done.'" About daylight on Sunday morning, Mrs. Jackson informed him that his recovery was very doubtful, and that he should be prepared for the worst. He did not reply for a moment; then he said, "It will be infinite gain to be translated to heaven." Colonel Pendleton coming into the room about one o'clock, he asked him, "Who is preaching at headquarters to-day?" Being told that "the whole

army was praying for him," he exclaimed, "Thank God! They are very kind." Afterward he said, "It is the Lord's day; my wish is fulfilled. I have always desired to die on Sunday."

His mind now began to wander. A few moments before he died, he cried out in his delirium, "Order A. P. Hill to prepare for action!" "Pass the infantry to the front rapidly!" "Tell Major Hawks——" then stopped, leaving the sentence unfinished. Presently a smile of ineffable sweetness spread itself over his pale face, and he said quietly, and with an expression as if of relief at closing up life's work at last, "*Let us cross over the river and rest under the shade of the trees.*"

Until midsummer of 1863, it seemed as if the Stars and Bars were ultimately to be victorious. The army of the Potomac had been defeated at Fredericksburg and Chancellorsville; Burnside had not yet overrun East Tennessee; Banks was vainly knocking at the gates of Port Hudson, and Grant at Vicksburg; Bragg had held Rosecrans at bay before Chattanooga for a good half year since the battle of Murfreesborough; Magruder had recaptured Galveston, Texas, taking valuable stores, securing a fort for the Confederates, and greatly depressing the Union cause in that State; while an attempt of the iron-clads under Dupont to reach Charleston (see page 554) had ended in disaster. Worse than all these repulses at the hand of the enemy, a powerful peace party had arisen in the Free States, which either openly denounced the effort to "subjugate the sister States," or asked for quiet at the price of a dissolution of the Union.

Encouraged by these successes, the South felt that the time had come to carry the war into the North, and dictate terms of peace in Philadelphia or New York. With the flower of that infantry which, on so many battle-fields, had wrenched victories from the best armies and generals the Federal government had yet sent forth, Lee, June 3d, just a month after Chancellorsville, broke camp, moved rapidly down the Shenandoan, and, crossing the Potomac, advanced to Chambersburg.

The Confederates very generally obeyed Lee's stringent orders forbidding all plundering and wanton waste of property. A Southern paper, sarcastically alluding to this forbearance, declared that if the commander-in-chief saw a top rail off the fence, he would dismount and replace it. The army, however, lived upon the country through which it traveled—horses, cattle, and supplies being exacted from the farmers. York was ordered to have ready

in the market-place, at four o'clock in the afternoon of the requisition, "one hundred and sixty-five barrels of flour, or twenty-eight thousand pounds baked bread; thirty-five hundred pounds sugar; sixteen hundred and fifty pounds coffee; three hundred gallons molasses; twelve hundred pounds salt; thirty-two thousand pounds fresh beef, or twenty-one thousand pounds bacon or pork; two thousand pairs shoes or boots; one thousand pairs socks; one thousand felt hats; and one hundred thousand dollars in money."

The Union army followed northward along the eastern slope of the Blue Ridge, the passes of which were occupied by Stuart's

cavalry and gave no glimpse to prying Federal eyes of what was doing on the other side.

June 27th, Hooker resigned, and General George G. Meade was appointed to the command of the army of the Potomac. Stuart, after crossing the river, moved off on the Union right, thus leaving Lee's communications with Richmond open to the Union army through the gaps in the South Mountain. Lee thereupon turned to the east, in order to secure a good position for the defensive battle which he was resolved to offer.

Meade, also intending to act only on the defensive, had de-

cided to make a stand at a point on Pipe Creek, about fifteen miles southeast from Gettysburg. Neither commander was purposing a battle where it occurred; but mere chance, the finger of destiny, or the hand of providence, as men may varyingly style the current of events, steadily drifted the two armies into collision on that fatal Cemetery Ridge.

Meade had sent his left wing, under General J. F. Reynolds, to Gettysburg, in order to screen the movements of the main body toward his objective point. In the morning of July 1st, Buford's cavalry, moving out a couple of miles west of Gettysburg, struck the head of Lee's advance. Reynolds hurried to the front,

MAJOR-GENERAL GEORGE G. MEADE.

and, while reconnoitering the enemy through a fence, was struck by a sharp-shooter. After having bravely fought in Mexico, California, and Virginia, he returned to die in his native State, "almost within sight of his home." Reinforcements rapidly came up on both sides; but the Federal troops were finally forced back, and, becoming entangled in the streets of the village, lost many men, besides abandoning their wounded. Hancock arrived at the moment when they were retreating in disorder through the town, hotly pursued by the triumphant enemy. He at once made ready to hold the strong position on Cemetery Ridge already occupied by General Howard. All the men at hand were thrown into line, and Buford's cavalry was drawn up in front to offer battle. Awed by this firm appearance, and ignorant whether the whole Union army were not in his front, Lee decided to defer the attack till morning. Hancock informed Meade of the advantages of the location, and about midnight that general came up, when, amid the tombs of the dead, the plans were laid for the coming struggle.

All that bright moonlight night the troops were arriving and taking their positions. By morning, both armies, each about eighty thousand strong, were in line of battle. On the Union side, Sedgwick's corps, having thirty-six miles to travel, marched all night, and, weary and footsore, did not arrive on the field until afternoon. On the Confederate, Pickett's division, coming from Chambersburg, joined Lee about the same time.

The Union line was upon a fish-hook-shaped ridge about six miles long, with Culp's Hill at the barb, Cemetery Ridge along the side, and Little Round Top and Round Top—two eminences—at the eye. The troops lay behind rocky ledges and stone walls, constituting a natural rampart, which they soon strengthened by improvised breastworks. The Confederate line was on Seminary Ridge, at a distance of about a mile and a half, the men being largely hidden in the woods. In the valley between the hostile ranks were fields of golden grain and green meadows, where cattle were quietly grazing, all unheeding the gathering storm.

On the Union left, General Sickles, by mistake, had taken a position in front of Meade's intended line of battle. Lee saw the

VICINITY OF GETTYSBURG.

error, and sent Longstreet to break this weak point and carry Little Round Top. It was the key to the Union line, yet was strangely left unoccupied. The Confederates, far outflanking, swung around Sickles, but as they reached the summit they met Vincent's brigade, which General Warren had, by a quick thought, sent in the nick of time. Vincent fell, and also Weed, who came with a brigade to his relief; but the hill was held, and the Texans, whom Lee said he relied upon for every "tight place," at last retired—their commander, Hood, losing an arm. Sickles was, however, crowded back to Cemetery Ridge, where he stood firm. Later in the day, General Ewell made an attack on the Federal right, then greatly weakened by detachments sent to help Sickles, and succeeded in getting a position on Culp's Hill.

At night, the Federal army had been forced back on both flanks. Lee, encouraged by this success, and by the wonderful spirit of his men, who were eager and confident, resolved to continue the fight another day. The Confederate advantage, however, was only apparent. Sickles was then in a better position than at first, and the one which Meade had intended him to occupy; while Ewell could not hold his ground, and was driven out of the Union works early the next morning.

About one o'clock in the afternoon of the third day, Lee, having massed one hundred and forty-five guns, suddenly opened on Cemetery Ridge. For two hours the air was alive with shells. "Every size and form of shell known to British or American gunnery," says Wilkinson, "shrieked, whirled, moaned, whistled, and wrathfully fluttered over our ground. As many as six in a second, constantly two in a second, came screaming around the headquarters. They burst in the yard; burst next to the fence, garnished, as usual, with the hitched horses of aids and orderlies. The fastened animals reared and plunged with terror. One horse fell; then another; sixteen lay dead and mangled before the fire ceased. Through the midst of the storm of screaming and exploding shells, an ambulance, driven by its frenzied conductor at full speed, presented to all of us the marvelous spectacle of a horse going rapidly on three legs. A hinder one had been shot off at the hock. A shell tore up the little step at the headquarters cottage, and ripped bags of oats as with a knife. Another soon carried off one of its two pillars. Soon a spherical case burst opposite the open door; another tore through the low garret. The re-

maining pillar went almost immediately to the howl of a fixed shot that Whitworth must have made. Soldiers in Federal blue were torn to pieces in the road, and died with the peculiar yell that blends the extorted cry of pain with horror and despair." The Union guns replied for a time, and were then withdrawn to cool. The men lay crouching behind rocks and hiding in hollows

REFULSING A CHARGE AT GETTYSBURG.

from the iron tempest which drove over the hill, anxiously awaiting the charge which they knew would follow.

Finally the cannonade lulled, and out of the woods swept the Confederate double battle-line, over a mile in length, preceded by a cloud of skirmishers, and with wings on either side to prevent its being flanked. A thrill of admiration ran along the Union ranks, as, silently and with disciplined steadiness, that magnificent column of eighteen thousand men moved up the slope with its red battle-flags flying and the sun playing on its burnished bayonets. A quarter of a mile away and a hundred guns opened upon it. Great gaps were torn in the front, but the men closed up and sternly moved on. Then the "quick time" became "double-

quick," and they dashed forward on the run. Infantry volleys now struck their ranks. Their line was broken, and their supports were scattered to the wind. Still Pickett's veteran Virginians pushed forward. They planted their battle-flags on the breastworks. They bayoneted the cannoneers at their guns. But beyond, upon the crest of the hill, was a second and stronger line. As they dashed ahead to charge this, the Federal fire smote them full in the face and on either flank. The whole column seemed to break into pieces and disappear at once. The bravest gave up in despair. Many surrendered, while the wreck fled from the field, leaving the ground strewn with the *débris* of battle—the wounded and the dead. The division had lost three generals, fourteen field-officers, and three-fourths of its men.

This was the supreme moment of the war. At that very time Pemberton was seated beside Grant, under an oak-tree near Vicksburg, negotiating for the surrender of that city. These disasters determined the fall of the Confederacy. From that hour its fate was sealed. Yet at the time the issue did not seem so clear as it does now to the historian.

Lee had staked all on this charge, and he made no attempt to renew the battle. In the three-days fight he had lost probably thirty-six thousand and Meade twenty-three thousand men. The Union commander was severely criticised at the North for not immediately attacking Seminary Ridge before the enemy could rally from its confusion. He probably judged wisely in being content with the victory he had achieved. Lee expected such a charge, and was ready to receive it. The *morale* of the Confederate army was not shaken. Its confidence in its commander was strong, and the veterans came back from Seminary Ridge saying, "Uncle Robert will get us into Washington yet, you bet he will."

On the 4th, Lee retreated, and nine days after crossed the Potomac, Meade slowly following. The second invasion of the North had ended in disaster. The first lasted thirteen days; this, seventeen days; the two had cost the South at least eighty or ninety thousand men. Lee retired back of the Rappahannock, sending Longstreet south to Bragg. Meade likewise detached Hooker to Chattanooga.

A curious circumstance mentioned in the official accounts of the battle of Gettysburg shows to what extent, on both sides, the excitement of the conflict caused the loss of self-possession among the soldiers. Of twenty-four thousand loaded muskets picked up

at random on the field of battle, one-fourth only were properly loaded; twelve thousand contained each a double charge, and the other fourth from three to ten charges; in some were six balls to a single charge of powder; others contained six cartridges, one on the top of the other, none having been opened; a few more had twenty-three complete charges regularly inserted (this can be accounted for by the fact that, amid the din of battle, one cannot hear the report of his gun); and finally, in the barrel of a single musket there were found jumbled together twenty-two balls, sixty-two buck-shot, and a proportionate quantity of powder.

In October there occurred a trial of tactical skill which is interesting, though it did not result in any great battle. Lee recrossed the Rapidan, intending to turn Meade's right flank and force him to a battle. Meade detected the plan, and began to retreat. So well executed was the movement, that when the Confederate army entered Culpepper, scarce a cracker-box was found to reward the pursuit. Lee pressed on, hoping to strike the Orange and Alexandria railroad near Manassas, in the rear of the Union army. The Federal columns, however, moved with such celerity, that the rear-guard only was overtaken near Bristoe station. Here Warren turned sharply upon the enemy, dealt him a staggering blow, and then safely joined the army at Centerville. Lee, disappointed in his object, ceased the pursuit, and, content with two thousand prisoners, taken in several sharp encounters which had occurred, retired to his former position near Orange Court-House. Meade followed him up closely, at Kelly's Ford routing Early and capturing nearly his whole command.

A curious incident happened during this advance. General Stuart was vigorously pursuing the Federal forces when, on the night of the 13th, near Auburn, he suddenly found that strong columns of the enemy were passing along in front and rear of the woods where he was encamped, the nearest one not over two hundred or three hundred yards distant. If discovered, his fate was sealed. The only resource was to keep silent and await the turn of events. His troopers accordingly sat their horses through the night, anxiously listening to the roll of artillery, the tramp of cavalry, and the steady march of infantry. At dawn, seeing the Federal rear encamped near by and quietly preparing their breakfast, he suddenly opened his guns, promiscuously knocking over their coffee-pots, while, under cover of a heavy fire, his men dashed off in safety.

November 26th, Meade in turn crossed the Rapidan, thinking to cut up in detail the Confederate army, then scattered in winter-quarters. Lee rapidly concentrated his troops behind Mine Run, and fortified his lines. Trees were cut down, and the logs piled up in double walls, and filled in with earth. In front was a sluggish stream, with steep and slippery banks. The Federal troops felt that his position was unassailable, and it is said that the men detailed for the attack wrote their names on bits of paper, which they pinned to their breasts, to enable their bodies to be recognized. The assault was finally abandoned, the Union army secretly withdrawn to its former quarters, and the campaign of the army of the Potomac for the year 1863 was closed.

During this year, the events of the greatest moment along the seaboard occurred at Charleston. Such was the confidence then felt in the ability of iron-clads to resist the heaviest cannonade, that Admiral Dupont attempted, April 7th, to run past the batteries and enter the harbor of that city. The little fleet, mounting only thirty-two guns, accordingly moved up the channel; but the vessels were stopped by obstructions, and held under the concentrated fire of three hundred cannon. The *Keokuk*, which was in advance, was struck ninety-nine times, the officers declaring that they heard the balls pounding against the iron sides of their ships as rapidly as the ticks of a watch. All the monitors were more or less injured, and were glad to creep out of harm's way again.

In July, General Gillmore, being placed in charge of the Union troops, secured a landing on Morris's Island, a low sandy beach but little above the level of the sea. An attack on Fort Wagner, a strong fortification at the northern end of the island, having failed, after a heavy bombardment it was again assaulted on the night of July 18th. The men double-quickened across the sand half a mile, under a heavy fire of guns, great and small. Though their ranks were torn by hand-grenades, they struggled through the ditch and planted their flag on the top of the crumbling wall. It was only for an instant. General Strong was mortally wounded; Colonel Shaw and others were killed. The survivors crept off in the friendly darkness. In this disastrous failure, the Union loss was twelve hundred, and the Confederate not over one hundred.

Colonel Shaw was in command of the Fifty-fourth colored regiment. It was the first raised in the Free States. In order to

be in season for the assault, it had marched two days through heavy sands and drenching storms. With only five minutes rest, it took its place at the front of the attacking column. The men fought with unflinching gallantry, and so many of the officers were killed that the remainder of the troops was led off by a boy, Lieutenant Higginson. The garrison, to show their contempt for the colonel, a noted abolitionist, "threw his body into the same pit with his niggers."

A regular siege was now undertaken. Parallels were rapidly pushed close to the walls. By night, powerful calcium lights blinded the eyes of the garrison, while they brought out every angle of the works vividly to the aim of the besiegers. At last, the fort being silenced and its men driven into their bomb-proof for shelter, Gillmore was preparing for a third assault when the place was evacuated.

Meanwhile, Sumter had been bombarded until it was reduced to a shapeless mass of ruins. On the night of September 8th, a party of sailors, landing from the fleet, clambered up the heaps of rubbish, only to meet the garrison starting out from their hiding-places, and to be all either killed or captured.

In a marsh west of Morris's Island, piles were driven into the soft, black mud, twenty feet deep, and a platform was made, on which was placed an eight-inch rifled Parrot gun, nicknamed by the soldiers "the Swamp Angel." It threw 150-lb. shells five miles into Charleston, but burst on the thirty-sixth round. The bombardment of the city was afterward continued from the other batteries.

After the disaster at Gettysburg, the Confederate Congress decreed a more rigorous conscription act, ordering all male persons from eighteen to forty-five to repair to camp on pain of being considered deserters. Before the close of the year, the age was extended to fifty-five, and no exemption allowed, even where a substitute had been previously furnished. The next year, the whole male population was rendered liable to military service.

The Federal government passed a conscription law, March 3d, enrolling all able-bodied citizens between twenty and forty-five years, and in May, the President ordered a draft of three hundred thousand men. The project was exceedingly unpopular, and was bitterly denounced on every hand. The anti-slavery measures of the administration had already awakened a wide-spread hostility to the war. While Pickett's column was assaulting Cemetery

Ridge, inflammatory handbills were being circulated in New York. July 13th, a riot broke out in that city. The mob rose in arms, sacked houses, demolished the offices of the provost-marshal, burned the colored orphan asylum, attacked the police, and chased negroes—women and children even—wherever they appeared on the streets, and, when caught, hanged them on the

DRAFTING.

nearest lamp-post. For four days, the populace ruled. Veterans from the army of the Potomac then arrived upon the scene, when law and order were soon restored. Two million dollars of property had been destroyed, and it is said that one thousand of the rioters had fallen.

A part of the Gettysburg battle-field was dedicated as a national cemetery, November 19th. After the usual solemnities, President Lincoln came forward, and, amid the tiers of encircling graves, slowly, tremulously pronounced these memorable words: "We cannot consecrate nor hallow this ground. The brave men,

living and dead, who struggled here, have consecrated it far above our power to add or detract. The world will but little note, nor long remember, what *we say* here; but it can never forget what *they did* here. It is for us, the living, rather to dedicate ourselves to the unfinished work which they so nobly advanced; to consecrate ourselves to the great task remaining, and to gather from the graves of these honored dead increased devotion to that cause for which they gave their lives. Here let us resolve that they shall not have died in vain; that this nation shall, under God, have a new birth of freedom; and that government *of* the people, *by* the people, and *for* the people shall not perish forever from the earth."

"His voice all elegies anticipated,
For whatsoe'er the strain,
We hear that one refrain:
We consecrate ourselves to them, the consecrated!"

During this year there were several minor expeditions which at the time attracted much attention, though they exercised little influence on the issue of the war, and served mainly to excite the bitterest feeling on both sides. April 17th, while Grant was preparing to move below Vicksburg, Colonel Grierson, with seventeen hundred Union horsemen, started south from La Grange, Tennessee. He traversed the country in the rear of the Confederate forces, in sixteen days marching six hundred miles, and destroying railroads and supplies wherever he could reach them. Detachments sent out to mislead his pursuers often traveled sixty miles a day over almost bottomless roads to regain the main body. Near Louisville he crossed a swamp where, for eight miles, the water was from three to four feet deep, and in which twenty of his horses were drowned. The last twenty-eight hours he rode seventy-six miles, swimming a river, fighting two skirmishes, and capturing a camp. He reached Baton Rouge at last with three-fourths of his men asleep in their saddles.

About the same time, Rosecrans sent Colonel Streight and eighteen hundred cavalry to raid in the rear of Bragg's army and destroy the manufactories at Rome and Atlanta. He was overtaken, however, by Forrest and Roddy, beaten in a running fight of over one hundred miles, and finally forced to surrender. The men were exchanged, but Streight and his officers were confined in Libby Prison, Richmond, on the charge of having negro sol-

diers under their command. After a confinement of nearly a year, Streight escaped with many of his companions, and after a series of romantic adventures, reached the Union lines.

Just before the battle of Chancellorsville, Hooker sent General Stoneman with twelve thousand cavalry to destroy the railroads in the rear of the Confederate army, and to cut off Lee's retreat to Richmond. Stoneman weakened his force by dividing it into six detachments. Unable to accomplish anything, they could only run from the enemy instead of after him. Some of them finally fled down the Peninsula, and the rest escaped across the Rappahannock to the Union lines. Meanwhile, the little gaps they had made in the railroads were repaired within three days.

Cotemporaneous with Lee's invasion of Maryland, that daring rider, John H. Morgan, crossed the Cumberland with two thousand well-mounted horsemen. At Tebb's Bend on Green River he found two hundred Michigan volunteers entrenched behind earthworks which had been thrown up within twenty-four hours. Colonel Moore, the commander, being summoned to surrender, replied: "If to-day were not the 4th of July, we might think of it." Driven thence by this plucky little garrison, Morgan next attacked a post at Lebanon, under Colonel Hanson, and compelled it to capitulate. His force having increased to four thousand men, he crossed the Ohio, July 7th, and marched in an easterly zigzag course through Indiana and Ohio. *En route* he destroyed bridges and depots, cut telegraph wires, burned factories and mills, and picked up the best horses. He reached the Ohio River again near Parkersburg. The Federal gun-boats, however, came up; the militia fast gathered on his path; and after several ineffectual attempts to recross the river, he was captured with most of his command.

On the night of August 21st, a guerilla band from Missouri, of about three hundred men, under Quantrell, attacked Lawrence, Kansas. They burned houses, plundered stores, shot peaceful men at their doors, and finally rode off, leaving behind them one hundred and forty dead bodies and one hundred and eighty-five ruined homes.

A great desire being felt at the North to effect the release of the Union prisoners at Richmond, during the winter of 1863-4 an expedition was sent from the Army of the Potomac for that purpose. Fifteen hundred cavalry under Custer made a feint on the west flank of the Confederate forces; while Kilpatrick with a

stronger body moved by the East, through Spottsylvania Court-House. The latter passed the first and second lines of defence before Richmond, but was stopped by the third, and being fiercely pursued, was driven pell-mell down the Peninsula. Meanwhile, a detachment under Colonel Dahlgren—a young man of only twenty-one, who had already lost a foot in the service—turned to the right, intending to cross the James and enter Richmond from the south. But finding the river too deep to ford, Dahlgren passed down the north bank and charged the Richmond defences on the night of March 2d. Being repulsed, and finding Kilpatrick had fled, he attempted to follow, but at Dabney's Ford, on the Mattaponi, he was killed and his command scattered.

NATIONAL MONUMENT AT GETTYSBURG.

CHAPTER XVI.

FOURTH YEAR OF THE CIVIL WAR—1864.

GRANT was made Lieutenant-General and commander of all the forces of the United States, March 2d. Leaving Sherman in charge of the Western troops, he took up his headquarters with the Army of the Potomac; Meade, however, still retaining his former position. General Phil. H. Sheridan was put at the head of the cavalry. The strength of the Confederates was concentrated under Lee in Virginia and Johnston in Georgia.

While the army of the Potomac was crossing the Rapidan, May 4th, Grant, seated on a log by the road-side, penciled a telegram to Sherman to take the field immediately. Sherman had then in his department the enormous number of three hundred and fifty-two thousand two hundred and sixty-five men. One can form some idea of the waste of our mode of warfare when he learns that the total effective force was only one hundred and fourteen thousand eight hundred and twelve, and on no occasion was half of this number actually engaged in battle. The Confederate army aggregated nearly one hundred and fifty thousand, with only a little over fifty thousand present for duty.

May 6th, Sherman advanced from Chattanooga. Johnston, expecting this movement, had entrenched his army at Dalton. In his front was Rocky-Face Ridge, pierced by a rugged glen known as Buzzard Roost, through which wound the railroad. A demonstration having shown this pass to be impregnable, Sherman sent General McPherson with his corps through Snake Creek Gap toward Resaca, thus turning the Confederate left. Johnston

fell back hastily to Resaca, already strongly fortified. Here Sherman pressed heavily in front, while McPherson, on the Union right, gained a post which enfiladed the enemy's works. The next day the national troops obtained a foothold close to the Confederate entrenchments, dug away the earth, pulled out the cannon with ropes, and, bursting through the breach, secured a lodgment within the lines. During the night, Johnston retreated. The pursuit was so vigorous as to save one of the bridges over the river. The broad valley of the Etowah and the Oostenaula, with the foundries and the mills at Rome, fell into the Union hands.

At Allatoona Pass, Johnston made a new stand. Sherman did not attempt to force him thence, but moved around upon the Confederate left toward Dallas. Johnston had anticipated this, and, at New Hope Church, was found waiting to head off the advance. Desperate assaults were made to and fro. Finally the Union army worked past into the rear of Allatoona, when Johnston evacuated all his posts and retired to Lost, Pine and Kenesaw Mountains. Here the whole country was one vast fort with fifty miles of entrenchments, above which towered "the everlasting hill" of Kenesaw, whence the Confederates could watch every movement in the national lines.

Sherman, wishing, it is said, to "show that he could assault fortified lines as well as the Army of the Potomac," June 27th, made two fierce dashes upon the enemy's works. Both were repulsed, with a loss of three thousand men and many valuable officers. Resorting then to his favorite tactics, he swung his army around toward Turner's Ferry. The result was magical. Before daylight the next day the Union outposts were creeping over the deserted entrenchments on Kenesaw.

Johnston next endeavored to defend the strong *tête du pont* and outworks at the crossing of the Chattahoochee. Amusing the Confederate army by demonstrations in front, Sherman secretly sent off Scofield, Howard, and McPherson to the left. They quickly laid bridges, and were soon across the stream above the Confederate lines. Johnston's position was once more turned, and he was ere long *en route* for Atlanta.

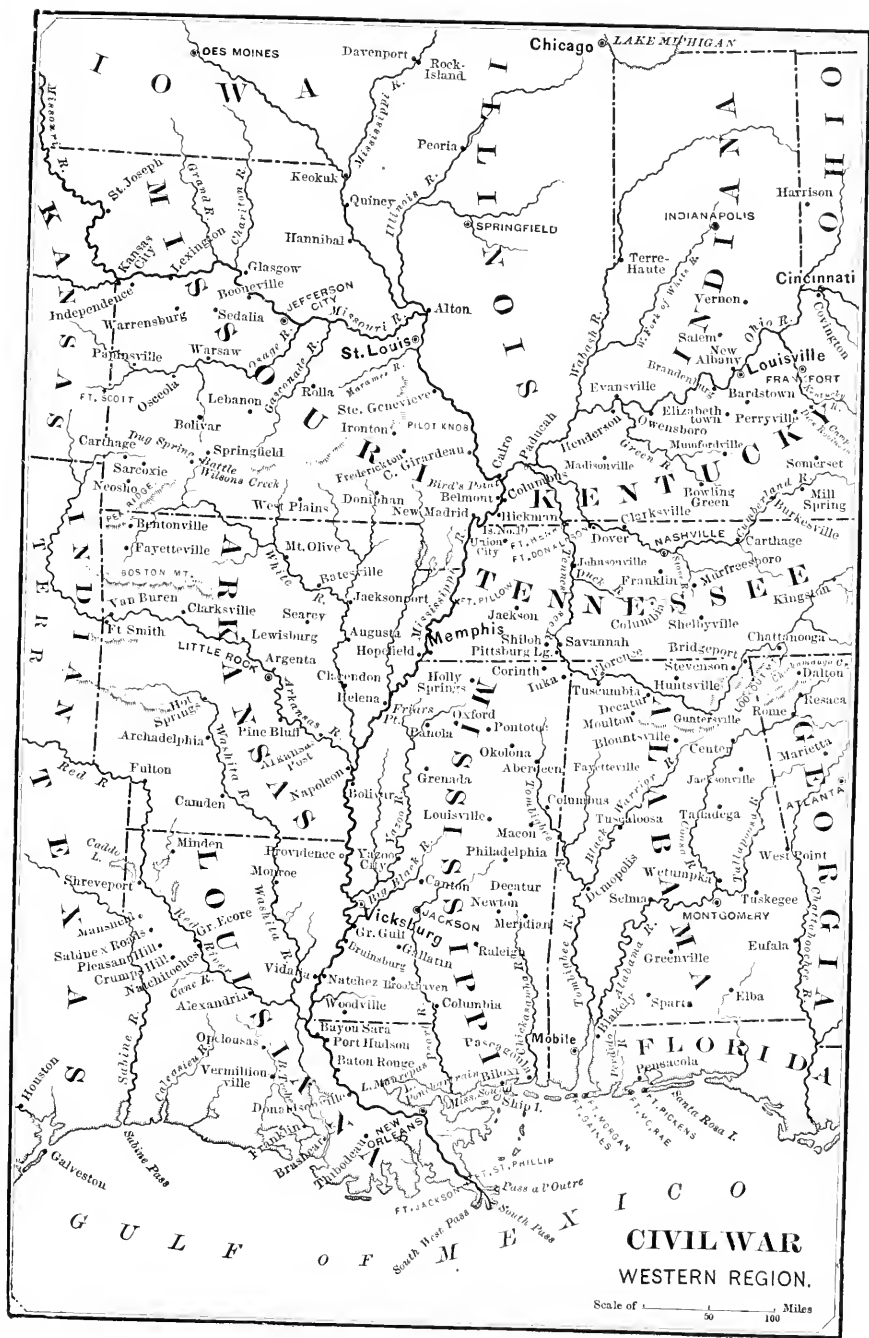

Johnston was not in the confidence of the Confederate authorities. Failing to appreciate the magnificent strategy by which he had so long delayed the Federal advance, they superseded him, July 17th, by General Hood. The Fabian tactics were at once exchanged for a more dashing policy.

Sherman was moving down upon Atlanta, when, on the 20th, Hood gave him a staggering blow, which was warded off. Again, on the 22d, Hood, having sent Hardee with a heavy column by a night-march to turn the Union left, suddenly enveloped it with a superior force. A desperate battle ensued. The Federals facing now this way and now that, as the enemy came upon them from the forest, fought sometimes on one side and sometimes on the other of their breastworks, and sometimes without any protection. McPherson was at headquarters when the sound of the guns indicated danger. He at once galloped in that direction, down a quiet country lane in the rear of his line. Some dropping shots were heard, and then a riderless horse came dashing back from the woods. When help arrived, this gallant, Christian warrior was no more. Hours of fierce fighting followed, but the Confederates were at length repulsed with heavy loss.

Six days after, Hood made a third tremendous sally upon the Union position. It was useless. During the next four weeks, Sherman kept feeling the formidable works about Atlanta; but finding them too strong for a direct assault, he loaded his wagons with fifteen-days provisions, and, by a circuit, brought his whole army around in the rear of the city and seized the railroad. Hood, detecting the movement, sent Hardee with two corps to Jonesborough to guard his line of supplies. Sherman instantly closed down upon him. The Confederate army was irrevocably sundered, and the Union forces were between the two portions. Hardee, however, managed to escape. Hood evacuated the city, after blowing up the magazines, depots, and machine-shops. Thus the Confederate army, which was the chief object of attack, slipped away.

The campaign had lasted from May 6th to September 2d. In its ten pitched battles and scores of minor engagements, it had cost the Union army about thirty thousand and the Confederate forty thousand men. It had been almost a constant skirmish. Said Sherman, "I have not seen ten thousand of the enemy in one view, yet, by advancing my lines one hundred yards, I could at any time draw the fire of one hundred guns and fifty thousand muskets."

When either party stopped, even for a brief time, it fortified its front with an abattis of felled trees and a ditch with a head-log placed on the embankment. The head-log was a tree, twelve or fifteen inches in diameter, resting on small cross-sticks, leaving a

space of four or five inches between the log and the dirt, through which the guns could be pointed. Thus, in a few hours, a field-work was thrown up which was almost unassailable.

Sherman's supplies during the entire campaign had been brought by a single line of railroad from Nashville, a distance of three hundred miles, exposed throughout to the attacks of the enemy. Yet so carefully was it garrisoned, and so rapidly were bridges built and breaks repaired, that the damages made by the Confederate cavalry were often mended before the news of the accident had reached the front. The whistle of the locomotive was frequently heard on the camp-ground before the echoes of the skirmish fire had died away.

The loss of Atlanta was a severe blow to the South; as it was a great railroad centre, and the chief seat of her machine-shops and manufactories. The Confederacy was cut off from Georgia—its granary, arsenal, and workshop.

Hood, having reunited his army, moved northward as far as Dalton, capturing several small posts along the line of the Federal communications. Sherman pursued him eagerly, hoping to bring him to battle, but Hood slipped out of his fingers, and at last struck for the Tennessee. Sherman gave up the pursuit at Gaylesville, Alabama, and, sending Thomas to Nashville to gather troops to meet Hood's invasion, turned back to Atlanta and prepared his army for his famous March to the Sea.

Reinforcements were ordered to General Thomas; the sick and wounded were sent back to Chattanooga; supplies for forty days were packed in the wagons; the railroads were destroyed; and a large part of Atlanta was burned, all the buildings on two hundred acres of ground being left a heap of ruins. The last thing, a telegram was sent to Thomas—"All is well"—when the wire was cut. The army, sixty thousand strong, stood free on southern soil. November 16th, it struck out boldly for the sea, three hundred miles away. The left wing, under General Slocum, moved along the Georgia and South Carolina railroad, and the right, under General Howard, along the Western and Macon and the Central Georgia railroad. The tracks were torn up and the rails destroyed as they passed. A cloud of cavalry under Kilpatrick and lines of skirmishers covered the march and guarded against a surprise. The troops foraged upon the country along the route. A swath sixty miles wide was thus cut through the very heart of the Confederacy. The path of the

army was marked by trampled fields, deserted villages, and chimneys standing sentinel over blackened ruins. The able-bodied men had been sent North to Lee and Johnston, and the "gray-beards and boys" that were left could offer no effective resistance. A feint on Augusta led to a concentration at that city of what forces could be gathered, leaving the route to Savannah open; and Sherman rapidly moved down the peninsula between the Savannah and Ogeechee Rivers.

December 9th, three scouts left the army. Paddling down the river by night, and hiding in the swamps by day, they crept past the enemy's pickets unobserved, and reached the Federal fleet in safety. They brought the first direct news received at Washington from the lost army since it swung loose from Atlanta.

Fort McAllister, a strong redoubt on the Ogeechee, was carried by Hazen's division. The garrison of two hundred fought desperately, and gave up only as each man was overpowered; but

THE MARCH TO THE SEA.

in fifteen minutes from the time the bugle sounded the charge, the Stars and Bars were run down from the flag-staff.

The army then rapidly closed in around Savannah. Hardee, in command of its defences, despairing of a successful resistance, evacuated the city, and the Union army entered in triumph. Sherman sent to "President Lincoln, as a Christmas present to the nation," the news of its capture with twenty-five thousand bales of cotton and one hundred and fifty cannon.

The March to the Sea had proved a magnificent military promenade. Sherman's entire loss was only five hundred and sixty-seven men in killed, wounded and missing. If the destruction of property be the object of war, it had been a great success. Sherman estimated the damage done at one hundred million dollars.

We left Hood making another sortie within the Union lines. It was a desperate venture, and he marched only to his doom. About the middle of November, he crossed the Tennessee at Florence. Generals Schofield and Stanley were in his front with twenty thousand men, about half as many as were in his command, seeking to delay his advance upon Nashville. Hood pressed them steadily back, at Spring Hill coming within half a mile of cutting off their line of retreat, and at last caught them at Franklin before they could cross the river. Schofield hastily threw up slight works on the south bank and made a stand with a part of the troops, while the rest guarded the trains, which were rapidly pushed forward. About four P. M., November 30th, Hood made a tremendous dash upon the entrenchments. By sheer might, the Confederate column swept everything before it, and soon the Federals, guns and men, were streaming wildly to the bridges in the rear. At this moment of peril, General Opdycke, waiting for no order, shouted, "First Brigade, forward to the works," and himself led the charge. They struck the enemy when disordered by their very success, forced them back, captured ten flags, and restored the line. Opdycke, with clubbed revolver and then with musket, drove the stragglers and skulkers to their duty. Others as brave came to his aid. Till ten o'clock at night, they held the front against repeated assaults. Under cover of the darkness, this gallant rear-guard fell back silently and before noon the following day the entire Federal force was safe within the entrenchments at Nashville. In this hard-fought battle, the Union loss was less than twenty-five hundred, and the

Confederate, by Hood's report, was forty-five hundred, including five generals killed, six wounded and one captured.

The next day Hood approached Nashville. He had there to confront an army superior to his own, and protected by numerous forts. An attack was hopeless. Thomas's delay to drive off his adversary under these circumstances excited great disappointment at the North. Indeed, Grant had ordered him to move, and had actually started to take command of the troops in person when he learned of his lieutenant's success.

On the 15th, Thomas took the field. Feigning an attack on the Confederate right, he delivered the real blow on the left, driving Hood from his works, and forcing him to take up a new line of battle at the base of Harpeth Hills. The Union troops lay on the hard-won ground during the bleak December night, and the next morning renewed the conflict. The Confederate position was forced at a dozen points by overwhelming charges. Overton's Hill was carried after a desperate resistance, and the whole army driven into headlong flight. Wilson's cavalry, ten thousand strong, had all the while been working around into Hood's rear. They now took up the pursuit with untiring energy, and the infantry followed hard after. The weather was cold and rainy; the roads were trampled into almost bottomless mud; the creeks were swollen to torrents; the bridges were burned by the Confederates as they passed, and Thomas's pontoon-train was away with Sherman. Forrest, the famous Confederate cavalry leader, came up to Hood's relief and organized a powerful rear-guard. Yet no obstacle could check the chase. The Confederate troops—barefooted, wet to the skin, blinded by the sleet, and half-frozen by the cold—fled day and night. Save the rear, which remained firm to the last, the whole organization dissolved into a mere rabble.

The rock of Chickamauga had become the sledge of Nashville. For the first time in the history of the war, an army was destroyed. The contest at the west, so far as great movements were concerned, was at an end. Thomas had now no enemy to meet, and his troops were scattered on various expeditions.

Having seen one great weapon of the Confederacy annihilated in Tennessee, we now turn to consider the fate of the other—the army under Lee. We left Grant crossing the Rapidan, May 4th, with one hundred and thirty thousand men. He had turned Lee's right flank, and his plan was by a rapid march to get be-

tween him and Richmond, and then force him to a battle. Lee, however, though he had only about fifty thousand men, did not retreat. Instead, he resolved to fall upon the Union army while entangled in the Wilderness, so famous in the Chancellorsville struggle a year before. The morning of the 5th found Warren with his corps moving out from the old Wilderness Hotel, while Hancock was pushing along the Brock road, the same over which Jackson made his secret flank march. Suddenly the Union column was struck in flank by Ewell's corps passing down the Orange Turnpike at right-angles to the Federal line of march. At first,

CROSSING THE RAPIDAN—GRANT'S TELEGRAM.

Meade took it to be a matter of the skirmishers only; but the heavy firing and the dense masses of men hastening along the roads told a different story. Hancock, then ten miles away, was hurriedly recalled, and Getty's division was placed to hold the Brock road open at every cost till his arrival. By great exertions the ground was maintained, and the Union line was formed. It was five miles long, with Warren in the centre, Sedgwick on the right, and Hancock on the left.

Another battle was now to be fought in this "land of jungle, thicket, and ooze." There is little need to picture its details. There was no strategy. The two mighty antagonists clutched at each other blindly, and wrestled in the dark. "Death came unseen; regiments stumbled on the enemy, and sent swift destruc-

tion into his ranks, guided by the crackling of the bushes." The officers, *compass in hand*, led the charge as best they could. Both sides cut down saplings, threw up slight breastworks of poles and dirt, and made abattis. Though they heard the ringing of the axes, they saw no one on the opposite side. The line surged to and fro, and no eye could follow it; only the ear marking the sound as it advanced or receded. Men fell, and their dying groans were drowned in the dull continuous roar, while their bodies were hidden in the tangled underbrush.

The first day of this horrid butchery decided nothing. Grant's only order for the next morning was to attack along the whole line. The sun blazed like a furnace. The gloomy shades were stifling with smoke. Not a breath of air was stirring. The thicket caught fire, as at Chancellorsville, and the men fought amid the crackling flames. General Wadsworth, on the Union side, was killed; and on the Confederate, Longstreet was severely wounded. Till late at night there streamed out of the woods the horrid wreck of battle—mangled, bleeding forms borne on stretchers. "The Wilderness," says Draper, "was throbbing with the wounded."

Grant had now lost twenty thousand and Lee ten thousand men. The next day each general quietly watched his adversary. At night, Grant pushed his army by the Confederate right flank to Spottsylvania Court-House, Warren leading the advance. Lee, mistrusting the movement, at nine o'clock in the evening hurried off Anderson along a parallel road toward the same point. Stuart with his cavalry so delayed the Federal march that when Warren arrived the next morning, he found the Confederates planted squarely across the road. As the van thus came in front of the enemy's works, the rear-guard was firing its parting shots on the field of the Wilderness.

Ere night, the two armies were again face to face. Two weeks

GRANT'S CAMPAIGN AROUND RICHMOND.

of cautious watching followed, with the planting of an occasional blow on either side, as opportunity offered. The trees along the front were full of sharp-shooters, picking off the officers. On the 9th, General Sedgwick was out superintending the planting of a battery under a heavy fire. Seeing some of his men wincing as the Minie-balls hissed past, he bantered them, saying, "Pooh! they can't hit an elephant at this distance." That very moment, this excellent officer was himself struck full in the face, and fell dead.

The next day, repeated assaults were made on the Confederate works, ending with one by twelve picked regiments under Colonel Upton. By a sudden dash, they broke through the line, and then turned right and left. Efforts were made to support the attack, but in vain. The Federals had gained no advantage, but had lost ten thousand men. From the midst of this slaughter, Grant telegraphed to Washington, "I propose to fight it out on this line if it takes all summer."

The 12th witnessed a yet more desperate enterprise. Before dawn, Hancock's corps was drawn up twelve hundred yards in front of a salient of Lee's works. Shrouded by the fog of the early morning, it swept out of the wood, and, breaking into a double-quick, dashed through the entrenchments, surrounding a division and taking three thousand prisoners, including two generals. Officers were captured at their breakfast. The surprise was as complete as that of the Union army at Shiloh, but the result showed the difference between veterans and raw troops.

At this critical moment, Lee formed a new line in the rear. "With his eyes all ablaze with the fire of battle," says his biographer Cooke, "he rode down to a standard, and, taking off his hat, pointed to the Federals. A storm of cheers rose as the men saw they were to be led by the gray cavalier himself. Just then, General Gordon seized his reins, saying, 'General Lee, this is no place for you. Go to the rear. These are Virginians and Georgians, sir, who have never failed.' Turning to his troops, and rising in his stirrups, he called out, 'Men, you will not fail now?' 'No! no!' was the reply, while the cry ran down the line, 'Lee to the rear! Lee to the rear!'" As at the battle of the Wilderness when Lee placed himself at the head of Gregg's Texans, the column would not charge until he retired out of harm's way.

Five desperate attempts were made to recover the works. The fighting was furious; oftentimes the contending battle-flags were planted on the same entrenchments. So severe was the

musketry fire, that the whole forest was blighted by it. "One tree, eighteen inches in diameter, was actually cut in two by the bullets. From dawn to dusk, the roar of the guns was ceaseless; a tempest of shell shrieked through the forest and plowed the field. When night came, the angle where the fire had been hottest had a spectacle for whoever cared to look that would never have enticed his gaze again. Men in hundreds, killed and wounded, were piled in hideous heaps—some bodies, that had lain for hours under the concentric fire of the battle, being perforated with wounds. The writhing of the wounded beneath the dead moved these masses at times; and occasionally a lifted arm or a quivering limb told of an agony not quenched by the Lethe of death around. Bitter fruit this; a dear price it seemed to pay for the capture of a salient angle of an enemy's entrenchment."

Each side had lost about ten thousand men, and nothing was really gained. Lee's new position was only a few yards in the rear, and the foothold so desperately fought for was finally abandoned.

While the struggle was going on before Spottsylvania, Sheridan, with his cavalry, passed in the rear of the Confederates; destroyed miles of railroad; recaptured four hundred Union prisoners; defeated a cavalry force which barred his progress, with the loss of their famous officer, Stuart; entered the outer defences of Richmond; and then returned to the Union army in time to take part in the ensuing engagement.

Grant, finding that all attempts to drive Lee from his post upon the River Po were useless, resorted to the favorite tactics of the year. Carefully withdrawing his troops from right to left, he set out for the North Anna. Lee, also, started in the same direction. When the Union advance troops reached the bank of that river, they found the gray-coats waiting on the opposite side to receive them. Thus again Lee had handled his men so admirably as to checkmate his antagonist.

Grant once more turned the Confederate line on its right flank, crossed the Pamunkey at Hanover town, and proceeded to Cold Harbor, where, as usual, he found the Confederate army barring his road to the capital. At the first streak of light on the morning of June 3d, the Union forces moved swiftly out of their entrenchments and fell desperately upon the Confederate works. In little over a half hour, they returned defeated, leaving fully ten thousand of their number "stretched writhing on the sod, or still and calm in death." Later in the day, Meade directed the corps-com-

manders to renew the attempt; but, appreciating the uselessness of this butchery, the army quietly disregarded the order.

The two armies were now coming upon ground familiar to the veterans. Gaines's Mill was in the rear of the Confederate centre, while the White House was the Union base of supplies.

Before Grant started on this Overland Campaign, as it is called, he had arranged for two co-operative movements, in order to distract the attention of the Confederate army in Virginia. The first was for a column under General Sigel to advance up the Shenandoah and threaten the railroad to Richmond. This force having been defeated at New Market, May 15th, Hunter took command and pushed down as far as Lynchburg, but finding the Confederates mustering before him, he prudently retired across the Mountains into West Virginia.

The second was an expedition under General Butler. With thirty thousand men, he was directed to ascend the James and attack Richmond from the south. He accordingly went up from Fortress Monroe and landed at Bermuda Hundred. Here he was surprised by Beauregard and forced back into his defences. The Confederates threw up fortifications across the narrow neck connecting Bermuda Hundred with the main land, and so held the army securely "corked up," as the phrase of the times termed it. Thus both expeditions, which had promised much, failed utterly.

It had not taken "all summer" to prove the impossibility of reaching Richmond from the north. That line of advance must now be abandoned, and a second change of base to the James River be effected. Bitter experience had shown the essential wisdom of McClellan's original plan so long discarded. Grant accordingly decided to cross the James, seize Petersburg, and cut the railroads leading south from Richmond. Then began the feat of throwing one hundred and thirty thousand men over a broad stream in the presence of a vigilant enemy. The Federal army, with its trains in a continuous line, would have crowded a single road for a hundred miles. Cavalry feints veiled the movement. Pontoons and ferry-boats were soon on the spot. Every road and lane through a wide expanse was filled by the hurrying troops. Divisions frequently traveled twenty miles to gain a quarter of that distance. For three days and nights the vast procession poured over by bridge and boat before all had passed.

Meanwhile, Grant pushed on a detachment to secure Peters-

burg. General W. F. Smith, who commanded the advance, skirmished up to the fortifications of that city, which were held only by some local militia. He carried the outer line; but at this precious moment, though the night was clear and the moon full, he rested till morning, "after the old but not good fashion of '61-'2," says Greeley. Daybreak showed long lines of Confederate troops filing into the trenches, and the battle-flags of the army of Northern Virginia flaunting defiance. It was too late for a surprise.

The main body of his army having arrived, Grant repeatedly tried to carry the works. Four days of slaughter cost nine thousand men, and secured only a single line of entrenchments, while Lee held stubbornly an inner one, which he had carefully fortified. Grant then swung his attacking columns to the left to seize the Weldon Railroad. Disaster followed, and he was driven back inside his former position. In this fruitless attempt four thousand men were killed or wounded. That this event was not mentioned in the military report and has received no specific name, shows the enormous proportions the war had assumed, and how changed it was from the time when Big Bethel and Ball's Bluff were esteemed great battles.

GENERAL ULYSSES S. GRANT.

The end of June had come. The Southern army behind its strong entrenchments was safe against any assault. Grant was compelled to sit down and begin regular approaches. The campaign had at last resolved itself into a siege of Richmond with Petersburg as its advanced post. The On-to-Richmond movement of this year, like its predecessors, had proved a failure. "Grant had sent the Confederate army," says Draper, "reeling and dripping with blood from the banks of the Rapidan to the James, but at what a fearful expense!" He had lost at least seventy thousand men to the Confederate forty thousand, or, as some say, twenty-eight thousand. The "process of attrition," which, according to Grant's favorite theory, was to subdue the Confederacy by destroying its soldiers, seemed a slow, it was certainly a costly, process. Lee's army had hewn out of the

Union ranks more than its own number, and yet remained apparently as unconquerable as ever. The On-to-Atlanta movement, at this time, had not been any more successful. Grant and Sherman were both apparently balked of their object. Their paths could be traced through a hundred miles of wilderness by the graves they had filled. The depression at the North was deep and anxious. In July occurred two events—a raid to Washington, and the mine disaster—which greatly augmented the gloom.

The retreat of Hunter had left the way to the national capital invitingly open. Lee accordingly detached a force under Early to advance upon that city. This officer moved down the Shenandoah under a summer's sun, at the rate of twenty miles per day; crossed the Potomac; defeated a small militia force under General Lew Wallace at Monocacy Bridge; and on the evening of July 10th, came within six miles of Washington. Great was the alarm in the Federal city. The fire of the Confederate skirmishers could be heard at the White House. The forts were garrisoned only by troops from the invalid corps, three-months men, department clerks, and others who volunteered for the emergency. Early delayed a day. Meanwhile, the Sixth corps sent on from before Petersburg, and the Nineteenth corps just arrived from the Gulf, reached the city. At the wharf they were met by Lincoln, who was anxiously watching for them.

In the afternoon of the 12th, a reconnoissance was pushed out from Fort Stevens. As the Confederates saw the line of battle move forward, and caught sight of the familiar flags and the easy, swinging gait of the veterans, they cried, "The Sixth corps has come," and knew that the long-coveted prize had escaped their grasp. That night, Early retreated into Virginia, carrying with him five thousand horses and twenty-five hundred cattle. The pursuit was very mild. Subsequently a Confederate raiding party recrossed the Potomac and burned Chambersburg, in default of a ransom of half a million dollars.

That Lee should dare thus to divide his force in front of Grant, in order to make this bold inroad, and that Early should escape unscathed, were matters of deep humiliation at the North. Davis, with some show of fact, declared that "Washington, not Richmond, was besieged."

For several weeks, the troops belonging to Burnside's corps had been busy digging a mine under the Confederate entrenchments before Petersburg. They began in a secluded ravine back

of the Union lines. The work was pushed forward with great diligence, though the men had nothing but cracker-boxes in which to remove the dirt. The main shaft, five hundred and twenty feet long, reached to a point directly under the enemy's position, with laterals running forty feet each way. A charge of eight thousand pounds of powder was fired on the morning of July 30th. The explosion was terrific. A mass of earth, with mingled flame and smoke, shot high into the air. A gulf yawned in the Confederate works, one hundred and fifty feet long, sixty feet wide, and thirty feet deep. The battery and two hundred men stationed at this point were overwhelmed in the ruin. Instantly every gun along the Union entrenchments opened fire. Then was the time for a sudden, overwhelming charge upon the shattered line. But a delay occurred before the assaulting column advanced. It only reached the chasm, and then halted. The Confederates, recovering from their confusion, planted batteries and brought every musket to bear upon the point of danger. Union reinforcements came up, but they, too, huddled into the crater. All organization was lost; company mingled with company, man on top of man. Into this struggling mass, the merciless shot and ball were poured, until the sight became so sickening that, it is said, General Mahone ordered the firing to stop. For eight hours death had held high carnival. The Federal loss in this "miserable affair," as Grant well termed it, was four thousand.

The Federal government had already this year called out four hundred thousand additional troops. In the midst of this gloom, five hundred thousand, and still later, three hundred thousand more, were demanded. The national debt had reached two billion dollars. Gold had risen to 190% premium. There was a possibility of giving up the effort to subdue the South. Indeed, a large party was in favor of abandoning hostilities at once. Still, however, the mass of the people held firm. Lincoln, who had been renominated by the Republicans for the presidency, was re-elected by a large majority; though General McClellan, the Democratic candidate, advocated a vigorous prosecution of the war, and differed with the administration only in its policy.

The repeated incursions into Maryland from the Shenandoah valley, and the demoralized condition of the Union troops in that department, induced Grant to send Sheridan thither. Having thoroughly organized his army, that dashing officer took the field with greatly superior forces. He had received, says Grant, only

two words of instruction, "Go in!" September 19th, he routed Early at Winchester, and, two days after, drove him from his entrenchments at Fisher's Hill, and sent him "whirling up the valley."

Sheridan, returning, laid this lovely region waste, burning, according to his report, two thousand barns filled with wheat and hay; seventy mills, stored with flour and grain; and driving off or killing seven thousand cattle and sheep, besides a number of horses. The axe and the torch finished what the sword had left.

Having posted his army at Cedar Creek, Sheridan went to Washington. During his absence, Early rallied his shattered troops and being reinforced from Lee, surprised the national

SHERIDAN'S ARRIVAL AT CEDAR CREEK.

forces in the fog and mist of early morning, October 19th, carried their camps, and pursued the fugitives four miles. General Wright, with a portion of the national army which remained intact, here rallied the men and checked the retreat. Sheridan was already returning, and at Winchester, thirteen miles away, heard

"The terrible grumble and rumble and roar,
Telling the battle was on once more."

Putting spurs to his steed, he galloped to the front without drawing rein. Meanwhile, the Confederates had become scattered in plundering the captured camps. Sheridan, seeing the opportunity of retrieving the disgrace, turned upon the enemy, recaptured all that had been lost, and struck such a telling blow that Early escaped with only the wreck of his army.

This brilliant campaign had lasted only a month, but it ended the war in the Shenandoah. It had cost the Union forces nearly seventeen thousand, and the Confederates, according to their own accounts, eight thousand men and sixty pieces of artillery. "At the time," says Pollard, "wags in Richmond were accustomed to label cannon designed for the valley, 'General Sheridan, care of Jubal Early.'"

During this year, the war in the Mississippi valley had languished, as the necessities of the contest in Georgia and Virginia had drawn off nearly all the available troops. Sherman, before he was called to Grant's aid at Chattanooga, made a destructive foray to Meridian, the intersection of the Southern Mississippi and the Mobile and Ohio railroad. General W. S. Smith was to join him with seven thousand cavalry from Memphis, and move on to Selma. But Smith fell in with Forrest's troopers, who drove him back. Sherman, however, destroyed "one hundred and fifty miles of railroad, sixty-seven bridges, seven hundred trestles, twenty locomotives, twenty-eight cars, several thousand bales of cotton, several steam-mills, and over two million bushels of corn."

Thousands of fugitive slaves accompanied the column on its return, as they did afterward in the March to the Sea. They came, says an eye-witness, "some on foot, some on horseback, some in ox-carts. Some were clad in their 'Sunday-best,' the cast-off clothes of their masters. Of the women, some had bandana handkerchiefs twisted in turban-fashion round their heads, or were decorated with scraps of ribbon and fantastic finery of every conceivable hue. I saw one carrying a little child in her arms; she had another on her back, and still another was holding by her skirts. The father strode in front; a pile of bundles was sustained by a stick on his shoulder, and all sorts of kitchen utensils and household trumpery were hanging upon his body. So vast was the crowd, that families were separated, and women and children lost in the throng."

Early in March, after the brief Meridian campaign, a joint land and naval expedition was organized under General Banks, then in command at New Orleans, to ascend the Red River in order to capture Shreveport, the seat of the Confederate government of Louisiana. The advance carried Fort de Russy by assault, March 14th, and two days after entered Alexandria. At Natchitoches the road diverged from the river, and the army was compelled to

lose the protection of the gun-boats. No enemy, however, was seen until the advance was passing through a dense pine-forest near Mansfield, when it was suddenly attacked by the Confederates under General Kirby Smith. The Union troops, scattered along the road for a distance of thirty miles, and encumbered with baggage-trains, were unable to make any effective resistance. A sudden panic seized the men, and they fled wildly, leaving wagons and guns to the enemy. At Pleasant Hill, the fugitives were rallied on the main body. Here the pursuit was stopped the next day by the veterans of Emory's and A. J. Smith's divisions. Banks, however, decided to abandon the expedition. He accordingly fell back to the river, leaving the dead unburied and abandoning the wounded. The retreat of the gun-boats was a difficult task. The water was falling, and the Confederates swarmed in the woods along the banks and planted batteries at every favorable point. At Alexandria, it was feared that it would be necessary to blow up the vessels to prevent their falling into the enemy's hands. Lieutenant-Colonel Bailey, formerly a Wisconsin lumberman, came to the rescue. He constructed a series of wing-dams, and thus raised the water so that the boats were safely floated over the rapids.

This skillful expedient was almost the only relieving feature of a campaign which cost the Union army three thousand men and twenty pieces of artillery. There were rumors that the expedition was undertaken simply as a gigantic cotton speculation. As the army advanced, wagons were scouring the country, gins were being erected, and the marines were busily gathering this staple. Transports came off loaded with cotton bales, while the Union people of Alexandria, who begged to be taken away, were abandoned.

General Fred. Steele, who was stationed at Little Rock, had advanced toward Shreveport to co-operate with Banks; but learning of that general's retreat, he fell back as rapidly as possible. He was greatly harassed by the accumulating forces of the enemy, but managed to reach Little Rock again. This disaster restored to the Confederacy a large part of the State.

After defeating Smith's cavalry at Okalona, Forrest captured Jackson, Tennessee, and then advanced rapidly upon Paducah, Kentucky. Here the garrison of Fort Anderson, aided by the gun-boats, defended itself stoutly and drove him off. Moving south, he next fell upon Fort Pillow, April 12th. His troops crept

along under shelter of a ravine until very near, and then charged upon the entrenchments. Rushing into the fort, they raised the cry, "No quarter!" "The Confederate officers," says Pollard, "lost control of their men, who were maddened by the sight of negro troops opposing them." An indiscriminate slaughter followed. Neither age nor color was spared.

The war along the coast this year comprised several important events. August 5th, Admiral Farragut ran past the forts at the

NAVAL BATTLE IN MOBILE BAY.

entrance of Mobile Bay. The admiral was stationed in the rigging of the flag-ship Hartford, whence he could watch the movements of his fleet. The leading monitor, Tecumseh, struck a

torpedo and sunk, carrying down nearly all her crew. As the vessels swept past the forts, they fired such broadsides of grape and canister as drove the cannoneers from their guns. Then came a desperate fight with the Confederate ram Tennessee and three supporting gun-boats. Detaching several vessels to engage the latter, Farragut signalled the others to attack the ram, not only with their guns but by dashing upon it at full-speed. In anticipation of this, the wooden ships had been provided with false bows

of iron. The odds were overpowering. True, not a shot penetrated the thick armor of the Tennessee, but the shutters of one of her port-holes was destroyed, and thus a vulnerable point was presented. Such was the accuracy of the firing, that it is said ten shots struck close to this port; while a fragment of a shell entered through it and wounded Admiral Buchanan, who commanded the Merrimac in Hampton Roads, and was also injured in that engagement. The ram was soon sore beset on every side by blows of beak and ball. After sustaining the battle for over an hour single-handed against half the Union fleet, it surrendered.

The forts capitulated soon after, and thus the port of Mobile was closed. The city itself was not taken until the surrender of Lee and his army had already decided the war.

Late in the fall, a naval expedition under the command of Admiral Porter, and a fleet of transports carrying about six thousand five hundred troops under Generals Butler and Weitzel, attempted the capture of Fort Fisher and the other defences guarding the entrance to Wilmington, a famous rendezvous for blockade-runners. Grant intended that General Weitzel should command the troops. Mrs. Willard naively remarks upon this: "General Butler, through whom, as the superior officer, the instructions were sent, put them in his pocket, and went himself. Grant did not dream that Butler would take the direction, and thought that he went merely to see the explosion of a boat laden with powder, which he had prepared at great expense and delay, as if fancying that the mud walls of Fort Fisher would fall at the noise, as the walls of Jericho did at the sound of Joshua's trumpets. On the morning of November 24th, the powder-boat was exploded, but with so little effect that the Confederates did not know the object of it until they were informed by the Northern newspapers." It is said that the Southern commander, Colonel Lamb, supposed the noise was caused by the bursting of a heavy gun on the fleet.

After a brief bombardment and a reconnoissance, Butler and Weitzel, deeming the fort too strong for an assault, re-embarked their troops and returned to Fortress Monroe. The war-vessels, however, remained, and Porter was anxious for a new attempt. Grant, therefore, sent back the same soldiers with a small reinforcement, but this time under General A. H. Terry. By a tremendous fire from the ships he compelled the garrison to keep under the shelter of the bomb-proofs. Meanwhile a body

of sailors and marines, by digging ditches and rifle-pits, cautiously worked its way within two hundred yards of the fort. On the land-side, the troops also advanced under shelter and lay ready for the assault. At three P. M., January 14th, the steam-whistles gave the signal. Both columns dashed forward. The fleet had to stop its guns, as their fire would be liable to injure the attacking parties. The Confederates instantly swarmed out upon the walls. The Federal ranks were swept by grape and canister and volleys of musketry. The sailors were repulsed. But the other column broke through the palisade and effected a lodgment on the parapet. Reinforcements came up; nine successive traverses were carried; the sailors joined in the *mêlée*, and near midnight the garrison was driven from every defence to the water's edge and forced to surrender. In reading the account of this assault, one knows not which to admire the more, the heroism of the defence or the gallantry of the attack. "In foreign countries," remarks Draper, "it was often said that the reunion of the States after the close of the war was a political impossibility. In America there was a very different opinion. Conquered and conquerors looked upon each other with pride."

The neighboring works were now abandoned by the Confederates, and this port of entry was sealed. After the victory at Nashville, General Scofield came with a corps from the Army of the Tennessee, and occupied Wilmington on the anniversary of Washington's birthday.

The Confederate privateers having been captured or driven from the ocean, the Richmond authorities made arrangements in Great Britain, at the ship-yards of Liverpool and Glasgow, for building their war-steamers. The Tallahassee, the Chickamauga, and the Shenandoah were accordingly fitted out in British ports. They sailed under the British flag. They were manned by British sailors, and welcomed in British ports. The commerce of the United States was nearly annihilated by them. In 1863 alone, one thousand American ships were sold to foreign merchants.

The most noted of the Anglo-Confederate cruisers was the Alabama, Captain Semmes. This ship was built by Laird, a member of the British Parliament. She is said to have destroyed sixty-five American vessels and their cargoes, valued at ten million dollars. In June, 1864, she went to Cherbourg, France. Captain Winslow, of the United States gun-boat Kearsarge, learning of her arrival, immediately sailed thither. Semmes, anxious for the

duel, came out into the open sea, Sunday, June 19th. He left with his friends on shore a chest of coin and sixty-two chronometers, the relics of his buccaneering exploits. In a speech to his men before the engagement, he repeated the words of Nelson, "England expects every man to do his duty!" The Kearsarge

THE ALABAMA.

immediately steamed to within nine hundred yards of her antagonist, when she began to circle about her, firing slowly and deliberately. At the seventh round, the Alabama ran up the white flag, and soon sank. Capt. Winslow picked up a part of her crew, and the rest were rescued by the

boats of the Deerhound, a British yacht which accompanied the Alabama. No one was killed on the Kearsarge. One sailor, however, William Gowin, was mortally wounded, but he refused to go below, and sat on deck through the fight waving his hat and encouraging his comrades. After the battle was over he was taken to the hospital, exclaiming, "I am willing to die for my country since our ship got the victory!"

The whole South was now a vast beleaguered camp. The lines of circumvallation had been drawn so closely as nearly to cut off supplies. It was impossible to secure sufficient medicines for the sick or clothing for the well. The price of foreign goods in Confederate money had become fabulous. Coffee was sold at fifty dollars per pound; calico at thirty dollars per yard; and kid gloves at one hundred and twenty-five dollars to one hundred and seventy-five dollars per pair. The enormous profits of a successful venture led many European merchants to attempt to run the blockade of the Confederate ports. Swift steamers, sitting low in the water and painted of a neutral color, were constantly hovering along the Southern coast watching for a chance to dart past the Federal cruisers into port and land their cargoes. The activity of the Union navy may be estimated from the fact that during the war it captured or destroyed over fifteen hundred ships, worth, with their cargoes, about fifty million dollars. The stringency of the blockade thus largely prevented not only the ingress of foreign supplies, but also the egress of cotton, by the sale of which the Southern government could alone procure funds for the prosecution of the war.

The Confederate currency had depreciated until fifty dollars would bring but one in specie, and finally its own officials publicly exchanged it in Richmond for gold at a premium of 5900 %. The cost of all articles of trade took on prices corresponding with this shrinkage, unprecedented since Revolutionary times. Many of the soldiers of the Confederate army had not been paid for two years, and when their pittance was received, it required three dollars to buy a loaf of bread, while a month's wages would scarcely procure a pair of stockings or a substantial dinner. The transportation of food to the army at Richmond over the worn-out railroads became difficult, and the rations of the soldiers were often only "a quarter of a pound of rancid bacon and a little coarse corn-meal." Shoeless, ragged, and weak with hunger, it is not strange that desertions materially diminished the strength of the "Army of Northern Virginia," especially when the homes of the soldiers were so constantly threatened alike by want and the incursions of the Federals.

GENERAL SHERMAN.

GENERAL SHERIDAN.

CHAPTER XVII.

LAST YEAR OF THE CIVIL WAR—1865.

THE plan of the final campaign was simple. All depended on the issue of the struggle before Richmond. Upon this focus the Union forces were converged from every side. February 27th, Sheridan, with ten thousand cavalry, swept down from the Shenandoah, cut the railroad communications north of Richmond, and in a month from the time of starting took his place in the Union lines before Petersburg. Wilson, with thirteen thou-

sand horsemen, raided from Eastport on the Tennessee through Alabama, capturing "Selma, Columbus and Macon, with six thousand eight hundred and twenty prisoners, two hundred and eighty pieces of artillery, twenty-two stands of colors; destroying two gun-boats, ninety-nine thousand small arms, besides two hundred and thirty-five thousand bales of cotton, and all the mills, collieries, iron works, factories, arsenals, railroad bridges and rolling stock in the line of march." Stoneman, with five thousand cavalry from Knoxville, Tennessee, poured through the passes of the Alleghanies, captured Salisbury, North Carolina, ransacked its depots of supplies, and destroyed all the railroad bridges within reach.

Early in February, Sherman, having rested and refitted his army, set out on his march northward to join Grant. Heavy rains impeded his progress. His route lay through morasses, and rice-fields flooded with water. The rivers overran their banks and the swamps became lakes. The bridges had been burned and the roads barred with felled trees by the Confederate cavalry.

But the Federal troops, who had fought their way across the Alleghanies and made the March to the Sea, were not to be stopped by any ordinary obstacle. They built bridges, made corduroy roads, waded swamps, and, at the Salkehatchie, fought with the water up to their armpits.

In Georgia, few dwelling-houses had been burned, but in South Carolina, destruction and pillage became the rule; officers and men uniting to bring home to the State which had inaugurated the war, its bitterest curse. Columns of smoke marked the progress of the troops. The heavens were black even at mid-day. "Bummers," with a keen scent for valuables, scoured the country far in advance of the army.

Columbia, the capital of the State, was taken, February 17th. That night saw the city in flames and nearly reduced to ashes. During the march thither, in order to prevent a concentration of the Confederate forces, strong demonstrations had been made toward Augusta and Charleston. Hardee, at the latter place, finding that Sherman had reached Branchville, evacuated the city, February 18th; on leaving, he set fire to the buildings in which cotton was stored. A quantity of powder having been left at the Northwestern railroad station, the boys amused themselves by throwing handfuls of it upon the flames. The powder which they spilt soon formed a train, along which the fire leaped to the depot. A tremendous explosion followed, killing two hundred persons. The fire spread rapidly, and, in spite of the efforts of the Union troops who quickly came to the rescue from Morris's Island, four entire squares were consumed.

The siege of Charleston had lasted five hundred and forty-two days. This stronghold had fallen at last, not before the prowess of its besiegers, but by the strategy of a general who never paused in his victorious march to seize his prize. The scars of war were manifest through a large part of the city. An eye-witness says: "No pen, no pencil, no tongue can do justice to the scene; no imagination can conceive the utter wreck, the universal ruin, the stupendous desolation. Ruin, ruin, ruin, above and below, on the right hand and on the left—ruin, ruin, ruin, everywhere and always, staring at us from every paneless window, looking out at us from every shell-torn wall, glaring at us from every battered door, pillar and veranda, crouching beneath our feet on every sidewalk. Not Pompeii, nor Herculaneum, nor Tadmor, nor the Nile, has ruins so saddening, so plaintively eloquent."

The Confederate government now recalled Johnston to unite the garrisons of Charleston, Wilmington and Columbia, in order to make head against the triumphant progress of Sherman's army, which had already reached Fayetteville, North Carolina. These old antagonists met again. But Johnston could do little with the means at hand. So low had the military spirit of the Confederacy sunk, that Hardee's army, in marching from Charleston to Averysboro, had been reduced, mainly by desertion, from eighteen thousand to six thousand men. Sharp engagements with the heads of the advancing columns took place at Averysboro, March 15th,

SHERMAN AT THE HEAD OF HIS TROOPS.

and three days later at Bentonville. While Johnston was guarding the route to Raleigh, Sherman pushed forward to Goldsboro, in order to join General Schofield, who had made his way thither from Wilmington, and General Terry, who had come up from Newbern. Their three armies having united, one hundred thousand men upheld the Flag of the Union along the banks of the Neuse. Sherman then went to City Point to arrange with Grant the plan of the final campaign against Richmond.

Lee's position was fast becoming desperate. Though there were one hundred and fifty thousand men on his muster-rolls, he had but forty thousand present for duty. His only hope lay in breaking through his environment and joining Johnston's forces. Accordingly, March 25th, he hurled a strong column upon Fort

Steadman at the right of the Union line, hoping that Grant would weaken his left to meet this attack, and thus give the Confederate army a chance of escape. This forlorn hope eventuated in a repetition of the mine disaster; the Southern troops being this time the victims. The fort was carried; but reinforcements did not arrive. The batteries on the right and left commanding the position opened fire. The assaulting division could not advance, and dared not retreat. Two thousand men laid down their arms. Meade followed up this success by a brilliant dash and carried the Confederate picket lines, taking many prisoners.

Grant had not stirred his left. The heavy "hammer" which he had lifted so often was now about to fall for the last time. The plan was the old one of "moving by the left." Two corps of infantry had been withdrawn from the right without attracting the attention of Longstreet, who was in their front. With these and nine thousand troopers Sheridan moved out, March 29th, to pass the Confederate right and destroy the Southside Railroad. Lee perceived the design. In order to meet Grant as he gradually stretched his lines westward, Lee had already extended his fortifications till they were nearly forty miles in length. It was a desperate alternative, but, by stripping his entrenchments until at many points there was left only a strong skirmish line, he was able to mass seventeen thousand men on his right wing.

Sheridan's intention was to keep his infantry snug to the Confederate right, while with the horsemen he should sweep far around to grasp the railroad. By night-fall he had occupied Dinwiddie Court-House. Encouraged by this success, Grant wrote him, "I feel now like ending this matter. Push around the enemy and get in his rear." Sheridan at once abandoned his design of cutting loose for a cavalry raid. The next day the rain prevented any further movement. March 31st, ere he could attack the Confederate lines, Lee, with the old Peninsular impetuosity, himself took the initiative. The storm burst with fearful force. It fell first on Warren at White Oak Ridge, but he succeeded in beat-

GENERAL JOSEPH E. JOHNSTON.

ing it back. Then it struck Sheridan, whose advance had already seized upon Five Forks—a strategic point of great value. The Federals were overpowered. Dismounting his troopers, Sheridan deployed them in the woods, leaving only enough men to take care of the horses. His line then fell back, stubbornly resisting. During its slow retreat, Sheridan got his troops in hand, and, throwing them behind the entrenchments at Dinwiddie, stopped the Confederates.

April 1st, Sheridan again moved upon Five Forks. The cavalry, pushed up in front of the Confederate works, formed a screen, behind which Warren with the Fifth Corps, twelve thousand strong, got into the enemy's rear. Attacking front, flank, and rear at once, the Federals swept all before them, captured the entrenchments, and pursued the Confederates six miles down the White Oak road, taking five thousand prisoners.

It was the beginning of the end. That night every cannon in the Union batteries before Petersburg was in full play. At dawn, the entire Union line from the Appomattox to Hatcher's Run leaped from behind its entrenchments, and poured in an overwhelming flood upon the Confederate works. All opposition was crushed by the irresistible force of the onset. The outer line was taken in the first fierce rush. Fort Alexander, in the rear, fell next. Fort Gregg, however, made a stout defence. Three times the assailants were repulsed; on the fourth charge they swept over the crest. Of the gallant little garrison of two hundred and fifty men, only thirty survived.

General A. P. Hill was at the headquarters of General Lee discussing the prospects of the day. Suddenly, Lee, listening, said, "General, your men are giving way." Hill quickly mounted his horse and dashed down the road. As he was spurring on, he caught a glimpse of several Federals with rifles leveled upon him. "Throw down your arms!" he commanded. For an instant the men hesitated, but the next moment the clang of their pieces was heard, and General Hill fell dead.

In this crisis of his fortunes, says his biographer Cooke, Lee was clad in a new uniform, and had put on his dress-sword, which he seldom wore, declaring that if he must surrender it should be in full harness. From the lawn in front he saw the Federal infantry moving forward at the double-quick, their bayonets flashing in the April sun; the Union batteries were seizing the neighboring knolls, whence they quickly opened on his fleeing troops; while

on every hand buildings set on fire by the fast-falling shells were sending up volumes of smoke and flame. Mounting, he escaped only by spurring his steed into a gallop, under a heavy fire.

Lee then gathered his men into the inner line of works, and immediately sent word to the civil authorities that Richmond must be surrendered. The messenger reached Davis in his seat at St. Paul's Church. With pallid face, the ruined president hastily retired. The fatal news startled the people like a thunder-clap from the clear sky. Suddenly, the streets, which had before been so silent, were filled with men hastening to escape with their

CITY OF RICHMOND.

effects from the doomed city. The excitement was like that in the front of a sweeping conflagration. A hundred dollars in gold were paid for the use of a wagon for a single hour. Night increased the disorder. The guards having been withdrawn, the inmates of the Penitentiary escaped. The mob got control of the city. Stores were broken open. Costly fabrics strewed the side-walks. The gutters ran with liquor. Confederate scrip was trampled in the mud. Men and women reeled through the streets staggering under the plunder they had secured. The yells of the crowd, the crash of broken glass, and the noise of mad revel, made the night hideous.

Then came a new horror. General Ewell, in command of the Confederate rear-guard, having blown up the iron-clads in the

river, set fire to a large tobacco warehouse in the very heart of the city. The flames soon extended to the neighboring buildings, and thirty squares were laid in ashes. Amid the roar of the flames, the noise of falling buildings, the screams of women and children, the explosion of shells, and the ghastliness of the air thick with cinders, came the advance of the Federal army, driving before it the maddened crowd of plunderers. The Stars and Stripes soon floated from the Capitol; order was restored in the streets; soldiers were set at work fighting the fire; and before night, every one was safe under the national protection. Yet sad indeed were the hearts of those who lay down by the side of blackened walls, amid the quiet of a great desolation, their hearts aching the while with "a dull sense that the work of years had been ruined and that all they possessed had been swept away."

Meanwhile, Lee, with the wreck of his army, had been pushing rapidly toward Burkesville, at the junction of the Danville and Southside railroads. By daylight, April 3d, when the Union pickets were cautiously creeping over the deserted entrenchments before Petersburg, he was already sixteen miles away.

There was to be a different pursuit from that after Antietam or Gettysburg. Grant at once threw every man, horse and gun into the chase.

Lee had sent instructions to have rations ready for his men at Amelia Court-House. On reaching this point, he found to his dismay that the Richmond authorities had ordered the supply-train thither on Sunday, without unloading. It was necessary to halt for two days, that the army might collect food in this impoverished country. Sheridan, with his cavalry, now got the start and struck the railroad at Jetersville, seven miles in advance of the Confederate army. The Fifth corps soon joined him. The victors of Five Forks were thus planted squarely across Lee's path, and he was forced to take a new route. He accordingly gave up joining Johnston and turned toward Lynchburg, whence he hoped to reach the cover of the mountains.

Then began a terrible race for life. It lasted four days. Grant threw one column on the south and another on the north, while a third pressed upon the rear of the retreating army. Sheridan's cavalry hung on its flanks with dogged tenacity. Davies, with his command, struck the Confederate wagon-train at Paine's Cross-Roads, burned one hundred and eighty wagons, and captured five guns. The Confederate infantry closed in

about him, but Gregg and Smith came to his help. Custer, with another division, pierced the Confederate line of march, destroying four hundred wagons and taking sixteen guns. Crook's and Devin's brigades having joined him, together they cut off Ewell's men, and by incessant charges kept them at bay until the Sixth corps came up, when they forced them to surrender, six thousand

CAVALRY CHARGE ON THE CONFEDERATE WAGON-TRAIN.

strong. Read, with a squadron of cavalry and two regiments of infantry, recklessly threw himself before

Lee's column as it was about to cross the High Bridge over the Appomattox. The Confederates thrust his little force aside, and he was killed in a hand-to-hand fight with a Southern officer. Lee crossed the river, and by marching all night left his pursuers far behind.

At dawn, however, the last of the Confederates, the *débris* of the retreat, had just crossed. General Mahone, who had charge of the rear, having established a line of defence, went back to the bridge and found the officer in command stupidly waiting for orders to fire it. Fuel was hastily brought together and the

match applied. At that instant, the Federal skirmishers, coming up on the hill beyond, caught sight of the bridge and rushed forward. Under their dropping shots, the guard retreated. The Second corps soon arrived and captured the bridge with eighteen guns upon the bank. Pushing on rapidly, General Humphreys found Lee's army encamped in a strong position. He attempted to carry it, but was driven back with a loss of six hundred men.

Under cover of the darkness, Lee continued his flight. The condition of his army was indeed woful. History has not recorded such a retreat since Napoleon fled from Moscow. Every mud-hole along the route was choked with blazing wagons, fired to prevent their capture. Ammunition trains were blown up, and the air resounded with exploding powder and bursting shells. Famine was fast doing its work on the jaded, starving men, who yet clung to their banners. Many dropped their guns from pure exhaustion. If they straggled in search of food, or laid down to catch a moment's rest, on their heels quickly thundered the remorseless enemy, who drove them on day and night. "Death itself," says an eye-witness, "was often welcomed as God's messenger in disguise."

At midnight of the 8th, Custer, by a thirty-miles march, reached Appomattox Station, captured four trains loaded with supplies for Lee, drove back the Confederate advance, and took possession of the road in front of the fleeing enemy. Before dawn, Sheridan came up with the troops of Ord and Griffin. The road to Lynchburg was closed.

For two days Lee and Grant had been corresponding concerning a surrender, and the Union general had offered generous terms, hoping to prevent further bloodshed. Early in the morning of the 9th, Lee, consulting with Longstreet and Mahone around his camp-fire, decided that if they should find infantry in front, there was no escape. General Gordon accordingly advanced with his corps, supported by Fitz Lee's cavalry. They dashed forward, driving Sheridan's troopers before them, when suddenly the Federal cavalry drew aside to the right and left, revealing in the rear dense masses of infantry in solid battle-line. It was the last charge of the Army of Northern Virginia. A white flag appeared in the Confederate front. The battle was stayed.

Lee, learning the result of Gordon's movement, requested an interview with Grant. The two generals accordingly met in the largest of the five houses in Appomattox, passing through a

yard blooming with spring flowers. There was no display, no sentiment. Simply greeting each other, they proceeded at once to business. Seated at a plain table they drew up the papers of surrender, exchanged bows, and parted. Lee returned to his headquarters. On his arrival, the lines of battle, no longer necessary, were quickly broken, and his men thronged about him for a farewell. He could only say in suppressed tones, and with eyes full of tears, "We have fought through the war together. I have done the best I could for you."

The Confederate army paraded for the last time on the 12th, just four years from the firing of the first gun on Sumter. At the signal, the men fixed bayonets, stacked guns, and threw over them their tattered colors, some reverently kissing the banners they had defended so long and so well. There were only eight thousand soldiers to lay down their arms, although twenty-seven thousand eight hundred and five were included in the surrender. They were then paroled and allowed to go home. Grant, with true delicacy, absented himself from the ceremony. Every effort was made to spare the feelings of the vanquished, and the Union troops, in that hour of triumph, shared the contents of their haversacks with their starving brethren.

Sherman, learning of Lee's surrender, put his army in motion to prevent Johnston's escape. On the 14th, he received a letter from that officer relative to a capitulation. An interview took place near Durham's Station, and terms were arranged for disbanding the remaining armies of the Confederacy. Besides

LEE AND GRANT SIGNING THE TERMS OF SURRENDER.

this, however, the basis of a peace was agreed upon, which recognized the several State governments, and guaranteed to the people the elective franchise, their political rights, and a general amnesty. The memorandum was transmitted to Washington. Meanwhile, important events had there occurred which had materially changed the views of the authorities. The terms were rejected. Grant was sent to Sherman to take charge of affairs. Johnston had no resource but to surrender on the same conditions with Lee.

The other Confederate troops rapidly followed. The situation was universally accepted. Guerilla-bands everywhere threw down their arms. Peace came as by magic. Smith's trans-Mississippi army, the last Confederate force, surrendered to General Canby, May 26th. The civil war was over.

JEFFERSON DAVIS.

We left Davis passing out of St. Paul's Church, Richmond. He escaped to Danville, where he sought to re-establish the Confederate government. On the surrender of Lee, he fled to Johnston's army. Finding the Confederacy generally despaired of, he continued on to Charlotte, where his

cabinet forsook him. The fugitive president then hurried through Georgia, hoping to reach Texas. A reward of one hundred thousand dollars, however, had been offered for his arrest, and the Federals were on his track. May 10th, a detachment of Wilson's cavalry overtook his party while in camp at Irwinville. Lieutenant Stuart, of Davis's staff, says: "Hearing musketry-firing, we supposed it to be between some apprehended marauders and the camp-defenders. Mr. Davis hurriedly put on his boots, and prepared to go out for the purpose of interposing, saying,

" 'They will at least as yet respect me.'

"As he reached the tent-door, he saw a few cavalry ride up the road and deploy in front.

" 'Ha! Federals!' was his exclamation.

" 'Then you are captured!' cried Mrs. Davis.

"In a moment she caught an idea—a woman's idea—and, as quickly as women in an emergency execute their designs, it was

done. He slept in a wrapper—a loose one. It was yet around him. This she fastened, and bidding him adieu, urged him to go to the spring, a short distance off, where his horses and arms were. Davis felt that this was his only course, and complied. As he was leaving the door, followed by a servant with a water-bucket, Miss Howell flung a shawl over his head." As the three, Davis, his wife and sister, moved toward the woods, they were stopped in the gray dawn by a corporal's "Halt, or I'll fire!" The disguise had failed and escape was hopeless. The ex-president's family were carried to Savannah and set at liberty; while he was taken to Fortress Monroe. An indictment for treason was found against him, and the next year one for treason and conspiracy. In 1867, he was released on bail, Horace Greeley and John Minor Botts, among others, becoming his bondsmen. After various delays in bringing the case to trial, he was discharged under the Proclamation of Amnesty, December 25, 1868.

We now turn to Washington, where, during these months pregnant with such momentous consequences to the country, a sad tragedy had been enacted. Lincoln, though he had vigorously pressed the war to its conclusion, now that peace had come thought only of reconciliation and mercy. "With malice toward none, with charity for all," his simple heart could not entertain the thought of that personal danger against which he had been so often warned. On the day after the fall of Richmond, he visited that city, walked its streets unguarded, and gave a public reception in Jefferson Davis's mansion. Having returned to Washington, it was announced that he would visit Ford's Theatre on the evening of the 14th, the anniversary of the fall of Sumter. Although feeling quite indisposed, he went in order not to disappoint the public. While sitting in his box with Mrs. Lincoln, a play-actor named John Wilkes Booth entered from behind and shot him through the head. The assassin then came forward, brandished a knife, and shouted *Sic semper tyrannis*—So always to tyrants. Endeavoring to leap to the stage, his spur caught in the flag draped in front of the box, and he fell, breaking his leg. He sprang up, however, and amid the confusion escaped behind the scenes. Lincoln dropped forward unconscious, and was removed to a private house, where he died the next morning, without a sign of recognition or a parting word to the friends who watched so anxiously by his side.

In the midst of the national rejoicings over the return of peace,

the tidings of the President's assassination came to every heart with a keen, sudden anguish. Fast upon this was flashed the news that at the same hour, an accomplice had forced his way to the bed of William H. Seward—who had been thrown from a carriage and was laid up with his injuries—severely wounded his son, and then stabbed the helpless secretary three times with a bowie-knife. The conspirators who were to assassinate other cabinet officers, together with Vice-President Johnson and General Grant, had fortunately failed of their purpose.

ASSASSINATION OF PRESIDENT LINCOLN.

A thrill of horror ran over the civilized world. The North was outraged. For the moment, it was supposed that the late Confederate authorities were implicated. Sherman's terms of peace were at once rejected. The South found that in Abraham Lincoln it had lost a friend on whom it could rely, and that the work of reconciliation was greatly complicated by this act of a madman.

Booth, after his escape, mounted a horse which was in readiness and fled into Maryland. He rode thirty miles before he dared to stop to have his leg set. Having crossed the Potomac, he was overtaken by his pursuers in a barn near Bowling Green. As he refused to surrender, the building was fired to drive him out. While he stood at bay, defiant, one of the soldiers shot him by the light of the flames. Singularly, the fatal wound was in

nearly the same place as that of the martyred President. Booth's accomplices were arrested, tried by a military court and convicted. Harold, who aided Booth; Payne, who attacked Seward; Atzerodt, who was to have assassinated Johnson; and Mrs. Surratt, at whose house the conspirators met, were hanged; Arnold and O'Laughlin, who were also accomplices, and Dr. Mudd, who dressed Booth's wound, were imprisoned for life; Spangler, who assisted the assassin in his escape, was sentenced for six years.

There are some general topics connected with the Civil War worthy of attention. The entire number of soldiers enlisted by the national government was two million six hundred and eighty-eight thousand five hundred and twenty-three. As many of these served on more than one call and desertions were frequent, perhaps not more than one million five hundred thousand actually took the field. The Confederates had in active service probably six hundred thousand soldiers. Each side lost about three hundred thousand men, who were either killed in battle or who died of disease or wounds; to which should be added at least two hundred thousand more who were crippled or enfeebled for life. The industries of the country, therefore, lost the services of one million able-bodied men by these four years of strife.

The monetary cost of this struggle is partly shown by the war-debts on both sides. The Union debt, June, 1860, was only about sixty-five million dollars; January, 1866, it had reached two billion seven hundred and fifty million dollars. Add to this vast amount the bounties paid by the States, counties, cities, towns, and individuals; the pensions to the wounded; and the benefactions to soldiers' families, and the aggregate would exceed four billion dollars. The Confederate debt at the breaking up of its government was two billion dollars, which, of course, has never been paid. These immense sums leave untouched the vast waste and wholesale devastation incident to war—the desolated fields, the ruined towns and cities, and the demolished railroads.

Various financial measures were adopted by the Federal authorities to meet the current expenses, which at one time reached three million five hundred thousand dollars per day. At first, fifty million dollars were advanced by the principal banks. Large subscriptions were made by wealthy persons. Additional duties were imposed on tea, coffee and other articles. Such was the derangement of the finances that, December 30, 1861, the

banks of New York suspended specie payments, an example which was generally followed. By successive acts, Congress authorized the issue of one hundred and fifty million dollars of paper money, familiarly known as "greenbacks." Silver and gold began to command a premium and to disappear from circulation. Postage stamps, ferry and omnibus tickets, and "shinplasters," issued by individuals or corporations, were used for small change. Congress hereupon authorized a fractional or postal currency, which soon came into common use. February 25, 1863, the act establishing the national banking system was passed. Duties were greatly increased. Taxes were levied on incomes and manufactures, and revenue stamps were ordered to be affixed to all notes, checks, bonds, mortgages, etc. The principal relief, however, was obtained from the sale of United States bonds. The several issues of these are known as Seven-Thirties—the rate of interest being seven and thirty-hundredths per cent. ; Five-Twenties and Ten-Forties—the time of redemption of the former being fixed at not less than five nor more than twenty years, and of the latter, at not less than ten nor more than forty years.

During the war, Humanity had its own victories. The Sanitary and Christian Commissions performed a work of mercy unknown in the history of the world. Sanitary fairs were held in the chief towns and cities. Voluntary contributions were offered. Lint was picked. Garments were made and dainties prepared without stint. Every possible comfort was provided for the sick and the wounded. Loving hands toiled tirelessly, while the warm hearts which strengthened them stretched out to Southern battlefields, and

Enfolded in an atmosphere of prayer

The dear, brave boys who fought and suffered there.

The Christian Commission sent clergymen who visited the camps, prayed and talked with the soldiers, and, while they ministered to their physical necessities, tried to lead them to a higher life. Agents of the Sanitary Commission were almost omnipresent. Wherever there was a camp or a picket station, and much more where a great battle impended, thither came these messengers of mercy, provided with every appliance that ingenuity could devise, love prepare, or money procure. They furnished ambulances, hospital cars and steamers, stretchers, nurses, canned fruits, medicines, bandages, clothing, hot coffee, postage stamps.

paper and envelopes, reading matter, prayer-meetings, Christian burial—no want of body or soul was overlooked. The blue and the gray shared alike in these offices of mercy. Soldiers who had wandered from their regiments, or who had been discharged or were on sick leave, found Lodges ready to receive them. Troops *en route* to or from the seat of war, at every halting-place were fed with generous hospitality, and waited upon by the first ladies of the neighborhood. Wives and mothers who came to visit their friends in the army were welcomed to Homes with kindness and sympathy. The Sanitary Commission alone thus became the almoner of nearly twenty-five million dollars.

The South, with its limited means, was less prodigal, but no less hearty in its generosity. The men were swept off by the relentless conscription law, but the women, left at home alone, devoted themselves to the struggle with that earnestness and ardor characteristic of the Southern race. (See Appendix.)

Self-sacrifice to them was only adding privation to privation, yet they shrunk from nothing which might aid "The Cause." Already, from necessity, raspberry leaves—the old Revolutionary resource—shared with sassafras the honors of the tea-pot, while roasted grains and sweet-potato chips took the place of mocha. Sugar became an expensive luxury, and the once despised sorghum was made to do service in desserts and sweetmeats, which were eaten from the rare old family china with a heroic ignoring of the plebeian molasses "twang." Salt was a necessity for which there was no substitute. So carefully was it economized that even the barrels were soaked in which salt pork or fish had been packed, the water being afterward evaporated, that not a grain might be lost. Fashion became submissive, and at the gay "starvation parties," where no refreshments were served, beautiful women appeared in garments carded, woven, spun and dyed by their own fair hands. Gas was beyond the reach of most families, but light-wood knots, tallow candles, and, above all, the so-called "Confederate candle" supplied its place. The last-named substitute consisted of a long wick—the longer the better—drawn through a mixture of wax and resin till it was thoroughly and smoothly coated, when it was wound on a little wooden frame which was called the "Confederate candlestick"; the free end of the wick was passed through a bit of tin which was nailed on the upper part of the candlestick, and, on being lighted, was uncoiled as wanted. Large thorns with wax heads were made

to serve for hair-pins. Shoes were manufactured with wooden soles, to which the uppers were fastened by means of small tacks.

The devices of the women for raising money to carry on the war were many and ingenious. Silver-plate and jewelry became free-will offerings, and the government published "monthly lists of contributions of rings, sugar-pots and spoons." One association advertised all through the South for broken kitchen-pots and pans, hoping thus to procure enough iron to build an armored steamer. It was even suggested by an ardent woman in Mobile that all the true feminine patriots should consent to be shorn, and a calculation was seriously made of the amount which might be realized in the European markets by the sale of so many heads of hair. Whatever opinion one may hold of the justice of the cause which lay so near the hearts of the Southern women, they can never be accused of lukewarmness or of lack of devotion to their principles. Their courage held good to the last; and when Lee surrendered, hundreds of delicate ladies were living on half rations, that they might share their few remaining comforts with his famishing men.

THE SURRENDER AT APPOMATTOX COURT-HOUSE.

CHAPTER XVIII.

THE DECADE OF RECONSTRUCTION—1865-1875.

WITHIN three hours after Lincoln expired, Andrew Johnson took the oath of office as the seventeenth President of the United States. Johnson was born in Raleigh, North Carolina, December 29, 1808. When he was two years old, his father died, leaving the family in poverty. At the age of ten, Andrew was apprenticed to a tailor. A gentleman often came into the shop and read to the workmen. The young boy, eagerly listening, became inspired with a desire to secure an education. All his leisure hours were thenceforth devoted to study. In 1826 he removed to Greenville, Tennessee, taking with him his mother. Here he married. Thus far he had learned only to read. His wife taught him to write and to cipher. He soon took a great interest in politics. Elected an alderman, he rose to be mayor

member of the legislature, and representative in Congress, holding the last office for ten years. He was twice chosen governor. The canvass for his re-election was exciting. At one meeting Johnson appeared with a pistol in his hand, laid it on the desk, and said: "Fellow-citizens, I have been informed that part of the business to be transacted on the present occasion is the assassination of the individual who has now the honor of addressing you. I beg respectfully to propose that this be the first business in order. Therefore, if any man has come here to-night for the purpose indicated, I do not say to him, let him speak, but let him shoot." After pausing for a moment, with his hand on his pistol, he said: "Gentlemen, it appears that I have been misinformed. I will now proceed to address you on the subject that has called us together." When Tennessee passed the ordinance of secession, he remained steadfast to the government. His loyal sentiments, his efforts to aid the Union refugees, and the persecution which he experienced at home, commended him to the North. In 1862, he was appointed military governor of Tennessee, in which position he upheld the Federal cause with great ability and zeal.

Soon after his inauguration as President, in the course of a speech on the condition of the country, he declared: "The people must understand that treason is the blackest of crimes, and will be surely punished." Severe measures were consequently expected, but his official acts soon dissipated the impression.

The close of the war found at least one million five hundred thousand men under arms. The opening of the new era was marked by the disbanding of this vast armament. A grand review of the armies of Grant and Sherman, two hundred thousand strong, took place in the presence of the President and his cabinet. For twelve hours this triumphal procession, thirty miles long, massed in solid column twenty men deep, rolled through the broad avenues of the capital. With no disturbance, no excitement, the men laid down their arms and returned to their homes. Soon there was nothing to distinguish the soldier from the citizen, except the recollection of his bravery. Never had the world seen such a triumph of democratic institutions.

Now came the task of reconstruction. It presented more difficult problems than the war itself. Johnson took the position that a State could not secede, and therefore none of the Southern States had ever been really out of the Union. Having laid down their arms, it was only necessary for them to submit to the na-

tional authority to be in all respects as they were before the war. He recognized the State governments that had been formed in Virginia, Tennessee, Arkansas and Louisiana under the protection of the Federal army. In the others, he appointed provisional governors, and authorized the calling of conventions to establish loyal governments.

The conventions, which were accordingly held, repealed the ordinances of secession, repudiated the Confederate war debt, and ratified the thirteenth amendment. April 29th, the President removed restrictions on trade with the South, and a month later he issued a proclamation of amnesty to all who would take the oath of allegiance to the United States. A few classes of individuals were excluded, but many persons thus debarred were pardoned on special application to the President.

The thirteenth amendment abolishing slavery having been ratified by the legislatures of twenty-seven States, on the 18th of December it was declared to be a part of the Constitution of the United States.

THE GRAND REVIEW—MARCHING DOWN PENNSYLVANIA AVENUE.

Congress, on assembling in the fall, took strong ground against the reconstruction policy of the President. It claimed that the seceded States were really out of the Union, and Congress alone had the power to prescribe to them the terms of re-admission. A committee of fifteen was appointed, to which were referred all questions concerning the reorganization of the States. Several important acts were passed over Johnson's veto. January 25, 1866, enlarged powers were granted to the Freedmen's Bureau—a department of the government which had the care of the emancipated blacks and the destitute whites of the South. The Civil Rights bill was enacted April 9th, guaranteeing to the negroes the privileges of citizenship. The Tenure-of-office bill, passed March 2, 1867, provided that, contrary to the decision reached by the first Congress (see page 336), no removal from office should be made by the President without the consent of the Senate. The same day the South was divided into five districts and placed under military governors. By a subsequent enactment, the commanders were made amenable only to the general of the army.

Meanwhile, Congress had declared that, as an additional guaranty, another amendment to the Constitution should be adopted. This provided (1) that equal civil rights should be conceded to all, regardless of race or color; (2) that where the right of suffrage was denied to any portion of the citizens of a State, the basis of representation should be correspondingly reduced; (3) that no person should hold any office under the national or State governments who had violated his oath of allegiance to the United States by engaging in secession; (4) that the national debt should be held inviolate; (5) that the Confederate war debt should be void; and (6) that no compensation should be given for emancipated slaves. This was incorporated in the Constitution July 28, 1868.

The effect of these various congressional measures was largely to exclude from office the better class of the Southern people, and to throw the political power into the hands of an ignorant population, and of Northern men who had gone South after the war. The latter were, in too many cases, mere adventurers—"carpet-baggers," as they were styled—who had been drawn hither by the hope of position and of plunder.

Tennessee having ratified the fourteenth amendment, in July, 1866, it was restored to the Union. The military governors in the other States made a registry of votes, and held elections for conventions to remodel their constitutions, in accordance with the

provisions of Congress. After a protracted struggle, Arkansas, Alabama, Florida, Georgia, Louisiana, and North and South Carolina were reconstructed, and their senators and representatives admitted to the councils of the nation, June 24, 1868.

In the fall of 1866, Johnson, with a brilliant party, made a tour from Washington to Chicago, to be present at the laying of the corner-stone of a monument to Stephen A. Douglas. At all the principal places, the President addressed the assembled multitude on the political issues. An expression which he used several times gave rise to the popular phrase, "Swinging round the circle."

The feeling between the executive and the legislative branch of the government at last came to an issue. In August, 1867, the President notified Mr. Stanton, the Secretary of War, of his suspension from office and the appointment of General Grant *ad interim*. The Secretary vacated his post under protest, considering the removal a violation of the Tenure-of-office bill. When Congress assembled, it refused to sanction the President's act, whereupon General Grant resigned his office to Secretary Stanton. In February, 1868, the President again informed the Secretary of his removal and the appointment of General Thomas to the vacancy. The Senate resolved that the President had no power to remove the Secretary of War and designate any other person to perform the duties of that office.

February 24th, the House agreed to impeach the President of "high crimes and misdemeanors." The trial began March 23d, the Senate being organized as a court, with Chief-Justice Chase presiding. Messrs. Bingham, Butler, Boutwell, Logan, Stevens, Williams and Wilson of the House were the managers of the prosecution; and Messrs. Curtis, Evarts, Groesbeck, Nelson and Stanbery were the counsel for the President. The decision was taken May 26th, when thirty-five Senators answered "guilty," and nineteen, "not guilty." As a two-thirds vote was necessary for conviction, the President was sustained. Stanton immediately resigned his post, and General Schofield succeeded him.

ANDREW JOHNSON.

On July 4, 1868 the ninety-second anniversary of the national birthday, a pardon was proclaimed to all engaged in the late war, except those already indicted for treason or other felony. On Christmas of the same year—a day most fitting for acts of goodwill and mercy to erring brethren—a UNIVERSAL AMNESTY was declared.

Though the nation was still agitated by political strife—the ground-swell, as it were, of the recent terrible storm—the country was rapidly taking on the appearance and ways of peace. The South was slowly adjusting herself to the novel conditions of free labor. The soldiers retained somewhat their martial air; but “blue-coats” and “gray-coats” were everywhere to be seen engaged in quiet avocations. The ravages of war were fast disappearing. Nature had already sown grass and quick-growing plants upon the battle-fields where contending armies had struggled.

“There were domes of white blossoms where swelled the white tent;
There were plows in the track where the war-wagons went;
There were songs where they lifted up Rachel’s lament.”

Strangely symbolical of the new era of growth which had dawned on the nation, a wanderer over the cannon-plowed slope of Cemetery Ridge found a broken drum, in which a swarm of bees were building their comb and storing honey gathered from the flowers growing on that soil so rich with Union and Confederate blood.

The annual interest on the debt was about one hundred and thirty million dollars; but the revenue from duties on imported goods, from taxes on manufactures, incomes, etc., and from the sale of revenue stamps, was over three hundred million dollars. Hence this provided not only for the current expenses of the government and the payment of interest, but also for the gradual extinguishment of the debt. It is a striking evidence of the abundant resources of the country that, in 1866, “before all the extra troops called out by the war had been discharged, the national indebtedness had been diminished more than thirty-one million dollars.”

While the United States was absorbed in the Civil War, Napoleon III. took advantage of the opportunity to attempt to secure a foothold on this continent. In 1862, France, England and Spain sent an expedition into Mexico to obtain redress for injuries suffered by foreign residents in that country, and also to

induce the people to elect a ruler and put an end to the anarchy which had so long distracted the nation. Difficulties arose, and the Spaniards and the English abandoned the enterprise. The French thereupon advanced inland, and after many reverses, succeeded in taking the city of Mexico. Refusing to treat with the liberal government under Juarez, the French commander called an assembly, which decided that Mexico should be an empire, and tendered the throne to Archduke Maximilian of Austria. He accepted on certain conditions, one of which was that the call should be a spontaneous expression of the whole nation. After his accession, the new emperor found that he had been deceived, and that the republican feeling was still strong. The United States government, now freed from its domestic difficulty, was ready to assert the Monroe doctrine, and accordingly demanded that the French troops should be withdrawn from this continent. Maximilian, abandoned by his allies, was unable to maintain his authority against Juarez. He was captured, tried by court-martial, and executed, June 19, 1867. With him fell the Mexican empire and the dream of French dominion in the West.

During these grand political movements, science had achieved a peaceful triumph whose importance far transcended the victories of diplomatic or military skill. As early as 1853, Cyrus W. Field of New York had conceived the idea of an ocean telegraph. An association was organized the next year, and in 1856, a line was finished from New York to St. John's, Newfoundland, a distance of over one thousand miles. A company was then formed, with a capital of about one million seven hundred and fifty thousand dollars, to carry the wire across the ocean. A cable was made, but it parted while being laid, August, 1857. A second attempt, in June, 1858, failed after repeated trials. A third effort in July of the same year was successful. A message was sent from the Queen of England to the President of the United States, and a reply transmitted. But the wire worked for only a few weeks and then became silent. The time and money spent seemed a total loss. Mr. Field alone was hopeful. Through his efforts the company was revived, three million dollars were subscribed, and a new cable was manufactured. Meanwhile, seven years had elapsed since the first failure. In July, 1865, the Great Eastern commenced laying the cable, but in mid-ocean it parted and sunk to the bottom.

Again Mr. Field went to work, raised a new company, with a

capital of three million dollars, and made a third cable. The Great Eastern sailed with this, June, 1866, and successfully accomplished its task; the first message transmitted being, "A treaty of peace has been signed between Austria and Prussia." To make the triumph more complete, the vessel went back, found the very spot in the broad ocean where the cable of 1865 had parted, and, dropping her huge grappling-irons down two miles into the sea, caught the lost cable, brought it to the surface, and, splicing it, laid the remaining portion. The two cables were

THE GREAT EASTERN IN MID-OCEAN LAYING THE CABLE.

found to work admirably. So perfect is the connection and so delicate the instruments used, that a despatch has been sent from Valentia Bay, Ireland, to Heart's Content, Newfoundland, a distance of eighteen hundred and sixty-four miles, by a battery made in a gun-cap. Field had spent twelve years of anxious labor, during which he had crossed the Atlantic nearly fifty times; but American energy and ingenuity triumphed at last.

In 1866, the movements of the Fenians, a society formed for the avowed purpose of delivering Ireland from the English rule, caused great apprehension in Canada. Large amounts of money were subscribed by the Irishmen in this country, and extensive military organizations perfected. June 1st, fifteen hundred men crossed the frontier from Buffalo, but they were quickly driven back. Seven hundred fugitives were captured by a United States

gun-boat. General Barry paroled large numbers of the privates and released the officers on bail. The main body of the so-called "Fenian army" advanced a little later from St. Albans, Vermont, but, after some skirmishing with the British troops, returned across the line. The United States authorities sent home the men at government expense and held the officers to bail.

The 4th of July, this year, was marked by a destructive conflagration at Portland, Maine, caused by a fire-cracker. Nearly one-third of the city was consumed, the loss being ten million dollars.

The year 1867 was signalized by the purchase of Alaska from Russia for the sum of seven million two hundred thousand dollars. The territory comprises five hundred and eighty thousand square miles and twenty-nine thousand inhabitants. It is chiefly valuable for its fisheries, furs and lumber.

During Lincoln's administration, but one State, the thirty-sixth, was received into the Union. This was Nevada, so named from a range of mountains on its eastern border, the Sierra-Nevada, signifying "snow-covered mountains." It was the third State carved out of the territory acquired by the Mexican war; Texas being the first and Colorado the second. During Johnson's administration, also, one State, the thirty-seventh, was admitted, March 1, 1867. This was Nebraska, so named from an Indian term meaning the "water-valley."

The "National Union Republicans" held a convention at Chicago, May 21, 1868. There were six hundred and fifty delegates present, all of whom, on the first ballot, cast their votes for Ulysses S. Grant as their candidate for the presidency. Schuyler Colfax of Indiana was then nominated for the vice-presidency.

The National Democratic convention at New York, July 4th, put in the field Horatio Seymour of New York for the presidency, and Frank P. Blair of Missouri for the vice-presidency.

The election resulted in the choice of the Republican candidates, Grant and Colfax receiving two hundred and seventeen electoral votes; Seymour and Blair, seventy-seven. In the popular vote there was not so great a difference, as the former candidates received two million nine hundred and eighty-five thousand and thirty-one; and the latter, two million six hundred and forty-eight thousand eight hundred and thirty. Mississippi, Texas and Virginia did not take part in this election.

Ulysses S. Grant was inaugurated eighteenth President of the

United States, March 4, 1869. Grant was born of Scotch parentage at Point Pleasant, Ohio, April 27, 1822. His name was Hiram Ulysses, but on being appointed to West Point in 1839, he was

GENERAL GRANT'S RESIDENCE AT GALENA, ILL. (1860).

registered as Ulysses S., and so remained. He graduated twenty-first in a class of thirty-nine, and became a second lieutenant in the army. For gallantry at Molino del Rey, he was promoted to a first lieutenancy, and at Chapultepec he was brevetted captain. In 1854, he resigned his commission, and when the war broke out,

he was engaged with his father in the leather trade at Galena, Illinois. He raised a company of volunteers, and finally took the field as colonel of the Twenty-first regiment. Soon after, his history became a part of the general record of the war.

President Grant chose for his official advisers: Elihu B. Washburne of Illinois, Secretary of State; Alexander T. Stewart of New York, Secretary of the Treasury; General J. M. Schofield of the United States Army, Secretary of War; Adolph E. Borie of Pennsylvania, Secretary of the Navy; Jacob D. Cox of Ohio, Secretary of the Interior; John A. J. Creswell of Maryland, Postmaster-General; and E. Rockwood Hoar of Massachusetts, Attorney-General. Mr. Washburne resigning soon after, Hamilton Fish of New York was appointed in his stead. A law, passed near the close of the eighteenth century, forbids any person engaged in trade or commerce to serve as Secretary of the Treasury. Mr. Stewart being a merchant, was accordingly ineligible to the place, and George S. Boutwell of Massachusetts was selected. General Schofield wishing to return to the army, John A. Rawlins of Illinois was appointed to fill the vacancy.

This year was made memorable in our history by the completion of the Central Pacific Railroad. The project was first advocated by Asa Whitney, who spoke upon the subject as early as 1846. Surveys to decide upon the best route were made

by the authority of the War Department in 1853. Nothing, however, was accomplished until July, 1862, and 1864, when Congress granted to the companies undertaking the work of building the road, for each mile they should complete, twelve thousand acres of land and a subsidy, varying, according to the difficulties encountered, from sixteen thousand to forty-eight thousand dollars. The road was extended eastward from California by the Central Pacific Company, and from the Missouri River westward by the Union Pacific Company. The work was performed with great rapidity, the track being laid at the rate of two or three miles per day.

The last tie connecting the two lines was laid with much ceremony at Ogden, May 10, 1869. It was of polished laurel-wood

DRIVING THE LAST SPIKE.

bound with silver-bands. Three spikes were used—a gold one, presented by California; a silver one, by Nevada; and a gold, silver and iron one, by Arizona. The strokes of the hammer were telegraphed over the Union. When the junction was complete, an invoice of tea was immediately shipped over the road from San Francisco, and the telegraph announced that the “overland trade

with China and Japan was inaugurated. The entire length of the road from Omaha to San Francisco is nineteen hundred and eleven miles, and from New York, about three thousand four hundred miles. Cars run the whole distance in less than a week.

September 24th, 1869, is famous in business circles as "Black Friday." An association known as the "Gold Exchange" had planned to get control of all the gold in circulation. At the date named it had succeeded in raising the price from 1.38 to 1.60. That difference meant the financial ruin of multitudes. At this crisis it was announced that the Secretary of the Treasury would sell four million dollars in gold the ensuing day. The stringency of the market was at once relaxed, and gold dropped back to 1.32.

November 12th of this year is a notable date in the ecclesiastical history of this country. The two schools of the Presbyterian Church had been separated, on account of some doctrinal differences, since 1837. Representatives of the two bodies having convened at Pittsburg decided upon a reunion; and on that day their Moderators grasped each other's hands in token thereof, amid indescribable enthusiasm.

The Fifteenth Amendment, which guarantees to all the right of suffrage, irrespective of "race, color, or previous condition of servitude," was formally announced to be a part of the Constitution, March 30, 1870.

Early in 1870, the representatives of the three remaining Southern States took their seats in Congress; Texas being the last to resume her former place.

The ninth census of the United States was completed this year. The inhabitants then numbered over thirty-eight millions, an increase of seven millions during the previous decade. The centre of population in 1840 was just south of Clarksburg, West Virginia; in 1850, a little south-east of Parkersburg, West Virginia; in 1860, south of Chillicothe, Ohio; and in 1870, near Hillsboro, Ohio. During the last three decades the tide of population had set westward at the rate of 5.5, 8.2, and 4.6 miles per annum respectively. In 1840, half of the people of the United States lived east of a line drawn from Oswego to Appalachee Bay; in 1870, the dividing line ran from Cleveland, Ohio, a little west of Rome, Georgia.

The Republic of Santo Domingo, on the island of Hayti, seemed anxious to be annexed to the United States. President Grant strongly favored the plan. He accordingly appointed Senator Wade of Ohio, President White of Cornell University, and Dr.

Howe of Massachusetts, as a Board of Commissioners to visit the island. They reported favorably, but the measure was rejected by Congress.

There was at this time in New York a combination familiarly known as "The Ring," which controlled public affairs. William M. Tweed stood at its head. By forging bills or by fraudulent accounts it had abstracted millions of dollars from the treasury. A committee of prominent men was formed, which broke up the conspiracy. Tweed was arrested, tried, and imprisoned, but he escaped in December, 1875. Several of his companions had previously fled the country.

Our government had constantly pressed upon the attention of the English authorities a claim for the damages caused to American commerce by the Anglo-Confederate cruisers. A joint high-commission, consisting of five eminent statesmen and jurists from each country accordingly assembled at Washington, February 27, 1871. They arranged the basis of the Treaty of Washington, providing that the claim for losses should be submitted to a board of arbitration appointed by the President of the United States and by friendly powers. This body met at Geneva, Switzerland, in the summer of 1872. Sixteen million two hundred and fifty thousand dollars were awarded to the United States.

On the eve of October 8, 1871, a fire broke out in Chicago, which proved the most disastrous conflagration since the burning of Moscow in 1812. The flames, driven by a high wind, swept over the neighboring lumber-yards, leaped the South Branch of the river, and spread through the business part of the city. All efforts to check it were fruitless. Fire-proof buildings burned like tinder. The conflagration raged for three days, when it died out for lack of fuel. A territory a mile wide and four and a half miles long had been swept barren by the fiery deluge; two hundred persons had been killed, one hundred thousand persons left homeless, and two hundred million dollars worth of property consumed. As the tidings of this terrible disaster were telegraphed over the world, meetings were called and contributions to the amount of seven million dollars were made for the relief of the sufferers. Never was there such a display of charity; it was only paralleled by the energy of the citizens themselves. Within a year the burnt district was nearly all rebuilt, and within two years the business part of the city was larger than ever.

A curious incident is recorded in connection with this fire. A

news establishment containing an immense stock of books and periodicals was consumed. Among the blackened ruins there was found a single leaf of a Bible charred around the edges. It contained the first chapter of the Lamentations of Jeremiah, opening with the words: "How doth the city sit solitary, that was full of people! how is she become as a widow! she that was great among the nations, and princess among the provinces, how is she become tributary! She weepeth sore in the night, and her tears are on her cheeks: among all her lovers she hath none to comfort her."

About the same time of this disaster, extensive conflagrations raged in the forests of Wisconsin, Minnesota, and Michigan. Entire villages were consumed, and in Wisconsin alone, fifteen hundred people perished.

On the 9th of November, 1872, Boston was also visited by a fire, that destroyed the very heart of its wholesale trade, causing a loss of seventy-five million dollars. Nearly eight hundred buildings were consumed, many of them of granite, and four or five stories high.

During the last session of the Forty-second Congress, the salary of the President was doubled; the pay of the Vice-President, Speaker of the House, Justices of the Supreme Court, and Heads of the Departments was increased twenty-five per cent.; and that of Congressmen was raised to seven thousand five hundred dollars. As the action was made, in part, retroactive, a popular outcry was raised, and the terms "salary grab" and "back pay" became incorporated into the political as well as social vocabulary of the country.

The Liberal Republicans, *i. e.*, the members of that party who were opposed to the policy of the administration, met at Cincinnati, May 1, 1872. They nominated Horace Greeley for President, and B. Gratz Brown of Missouri, for Vice-President. The Democratic convention at Baltimore afterward endorsed their selection. The Republican party renominated General Grant by acclamation, choosing Henry Wilson of Massachusetts for the vice-presidency. The campaign was heated and bitter. The question of the reconstruction of the South and all the issues of the late war were discussed, oftentimes with virulence. The Republican candidates were elected. They received two hundred and sixty-eight votes in the electoral college, against eighty for the others, and had a popular majority of seven hundred and sixty-two thousand nine hundred and ninety-one.

The sad fate of Horace Greeley cast a gloom over the whole country. The desertion of his life-long friends, the excitement of the presidential canvass, and the death of his wife combined to weaken both his mind and body. He died at a private asylum, November 29th. Forty-one years before, he came to New York a young man of twenty. He had only ten dollars in his pocket, but he possessed energy, will, and a good trade. Step by step, he rose from the compositor's desk to an acknowledged leadership in journalism. In our history, he is known as the "Founder of the New York Tribune."

HORACE GREELEY.

General Grant a second time took the oath of office as President of the United States, March 4, 1873. An anecdote told concerning the inauguration of Mr. Wilson as Vice-President, is characteristic of the man and the republic. "The evening before the ceremony, he called on Senator Sumner and said, 'Sumner, can you lend me a hundred dollars? I have not money enough to be inaugurated upon.'" The Senator replied, 'Certainly. If it had been a large sum, I might not have been able to help you; but I can always lend a friend that amount.' He then gave Mr. Wilson a check, and after the latter had retired, turning to Mr. Carpenter, he remarked, 'There is an incident worth remembering; such a one as could never have occurred in any country but our own.'"

The cabinet, as first organized, was as follows; Hamilton Fish of New York, Secretary of State; William A. Richardson of Massachusetts, Secretary of the Treasury; William W. Belknap of Iowa, Secretary of War; George M. Robeson of New Jersey, Secretary of the Navy; Columbus Delano of Iowa, Secretary of the Interior; George H. Williams of Oregon, Attorney-General; and John A. J. Creswell of Maryland, Postmaster-General. Several changes by death or resignation afterward occurred, and the

following new appointments were made; Benjamin H. Bristow of Kentucky, Secretary of the Treasury; Zachariah Chandler of Michigan, Secretary of the Interior; Edwards Pierrepont of New York, Attorney-General; and Marshall Jewell of Connecticut, Postmaster-General.

The proper method of treating the Indians was a mooted question throughout the decade. The Society of Friends having suggested to Congress the wisdom of using charity instead of gunpowder, a committee of Quakers was appointed to visit the various tribes and make a practical trial of the effect of kindness. The result was favorable, but the influence was necessarily limited. There were continued difficulties with the red men along the entire frontier. In every case, the military power was used to enforce submission.

In 1865-6, the Sioux and Cheyennes took the war-path, and perpetrated horrible massacres. Sheridan and Custer were sent against them, and the victory of Wacheta put an end to the disturbance. In 1870, a tribe of the Blackfeet Indians in Montana renewed the horrors of the Old French and Indian War. Troops were called out. The Indian villages were burned, and men, women and children put to the sword. The remnant sued for peace. Three years later, Captain Jack's band of Modocs in Oregon left its reservation and refused to return. Troops were sent to enforce submission. The Modocs retreated to the Lava Beds, which formed a natural fortification. Commissioners were sent to learn their grievance, but during a peaceful conference, the Indians brutally murdered General Canby and Rev. Dr. Thomas, and stabbed Mr. Meachem. The Modocs were soon after besieged in their stronghold and forced to surrender. The leaders were tried by military commission and executed at Fort Klamath, October 3, 1873.

The company formed for the purpose of constructing the Pacific Railroad purchased the charter of an organization known as the *Crédit Mobilier of America*. The stock was increased to three million seven hundred and fifty thousand dollars; enormous dividends were declared, and the shares rapidly rose in value. In 1872, during a law-suit tried in Pennsylvania, the startling fact was developed that several members of Congress, the Vice-President and one of the candidates for that office had accepted, even if they did not then own, stock in the *Crédit Mobilier*. The nation was greatly scandalized by the thought of its official ser-

vants being thus pecuniarily interested in a corporation whose profits were so largely dependent on their votes. Subsequent investigation disclosed cases of corruption which shocked the public confidence.

The panics of 1837 and of 1857 were repeated in 1873. As Jackson's "Specie Circular" and the failure of the "Life and Trust Company" of Cincinnati were, in the former instances, the signals for a financial crash, so in this, the failure of the banking-house of Jay Cooke and Company, Philadelphia, began the panic. Money took the alarm and fled to its hiding-places. Innumerable failures ensued. Confidence was destroyed. Values shrank. Great railroad enterprises were stopped. The causes of the crash were numerous. Among the principal ones may be recorded: an excessive importation of foreign goods, necessitating an exportation of gold and silver in payment; the building of railroads beyond the immediate wants of the country; the growing extravagance of the people; and the contraction of the national currency from six hundred and ninety-nine million dollars in 1865, to three hundred and forty-seven million dollars in 1873.

The idea of the benefits of association among those having a similar pursuit was unusually prevalent during the decade. Prominent among the organizations formed on this basis is the one known as the Patrons of Industry. The first grange of this order was located at Fredonia, New York, April 16, 1868. At the recent national meeting at Charleston, there were reported to be in the United States twenty-four thousand granges, having a membership of one million seven hundred and fifty thousand. The objects of the order are various, but among them are the following: to dispense with the services of middlemen; to bring producers and consumers, farmers and manufacturers, in direct communication; to buy and sell together; to elevate the social standing of the farmer; and to improve agriculture.

March 3, 1875, an act was passed admitting Colorado, the thirty-eighth State. Though the last to be admitted into the Union, its territory was among the earliest to be discovered, Vasquez Coronado having led a Spanish expedition from Mexico to explore it in 1540.

The latter portion of the decade was marked by the death of many men who have borne a distinguished part in our history. The following is a list of the most prominent: In 1869, Edwin M. Stanton, Secretary of War under President Lincoln

and afterward Justice of the Supreme Court, and Franklin Pierce, ex-President of the United States. In 1870, General Robert E. Lee, General George H. Thomas, and Admiral Farragut. In 1872, William H. Seward, Horace Greeley, General Meade, and Professor Morse. In 1873, Chief-Justice Chase, and in 1874, Charles Sumner. In 1875, John C. Breckenridge, Vice-President under Buchanan; ex-President Johnson, and Henry Wilson, then Vice-President. The century closes with no President living except its present incumbent, and no Vice-Presidents except Hannibal Hamlin, who held that office during Lincoln's first administration, and Schuyler Colfax, who held it during the first administration of General Grant.

We have now traced the story of our Independence to the close of its first century. Already, as we have reached the anniversary of the stirring events which preceded the Declaration in 1776, there have been imposing observances. The popular pulse has beaten with the fervor of patriotism as crowds have gathered to celebrate the Boston Tea Party, the Mecklenburg Declaration, and the battles of Lexington, Concord and Bunker Hill. Everywhere there has been manifested a desire to recognize the kind Providence which has so abundantly prospered the nation; to gather the rich fruitage from the experience of the past; to draw closer the bands of national fellowship; to cherish the recollections of the fields whereon our forefathers, North and South, fought side by side to achieve a common Independence; and to learn from the conflicts wherein we, their sons, have met face to face, lessons of mutual respect and forbearance.

CENTENNIAL MEDAL — REVERSE.

CHAPTER XIX.

THE CENTENNIAL DECADE—1876-1886.

THE arrival of the Centennial Year of the Republic was hailed with acclamations of delight that were continued with unabated fervor by the whole nation from midnight on Friday, December 31, 1875, until daybreak. In cities, villages, and hamlets everywhere, guns were fired, bells rung, bonfires lit, public buildings and private residences illuminated, and rockets sent into the air. Troops of men went singing patriotic songs through the streets that, as the night was unusually mild, were crowded as though it were broad daylight. All through the year 1876 the jubilant feeling continued, and the national holidays and anniversaries, especially the Fourth of July, were celebrated with great enthusiasm. The International Exhibition, the second one of the kind in the country, was held in Philadelphia. The centennial bill authorizing it and the necessary bonds were signed by President Grant with a quill from the wing of an American eagle, shot near Mount Hope, Oregon. Thirty-eight foreign governments were represented in the Exhibition. It was formally opened May 10, and closed on November 10. The number of exhibitors surpassed that of any previous World's Fair, excepting the one in Paris in 1867, and the number of admissions and the receipts therefrom were larger than those of any similar exhibition held up to that time. So far as money was concerned, the undertaking did not prove a profitable one, but the influence on the education and various industries of the country was marked and valuable.

In the early part of the year, Secretary Belknap was accused of fraud and peculation in the disposition of Indian Post traderships. He tendered his resignation on March 3, and it was accepted by the President. Alfonso Taft of Ohio was appointed to fill his place in the cabinet. Subsequently, by the appointment of Edwards Pierrepont to be Minister to England, Mr. Taft suc-

ceeded him as Attorney General, and J. Donald Cameron of Pennsylvania was made Secretary of War. Other cabinet changes occurred during the year. Benjamin H. Bristow resigned his position as Secretary of the Treasury, and was succeeded by Senator Lot M. Morrill of Maine, and James N. Tyner of Indiana succeeded Marshall Jewell at the head of the Post Office Department.

Notwithstanding Secretary Belknap's resignation, Congress decided that it had jurisdiction of the case, and accordingly articles of impeachment were formally presented against him. His trial was begun before the Senate on April 17, and continued from time to time until August 1, when two-thirds of that body not voting to sustain the articles, it was ordered that an acquittal be entered. In the meantime he had been indicted before the courts, but the action of the Senate put a stop to all further proceedings.

The country was much agitated at this time by the discovery of great frauds perpetrated in the revenue department at St. Louis, Chicago, Milwaukee, Louisville, and other midland cities, by what was termed the "whisky ring." Many officers confessed or were convicted, and sentenced to fines and imprisonment. President Grant, in writing to the Attorney General with regard to the prosecution of the offenders, used the words so much quoted: "Let no guilty one escape."

The election of a President took place this year. On May 18, the "Greenbackers" held their first national convention in Indianapolis, Indiana. This organization, first heard of in 1868, took its name from the leading article of its political faith—that the government should issue paper money similar to that issued during the war, popularly called, from its color, "greenback currency," based on the credit of the country, without regard to coin; and with it, should buy up the bonds. This party nominated for President, the venerable philanthropist Peter Cooper of New York, and for Vice-President, Samuel F. Cary of Ohio. The republicans met in Cincinnati, on June 16, and put in nomination for President, Governor Rutherford B. Hayes of Ohio, and for Vice-President, William A. Wheeler of New York. The democrats met in St. Louis on June 27, and nominated for President, Samuel J. Tilden of New York, and for Vice-President, Thomas A. Hendricks of Indiana.

The connection of General Robert C. Schenck of Ohio, Min-

ister to England, with a silver-mining company that was alleged to have been a fraudulent speculation, attracted a great deal of attention. General Schenck had served with some distinction in the war, and his position as minister gave him the confidence of the English people. They were induced to subscribe liberally to the stock of the mining company, and eventually lost their investments. General Schenck was compelled to resign (February 8). On May 25 following, the Senate passed a resolution condemning him for becoming a director in the mining company, and for his operations in connection therewith in London.

The Indians in the Territories continuing to be troublesome, Generals Terry and Custer were sent to subdue them. The troops were operating in Montana, when General Custer was detached to follow the trail of a hostile band of Sioux. June 25, he came suddenly upon a large force on the Little Big Horn River. Without waiting for support, he attacked them. His little command was overpowered after a desperate resistance. He, with his two brothers and a nephew, were killed. Our loss was two hundred and sixty-one killed, and fifty-one wounded; while that of the Indians was only seventy in all. Troubles with the Cheyennes, Utes, Nez Percés, Sioux, and Pawnee tribes continued almost constantly through this decade.

GROUP OF SIOUX INDIANS.

The Presidential election was attended with more than the usual excitement, on account of the closeness of the vote, and the uncertainty of the result. The usual method of counting the electoral vote was not considered the proper one to follow on this occasion, there being so many disputed returns. An Act was accordingly passed, prepared by a committee of seven members from each House of Congress, the committee being made up of an equal number from each political party, providing that the two Houses should meet in the Hall of the Representatives, and where there was more than one return from a State, a commission of fifteen members should decide which was the true and lawful one. This

commission was composed of five from each House of Congress, and five associate justices of the U. S. Supreme Court, the associate judge longest in commission being the presiding officer. The joint convention of Congress to count the electoral vote began its sessions on February 1, 1877, and concluded on March 2. Questions arose as to the electoral votes of Florida, Louisiana, Nevada, and Oregon. The commission, by a vote of eight to seven, decided them all in favor of the republican candidates, who were thereby declared elected, receiving one hundred and eighty-five electoral votes to one hundred and eighty-four cast for the democratic candidates.

The Forty-fourth Congress adjourned on March 5, the House of Representatives having passed a resolution declaring that Tilden and Hendricks had been elected.

RUTHERFORD B. HAYES.

Rutherford Birchard Hayes, the nineteenth President of the United States, was born in Delaware, Ohio, on October 4, 1822, his parents having emigrated from Vermont in 1817. He was graduated at Kenyon College in Ohio, being the valedictorian of his class; passed through the Harvard Law School, and was admitted to practice at the bar in 1845. He was married in 1852. In

1858 he was solicitor of the city of Cincinnati. He was appointed Major in the Twenty-third Ohio Infantry in 1861, and distinguished himself in a number of engagements during the war. While still in the field, he was, in 1864, elected Member of Congress of the Second Ohio District, and was re-elected in 1866. Soon after, he was twice elected Governor of Ohio. He was again nominated for Congress, but was defeated. In 1875 he was, for the third time, elected Governor of his State.

March 4 falling on Sunday, President Hayes took the oath of office privately on that day, and on the day following was publicly inaugurated at the east front of the Capitol, the oath being

administered by Chief Justice Waite. He selected the following-named as his cabinet: Secretary of State, William Maxwell Evarts of New York; of the Treasury, John Sherman of Ohio; of War, George W. McCrary of Iowa; of the Navy, Richard M. Thompson of Indiana; Attorney General, Charles Devens of Massachusetts; Postmaster General, David M. Key of Tennessee; Secretary of the Interior, Carl Shurz of Missouri. But three changes were made in the cabinet during Hayes's administration. Secretary Key was appointed a Judge in a U. S. District Court in Tennessee in June, 1879, and Secretary McCrary was made Justice of the Eighth U. S. Circuit on December 10 of the same year. Their positions in the cabinet were filled respectively by Horace Maynard of Tennessee, and Alexander Ramsey of Minnesota. In December, 1880, Secretary Thompson gave up the portfolio of Naval Affairs, and Nathan Goff Jr. of Western Virginia was appointed in his stead.

In South Carolina and Louisiana there had been considerable political disturbance, and two rival governments existed. October, 1876, President Grant ordered United States troops thither to preserve peace, and enforce the law. Both in his letter accepting the nomination, and in his inaugural, President Hayes had favored a conciliatory policy toward the South, and, at one of the first cabinet councils, it was decided to invite to Washington Governors Hampton and Chamberlain, the rival executives of South Carolina, and to send a commission of prominent men to inquire into the state of affairs in Louisiana. As a result of these conferences, the United States troops were withdrawn from the two States named, in April, an action that caused the overthrow of the local republican governments, and put the States entirely in the control of the democrats.

President Hayes also speedily followed up his policy with regard to civil service reform, as indicated in his letter of acceptance and his inaugural address. On July 22 he issued a circular forbidding officers of the general government from taking part in political organizations and caucuses, and from being assessed for political purposes. He also repeatedly urged Congress to further the reform. A system of examination was adopted in the departments, and, to some extent, promotions and discharges were founded upon them.

The summer of 1877 was marked by labor disturbances of greater magnitude than had ever before been witnessed in this

country. There were strikes on most of the trunk lines of railroads, brought on by a general reduction in wages. The strikers seized the roads at prominent centers, and for several days in July all traffic was suspended. The military were called out, and at Baltimore, Chicago, Pittsburgh, and Reading, Pa., collisions between the troops and the mob resulted in serious loss of life. In Pittsburgh, the mob, maddened at being fired upon by a Philadelphia regiment, drove the troops into a round-house, and in trying to burn them out, set fire to a large railroad depot. Before the flames were subdued, two thousand loaded cars, and property valued at more than three million dollars were destroyed. By the use of sufficient military force, and the arrest of hundreds of the ringleaders, the tumult was quelled. Some of the railroad companies acceded to the demands of the strikers, but the majority held to the reduction of wages. By July 30, the main roads were in working order, but the trouble continued here and there through the month of August.

The imaginary tales of the magicians of old were outdone in the period now being considered by some remarkable applications of electricity. The usefulness of the telegraph was more than quadrupled by appliances invented for the transmission of messages, two or more on the same wire at the same time. The telegraph lines had multiplied greatly since the first message was sent in 1844. In 1860, there were 17,852 miles of line and 26,375 miles of wire in the country, and twenty years thereafter there were 142,364 miles of line and 350,018 miles of wire, affording employment to 36,000 persons. Now, also, Professor Alexander G. Bell of Boston discovered the wonderful telephone. His first patent was taken out March 7, 1876, and his second, January 30, 1877, and in less than four years from the first date, his invention was in practical use in almost every place of any size in the country. The immense increase in the mileage of railroads at this period is a notable fact. In 1870, the number of miles was about forty thousand. This was more than doubled in the decade following, for in 1880 there were more than ninety thousand miles in operation.

American daring, skill, and fortitude were also signalized at this period by an explorer, Henry M. Stanley, who, just before, had sought and found Dr. Livingstone, the famous traveler, in the heart of the continent of Africa. On September 18, 1877, Mr. Stanley reached the mouth of the Congo River, having ex-

plored it from its source, and ascertained it to be one of the largest rivers in the world.

During this and the preceding year, there was a memorable moral and religious awakening throughout the country. The revival meetings of Moody and Sankey, neither of whom was an ordained clergyman, in all of the larger cities, were attended by throngs so large that special buildings were necessary to accommodate them, and their converts were numbered by the thousand. During the same time, the labors of Francis Murphy, himself a man reformed from the lowest depths, gave the cause of temperance a powerful impetus.

On February 28, 1878, Congress passed, over the veto of the President, the Bland Silver Bill, which provided for a silver

dollar of four hundred and twelve and one-half grains; restored its legal tender character, and limited the amount to be coined each month to not less than \$2,000,000, nor more than \$4,000,000. The bill also provided for the appointment of three commissioners to

THE SILVER DOLLAR.

an international monetary conference called to adopt a common ratio between gold and silver, to establish internationally the use of bi-metallic money, and secure fixity of relative value between the metals. The conference met in Paris, France, but was attended with no practical result.

June 7, 1878, an act repealing the bankrupt law adopted March 2, 1867, was passed, and received the signature of the President. It took effect on September 1 of the same year.

In 1878 and 1879, the yellow fever prevailed to an alarming extent in the Southern States, especially in New Orleans and Memphis. From July 31 to November 12 in 1878, the number of deaths from this scourge reached twenty thousand. The following year, the losses were not so great, but were, nevertheless, severe.

Some difficulty had arisen between this country and England with relation to the Newfoundland fisheries, and the rights of

United States citizens therein. It had been referred to a commission that, on November 23, 1877, awarded as damages to England the sum of \$5,500,000. This sum was paid on November 18, 1878, to the British Government in London by the American Minister, who accompanied it with a protest against the payment being understood as an acquiescence in the result of the Commission "as furnishing any just measure of the value of a participation by our citizens in the in-shore fisheries of the British provinces."

On Tuesday, December 17, 1878, at 12:29 P. M., the announcement was made in the gold-room at the Stock Exchange in New York City, that "gold was at par." Sixteen years before, on Jan. 13, 1862, its price had begun to advance, and continued so to do until July 11, 1864, when it stood at 2.85, gradually declining from that time.

On January 1, 1879, the Government resumed specie payment. The act authorizing it was passed on January 14, 1875. Every preparation had been made, and no interests were unfavorably affected.

The tenth census of the United States was completed in 1880, giving a total for the country of 50,152,866, an increase in ten years of 11,596,883. The centre of population moved in the decade only about fifty-six miles, and that in a south-westerly direction. In 1870 it was forty-eight miles east by north of Cincinnati, Ohio. In 1880 it was eight miles west by south of that city, the spot being in the State of Kentucky, one mile from the south bank of the Ohio River, and one mile and a half southeast of the village of Taylorville.

On July 19 of this year, there arrived, as a gift from the Khedive of Egypt, one of the obelisks known as "Cleopatra's Needles." One had previously been sent to England, and in October, 1877, the project was broached of sending the other to this country. It was not, however, until June, 1880, that, in charge of Commodore Gorringe of the U. S. Navy, it left Alexandria on its long journey, safely performed in a little more than a month. It was set up in Central Park, New York City.

Charles Stewart Parnell, M. P. of Ireland, visited the United States during this year in the interest of the Irish Land League, an organization created for the purpose of relieving the tenantry of his country from the oppressions of the landlords. He spoke in many of the large cities, and raised a considerable sum of money in aid of the league. Many branches of the society were organized

to further the object sought by raising money, and by the moral influence they were expected to exert.

There were five tickets in the Presidential Election of 1880. The Republicans nominated General James Abram Garfield of Ohio for President, and General Chester Allen Arthur of New York for Vice-President. The Convention met at Chicago in June. The question of the "third term" came prominently before it, represented by General Grant's adherents. On the tenth day, and the thirty-sixth ballot, General Garfield was nominated. To the end, three hundred and six votes were cast

THE WHITE HOUSE.

for General Grant. The Democrats nominated General Winfield Scott Hancock of Pennsylvania for President, and William H. English of Indiana for Vice-President; the Greenback Labor party presented General James B. Weaver of Iowa for President, and General Benjamin J. Chambers of Texas for Vice-President; the Prohibitionists, Neal Dow of Maine for President, and Henry A. Thompson of Ohio for Vice-President; and the Anti-Masonic party, John W. Phelps for President, and Samuel C. Pomeroy of Kansas for Vice-President. The Electoral Vote was divided between the Republicans, who secured two hundred and thirteen, and the Democrats, one hundred and fifty-six. The popular vote

stood, Republican, 4,441,233; Democratic, 4,443,325; Greenback, 314,324, and Prohibition, 10,487.

President Hayes throughout his term favored and urged upon Congress the passage of measures improving the condition of the Indians. His policy was set forth in full in his last message on February 1, 1881. It suggested that the Indians should be prepared for citizenship by giving to their youth of both sexes that industrial and general education which is requisite to enable them to be self-supporting and capable of self-protection in civilized communities; that lands should be allotted to the Indians in severalty, inalienable for a certain period; that the Indians should have a fair compensation for their lands not required for individual allotments, the amounts to be invested with suitable safeguards for their benefit, and that, these prerequisites secured, the Indians should be made citizens, and invested with the rights and charged with the responsibilities of citizenship.

A portion of this policy was inaugurated in April, 1878, in a school for Indian young men established in connection with General Armstrong's famous Normal School for negroes, at Hampton, Virginia. It was begun with seventeen ex-prisoners of war out of a party of sixty-five, who had been confined for three years at Fort Marion, Florida, in charge of Captain R. H. Pratt, U. S. A. They represented the worst stock in the Indian Territory; the class which the West declared could not be elevated any more than the buffalo, and which gave rise to the creed, "There is no good Indian but a dead one." Under Captain Pratt, aided by Miss Mather, Miss Perrit, and other philanthropic ladies, who volunteered their services as teachers, the fierce prisoners, who came to St. Augustine in war-paint and blankets, were transformed into tractable pupils, wearing the national uniform, and tolerably skilled in various trades. A few months after their arrival at Hampton, eleven of them were received into the Christian Church connected with the Institution.

Four of the young men from Fort Marion, Florida, were educated by Bishop F. D. Huntington of the Central New York Diocese of the Episcopal Church. Two of them became clergymen, and were ordained deacons at Syracuse, N. Y., in June, 1881. Of one of these deacons, Captain Pratt said that, at first, he was the worst among his prisoners, being so wild and untamable, that he feared he should be obliged to shoot him! Yet the bishop declared, on the day of the young man's ordination, that he was

one of the gentlest Christian men he ever knew. Both Indians returned to labor among their people, the Kiowas.

By Act of Congress, a school was established at Carlisle, Pa., to accommodate some two hundred Indians, and within two years of its opening, its pupils made a portion of the shoes, harnesses, wagons, tinware, and other supplies needed by the Department of Indian Affairs. Indian young men were also now employed in the Indian Office of the government, training for clerks or superintendents of the agencies.

GARFIELD AND ARTHUR.

The reduction of the debt during this administration was \$208,824,730.27. The whole annual income of the government in the time of John Quincy Adams was less than the amount applied by President Hayes in one month on the public debt. The highest point reached by the debt was on August 31, 1865, when the total, less cash in the Treasury, was \$2,756,431,571.43. In fifteen years and six months there was paid \$876,475,156.66.

The home life in the White House at this time attracted much attention. Mrs. Hayes was hospitable, and deeply interested in public affairs, and although simple in her tastes, took great pride in keeping her home attractive, and personally superintending its decoration for official occasions. She early took a position in opposition to serving wine, or other spirituous liquors, in the Presidential mansion, and although she was severely criticised therefor, continued in her course bravely and consistently to the end of her husband's term. Her portrait was afterward hung in the Executive mansion, she being, save Martha Washington, the only lady thus honored. The ladies of Illinois manifested their

appreciation of her character by presenting her with an autograph album in six volumes of six hundred and fifty pages each. The first signature was that of Mrs. James K. Polk, widow of President Polk, and the other autographs were those of distinguished men and women; some were accompanied with characteristic sentiments, the book being illuminated with India-ink drawings of chaste design.

On Friday, March 4, 1881, James Abram Garfield was inaugurated the twentieth President of the United States, being sworn into office by Chief Justice Waite. He was not yet fifty years of age, being the third youngest of the Presidents at the time of his inauguration.

General Garfield was the third President who was a native of Ohio, his two immediate predecessors being from that State, making it seem destined to share with Virginia the title of being "Mother of Presidents." He was born in Orange Township, Cuyahoga County, November 19, 1831, the youngest of four children. His father died soon after, and his youth was spent in great poverty. At one time he drove on the tow-path of the Ohio Canal. He was graduated at Williams College in Massachusetts in 1856, and became first a Professor, and then the President of Hiram College—an institution attached to a sect called the "Disciples," of which he was a member. While a Professor, he married Miss Lucretia Rudolph, the daughter of a farmer living in the neighborhood. In 1859, he was elected State Senator. He took an active part in raising troops in 1861, and was elected Colonel of an Ohio regiment. Sent into Eastern Kentucky, he was soon made a Brigadier-General. After a severe march, he surprised and routed General Humphrey Marshall, near Picketon. He joined General Buell, and participated in the second-day's fighting at Pittsburgh Landing, and in the siege of Corinth. In January, 1863, he was made Chief of Staff of the Army of the Cumberland, and, after the battle of Chickamauga, Major-General. In 1862 he was elected Member of Congress from the District formerly represented by Joshua R. Giddings, and thereafter served continuously in the House until January, 1881, when he was chosen U. S. Senator from Ohio.

General Garfield selected the following named as his advisers: Secretary of State, James G. Blaine of Maine; of the Treasury, William Windom of Minnesota; of War, Robert Todd Lincoln of Illinois, son of the lamented Abraham Lincoln; of the Navy,

William H. Hunt of Louisiana; Attorney-General, Wayne McVeagh of Pennsylvania; Postmaster-General, Thomas L. James of New York, and Secretary of the Interior, Samuel J. Kirkwood of Iowa.

The dominant party of the country was divided into two factions that, after the election of Garfield, became bitterly opposed to each other, their differences seeming to arise rather from a disagreement as to the disposition of the "spoils" than from variance of opinion as to some principle. With the usual readiness of the people to bestow names on parties or factions, these were called "machine men" or "stalwarts," and "half-breeds" or "feather-heads," the first opposing, the second sustaining the administration. On May 16, 1881, Roscoe Conkling and Thomas C. Platt of New York, the first of whom was the recognized leader of the faction opposed to the administration, resigned their seats in the Senate of the United States, alleging as the chief reason for their action that the President had appointed to be the Collector of the Port of New York a gentleman who was opposed to them and their political interests. Balloting for their successors was begun in the Legislature of New York State on Tuesday, May 31, and continued until July 16, when, on the forty-eighth ballot, a successor was chosen to Mr. Platt; six days later, and on the fifty-sixth ballot, a choice was reached for Mr. Conkling's successor.

In the midst of the trouble and excitement caused by the disagreement of the two factions, on Saturday, July 2, 1881, President Garfield, while at the railroad station in Washington, was shot by a man named Charles J. Guiteau. The assassin was at once apprehended. The terrible news of the attempted assassination was flashed to every town and city in the United States. Only once before in its history had the nation received such a shock. This was on the 14th of April, 1865, when President Lincoln was shot. At the startling tidings that again their President had been stricken down, men of every shade of political belief, and from every portion of the land, forgot their differences, and, in the shadow of this great sorrow, remembered only their loyalty to a common country. For many long weeks the President trembled between life and death, and the entire nation anxiously waited the result. The Christian heroism of the sufferer and the tender devotion of his wife touched all hearts, and even across the ocean, whole peoples waited, hoping so grand a character might be spared

to the world. Mr. Garfield was finally carried to Elberon, N. J., in the hope that the sea air would revive his exhausted energy. But in vain. He died September 19. Every civilized country manifested the profoundest sympathy with our loss. In England this feeling was especially pronounced. That a prayer for an American Executive unconnected with any royal family should have been inserted in the church service, and that, on his death, the Queen should order her court to wear mourning, were events without precedent in English history. Mr. Garfield's body was borne to Washington, where it lay in state in the Capitol, and was finally conveyed to Cleveland, Ohio, and buried amid the tears of the nation. Through this long journey there lay upon the coffin a wreath of flowers, placed there by the direction of the widowed Queen of England in loving sympathy with the martyred President's wife.

On receiving official information of the death of President Garfield, the Vice-President, Chester A. Arthur, took the oath of office as President, in his own house in New York, about two o'clock on the morning of September 20; two days later, he was sworn in by the Chief Justice at Washington.

Mr. Arthur was born at Fairfield, Vt., in 1830; graduated at Union College, 1848; and, having studied law, was admitted to the bar. Here he soon obtained a high position, especially distinguishing himself as the champion of the legal rights of the colored race. He early took an interest in politics as a Clay Whig, and was a delegate to the convention at Saratoga where the republican party of New York was founded. When E. D. Morgan was re-elected Governor of New York, he appointed Mr. Arthur on his staff; first as Engineer-in-Chief, and, afterward, as Inspector-General and Quartermaster-General. In the last position, Mr. Arthur granted large contracts, and had every opportunity for advancing his private interests, yet, it is said, he left the office poorer in purse than when he entered it. In 1863, he returned to his law practice in New York City. President Grant appointed Mr. Arthur Collector of the port of New York, November 20, 1871. He held this post until July, 1878, when he was removed for not obeying an order issued by President Hayes, which forbade persons in the civil service of the United States from taking an active part in the management of political affairs (p. 625).

President Arthur retained for a time the cabinet of his predecessor, but afterward chose as his advisers: Frederick T. Frelinghuysen of New Jersey, Secretary of State; Charles J. Folger of New York, Secretary of the Treasury; Robert T. Lincoln of Illinois, Secretary of War; William E. Chandler of New Hampshire, Secretary of the Navy; Henry M. Teller of Colorado, Secretary of the Interior; Timothy O. Howe of Wisconsin, Postmaster-General;

CAPTURE OF A REDOUBT AT YORKTOWN DURING THE REVOLUTION.

and Benjamin Harris Brewster of Pennsylvania, Attorney-General.

The following changes were made in the cabinet during the administration: On the death of Postmaster-General Howe, he was succeeded, April 3, 1883, by Walter Q. Gresham of Indiana, who resigned September 24 of the following year. His successor, Frank Hatton of Iowa, was appointed October 14, 1884. Charles J. Folger, Secretary of the Treasury, died September 5, 1884, and was succeeded by Walter Q. Gresham, September 24, 1884. Mr. Gresham retained this position only one month and four days, when he was followed by Hugh McCulloch of Indiana, who had filled the same position during Johnson's administration.

On October 19, 1881, the hundredth anniversary of the Surrender of Yorktown was celebrated. It was a unique event. France naturally took a glad part in a jubilee that her aid during

the Revolution had alone rendered possible; with England, it was different, for she was our old-time enemy, and our fathers had taught us to hate the "red-coats" with a bitter hatred. But England had recently mourned with the United States about the bedside of the late President. In this common sorrow all former causes of alienation had vanished, and only the remembrance of a common brotherhood remained. In grateful acknowledgment of our affection for the "mother country" the President directed, that, during the anniversary, a national salute should be fired in honor of the flag of Great Britain. So it came about that, on the historic field of Yorktown, the lilies of France, the cross of St. George, and the Stars and Stripes, floated in sweet accord.

In the spring of 1882, a disastrous flood in the Mississippi Valley rendered 100,000 persons homeless. An appropriation was made by Congress, and large amounts were subscribed by private citizens, to relieve the sufferings of these people. In the following spring, there were heavy floods in the Ohio Valley, sweeping away bridges, damaging mills, and devastating large tracts of country.

On May 24, 1883, the first suspension bridge between Brooklyn and New York was opened. This remarkable structure was begun January 3, 1870. The bridge roadway, from its terminus in Brooklyn to its terminus in New York, is 85 feet wide, and 5,989 feet long—a little over a mile. The height of the towers is 278 feet. The length of the suspended span, from tower to tower, is 1,596 feet, and its height from the water at the centre, during high-tide, is 135 feet. The four great cables are $15\frac{3}{4}$ inches in diameter, each cable containing 5,296 parallel (not twisted) galvanized steel, oil-coated wires, closely wrapped, and weighing, with its covering, $897\frac{1}{8}$ tons. The heat of the sun causes these cables to vary in length as much as six inches in the course of the day. The four cables are estimated to have a strength of 48,800 tons, or more than four times that needed to support the bridge when crowded with passengers, vehicles, and cars. The bridge is traversed not only by roadways and footwalks, but also by trolley cars from all parts of Brooklyn. "This bridge forms, practically, a street, belonging jointly to the two cities, and making, with Third Avenue, the Bowery, and Chatham Street, New York, and Fulton Street continuing into Fulton Avenue on the Brooklyn side, a great thor-

oughfare, fourteen miles long, already continuously built up, from the Harlem River to East New York." Later years have seen the East River spanned by three other notable bridges, different in principle of construction, but most remarkable as providing for the public great roadways for wagon, carriage, automobile and trolley traffic.

A World's Industrial and Cotton Exposition was held at New Orleans in the winter of 1884-5. Its object was to commemorate the centenary of the beginning of the cotton industry on this continent. The exhibit excited wide-spread interest, and was of special value because of the remarkable displays made by Mexico, Central and South America, and the West Indies. President Arthur, in the Executive Mansion at Washington, and in the presence of a concourse of distinguished men, formally opened the Exposition.

A Congress of scientific men from the principal nations met at Washington (1884). It decided to adopt Greenwich as the zero meridian from which to reckon longitude, and, in addition, a universal day, beginning at midnight of the Greenwich day, and counting up to twenty-four hours.

During this year, also, four standard meridians were adopted by which to run railway trains, and to regulate local time. These meridians—the centres of the time belts—are 15° of space, and one hour of time apart. The Eastern meridian, 75° W. from Greenwich, passes near Philadelphia. The Central meridian, 90° W. longitude, passes near New Orleans and St. Louis. The Mountain meridian, 105° W. longitude, passes near Denver. The Pacific meridian, 120° W. longitude, forms a part of the boundary line between Nevada and California.

The sad fate of two Arctic Expeditions excited general sympathy. July 8, 1879, the *Jeannette*, a steam yacht, fitted out by James Gordon Bennett, left San Francisco, under the command of Lieutenant G. W. De Long. Soon after entering the Arctic Sea, the vessel was caught in the ice, and floated helplessly about for over twenty-one months, the play of winds and currents. June 13, 1881, the ship sank. The men took to the ice, with sleds and boats mounted on runners, and, amid terrible hardships, slowly struggled southward. The nearest coast was that of Siberia, over four hundred miles away. Of the three parties into which they separated, one, under Lieutenant Danenhower and Chief Engineer G. W. Melville, entered the Lena River, and was

rescued by the natives; a second has never been heard from; the third, containing Lieutenant De Long, wandered over the wastes of the Lena delta, until all perished of hunger and cold.

In the summer of 1881, a Signal Service station was established, under the command of Lieutenant A. W. Greely, at Lady Franklin bay. It was one of a series of International polar stations for

SCENE IN THE ARCTIC REGIONS.

investigating the meteorology of the Arctic regions. Elaborate observations were taken and several exploring parties sent out. Lieutenant Lockwood and Sergeant Brainard reached the furthest point north yet attained by man. But the expected supplies did not arrive, and, in August, 1883, Greely and his little company returned southward. After great suffering, they reached Cape Sabine, where they went into winter-quarters. Their scanty provisions were eked out with moss and lichens, and seal-skin broth. When the relief squadron, under Commander Schley, found them, June 22, 1884, only seven of the twenty-five members of the party were alive. Ensign Harlow, of the rescuing fleet, described thus

the pitiable scene that met his eyes on landing: "Hurrying on, I came to the tent. One pole was standing, and, about it, the dirty canvas bellied and flapped in the fierce gusts. Brainard and Biederbeck lay outside at the bottom of the tent and a little to the left of the opening; one, with his face swollen and rheumy so that he could barely show by his eyes the wild excitement that filled him; the other, muttering, in a voice that could scarcely be heard in the howling of the gale, his hungry appeal for food. Reaching over, I wiped their faces with my handkerchief, spoke a word of encouragement to them, and then pushed aside the flap of the tent and entered. The view was appalling. Stretched out on the ground in their sleeping-bags, lay Greely, Connell, and Ellison, their pinched and haggard faces, their glassy, sunken eyes, their shaggy beards, and disheveled hair, their wistful appeals for food, making a picture not to be forgotten."—(*The Century*, May, 1885.) Even while perishing, one by one, of starvation, the scientific explorations had been continued, and the results of the expedition have proved of great interest and value.

Among the important measures passed by the Forty-seventh Congress were the following: an apportionment bill, based upon the census of 1880, fixing the number of members in the House of Representatives at 325, an addition of 32 members (the new ratio of representation being 151,912); a bill forbidding the immigration of Chinese into this country for the period of ten years; a civil service bill regulating, by means of a system of examinations, the method of appointments and promotions in the civil service of the United States; and a bill reducing single letter-postage from three cents to two cents per half-ounce.

In the Forty-eighth Congress, the democratic party had a majority of the House of Representatives, thus presaging the coming revolution in the politics of the nation. Among the most noticeable measures that were adopted by this Congress were the following: a bill increasing from one half an ounce to an ounce the weight of a letter to be carried for two cents; and a bill constituting the extensive territory of Alaska (see page 611) into a civil and judicial district, with the temporary seat of government at Sitka; it provided for the appointment of a governor, judge, marshal, and other officers, who are to hold their positions during four years, but authorized no legislative assembly and no congressional delegate from the district.

The appointment, December 8, 1880, of General William B.

Hazen, in place of General A. J. Myer, in charge of the Signal Service of the United States, and, still later, the bitter discussion over the Greeley Expedition, served to call general attention to the increasingly-valuable services of this Bureau. The Weather Department proper was established by Act of Congress in 1870. Its modestly-named "probabilities" have proved so reliable, often over 90 per cent. having been verified, that, in common speech, they are termed "predictions." About two hundred Signal Service stations are scattered over the country, where observations are taken three times per day at the same instant. The results are telegraphed to Washington. The laws of the movements of storms across the continent are now so well understood, that these local observations furnish data for computing the time and the character of the meteorological changes that will be likely to occur in any part of the country.

The excess of the income over the expenditures of the national government, and the vast amount of money consequently under the control of Congress, as well as the constant diminution in the amount of the United States bonds, that formed the basis of the banking system, through the steady reduction of the public debt,—all led to a general feeling that the imposts and excises should be reduced. A Tariff Commission was therefore appointed, May 15, 1882; its report was made to Congress, December 4, 1882; and a bill, embodying many changes in the Tariff, became a law, March 3, 1883. This, however, failed to produce the expected diminution of revenue. The Morrison bill was accordingly reported, February 4, 1884, which proposed a "horizontal reduction" of 20 per cent. in the duty of nearly all imported articles. This measure was defeated in the House, May 6, 1884. Tariff reduction remained accordingly before the country as a political question of pressing importance, and, complicated as it is with the vital issues of protection and free trade, promises long to demand the wisest statesmanship for its solution.

It is generally held that the principle of "rotation in office" was introduced into our political system by President Jackson (p. 419). This policy steadily gained favor until Marcy's maxim, "To the victors belong the spoils," became the commonly-accepted view; and after every important election, the successful party was accustomed to fill even the menial offices of government with its favorites. Under such a system, the qualification of the applicant was of much less importance than the service he had done the party.

Thoughtful men began to see that this method, so unlike that pursued in all ordinary business transactions, was wrong in theory and harmful in practice. The opposition soon found expression through the press, and was crystallized in political platforms. President Hayes, on his accession, promised to make "no dismissal except for cause, and no promotion except for merit." It was not easy to carry out this advanced doctrine. The agitation, however, went on, and civil service reform gradually became a distinct party issue. Associations were formed, and documents distributed, in order to disseminate correct ideas upon this subject. Two distinct claims were made. First, that all appointments to office should be based *solely* on the qualifications of the candidate; and second, that promotion and the tenure of office should depend alone on the faithful and efficient discharge of duty. So persistently were these views pressed by able and far-seeing men, and so surely did the common sense of the masses respond, that, during the campaign of 1884, the aspirants for the Presidency were called upon to express their sentiments with regard to this subject; and in the sequel the election was, as many think, decided by a large number of republicans, known as "Independents" or "Mugwumps," voting for the democratic candidate on the ground that he would be most likely to carry out the principles of the civil service reform movement.

President Arthur's administration proved to be one of those fortunate periods when little history is made, and general quiet and order reign. Between March 1, 1881, and March 1, 1885, the national debt was reduced \$474,033,062.59. The people soon forgot that Arthur was only "an accidental President," like Tyler, Fillmore, and Johnson, and came to honor him for his prudent management of public affairs. An examination of his state papers shows that, in general, he advocated those measures that were beneficial, and opposed those that the event has shown unwise. In a word, he assumed office with modesty, held it with discretion, and left it with dignity.

The democratic party nominated Grover Cleveland of New York, for President, and Thomas A. Hendricks of Indiana, for Vice-President. The republican party selected James G. Blaine of Maine, for President, and John A. Logan of Illinois, for Vice-President. The people's party chose B. F. Butler of Massachusetts, for President, and A. M. West of Mississippi, for Vice-president. The national prohibition party nominated J. P. St. John of

Kansas, for President, and William Daniel of Maryland, for Vice-President. The woman's rights party selected Belva A. Lockwood of the District of Columbia, for President, and Mrs. Dr. Clemence Lozier of New York, for Vice-President. The American political alliance nominated W. L. Ellsworth of Pennsylvania, for President, and Charles H. Waterman of New York, for Vice-President. The candidates of the democratic party were elected, thus insuring the return of that party to the control of the government for the first time since the retirement of James Buchanan, in 1861.

Grover Cleveland was inaugurated March 4, 1885. His life had been comparatively uneventful. He was born in Caldwell, New Jersey, March 18, 1837. Shortly after, his father, a Presbyterian clergyman, moved to Central New York. It was before the days of railroads, and the journey was made by schooner up the Hudson to Albany, and thence by packet on the Erie Canal. Young Grover was pursuing his academic studies when his father's death left him, at sixteen, without a dollar to continue his education. Having made several efforts to earn his living, he

GROVER CLEVELAND.

borrowed \$25, and started west to carve his fortune. At Buffalo, he entered a law office, began on Blackstone at once, and, in 1859, was admitted to the bar. His "marked industry, unpretentious courage, and unswerving honesty" won him rapid promotion. In 1863, he commenced his political life, filling, in succession, the offices of Assistant District-Attorney, Sheriff, and Mayor. Being nominated as the candidate of reform, he was elected, in 1882, as Governor of New York by a majority of 192,854. This remarkable vote gave him a national reputation, and, ere his term expired, he became a candidate for the highest office in the gift of the people.

President Cleveland chose the following as his cabinet advisers: Thomas F. Bayard of Delaware, Secretary of State; Daniel Manning of New York, Secretary of the Treasury; William C. Endi-

cott of Massachusetts, Secretary of War; William C. Whitney of New York, Secretary of the Navy; L. O. C. Lamar of Mississippi, Secretary of the Interior; William F. Vilas of Wisconsin, Postmaster-General; A. H. Garland of Arkansas, Attorney-General.

The long and painful sickness of ex-President Grant during the summer of 1885, aroused general sympathy. His last days were

filled with efforts to harmonize the recently-warring sections of the country; and about his bedside there gathered alike the leaders of the Union and the Confederate armies. He died at Mount McGregor, July 23. At the receipt of the news of his death, flags were put at half-mast, bells were tolled, and symbols of mourning displayed in every part of the United States. The funeral was made a national and military one, the pall-bearers being chosen by President Cleveland, and the ceremonies conducted by General Hancock. The body was buried in Riverside Park, New York City, with a pomp and parade unparalleled in our history. The wonderful effect of General Grant's uniform kindness toward those whom, while in arms, he had fought so relentlessly, was well shown in the following extract from a prominent Southern paper: "The South unites with the North in paying tribute to his memory. He saved the Union. For this triumph—and time has shown it to be a triumph for the South as well as the North—he is entitled to and will receive the grateful tribute of the millions who, in the course of time, will crowd this continent with a hundred imperial States."

CHAPTER XX.

ERA OF REFORM—1885-1900

AMONG the questions which deeply interested the people during recent administrations was the development of the navy. In 1884, Secretary Chandler recommended to Congress the construction of seven modern cruisers annually for ten years. Prior to 1861, our ships were the best in the world, when an Advisory Board was appointed by the President to recommend a plan for strengthening and perfecting the navy. But very little was done until a beginning was made by President Arthur. During this administration the *Chicago*, *Boston*, *Atlanta*, and *Dolphin* were built by John Roach on designs purchased by the before-mentioned advisory board. In 1885, at a critical time in the progress of construction, the department came under the administration of William C. Whitney, Secretary of the Navy. One of his first acts was to object to the acceptance by the Government of the cruiser *Dolphin*, based upon the report of a special board of examiners, consisting of Commander George E. Belknap, Commander R. D. Evans, and Constructing Engineer Herman Winter of the navy, appointed by the Secretary. The Government was compelled to complete the *Chicago*, *Atlanta*, and *Boston* itself, using the yard of Roach and other builders for the purpose. In his annual report the Secretary urged the importance of the further and complete reorganization of the Department which he regarded faulty in method and results. In 1886, the fleet consisted of fourteen turreted monitors, five fourth-rate vessels of small tonnage, and twenty-seven cruisers. In 1889, the Government began to feel the effects of the naval policy of the past and the growth of the navy was apparent. The expenditures per annum were about \$14,000,000.

The army of 1885 consisted of 2,154 officers and 24,755 men, and was sustained at an expense of \$32,700,000. They were dis-

tributed at the frontiers and to watch the Indians. In 1884, the Indians were quiet. The policy instituted by President Hayes of educating Indian children and encouraging the general adoption of the regular industries and habits of civilized people was continued. There had been established by Government eighty-one boarding, seventy-six day, and six industrial schools, on the several reservations. Twenty-three other schools were maintained by churches and private associations.

In 1885, encroachments had been made upon the Indian reservation in the Oklahoma region, Indian Territory, by white settlers, cattle-men and others. This caused an uprising of the Indians which brought the Government to see the necessity of recognizing Indian rights. The army was called upon to drive out the encroachers, which it did without difficulty. The total Indian population at this time, exclusive of Alaska, was about 260,000, and they occupied about 212,466 square miles of territory.

During President Cleveland's administration there was a continual reduction of the public debt, as had been the case in President Arthur's time. There was also a further contraction of national banknote circulation. Congress had failed in 1884 to enact any legislation for the reduction of the revenue, relief of the banks, and stoppage of silver coinage. Other eventful acts of Congress in 1885 were the Edmunds Anti-polygamy Bill, which was aimed to suppress Mormonism; Senator Hoar's Presidential Succession Bill, which provided that in case of removal, death, resignation, or inability, the succession should fall in the following order: Vice-President, Secretary of State, Treasury, War, Attorney-General, Postmaster-General, Secretary of Navy, Secretary of Interior, until such disability be removed or a President be re-elected.

Senator Blair's Foreign Contract Labor Bill was also passed, which prohibited the importation and migration of foreigners and aliens under contract or agreement to perform labor in the United States, the Territories, or the District of Columbia. A curious illustration of the operation of this law occurred later in 1888, when the episcopal church of the Holy Trinity, New York, brought over the Rev. Dr. Wilbur Watkins from England, to fill its vacant pulpit. Friendly objections were made by Mr. John S. Kennedy, president of the St. Andrews society of New York, on the ground that this was skilled labor imported under contract. The case was tried, and the church was obliged to pay a fine for evasion of the law. Mr. Kennedy, however, furnished the money, as his object was to

test the law and, if possible, show its weakness. In 1885, there was also an understanding entered into with Canada over the fisheries question.

In 1886 great financial influence was exerted throughout the country upon bank circulation by repeated calls for 3% bonds. Their number had been reduced from 200,000,000 in 1883, to 138,000,000 in 1885. The last of these bonds was redeemed in 1887. Notwithstanding the reduction, there seems to have been no reason to anticipate an abandonment of the system for many years. In twenty-two years the country has paid off a bonded indebtedness exceeding \$1,380,000,000, and reduced the annual interest charges from over \$150,000,000 to less than \$41,000,000. The condition of the national banks in 1887 deserves notice, in that bonds exceeding by 72.9 per cent. the minimum amount required by law in 1883, were reduced to .72 in 1887.

At this time the Government was in possession of 22,124,563.92 acres of what are known as public lands.

The year 1887 was marked early by the resignation of Daniel Manning, who had made an excellent Secretary of the Treasury. He was in ill-health, and later in the year died. His successor was Charles S. Fairchild, who had been Assistant-Secretary of the Treasury. He retained the office during the remainder of President Cleveland's term. There was another change in the cabinet, due to the appointment of Secretary of the Interior, L. Q. C. Lamar, to the Supreme Court bench, as successor to Justice Wood, deceased. Postmaster-General Vilas was appointed Secretary of Interior, and Don M. Dickinson, of Michigan, was made Postmaster-General. After years of apparently fruitless discussion, Congress passed and the President signed the Inter-State Commerce Bill, February, 1887. The value and importance of this law has increased, and the railroads of the country have gradually adapted themselves to its conditions.

Mr. Cleveland issued an order to return to the States the flags captured from Confederate troops during the Civil War, which are now stored in the War Department in Washington. This order met with serious opposition, particularly from members of the Grand Army of the Republic, and was rescinded. The ground upon which the President withdrew the order was that the flags are public property and under the direct control of Congress.

The centenary celebration of the adoption of our Constitution

of 1787, took place in Philadelphia, September 15th, 16th, and 17th, 1887. The city was given up to the celebration. The whole affair was attended by people from every State and Territory, and indicated strongly the sentiment of veneration which held the people to the acts of the Fathers.

On the 12th of March, 1888, began a violent snow-storm which was unusual for that time of year and remarkable in the annals of history. It lasted for three days, during which the city of New York was practically isolated by rail or telegraph from the rest of the country. Snow was piled up to a depth of from eight to ten or more feet in the heart of the city, and trains were caught on the road so that passengers were housed and unable even to obtain necessary food. It looked for the time as though the city might be visited by famine, so great was the scarcity of food and the impossibility of obtaining further supplies. Many men doing business in the lower parts of the city found it almost impossible to reach their homes in the evening. Instances of strong men losing their lives almost in sight of their homes were not wanting.

The great blizzard of 1888 will long be remembered. It indicated a tendency to atmospheric derangement which led people almost to expect strange and wonderful things. Adding this experience to the earthquake in South Carolina, the discoveries of natural gas in the oil regions, and the abundant rains and strong winds of 1889, it seemed at the time as though the expectation of the people were likely to be realized.

More attention had been paid to Civil Service rules than heretofore, and during the year 15,852 persons were examined for admission in the classified Civil Service of the Government in all its branches.

Some trouble had arisen as to the rights of fishermen on the Canadian coast, and a commission appointed by England and the United States prepared a treaty, which was signed by the President but rejected by the Senate. The President thereupon issued a proclamation asking for greater powers of retaliation, but the Senate refused this on the ground that sufficient powers had already been conferred upon him. The people were much interested in this matter, as it was generally believed that there was a "campaign" object in the discussion. In fact, later, the British Minister, Lord Sackville, was drawn into the indiscretion of answering an anonymous letter addressed by one Charles F. Murchison, of Pomona, California, asking the advice in regard to the fishery

and tariff discussions. As this seemed like proof of English interference, much indignation was felt, and Mr. Cleveland requested the recall of the Minister, and finally sent him his passports.

The issues which became prominent in the Presidential campaign were tariff reform, free trade, and protection. The Republicans represented the latter policy and the Democratic party espoused the cause of tariff reform, as represented in Congress by what was known as the Mills Bill. The Republicans strove to show that the Mills Bill and the President's utterances committed their opponents ultimately to a free-trade policy. Their own position was to first abolish the entire internal revenue system before destroying protective tariff rates.

Civil Service Reform, the Southern problem, the personal record of candidates, and all other questions, including prohibition, dwindled into comparative insignificance.

The election resulted in favor of the Republican candidates, and Benjamin Harrison, President, and Levi P. Morton, Vice-President, were declared elected by 233 college votes to 168.

Benjamin Harrison was born at North Bend, Ohio, August 20, 1833. The lines of his descent was as follows: He was the son of John Scott Harrison, who was the son of William Henry Harrison, ninth President of the United States, who was the son of Benjamin Harrison, a signer of the Declaration of Independence, who was a descendant of Thomas Harrison, a Lieutenant-General under Cromwell, a member of Parliament that signed the death-warrant of Charles I., and was afterward, upon the accession of James II., executed by the Royalists. Pepys relates that he saw the heart of Thomas Harrison removed from his body and passed around the company, possibly the object of contempt and derision. Thus was the new President a representative of a notable line of ancestors.

In 1860, he became the Republican candidate for Reporter of the Supreme Court, to which office he was elected. A year later he presented himself to Governor Morton of Indiana for service in the war and offered to raise a regiment. His offer was accepted, and he bought a military cap, engaged a fifer and drummer, and began recruiting. The regiment was soon filled. Governor Morton made him Colonel, and the 70th Indiana was ready for action. On the field and in the camp he displayed admirable qualities as an officer. He was thoughtful of his men, a good disciplinarian, attentive to his duties, and courageous. He never asked his men to do what he

was unwilling himself to perform. It was always "Come on, boys!" and he led them into action. He was a close student of the art and science of war, as he had been of his books within the secluded walls of college.

His proficiency as an officer and the excellent discipline of his regiment were noticed by his brigade commander. He distinguished himself in the Atlanta campaign and at Beach Tree Creek, where he earned his promotion upon the recommendation of General Joseph Hooker. After the war he entered the law firm of Porter, Harrison & Fishback, in Indianapolis, and always occupied a high position as attorney and counsel in his State. He was elected United States

BENJAMIN HARRISON.

Senator in 1880, and filled out the full term of office. He was a believer in Civil Service Reform, and in 1882 made a strong speech in its favor on the floor of the Senate. He opposed the greenback theory, and on the tariff question, in 1886, he said: "I am sure none of us are so anxious for cheap goods that we would be willing to admit the spoils of the poor into our houses." He spoke in favor of justice to the laboring man, and recommended the building up of the navy, and strongly advocated a fair count at elections in the Southern States.

Thus, by birth, education, and experience, he gave promise of worthily filling the Presidential chair.

Mr. Harrison was inaugurated on the 4th of March, 1889.

His first official act was the announcement of his Cabinet, as follows: James G. Blaine, of Maine, Secretary of State; William Windom, of Minnesota, Secretary of the Treasury; Redfield Proctor, of Vermont, Secretary of War; William H. H. Miller, of Indiana, Attorney-General; John Wanamaker, of Pennsylvania, Postmaster-General; Benjamin F. Tracy, of New York, Secretary of the Navy; John W. Noble, of Missouri, Secretary of the Interior; and Jeremiah M. Rusk, of Wisconsin, Secretary of Agriculture.

Much interest was exhibited in his appointments to minor offices. It was hoped that his attitude toward Civil Service Reform would be eminently friendly. It was found, however, that the Jacksonian principle of "To the victors belong the spoils," was not to be ignored. The number of removals of Democrats and appointments of working Republicans, was as great as professional politicians could have reasonably asked.

One of the early appointments in Mr. Harrison's administration was that of Corporal Tanner as Commissioner of Pensions. His appointment was a signal for general rejoicing in the ranks of the Grand Army of the Republic. He was known to be an ardent advocate of a liberal distribution of the surplus in the Treasury among the boys in blue. To give some idea of the growth of the number of pensioners during a comparatively short period, the following figures are quoted:

In 1884, the pension rules included 322,756 names, and there was expended \$34,456,600; in 1885, there were 345,125 names and \$38,090,985 expended; in 1886, 365,783 names and \$44,708,027 expended; in 1887, there were over 400,000 names on the list and \$52,824,000 expended; in 1888, there were 452,557 names and something over \$80,000,000 expended; and the increase continued under the new Commissioner. The drain upon the surplus became so noticeable that, in the month of August, 1889, there seemed to have been an increase in the public debt instead of a decrease, and the people became alarmed, and the criticisms upon the course of Corporal Tanner became so violent that he was forced to resign. His resignation was handed in and accepted on the 17th of September, 1889.

On the 30th of April, 1889, the centennial of the inauguration of George Washington as President of the United States, under the Constitution of 1787, was celebrated in the City of New York. It was observed with great pomp and ceremony, and for three

days all industrial and mercantile occupations were abandoned in the city, and the people gave themselves up to participation in the pageant.

But we must be contented with only a rapid survey of more recent events.

On the 31st of May, 1889, owing to heavy protracted rains, a dam at the head of Conemaugh Valley, Pennsylvania, gave way. The water rushed down the course of the Conemaugh River like a wall, carrying everything before it—bridges, houses, villages, towns, and cities. So overwhelming and rapid was the flood that people had no time to escape even to the surrounding hills, and thousands of lives were lost. In the town of Johnstown were the Cambria Iron Works and other furnaces. Two railroad lines ran through the valley, the Baltimore and Ohio and the Pennsylvania railroads. The water even overtook trains of cars standing on the track and engulfed them. The number of people drowned exceeded 3,500. The news of the disaster awakened the greatest sympathy throughout the entire country, and millions of dollars were immediately subscribed to relieve the suffering.

During the summer of this year the Territory of Oklahoma, which had long been coveted by the growing populations of the West, was thrown open to the "boomers." It was immediately taken possession of by an advanced guard of people, who lined the border of the territory days before they were admitted, and who afterwards formed themselves into law-abiding communities, elected their officers, and went on about their business after the most approved American fashion.

At about the same time four new States were formed out of rapidly developing territories of the North-west. North Dakota, South Dakota, Montana, and Washington became integral parts of the sisterhood of States.

Among the events of the year, was the death of Father Damien, who sacrificed his life for the lepers in the Sandwich Islands; and of John Ericsson, inventor of the famous Monitor. There was a peaceful revolution in Brazil, by which the Emperor Dom Pedro was deposed and a Republic ushered in.

The question of the rights of the United States in Bering Sea was raised by the capture of some British sealing vessels.

On the invitation of Secretary Blaine, a successful congress looking toward friendly relations with the South American States was held in Washington.

The subject of celebrating Columbus's discovery of America was discussed, and great efforts made by citizens of New York, Chicago, St. Louis, and Washington, to secure from Congress an appropriation for, and the appointment of their own favorite city as the place in which to hold a World's Fair in 1892. The decision was in favor of Chicago.

The amount of money collected by the Treasury from internal revenue in the year 1889 was \$131,000,000; from customs, \$224,000,000; these amounts were larger than ever before collected in any year.

The admirable credit of the country is evinced in the price of $4\frac{1}{2}$ and 4% U. S. bonds which were purchased by the government at a rate of interest to investors of 2.16 *per cent.* The National Banking System grew in popularity. Three thousand, five hundred and sixty-seven National Banks were in active operation October 31, 1890, with a capital of \$660,000,000.

The year 1890 was signalized by the admission of Idaho (Indian for the "Gem of the mountain") and Wyoming ("extensive flat"). These two new States had been territories, carved out of Oregon and the Dakotas. The flag had now 44 stars glistening on its blue field.

The most notable act of Congress in 1890, was the passage of the "McKinley" bill, a Republican party measure, which raised the tariff on certain goods, and struck it off from other articles. While the final apparent effect of the act was to lessen the revenue by about \$66,000,000, yet the increase on a single article was sufficient to furnish ammunition for a very active political campaign in the Fall, which resulted in the election of a Democratic majority to Congress, quite to the surprise of the ruling party. Among the other influences that brought about this change, was the position taken by Speaker Thomas B. Reed, in the House of Representatives, in arbitrarily cutting off debate and counting a quorum. There was, however, a provision in the tariff act that the President should be empowered to reciprocate with countries affording free trade in one American commodities.

A census taken during this year, gave the population of the United States, including Alaska, as 62,750,000. One of the most notable political developments of the year, was the strength of the party known as the Farmers' Alliance, which showed remarkable growth in the West and South, although in the year 1888 it had been absolutely unknown in the East.

Owing to the "free coinage of silver" discussion in Congress, and ruinous competition among railroads in the West, there was almost a financial panic, and a great decline in railroad securities. In order to check this fall in value, a meeting of railroad Presidents was held in New York for the formation of an association to regulate and equalize freight rates, and to prevent, if possible, the competition above mentioned.

General William Tecumseh Sherman died in New York, February 14, 1891. Admiral David Dixon Porter died the day preceding in Washington. Thus two notable figures of the Civil War passed away together.

The Postal Subsidy bill and the International Copyright bill were among the last important acts of the Fifty-first Congress, and gave general satisfaction.

February 5, 1891, a Reciprocity Treaty was concluded with Brazil, providing for the admission free of duty of a number of American products and for a reduction of 25 per cent. in the duty on various other articles; this Treaty was the first one concluded under the Reciprocity clause of the Tariff Act of October 1, 1890, and opened up a valuable market to American farmers and manufacturers.

Among the important acts of the Fifty-first Congress were the Postal Subsidy bill, the International Copyright bill, a bill establishing a Circuit Court of Appeals for the purpose of relieving the pressure on the United States Supreme Court, and a bill providing for a closer inspection of the immigrants landing on our shores, and creating the office of Superintendent of Immigration. All these measures gave general satisfaction.

On the 14th of March, 1891, a serious event occurred in the City of New Orleans. The city had for a long time been terrorized by the acts of a number of outlaws, who were supposed to belong to an Italian secret society known as the Mafia. Murders, murderous assaults, and other deeds of lawlessness were perpetrated without discovery until the Chief of Police, David C. Hennesey, received sufficient evidence to inculcate several members of the this brave and efficient officer, and he was murdered on the night Mafia. These assassins determined to remove from their path of October 15, 1890, in front of his own door. A number of them were indicted, and nine were brought up for trial. Although the evidence against the accused appeared to warrant a verdict of guilty, six of them were acquitted, and the trial of the other three

resulted in a disagreement of the jury. When the result was known there was great indignation, and it was charged that the jury had been influenced by bribes or threats. A public meeting was held in one of the squares, and attended by several thousand persons. After a number of violent speeches had been made, a mob proceeded to storm the jail where the Italians were confined, and an entrance was forced; nine of the imprisoned men were shot down in the prison-yard, and two others were dragged outside and hanged.

The greatest excitement followed. Baron Fava, the Italian Minister at Washington, solemnly protested against the outrage, and made a formal demand for reparation. Correspondence ensued between Mr. Blaine and Governor Nichols, of Louisiana, relative to the affair, but was not productive of any satisfactory result. Baron Fava reiterated his demand for reparation, and insisted that Mr. Blaine should promise to have the leaders of the mob brought to trial, and also to pay an indemnity to the families of the victims. Mr. Blaine had no power under the Constitution to make such a promise, and the Italian Government, not appreciating the distinction between Federal and State Governments, became incensed at the failure of our Government to comply with their demands, and recalled Baron Fava on the 21st of March. For the remainder of the year communications between the two governments passed only through the Italian Chargé d'Affaires. After much correspondence the difficulty was finally settled by the United States Government agreeing to pay \$25,000 to the families of the murdered Italians. The Minister, Baron Fava, thereupon returned to Washington.

The first session of the Fifty-second Congress began December 7th. Charles F. Crisp, of Georgia, was elected Speaker of the House of Representatives. The Chinese Exclusion Act, and the act authorizing the Secretary of the Treasury to grant American registers to the steamships City of New York and City of Paris, were the most important measures passed in this session.

Germany removed the prohibition of the importation of American hogs and hog products on September 3, 1891. Denmark did likewise on September 8th, Italy on October 19th, France on November 16th, and Austria December 9th, 1891. Reciprocity treaties were concluded during the year with San Domingo, August 1st, and Salvador, December 31st, 1891. An extradition treaty between France and the United States was signed at Paris

March 26, 1892. The Senate ratified the Behring Sea arbitration treaty March 29th.

The Republican National Convention met at Minneapolis June 7th. President Harrison was renominated, receiving 535 votes against 182 for Mr. Blaine. Whitelaw Reid, of New York, was unanimously nominated for Vice-President. The Republican platform reaffirmed the doctrine of Protection to American industries, and favored Federal supervision of elections.

The Democratic National Convention assembled at Chicago June 21st. Grover Cleveland was nominated for President, receiving 617 votes, against 114 for Mr. Hill, and 103 for Governor Boies. Adlai E. Stevenson, of Illinois, was nominated for Vice-President. The Democratic platform opposed high Protection, and declared that the Government had no constitutional power to impose and collect taxes, except for purposes of revenue. The platform also cast reflection on the Reciprocity policy, and denounced Federal supervision of elections. The issues between the two great political parties were thus very clearly defined.

The People's party, an offshoot of the Farmers' Alliance movement of two years previous, met in convention at Omaha, July 2d, and nominated James B. Weaver, of Iowa, for President, and James G. Field, of Virginia, for Vice-President. The platform of the People's party advocated the free and unlimited coinage of silver, and of gold, government ownership of railways, and an income tax.

The Prohibition party nominated John Bidwell, of California, for President, and James B. Cranfield, of Texas, for Vice-President.

The foreign trade of the United States for the year ending June 30, 1892, reached the remarkable figure of \$1,859,680,210, the largest total foreign trade in any year of the history of the country.

The four hundredth anniversary of the discovery of America by Columbus was celebrated in New York City by appropriate demonstrations, from the 10th to the 14th of October. The Naval Parade, on the 11th of October, and the Military Parade, on the following day, were exceptionally fine. An immense number of visitors from all parts of the country were in the city during the celebration, and business was almost totally suspended. The anniversary was also celebrated in most of the cities of the Union.

The campaign was carried through without excitement. The issues were thoroughly discussed, but all personalities regarding candidates were avoided.

The Presidential Election, November 8th, resulted in a victory

for the Democratic candidates, Cleveland and Stevenson, who received 277 votes in the Electoral College against 145 votes for the Republican, and 22 votes for the Populist, or People's party candidates. The popular vote was, Cleveland, 5,556,533; Harrison, 5,175,577; Weaver, 1,122,045; Bidwell, 279,191. The State of Ohio, of which William McKinley, the champion of a protective tariff, was Governor, gave Harrison only a small majority.

Reciprocity treaties were concluded during the year with Germany and England, Feb. 1, 1892, applicable as to England to British Guiana, Trinidad, Barbados, Tobago, Jamaica and the Leeward and Windward Islands, excepting the Island of Grenada; also with Nicaragua, March 12, 1892; Austria-Hungary, May 26, 1892; Spain (applicable to Cuba and Porto Rico only), June 28, 1892.

JAMES GILLESPIE BLAINE.

Ex-Secretary of State James G. Blaine died at Washington, D. C., January 27th, after a protracted illness. The career of this popular statesman and patriot forms an important part of the history of the country, and the value of his services to the American Republic was in many respects notable. His brilliant and popular qualities never showed more conspicuously than in the adjustment of the difficulties with Italy and Chile. To Mr. Blaine was largely due the peaceful settlement of both disputes without

sacrifice of National honor or dignity. His death was generally regretted by all classes, and his funeral, which took place at Washington, January 30th, was attended by the most prominent men of the country, irrespective of party.

A revolution in Hawaii, January 28th, resulted in the dethronement of Queen Liliuokalani. A provisional government was established under American protection. The American flag was raised February 1st. A treaty having for its object the permanent annexation of Hawaii to the United States was introduced into the United States Senate.

On Washington's Birthday, President Harrison assisted personally in raising the American flag over the Steamship New York,

thus inaugurating the new American Trans-Atlantic Line. The New York was the first foreign-built steamer to be admitted to American registry, under the provisions of the Act of May 10, 1892.

Mr. Cleveland was inaugurated March 4, 1893. He appointed the following as his advisers and members of his Cabinet: Walter Q. Gresham, of Illinois, Secretary of State; John G. Carlisle, of Kentucky, Secretary of the Treasury; Richard Olney, of Massachusetts, Attorney-General; Daniel S. Lamont, of New York, Secretary of War; Wilson S. Bissell, of New York, Postmaster-General; Hillary A. Herbert, of Alabama, Secretary of the Navy; Hoke Smith, of Georgia, Secretary of the Interior; Julius Sterling Morton, of Nebraska, Secretary of Agriculture.

The composition of the two Houses of Congress on the 4th of March was: Senate—Democrats, 43; Republicans, 39; People's party, 1; Farmers' Alliance, 1; Independent, 1; and three seats vacant. House of Representatives—Democrats, 217; Republicans, 128; People's party, 8, and two seats vacant.

On March 10th, Boston was visited for the third time in its history by a disastrous fire, which destroyed property to the value of nearly \$5,000,000; two persons were killed and many injured.

Owing to serious depression in financial and business circles following the great panic of 1893, President Cleveland called an extra session of Congress to convene August 7th to take such action as would tend to relieve the situation. His message to Congress was brief but strong in tone and won the approval of those of both parties who favored a sound currency. He attributed the cause of trouble to the over-purchase of silver (in pursuance of the act contained in the now famous Sherman Bill), and to its greatly depreciated value, and urged the repeal of that measure.

Never in the history of the country had there been such general prostration and consequent suffering. Stocks fell from 50 to 75 points in a few weeks, breadstuffs were sold at the lowest prices ever known, thereby causing serious loss to the farmer. Failures were numerous in all branches. Banks, depleted of their deposits and available cash, were forced to suspend; manufacturers, fearing no market for their products, either curtailed their output or closed down entirely; merchants, unable to secure accommodations at the banks, became embarrassed and were obliged to assign. Hundreds of thousands of men and women were thrown out of employment. Apprehension and distrust seemed to pervade all sections of the country, and relief was hardly looked for until definite action

should be taken on the silver question, and the policy of the Administration known as to the course it would take upon the tariff.

The project of holding a World's Fair to commemorate the four hundredth anniversary of the discovery of America by Columbus assumed definite shape when Congress, on February 25, 1890, selected Chicago as the place for holding the Fair, provided that the city should furnish a suitable site and a sum of not less than \$10,000,000 for expenses. On April 25th the World's Columbian Commission was created by act of Congress.

On December 24, 1890, President Harrison issued a proclamation, officially inviting all the nations of the earth to take part in the Exposition. On October 21, 1892, the Exposition grounds and buildings were officially dedicated by Vice-President Morton on behalf of President Harrison. The Exposition was opened with appropriate ceremonies May 1, 1893, to remain open until October 30th. President Cleveland and Vice-President Stevenson, in company with the Duke of Veragua, Columbus' lineal descendant, and other distinguished guests sat upon the platform erected near the Administration Building, and faced a multitude typically American in its enthusiasm and good nature. The preliminary exercises consisted of a "Columbia March" by an orchestra of six hundred musicians under Theodore Thomas; a prayer by the Rev. Dr. W. H. Milburn, the blind chaplain of the United States Senate, and the reading of a poem written by Mr. W. D. Crofut. The presentation address, by Director-General Davis, was a review of the work of the many departments of the management, with a word of well-earned praise for the activity and achievements of each. President Cleveland spoke briefly. "We have built," he said, "these splendid edifices, but we have also built the magnificent fabric of a popular government, whose grand proportions are seen throughout the world. We have made and here gathered together objects of use and beauty, the products of American skill and invention. We have also made men who rule themselves." And as he uttered a final sentence of invocation to future achievement and universal brotherhood, he touched a golden electric key, and instantly the great engine began to revolve, the beautiful electric fountains threw their streams high in the air, the banners of the nations of the world were unfurled, a thousand steam whistles sent forth their clamor, the guns of the war-vessels were heard, and, with a long-continued shout from the multitude, the great Exposition began its six months' life.

The opening of the Fair was preceded by a grand naval review, held at New York April 27th. It was the grandest review of the kind ever held in American waters. Thirteen American and twenty-two foreign vessels took part in it. The fleet of twenty-two foreign war-ships consisted of four British, three Russian, three French, two Italian, three Spanish, two German, three Brazilian, one Dutch and one Chilian. The entire fleet, American and foreign, was under the command of Rear-Admiral Gherardi, and was reviewed by President Cleveland, who was accompanied by his entire Cabinet and by the Diplomatic Corps, on the official yacht *Dolphin*. An appropriation of \$300,000 was made by Congress for the purpose of meeting the expenses of the review. On the day following, the officers and marines from the different vessels, escorted by the National Guard of New York and Brooklyn, paraded in procession through the streets of the city, and it was a pageant never to be forgotten by those who witnessed it, affording opportunity, as it did, to contrast the personnel of the different nations as represented by these sunburnt and dark-hued sons. It was estimated that there were at least 12,000 men in line.

The expenditure for the construction of buildings and for the general and operating expenses of the Fair amounted to \$25,500,000 in round numbers. The site selected was Jackson Park, and, with Midway Plaisance, covered an area of about 660 acres of ground. Jackson Park has a frontage of nearly one mile and a half on Lake Michigan, the second largest of the great lakes. The total appropriation made by the United States Government and by the governments of the different States and Territories was:

United States Government	\$1,500,000
States and Territories	3,876,000

Congress, by an act approved August 5, 1892, provided for the coinage of 5,000,000 memorial half-dollars in aid of the World's Fair. The total appropriations by foreign countries were \$5,400,000. Nearly all the nations of the globe and their colonies participated.

The total receipts, 1893, were \$28,151,168.75. The balance sheet presented in the final report showed a profit of \$1,850,000.

The World's Congress Auxiliary in connection with the World's Fair had for its object the discussion of all subjects affecting the well-being of the human race, and the subjects which it dealt with were divided under seventeen different headings, to wit: Art, Commerce, Finance, Education, Engineering, Government, Labor,

Literature, Medicine, Moral and Social Reform, Music, Public Press, Religion, Science and Philosophy, Temperance, Sunday Rest, Woman's Progress. The meetings of the Congress were held in the permanent Memorial Art Building, located on the shore of Lake Michigan in the heart of the city of Chicago. Noted men from all countries took part in the meetings of the Congress, and the many vexed questions, social, moral, political and economic, the solution of which puzzles the wisest men, were discussed and debated on by the ablest writers and thinkers of the age. The city of Chicago itself, the second city of the Union, would have been, to many visitors, a great attraction even without the World's Fair.

Later years brought the Louisiana Purchase Exposition of 1904, and the Lewis and Clark Exposition of 1905, which to many revived memories of the Columbian celebration of ten years earlier.

In 1894 hard times began to manifest themselves throughout the country, and much uneasiness was felt by all classes. Money became scarce, and, first in one city and then in another, came currency famines and currency panics. The excitement took political form and began to affect the old parties. There had been a long-continued and steady fall in the price of silver, and this to many people had brought about the unhealthful state of trade and commerce which prevailed. In both the Republican and Democratic parties prominent men advocated the enactment of laws for the free and unlimited coinage of silver at the rate of 16 to 1 as compared with gold, while at the very opposite extreme other leaders urged with equal power the establishment of the national finances upon a purely gold basis.

The banking and mercantile world became deeply interested in these matters, and began to take an active part on behalf of a currency based exclusively on gold. The conflict which began in this manner grew fiercer as the weeks rolled by, and became a paramount issue in the elections of both 1896 and 1900. Commercial disturbances were increased by tariff legislation at Washington. President Grover Cleveland represented a political school which favored a reduction in the tariff or a tariff for revenue only. His views were accepted by the Democratic party, and were expressed in what is known as the Wilson Tariff Bill, passed in the session of Congress (1893-1894), becoming law in August, 1894.

All tariff changes are accompanied by more or less disturbance, but in time trade forces usually adjust themselves to new conditions, and in the case of the Wilson Tariff Bill the country might in due course have grown accustomed to its provisions. Coming, however, at a time when the financial and political world was disturbed if not convulsed by monetary issues, it served to increase the discontent and to foment the bitterness of political feeling. Matters were made worse by the steady flow of gold from this country abroad. A world's crisis seemed to be on hand, and the great European powers made what seemed to be special efforts to increase their stock of the precious yellow metal at the expense of the United States. So rapid was the drain that the United States Treasury was obliged to issue bonds to the amount of \$100,000,000 to provide sufficient funds to meet its obligations.

The first practical evidence of the political unrest occurred in the fall elections, when in New York City William L. Strong was elected mayor, being the first Republican in that office for thirty years. In Brooklyn a powerful Democratic ring was overthrown, while the State at large went overwhelmingly Republican, electing Levi P. Morton Governor, and defeating Senator David Bennett Hill, who was the Democratic candidate.

Of special importance, at this election, was the approval by the voters of the extension of New York City to include Brooklyn, Richmond, Queens, and Bronx boroughs, making it the second largest city of the world.

This political movement swept the entire country. In the Fifty-third Congress there had been 219 Democrats, 127 Republicans, and 10 Populists. In the Fifty-fourth Congress, which was elected in 1894, there were 104 Democrats, 244 Republicans, and 7 Populists. The relation of the two great parties had been reversed by the people, a circumstance which tended to augment the discussions going on.

While the elections set the seal of public disapproval upon the changes which had been made in the tariff, they did not allay the excitement incident to the currency question. This increased in all parts of the land. People now began to quote the astonishing declaration of Governor Waite, of Colorado, "that the people of his State would ride in blood to their horses' bridles rather than submit to the dictation of Wall Street on the silver question."

So frequently was the figure quoted that it gave rise to a new soubriquet to that official, who became known as "Bloody Bridles

Waite." Another phrase struck out in the heat of the controversy was "Gold Bug," based upon Poe's famous story by that name. It caught the popular fancy and was adopted both by the foes and friends of gold coinage, the latter wearing gilded beetles in their coat lapels as an insignia of their financial belief.

The following year (1895) continued the conditions of 1894. While trade in general improved perceptibly, there was still great suffering throughout the country and in the agricultural districts; there was universal complaint in regard to prices, railway charges, and political conditions. As a change in the tariff was now imminent, the mercantile world was uneasy, not knowing what course Congress would take. There was a general atmosphere of unrest, which was utilized by political leaders to concentrate attention and discussion on the silver question.

In December occurred what is known as the Venezuela incident—an event which, at the time, threatened to plunge the country into one of the great wars of history. There had been for a long period differences between the governments of Venezuela and Great Britain respecting the boundary line of the former republic and British Guiana. The disparity in power between the two countries made the South American commonwealth feel that its cause was hopeless. It therefore appealed to the United States for intervention or the exercise of its friendly offices under the policy known as the Monroe Doctrine, which pledges the United States to oppose any encroachment by a European power upon the territories of North and South America.

The cabinet at Washington suggested arbitration to the British foreign office as early as February, 1895. Lord Salisbury, who was then Prime Minister, pursued a dilatory policy in replying until November of that year, when he sent a polite refusal to entertain the proposition. President Cleveland thereupon transmitted a special message to Congress urging the appointment of an ex-parte Commission, which should investigate the matter and report upon the facts and merits of the case. His message was so direct and free from diplomatic conventionality that it startled the civilized world. Statesmen of the old school considered it as tantamount to a declaration of war, and every bourse in the new and old world was disturbed by the announcement. The effect was greatest in Wall Street and Lombard Street, where prices fell in every direction, and many failures were the consequence.

The action of the President brought to light many things which

had been suspected but not clearly noticed before. The European press took the matter up with a savage joy, which showed that Great Britain had no friends among the Great Powers. In the United States there was an outburst of delight from the classes known as Anglophobes, of whom the most conspicuous were Irish citizens, who were members of the organization known as "The Land League." The action of Congress showed that Cleveland had gauged American beliefs with great accuracy. Congress unanimously passed a bill authorizing the appointment of the commission, and appropriating enough money to enable it to perform its work in a manner worthy of the gravity of the occasion. It was evident to everybody that the Monroe Doctrine represented the belief of the entire American people, and that in the support of that doctrine they were willing, if need be, to appeal to the sword with the strongest sea power on the globe.

During this year the revolutionary forces in Cuba made noteworthy headway; the insurgents became masters of large tracts of territory, and compelled the Spaniards to establish a complicated system of garrisons, blockhouses, and barbed wire fences in many of the more important districts of the island. The sympathies of North and South America were freely extended to the islanders who were struggling for liberty, and a steady stream of money, arms, and munitions of war from both continents enabled the patriots to keep up the unequal contest and to make more formidable movements than ever before. This struggle had many curious features.

The Cubans had a moving capital, which traveled from place to place with their armies upon their native soil. They had a permanent capital in Beaver Street, New York City, where the Junta, or Provisional Government, held continuous session. The Spanish Government had a system of espionage, and their spies were in turn watched by Cuban spies. In this way Beaver Street for several years was the center of a drama which descended into farce and often rose into tragedy.

Whenever a vessel was to be dispatched for Cuba with arms for the insurgents, the Junta would make a great ado about the matter, and would hire different vessels along the coast to pretend to engage upon the trip. These would be immediately put under surveillance by the Spaniards, who would invoke the courts against the supposed fillibusters, and even prevail upon the State department to interfere in the proceedings. In the meantime, the real smuggler would set sail from some out-of-the-way place, and before the deception

was discovered the arms would be landed in Santiago or Puerto Principe.

On one occasion, a cargo of rifles sent to the insurgents was concealed in rough logs which had been hollowed for the purpose. The thing was done so boldly that the Spanish officials, who passed the cargo when it reached Cuban waters, never knew of the deception until two years afterwards. A hundred revolvers were conveyed to the insurgents upon a steamer which stopped at several ports occupied by Spanish garrisons. They were dipped in heavy fats in New York, placed in two bags, to each of which was attached a long, strong cord which terminated in a wooden float, and were thrown overboard at a point agreed upon by the New York Junta and their friends at home. One bag remained in the water for several days, but, thanks to the preliminary treatment, every weapon was found to be in perfect order when rescued from the deep.

The year 1896 will be remembered as one of the great political contests in American history. Opinion respecting monetary matters had begun to crystallize in every State. The eastern and central communities were shaping their courses by the star of the yellow metal, while those of the South and West followed its white rival. Political campaigning was begun early in the year, and the machinery of the parties began operations in the spring. The Republicans met in National Convention on June 18, in St. Louis, and nominated William McKinley of Ohio for President, and Garret A. Hobart of New Jersey for Vice-President.

There was a fight in the party councils respecting the attitudes to be observed in regard to the monetary issue. Some of the leaders favored an outspoken declaration in favor of gold monometallism; others, of weaker nature, a compromise in the matter, or a declaration for gold with a recognition of silver. Not a few in the convention were strong silverites, and a considerable body advocated the policy of *laissez faire*. With so many conflicting views, there was a struggle, in which considerable feeling was displayed between the East and the West. The final outcome was a platform which declared for a gold standard, a protective tariff, and resolutions of sympathy for the Cuban revolutionaries.

On July 10 the Democrats held their National Convention at Chicago, and nominated William Jennings Bryan of Nebraska for President, and Arthur Sewall of Maine for Vice-President. Here there was a similar struggle, but the forces of silver were so strong that they swept all opposition before them. Bryan's nomination

was a surprise, and seems to have been the result of a picturesque oration which he delivered, and which won the hearts of all who heard it. In this address he used several striking rhetorical figures which culminated in a skillful scriptural parody, wherein he referred to labor as being crowned with a crown of thorns and crucified on a cross of gold.

The platform represented many elements. Its chief plank was in favor of the "free and unlimited coinage of silver." Other planks opposed the protective tariff, urged an income tax, advocated the restriction of immigration, denounced the Supreme Court, and advocated the abolition of the National banks.

The People's party met in National Convention July 24, and nominated Bryan for President and Thomas Watson of Georgia for Vice-President. At the same time an organization calling itself the Bimetallists, or Silverites, held a National Convention at St. Louis and nominated Bryan and Sewall. Democrats who believed in gold coinage and were dissatisfied with the course events had taken, now organized and held a National Convention at Indianapolis, September 3, nominating General John M. Palmer of Illinois for President, and General Simon Buckner of Kentucky for Vice-President.

The campaign was conducted more like a great war than a simple electioneering affair. The land was flooded with orators and the mails with partisan literature. Every known advertising device was called into use by political managers, and toward election day processions, serenades, jubilees, and parades were universal. The most romantic feature of the campaign was the meteoric course of the Democratic candidate, Bryan. Like a general, he seemed to live in his boots. He delivered more speeches during his electioneering than had ever been done before. He traveled more miles, spoke to more people, and performed more work, than had ever been known under similar circumstances. His extraordinary endurance and grim determination won the admiration of his foes, but not their votes.

The result of the election was a more sweeping victory for McKinley than had been won by any presidential candidate for many years. His plurality was over 600,000, and in the electoral college he had 271 votes to 176 for Bryan.

William McKinley, the twenty-fifth President of the United States, was born at Niles, Trumbull County, Ohio, January 29, 1843. He was of Scotch-Irish ancestry, the family having originally come from Scotland and settled in northern Ireland. Educated in

was admitted to the bar, and in 1869 elected Prosecuting Attorney of Stark County. In 1876 he was elected to Congress, where he served his constituents for fourteen years.

He was elected Governor in 1891, and two years afterward was re-elected by a plurality of 80,000. In 1892 he was a delegate-at-large from Ohio pledged to support the renomination of Benjamin Harrison. Chairman of the convention, he had it under complete control. There was a strong feeling against the renomination of the Ex-President, and a majority of the delegates were in favor of

WILLIAM MCKINLEY.

McKinley. They entreated him to permit his name to be used as a candidate, but, to his credit, he declined, stating that his own honor was greater than that of the presidential nomination. Nevertheless, 182 votes were cast for him for President.

No man brought to the presidential chair better intentions or a sweeter disposition. Senator Hanna styled him "Prosperity's Advance Agent," and the epigrammatic nickname stuck to him ever after.

With the election of McKinley came a revival of business prosperity which lasted for many years. Exports, which in 1896 had been \$882,000,000, leaped to \$1,050,000,000, the largest amount in the history of the American trade. Imports fell from \$779,000,000 to \$764,000,000. The exports of gold and silver fell from \$148,000,000 to \$102,000,000, while their imports rose from \$80,000,000 to \$115,000,000. The total commerce, including the precious metals, rose

from \$1,889,000,000 to \$2,031,000,000. Similar advances were recorded in the production of coal, iron, steel, copper, and manufactured goods. Business failures decreased in number, while the amounts of money expended in charitable and philanthropic work showed a handsome increase. There was a decline in immigration from Europe, but an increase from Canada and Mexico. Notable activity occurred in the mining-camps, and excitement was created by the confirmation of reports respecting enormous deposits of gold in the Klondike territory and Alaska.

The latter brought a stream of fortune-seekers from all parts of the world, and besides developing the Arctic districts mentioned, aided materially the prosperity of the new State of Washington, and more especially the cities of Seattle and Tacoma. To a smaller extent, the scenes in California in 1849 were repeated in Alaska in 1897. The Klondike discovery was to be followed by similar and perhaps more important consequences. Among its immediate results were the exploration and mapping of what had largely been an unknown territory, the changing of a Polar wilderness into a civilized community, a notable development of the steamship industry on the Pacific coast, and a steadily growing demand for mining machinery and supplies.

The Klondike discovery did not affect the nation as did its California counterpart. The latter showed the country to possess gold-mines and made it independent of the rest of the world in regard to the yellow metal; but as this had been discovered in large quantities in eleven States and Territories between 1849 and 1897, the Klondike revelation simply added to what was already a vast industry. Its chief importance was the practical answer which it made to the political argument that the supply of gold was growing smaller each year.

While the output of gold from the new fields was not so large as had been predicted by sanguine prospectors, it nevertheless was sufficient to raise the output of the precious metal in North America to a noteworthy extent. Beyond this, it induced the movement of capital from the East to the extreme West, and to an exploitation of Washington and Oregon of the greatest benefit to those two commonwealths. The effect was not ephemeral; it has grown steadily ever since, and promises to make the States in question very powerful communities in the Republic.

The experiences of the Klondike explorers in this year make a romance stranger than any novel. To carry their outfits from the

sea over the frozen ravines and mountains which fringe the Alaskan coast demanded strength and endurance of the heroic type. The cold at times was so terrible that mercury became a solid white metal like silver, and whisky and brandy solidified into golden crystals. Eskimo dogs were converted into draught animals for mining purposes, and would-be miners in temperate zones were soon compelled by necessity to adopt the diet of the Samoyed. They found that with the thermometer below zero tallow candles were good eating and raw lard a delicious dish. One man at Dawson City lived a week upon the suet he had brought with him to grease his boots, and another adventurer who had started a small grocery store used for his breakfast blocks of olive-oil which had been frozen solid.

Yet the awful suffering affected men in an unexpected way. Where the mining-camps in warmer countries had always been noted for lawlessness and disorder, these in the land of perpetual winter were remarkably quiet and well-behaved. The number of crimes were only a small fraction of what they were in the early mining days of California.

The year 1897 was also memorable for the consolidation of New York and its neighborhood into an imperial city. The new metropolis contained 306 square miles, with a population of 3,500,000, making it the second largest city in numbers and the first in wealth upon the globe. The city grew rapidly thereafter. In 1914 the population was estimated at 5,300,000. At the first election, Robert A. Van Wyck was made mayor of the Greater City for a term of four years.

The most important political action of the year was the repeal of the Wilson Tariff Bill, which was said to be for revenue only, and the passage of the Dingley Protective Tariff. The latter measure encountered almost no opposition, many of the Democratic members of Congress approving of the provisions, while others, who objected to certain of these, preferred them to the existing laws on the subject.

The rebellion in Cuba continued with unabated strength. The insurgent forces carried on the war upon a Fabian basis, and seldom gave battle to the Spanish army. They kept up a guerilla combat, which tried the patience of their foes in every conceivable way.

In this year it is estimated that the population of the island fell off at least 150,000. In addition to their appeal for liberty, the Cubans now made an appeal for bread. So terrible were their sufferings that charitable movements were organized in the United States which established agencies in Cuba for the alleviation of the

distress. In May, 1897, Congress appropriated \$50,000 to be expended by American consuls in Cuba for the relief of starving American citizens upon that island. In many of the cities fairs were held for the benefit of the Cuban poor, irrespective of the struggle, and similar action was taken in Great Britain, Canada, Mexico, and Venezuela.

Before the Cuban rebellion large amounts of American capital had been invested in that island. There had grown up a wealthy Cuban-American population, which formed a connecting tie between Havana and the great cities of the Union. The war ruined these investments and reduced many of their owners to absolute poverty. It was estimated that the injury to American property alone on the island under the reconcentrado system was \$10,000,000, and to Cuban property \$500,000,000. There were other losses upon as great a scale. Trade, which had been large and profitable, dwindled down to almost nothing. The sugar crop fell from \$70,000,000 to \$14,000,000; tobacco, from \$15,000,000 to \$3,000,000; and the cattle industry had vanished. Cuban exports to the United States dropped from \$75,000,000 to \$1,000,000, while American exports to Cuba diminished from \$30,000,000 to \$7,000,000.

These causes acting together aroused a universal desire on the part of the American nation to intervene and either compel Spain to make Cuba independent or else grant it autonomy under which there would be an end to the iniquitous system of government. Cuban-American leagues were formed through all parts of the nation, and general sentiment was reflected in the press, of which at least ninety-five per cent. was in favor of Cuba Libre. In the latter part of the year the Spanish Government became alarmed at the attitude not only of the United States but of the civilized world. In every capital there was a note of discontent and a feeling that America should and would interfere in the matter.

The Spanish diplomats did their best to offset the feeling, but with poor success. The Spanish politicians, either through ignorance or arrogance, made capital by denouncing the "American hog," as they called the people of the Republic, and their papers took delight in lampooning, vilifying, and caricaturing everything American. That they saw the possibility, if not probability, of war with the United States was evident from the beginning of 1897, at which time the Spanish press began a course of articles demonstrating, to their own satisfaction, that the American army was a paper creation, its navy worthless, and its people so bound up in the

worship of the "almighty dollar" as to possess neither courage, martial skill, nor knowledge.

One Madrid newspaper published a delicious plan of campaign by which a Spanish army was to enter the United States on the southern coast via Havana and to capture every city from New Orleans to New York. The attitude of both Spanish press and people would have been pitiable had it not been so ridiculous.

In December, 1897, there was a lull in the storm. The Spanish Government granted a quasi-autonomy to Cuba, which apparently pacified many hostile elements. The war sentiment in the United States died down, and the excitement in Spain decreased notably. In honor of the better feeling the navy department of each nation sent one of its best warships to make a friendly visit upon the other. From Spain the cruiser Vizcaya came to New York as an official visitor, while on January 25 the U. S. battleship Maine entered the harbor of Havana upon a similar mission. The officers and authorities exchanged calls, and in the mess-room of the Maine toasts were drunk in the hope of continued peace and friendship between the two nations. But somewhere there was deep hatred of the United States, and there were men, whose identity has never been proved, wicked enough to express that hatred in one of the most dastardly crimes in the history of civilization. On the night of February 15, 1898, the Maine was blown up while at anchor in Havana harbor, and while nearly all the officers and crew were asleep on board. Two officers and two hundred and sixty-four members of the crew lost their lives by the explosion.

The horror of the event produced a shock throughout the Old World and the New. Nearly every European government sent messages of sympathy, and the Spanish Government went out of its way to signify its condolence and regret. From every part of the United States came a cry for vengeance, and on the following day a clever newspaper man in New York coined the slogan, "Remember the Maine!" which in ninety-six hours was taken up by every city, town, and hamlet in the Union.

The American Government acted with great calmness, appointing a court of inquiry to investigate and report upon the catastrophe. The Spanish Government appointed a similar board, and the two tribunals set to work with a seriousness befitting the occasion.

While the court of inquiry was at work, both governments saw the gravity of the situation and commenced to make preparations for the impending conflict. Spain began to send warships to Cuba,

via the Canary Islands, and to move troops from the interior to the coast ports. The United States pursued similar tactics, concentrating the North Atlantic Squadron at the Dry Tortugas and shipping men by rail from the western and central posts to the Atlantic seaports. Both nations instructed their agents in other lands to purchase warships, guns, and ammunition.

Here America had the advantage on account of its wealth and unlimited credit. At all the navy-yards extra gangs of men were set to work, and in several there were night shifts, making the labor continuous. Early in March Congress appropriated \$50,000,000 for the national defense. It is worthy of note that in the House of Representatives there was not one vote in the negative, while in the Senate, of the seventy-six Senators present every one voted aye. This unanimity should be registered in red letters in the history of the nation.

The report of the court of inquiry was presented to Congress on March 28, and after reviewing the evidence, submitted the significant conclusion, among others, that the disaster was occasioned by the explosion of a mine under the ship on the port side. As the only mines in the harbor were those belonging to the Spanish Government, and controlled by Spanish officers in the garrison of that city, the report was practically an indictment of Spain, charging it with the commission of the offense, but not specifying whether it was deliberate or accidental.

The report was transmitted to Congress by President McKinley with a brief message. This state document surprised the world by its conservatism and judicial tone. It displeased the Jingoës of the country, whose wrath was now turned against the Executive. He was abused by several hundred newspapers for pusillanimity and a peace-at-any-price policy. This was followed by a demand upon the Spanish Government for reparation for the loss of the *Maine*, and also for an armistice in Cuba. Spain promptly refused to give either indemnity or apology for the loss of the *Maine*, and employed diplomatic dilatory tactics in regard to Cuba.

Instructions were now sent to all consuls and consular agents in Cuba to join Consul-General Fitz-Hugh Lee in Havana. This was but one step from war, and both countries looked forward to immediate hostilities. In the meantime the Spanish Government had begun to realize the danger which threatened their country. They were convinced now that the United States would fight, and they were half convinced that an appeal to arms would result in loss to

Spain. They therefore endeavored to avert the conflict of arms by diplomatic means, and appealed to the Great Powers for a friendly intervention.

They had every reason to believe that their endeavor would be successful. At least twice before in the history of Cuba trouble had been avoided through the diplomatic offices of Europe, and the Madrid Cabinet were of the opinion that the same thing could be brought about at the present juncture. The first move looked as if their calculations had a firm basis. On April 8 the envoys of Great Britain, France, Germany, Russia, Italy, and Austro-Hungary called upon President McKinley in a body, and on behalf of their respective governments made a strong appeal for peace and further negotiations.

President McKinley replied, acknowledging the good-will of the six Powers, and sharing the hope that the outcome of the situation might be the maintenance of peace. He made it clear that the United States intended to act irrespective of the Great Powers.

The Spanish diplomats now endeavored to have the Powers make a more formidable move, but here disappointment met them almost at the outset. Germany refused to intervene, which of course meant that France would be more or less tied in the premises. Russia declined, which acted as a counterbalance to any intended action on the part of Great Britain. Austria-Hungary was insignificant as a sea power, so that its action amounted to but little, while Italy, on account of its alliance with Germany, found itself more or less bound by the action of the latter. They turned to the Pope, who, with his customary love of peace, made a fervent appeal to the President through Archbishop Ireland; but this was of no more avail than the other efforts.

On April 11 the President sent a message to Congress, and with it the reports of the consuls in Cuba respecting conditions in that island. He asked from Congress the authority to take measures to secure a final termination of hostilities between Spain and Cuba, and to obtain in the latter the establishment of a stable government. On April 19, Congress passed a joint resolution demanding that Spain withdraw at once from Cuba, and authorizing the President to use the military and naval power of the United States to enforce the demand. The resolution was approved by the President on the following day. Diplomatic relations were at once broken off between the two countries, and on April 22 this country began actual warfare by blockading Havana and other Cuban ports.

The American warships were organized into three squadrons. The first, or Patrol Squadron, under the command of Commodore J. A. Howell, was established to protect the seaports of the North Atlantic coast. The second, or Flying Squadron, under command of Commodore Winfield Scott Schley, was designed to protect the middle coast and to reinforce either the first or third squadron in the event of an emergency. It consisted of the armored cruiser Brooklyn, the battleships Massachusetts and Texas, and the cruisers Minneapolis and Columbia. The third, or Blockading Squadron, under command of Acting Rear-Admiral W. T. Sampson, consisted of the armored cruiser New York, the battleships Iowa and Indiana, the cruisers Montgomery, Marblehead, Cincinnati, and Detroit, the torpedo boats Porter, Winslow, Cushing, Dupont, Ericsson, and Foote, the gunboats Nashville, Castine, Wilmington, and Newport, and four monitors, Puritan, Miantonomah, Terror, and Amphitrite. In addition to these three squadrons the United States had a squadron of six ships at Hong Kong under Commodore Dewey, and a large number ready or almost ready for service at various ports on both the Atlantic and Pacific coasts.

The Navy Department, under Secretary Long, displayed great energy in purchasing men-of-war and steamships, which it converted into cruisers. The work went on night and day, and resulted in the formation of a new navy, which rendered signal service during the conflict. These "converted cruisers," as they were called, ranged from large steamers of the greyhound class down to the swift steam-yachts of the New York Yacht Club.

On Sunday, April 24, Spain formally declared war. On April 23 the President called for 125,000 volunteers. The call met with an immediate response in every part of the country. The quota was filled in a few days, the number of those volunteering being twice that called for by the proclamation. The war which now followed was one of the most remarkable in history. Although it involved two great naval battles and many land engagements in the West Indies and in the Far East between two first-class Powers, it lasted but three months and twenty days, and resulted in the complete crushing of the Spanish arms, both on sea and land.

The first great chapter in the struggle took place in the Far East. Commodore Dewey had been waiting for orders from home, which came in the form of a telegraphic message as follows:

“WASHINGTON, *Sunday, April 24, 1898.*

“DEWEY, Hong Kong: War has commenced between the United States and Spain. Proceed at once to Philippine Islands. Commence operations at once, particularly against the Spanish fleet. You must capture vessels or destroy. Use utmost endeavors.

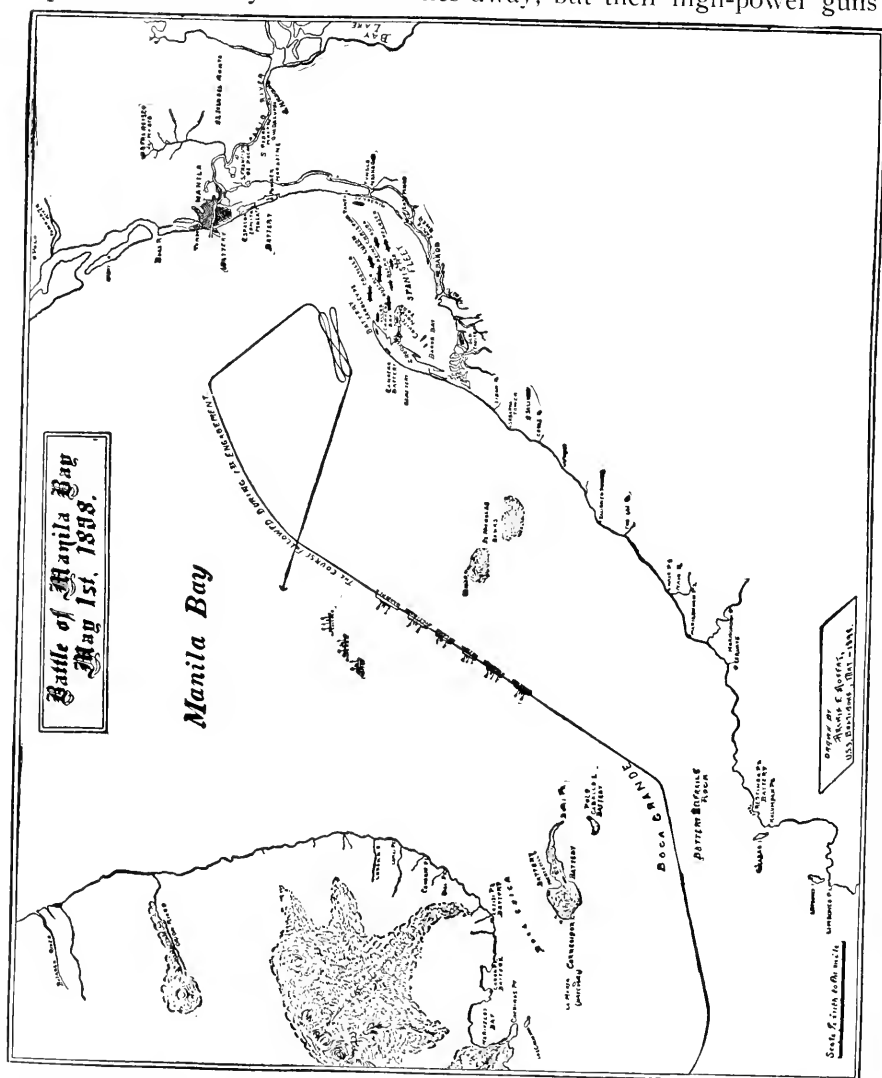

“LONG” [*Secretary of the Navy*].

On Monday Dewey left Hong Kong harbor and sailed to Mirs Bay, a deep arm of the sea which runs far into the China coast. Here his ships made ready for battle, and on Wednesday he set sail for Luzon. On Friday a blue cloud rose up on the horizon, which every sailor knew to be the land of the enemy. At daylight on Saturday morning they were alongside of the coast, and the ships Boston and Concord were sent to look into Subig Bay, where, according to information received by the commander, the Spanish fleet had contemplated making a rendezvous. The two ships went joyously on their mission, earnestly hoping that they would meet some Spanish man-of-war in that beautiful harbor. They had a delightful excursion and admired the wonderful landscape around the harbor, but they were looking for Spanish warships, and not landscapes, and returned promptly the moment they found that Subig Bay was deserted.

A council of war was held, in pursuance of which the squadron moved slowly down the coast, entered Manila harbor at eight o'clock in the evening, and steamed leisurely from Boca Grande, the entrance, across the great bay, until they were near to Cavite and Manila. The last ship had passed the entrance when the Spaniards seemed to notice the danger. A rocket rose high in air, a heavy gun boomed, and a shell went screaming over the Raleigh. A second shot followed, and then came an answering roar of heavy guns from the Raleigh, Concord, and Boston, and a rain of shells fell upon the place from which the Spaniards had fired.

There was no response, and silence reigned until dawn. Then the east suddenly changed to rose pink and blood red, as if to symbolize the day which was being born. Night changes to dawn quickly in the tropics, and in fifteen minutes what had been a starlit picture in blacks and grays was now a panorama in brilliant colors of the Spanish city on the mainland and the great harbor filled with ships of all nations. Over toward Cavite lay the Spanish squadron, magnified in the morning air into an ominous armada. Signal flags rose and fell, smoke poured from every funnel, and the American

squadron got under way and steamed in a curving line toward Manila and thence rounding toward the foe. There came a puff of smoke from the far-off shore as the Spanish batteries at Manila opened fire. They were five miles away, but their high-power guns

threw shot and shell across the long reach of water and above the masts of the American fleet. The *Concord* acknowledged the compliment by two shells, which burst in the Luzon capital, and then stopped firing, lest it should injure non-combatants in the city.

Now Cavité, a low-lying peninsula, rose up above the water's edge, and thousands of black spots, moving here and there, showed that the garrison was making ready to repel the invader. Flags were hoisted on the Spanish ships and fluttered in the morning sun. A torpedo exploded on the right and a mine on the left, a third and a fourth went off, but without injury to the Americans. Then the Cavité batteries opened fire, and shot and shell began to plunge about the approaching ships. At forty-one minutes past five the American opened fire in earnest. As the report of the first gun died away there came a hoarse shout, "Remember the Maine!" which ran from ship to ship, from fighting-top to engine-room, and then died away in the thunder of the guns. On swept the squadron, firing with ever-increasing accuracy, and now the Spanish answer began to grow fainter and slighter. At twenty minutes past six two torpedo launches came out from Cavité harbor to attack the Olympia. The next second the first was struck by a shell and sent bubbling beneath the water, and the next, a second one was struck, turned, and reached the beach just in time to go down without drowning its crew. At seven o'clock the Spanish flagship, the *Reina Christina*, commanded by Admiral Montojo, came forward from beneath the guns of the fort to break lances with the American squadron. It was magnificent courage but a martial crime. The guns were quickly silenced and the iron walls honeycombed with missiles. Tongues of flame appeared at the ports, and then the doomed ship turned and went back to her anchorage to fight the fires which were consuming her vitals.

At thirty minutes after seven signal flags ordered firing to cease and the warships to withdraw for breakfast. The event was without precedent in the history of naval warfare. It displayed a serenity in the mind of the commander which was fairly jovial in character. When the signal flags were read the crews laughed and cheered, but a few in whom the war blood was boiling cursed and vowed that they would not eat until they had finished the job. At eleven o'clock the flags again rose upon the commander's ship, and sixteen minutes afterwards the attack was resumed. At thirty minutes after twelve the task was complete, and the order of Secretary Long had been obeyed to the letter. The Spanish fleet was destroyed and captured.

Of the Spanish fleet, the flagship *Reina Christina*, the *Castilla*, and *Don Antonio de Ulloa* were sunk, the *Don Juan de Austria*, the *Isla de Luzon*, the *Isla de Cuba*, the *General Leco*, the *Marquis del Duero*, *M. El Correo*, *Velasco*, and *Isla de Mindanao* were burned, and the *Rapido*, *Hercules*, and several smaller crafts were

captured. Twelve hundred Spaniards were killed or wounded, while on the American side none was killed and only seven in the squadron were wounded, and that very slightly.

The ships of the American squadron were the *Olympia*, Capt. Charles V. Gridley; the *Raleigh*, Capt. J. B. Cogan; the *Boston*, Capt. Frank Wilds; the *Baltimore*, Capt. Nehemiah M. Dyer; the *Concord*, Commander Asa Walker; the *Petrel*, Commander Edward P. Wood; and the *McCulloch*, Capt. Albon C. Hodgson. The victory startled the world. The odds were against the Americans. The Spanish tonnage was sixteen thousand; the American, nineteen thousand. The Spaniards had 169 guns and 2,200 officers and crew; the Americans, 128 guns and 1,700 men. The Spaniards were on the defensive. They had powerful batteries at Corregidor, Cavité, Malate, Manila, and Binondo, and their harbor was supposed to be thoroughly protected by electric and automatic torpedoes and mines. It was a thunderbolt to such naval circles as had published opinions upon the subject to the effect that it would be impossible for the Americans to attack and capture the Spanish fleet at Manila.

When the news reached Spain the excitement was so great that Madrid and other cities were put under martial law. The Spanish Government ordered Admiral Cervera to proceed with his fleet from the Cape Verde Islands to Cuba, and issued orders to prepare a new fleet under Admiral Camara, who was to take it through the Suez Canal out to Manila and there regain that important city.

In the meantime, the blockade of Cuba grew stronger and more efficient. Every day witnessed the capture of a prize, and occasional engagements occurred between the American ships and the shore batteries. These engagements were notable for the accurate shooting of the Americans and the miserable marksmanship of the Spaniards. On April 27 Rear-Admiral Sampson bombarded the land batteries at Matanzas. In this engagement, although there were three large warships in full view and range of the Spanish ports, not one shot touched an American vessel. May 2 will be remembered by the death of that gallant young naval officer, Ensign Worth Bagley. He was executive of the torpedo boat *Winslow*, and was making a reconnaissance of Cardenas harbor when some concealed batteries opened fire upon his boat. The *Winslow* was crippled, and while being rescued by the revenue cutter *Hudson*, a Spanish shell killed Bagley and two others and mortally wounded two of the crew.

On April 29 Admiral Cervera set sail from the Cape Verde

Islands. His squadron comprised the best warships of the Spanish navy and included the armored cruisers *Infanta Maria Teresa*, *Almirante Oquendo*, *Vizcaya*, *Cristobal Colon*, and three torpedo-boat destroyers, the *Furor*, *Terror*, and *Pluton*. They reached Martinique on May 11, and proceeded to Curaçao, hoping to meet some colliers there which had been sent on ahead of them. They obtained coal and provisions and went to Santiago, reaching that port on May 19. The Americans had not been idle watching for the approach of this formidable squadron. Patrol ships scoured the waters of the Caribbean and the Atlantic, and American agents were waiting in every port to transmit news by cable of the approach of the Spanish warships. From a strategic point of view Cervera should have gone to Cienfuegos or Havana, as Santiago was a place of no great military or naval importance.

The Flying Squadron arrived off Santiago on May 26, but had no suspicion that Cervera was within the port. Commodore Schley was about to start for Key West, when he received dispatches ordering him to remain at Santiago. Three days later he made a reconnaissance and saw two of the Spanish warships in the harbor beyond the Morro Castle. He then cabled the Navy Department the famous dispatch that he had "the Spanish ships bottled up, and they'll never get home." The same day Rear-Admiral Sampson arrived upon the scene with the advance detachment of the Blockading Squadron.

Admiral Cervera was trapped. There was danger, however, that his fleet might come out in a dark tropical night and destroy the American warships or possibly escape. Several plans were suggested to Sampson, but the one which found favor in his eyes came from Assistant Naval Constructor Richmond P. Hobson, which was to take a steamer into the narrow entrance of Santiago Harbor, there blow her up with a torpedo and escape in a small boat. The collier *Merrimac* was selected for the purpose, and at four o'clock in the morning of June 3, Hobson with a crew of seven men ran the ship into the channel and sank her under the heavy Spanish fire. The hulk did not quite block the channel. The heroes were captured by the Spaniards, who, under orders from Admiral Cervera, treated them with the greatest courtesy.

Nothing, however, was known of their fate until Admiral Cervera with delightful chivalry sent his chief of staff to Rear-Admiral Sampson, notifying the latter that the eight men were prisoners and would be cared for as friends. The announcement that Cervera was bottled up was the signal for preparing a military expedition

from the United States to Santiago. The first step was the establishment of a base of operations at Guantanamo. This was effected on Thursday, June 9, by 850 marines, who were landed under the command of Lieutenant-Colonel Huntington. They promptly fortified themselves, and none too soon. On Saturday, June 11, they were attacked by the Spaniards, who waged an unsuccessful battle or skirmish for thirteen hours, in which the Americans had four men killed and the Spaniards thirty. The marines were reinforced from the fleet and shortly afterwards by Cuban insurgents.

At home, Congress passed a war tax bill, and the Secretary of the Treasury was authorized to borrow \$100,000,000. On June 31 the United States captured Guam, the chief island of the Ladrone Archipelago. This little commonwealth is out of reach of civilization, and when the cruiser *Charleston* arrived, the colonial government had not heard of the war between the United States and Spain, and supposed that the warship had put in for provisions. The port captain came on board and apologized for not returning the salute, as they were entirely out of munitions of war. The Governor, Don Juan Marina, when asked to surrender the islands, expressed great surprise at the demand of Captain Glass of the *Charleston*, and twenty-five minutes afterward surrendered the Ladrone unconditionally, but with a protest that he did this on account of the Americans' superior force and an absolute ignorance theretofore of the war existing between the two countries.

Dewey's victory in the Philippines was followed by the prompt return to Cavité of General Aguinaldo and other Filipino insurgents who had fled from their native land to Hong Kong and Singapore. These exiles had scarcely landed when they began to organize a native army which rapidly rose into the thousands. Aguinaldo possessed a strong personality, and soon induced many of the native troops to desert the Spanish flag and join his forces. Within two weeks he had an army of three thousand armed men and at least five thousand equipped with bolos, spears and clubs. He fought many skirmishes, displaying considerable military ability, and was soon in possession of the province of Cavité. What with firearms purchased abroad and with those captured from the Spaniards, his armed forces increased steadily. His work proved of immense benefit to the Americans, as it kept the Spaniards on the defensive themselves against Dewey's ships and the American army, which at every point and prevented their making any effort to protect was now being hurried forward from San Francisco.

Preparations for the first expedition to Cuba went on rapidly. The Fifth Army Corps, under Major-General William R. Shafter, had been mobilized at Tampa, and on June 14 thirty transports under a convoy of eleven warships left Tampa for Santiago. The expedition consisted of 773 officers and 14,564 men. In it was a cavalry troop known as the Roosevelt Rough Riders, which was to write its name large in the annals of the Republic. It was a curious organization, composed of ranchmen and cowboys from the West, college athletes and sportsmen from the East. It was raised by Theodore Roosevelt, who had resigned the position of Assistant Secretary of the Navy to organize the force, and was commanded by Colonel Leonard Wood, with Roosevelt second, as lieutenant-colonel.

The expedition arrived off Santiago on Monday, June 20, and on the evening of June 22 had disembarked at Daiquiri. Here they were joined by four thousand Cuban insurgents under the command of General Calixto Garcia. The first skirmish took place on Friday near Las Guasimas, when the Spaniards attacked the troops that were advancing to support General Lawton. The brunt fell upon the Rough Riders under Colonel Wood and Lieutenant-Colonel Roosevelt, and the regulars under General Young. In this engagement the former lost Captain Capron and Lieutenant Hamilton Fish, and several privates. Seven of the regulars were killed and fifty Americans wounded.

The fighting lasted only a brief period, and then the Spaniards turned and fled, two thousand being routed upon their own soil by one thousand Americans. On Friday, July 1, the Americans, who had moved forward to the outskirts of Santiago, began an attack upon the outermost defense of the city. This combat was notable from the fact that both navies participated in the engagement. Rear-Admiral Sampson shelled the Spanish batteries at Aguadores as General Bates attacked them from the land side. On the other hand, Admiral Cervera shelled the advancing American lines from his ships in the harbor. The American fighting line reached from the sea-shore up to the northern defenses. Northeast of Santiago was the village of El Caney, and on the same side were the San Juan hills and block-houses.

These were the key to Santiago, and upon these the American forces made their chief attack. The onset against El Caney began by a light battery commanded by Captain Capron, father of the Captain Capron who fell at Las Guasimas, and supported by General

Lawton. General Joseph Wheeler's cavalry and General Kent's infantry began to move on San Juan Hill. The action opened at seven in the morning, and at nine o'clock the American troops were within five hundred yards of Caney.

The engagement lasted until thirty minutes past four in the afternoon, when the Spaniards retreated to Santiago, retiring in good order and fighting as they went. The contest around San Juan Hill began shortly after the fighting started at Caney. Grimes' battery opened fire on the San Juan block-house, and the cavalry under General Sumner crossed the San Juan River and moved forward to the right, General Kent's troops moving at the same time to the left. General Wheeler, who had been ill, rose from a sick-bed and joined his cavalry as they crossed the river.

The firing became terrific and the losses on both sides heavy. Colonel Wickoff, commanding the Second Brigade, was killed; his successor, Lieutenant-Colonel Worth, fell seriously wounded; his successor, Lieutenant-Colonel Liscum, dropped wounded five minutes afterward from a Spanish bullet, and Lieutenant-Colonel Ewers assumed command. Two regiments under Colonel Pierson moved on the left of the division and drove the enemy back to their trenches. Not until the afternoon did victory perch upon the American banners. This was when reinforcements under Generals Lawton and Chaffee came forward and joined the fighting line. The Americans threw themselves upon the enemy and swept all before them.

During the day, and especially during this last attack, the bravery was magnificent, and the credit belongs to all. Nightfall found the Stars and Stripes floating over San Juan and Caney, and the fighting lines well advanced upon the Spanish trenches of Santiago. The next day the Spaniards made furious attempts to capture the positions they had lost, but without avail.

The following morning, Sunday, July 3, the war was practically ended by the destruction of Admiral Cervera's noble fleet. That gallant Spaniard had intended to remain in Santiago for an indefinite period, fearing an encounter with the American squadron outside. This was now far stronger and more efficient than his own, so that he knew a conflict would mean the loss of his fleet in part or whole. His opinions were set at naught by Captain-General Blanco at Havana and by the Cabinet at Madrid. In compliance with orders from his superiors, Cervera led the Spanish fleet out of the harbor early in the morning.

It was about thirty minutes after nine as the *Infanta Maria Teresa* came through the channel. The Americans were ready and eager for action. Within two minutes every gun was loaded and pointed at the advancing foe, and every vessel moving to the spot assigned to it by the plans which had been prepared in advance for the emergency. Now the Spanish cruisers cleared the entrance, and then their destroyers appeared in their wake. This was the signal for the heaviest cannonading which the world had known up to that moment.

Soon a Spanish cruiser burst into flames, and then a twelve-inch shell from the *Iowa* struck the *Maria Teresa* in a vital part. There was a terrific explosion, followed by vast clouds of smoke and then by rushing flames. As the smoke cleared she was seen steaming at full speed for the beach in order to prevent her sinking in deep water. In the next ten minutes a second cruiser lay a wreck not far from the shore, and in forty-four minutes the third surrendered. Only the *Cristobal Colon* now remained unhurt, and behind her sped the *Iowa*, *Oregon*, and *Brooklyn*. The *Furor* and *Pluton* were engaged by the *Hist* and the *Gloucester*, under Lieutenant-Commander Richard Wainright.

The latter had been on the *Maine* when she was blown up, and was eagerly awaiting the time in which to obtain revenge, and now it had come. Every gun on board his little craft was fired with a precision that will never be forgotten; and regardless of the death-dealing character of the enemy, he steamed boldly toward them as if to run them down. But this heroic recklessness was not needed. The awful fire had riddled the two Spanish craft, which now turned and ran to the shore, reaching the rocks almost at the moment they began to founder beneath the waves. Four hours after the first gun was fired, the *Colon* surrendered, after her captain had beached her at a point about fifty miles west of Santiago.

This memorable contest was marked by many dramatic incidents. Most notable was the work of the battleship *Oregon*, commanded by Captain Clark. On March 12 she had been ordered to leave San Francisco, where she was lying, to join the North Atlantic Squadron. This task in itself was a matter of great importance, as it involved an ocean voyage around the South American Continent of nearly fourteen thousand miles. So excellent was her construction and so skilful her management, that she made this trip in record-breaking time and without the least injury to her complicated machinery, reaching Jupiter Inlet, Florida, on May 24. Without

wasting time for repairs or cleaning, she joined the blockading squadron, and in the battle of Santiago proved herself the most efficient battleship which had ever been seen upon the deep.

When the second cruiser went down under the American fire, the crew of the battleship Texas broke out into wild cheers. Captain Philip turned to his men and said. "Don't cheer, boys—the poor devils are dying."

When the Vizcaya went down, the Iowa launched its boats and picked up some two hundred and fifty of the crew. They were taken on board the battleship, clothed and fed, and treated more as guests and friends than as enemies. The Spanish Captain Eulate, who had been wounded, was carried on board of the Iowa. As he approached Captain Evans he bowed, and, with tears falling from his eyes, presented his sword to the commander. The latter bowed, stepped back and answered, "Retain your sword, Captain. You are my guest and not my prisoner."

Admiral Cervera, lightly clad in his underclothes, was rescued from the flagship. His courtly reception of Hobson now stood him in good stead. When lifted into the American boats, he was received with cheers, which never ceased until he had been taken on board the American ship and there clothed by the American officers.

The naval battle of Santiago was as memorable as that of Manila. The Spanish fleet was destroyed, while the American was scarcely injured. The former lost 600 killed and 1,300 captured, while the American loss was one killed and one wounded. The destruction of Cervera's fleet was a terrible loss to the defenders of Santiago. They realized the hopelessness of the situation, and began negotiations looking toward surrender.

On July 17 General Toral capitulated, and the surrender of his army of 23,000 men was followed by that of the garrison in the province of Santiago, amounting to about 4,000 more.

Before Santiago had fallen the campaign of Porto Rico had begun. General Miles, at the head of an expedition of 15,000 men, landed at Guanica, on the south coast of the island, on July 25. The next day the Americans advanced to Yauco, where they had a skirmish with the Spaniards, who retreated in disorder. On July 28 a detachment of sailors and marines landed at the Port of Ponce, which is two miles from the city, and occupied the place. Here occurred the extraordinary event of receiving the surrender of the city of Ponce by telephone. Everywhere the Americans received a hearty welcome from the Porto Ricans. At Yauco the

Alcalde issued the following interesting and inspiring proclamation:

"Citizens,—Long live the Government of the United States of America. Hail to their valiant troops. Hail, Puerto Rico, always American.

"El Alcalde FRANCISCO MAGIA,
"Yauco, Puerto Rico, United States of America."

In writing this last line the good mayor seems to have been the sudden possessor of the gift of prophecy. There were several small battles, especially at Guayama, Arecibo, Fajardo, Coamo, and Aibonito. Preparations had been made for a general engagement upon August 12, when the news came that an armistice had been declared by the two warring nations.

In July the troops which had been forwarded from the United States began to arrive in Manila Bay. Major-General Merritt, commander-in-chief, reached Cavité on July 25. In the meantime the insurgents, under General Aguinaldo, had driven the Spaniards into Manila. The Americans began a campaign against the city and were vigorously attacked on the night of July 31, but repulsed the Spaniards with heavy loss. On August 13 the American army and navy began an attack upon the city, and after an exchange of shots, General Jaudenes surrendered unconditionally. Thirteen thousand prisoners and twenty thousand arms were handed over by General Jaudenes to General Merritt.

On August 12 the Peace Protocol between the United States and Spain was signed at the White House by William R. Day, Secretary of State, for this country, an M. Jules Cambon, French Ambassador, on behalf of Spain. The latter country disclaimed sovereignty over Cuba, ceded Porto Rico and Guam, and relinquished Manila and the Philippines pending the conclusion of a formal treaty of peace.

The war was really ended. It had lasted less than four months and had cost about \$150,000,000. The American losses had been 2,910 by deaths from all causes. The Spanish losses have never been officially published, but were very heavy. The deaths from all causes are said to have been 40,000 and the prisoners taken 60,000; but the great loss of Spain was in its navy. At the beginning of the war it had been a second-class power, being seventh in the list of naval powers, and preceding Austro-Hungary, Turkey, Japan, China, Denmark, and Holland. At the end of the war it had fallen into the fourth class, being weaker and inferior to Austro-Hungary, Japan, Turkey, Holland, and Norway and Sweden.

The final treaty of peace was signed December 10, 1898. Spain resigned sovereignty over Cuba and ceded to the United States Porto Rico and the smaller Spanish islands in the West Indies, Guam in the Ladrones, and the Philippine Archipelago. The United States agreed to pay Spain \$20,000,000 for Spanish governmental property and for reimbursement of Spanish expenses in fighting the Filipinos. This treaty may be called the epitaph of Spain as a colonial power. It left her with no colonial possessions except a few islands off the coast of Africa and a small amount of territory in the Dark Continent.

TREATY COMMISSIONERS.

The Government was quick to appreciate the bravery and efficiency of its soldiers and sailors, and bestowed its rewards with a generous hand. Commodore Dewey was made Admiral, being the third in the history of the navy, while Howell, Remy, Watson, Sampson, Kempff, Sumner, Barker, Evans, Wilds, Schley, Dyer, Farenholt, and others equally gallant were made Rear-Admirals.

In the army, on account of the distinction between the regulars and the volunteers, fewer permanent honors were conferred. A number of volunteers received commissions in the regular army, more especially the following, who were made Brigadier-Generals:

Weston, Bates, Davis, (George W.) Sumner, Wood, Hughes, Randall, Kobbe, Grant, Bell, Smith, Funston, Gillispie, Davis (George B.) Bisbee, and Crozier.

One other event of the year, which attracted little notice on account of war excitement, was the annexation of Hawaii by joint resolution of Congress on July 6. This added 6,740 square miles of territory to the United States and a population of 109,000.

Toward the close of 1898, a cloud arose upon the horizon in the Philippines. The insurgent leaders, instead of disbanding their armies, continued to increase them, and ere long it was evident there was a desire or conspiracy on the part of Aguinaldo and his lieutenants to establish a military despotism in the islands with the insurgent general as dictator and to expel the Americans without further ado.

During the year now passed the native levies had been well drilled and had been augmented by native troops who had revolted from Spanish rule. They were well armed and equipped and made a formidable host. At least thirty thousand were in camp around Manila and they made angry demands that the city be turned over to them. Relations grew strained, and on February 4 the Filipinos made a savage attack upon the Americans, in which the latter lost 49 killed and 148 wounded. They were repulsed with a tremendous loss of more than one thousand Filipinos. The next day Dewey shelled the Filipino camps and the army took four thousand prisoners. From now on an active campaign was waged against the insurgents on Luzon, and thereafter on Panay, Cebu, and Negros. The brown men displayed considerable bravery, but poor marksmanship and no military strategy. There was severe fighting at more than twenty points. At the end of the year the insurgent armies were broken up, Aguinaldo was a fugitive in the north, and the war had degenerated into guerilla tactics. On December 19 America lost one of its bravest sons in General Lawton, who was killed at the siege of San Mateo by a Filipino sharpshooter.

This year witnessed a settlement of the Samoan question, which had long annoyed the governments of the United States, Great Britain, and Germany. It resulted in the division of the archipelago and the annexation of the island of Tutuila to this country, of which the harbor of Pago Pago is said to be one of the best in that part of the Pacific Ocean.

Compared with the two preceding years of intense excitement and activity, the year 1900 was a quiet breathing-spell for the Amer-

ican people. The Filipino war continued in guerilla form, and marked by extreme cruelty and savage excesses on the part of the insurgents. These were directed more especially toward their own people. Numbers of the local chiefs levied blackmail upon their fellow-countrymen, and punished all refusals to pay with penalties of the severest type. Homes were burned, crops destroyed, farm animals confiscated, men tortured and slain, and even women and children put to death.

In June the decennial census of the United States was taken, and gave great satisfaction to the citizens, and surprised foreign nations. It showed the population to have grown from 62,000,000 in 1890 to 76,000,000 in 1900, or 77,000,000 including Porto Rico. There was a proportional increase in wealth, manufactures, industries, and trade. Including specie, the total exports during the fiscal year ending June 30, 1900, were \$1,499,000,000, and the imports \$927,000,000, making a total of \$2,426,000,000. These figures made the United States the first exporting nation of the globe, and second only to Great Britain in its commerce.

During the year the colonies of Hawaii and Porto Rico were fairly prosperous. In the former there was no friction whatever, as the Island Commonwealth had long been moving upon American lines of development. In Porto Rico, on the other hand, there was some commercial trouble on account of the tariff changes and also of a series of storms which inflicted great damage to the planters. In Cuba the work of reorganization went on with singular smoothness. The task was difficult on account of the conditions, survivals of the Spanish régime, that confronted the American authorities. These were aided by the active support of the more public-spirited natives. The work done included the sanitation of the cities, the restoration of old roads and the construction of new ones, the development of the school system, and the establishment of local government.

The Presidential election of 1900 was less exciting than that of 1896. The Republican party held its National Convention in Philadelphia June 19, and unanimously nominated William McKinley of Ohio for President, and Theodore Roosevelt of New York for Vice-President. The Democrats met at Kansas City, Mo., July 4, and nominated William Jennings Bryan of Nebraska for President, and Adlai E. Stevenson of Illinois for Vice-President. The silver question was again an issue, with a number of other planks respecting the Philippines, the Porto Rican tariff, and antitrust and anti-

monopoly legislation. The four years of McKinley's administration had changed the financial conditions of the country to so great an extent that the arguments of 1896 were of small moment in 1900. Thus the cry in the former campaign that gold was growing scarcer and a gold famine was imminent was answered by the fact that the output of the precious metal had leaped in the United States from \$46,000,000 to \$71,000,000, and in the world from \$198,000,000 to \$306,000,000; or, in other words, that the annual supply of the yellow metal was now as large as the combined output of gold and silver up to 1891.

In this campaign Bryan repeated the whirlwind electioneering which had marked him four years previously, but this time he had a rival in Theodore Roosevelt, the Republican nominee for Vice-President. The two men made new campaign records. They swept the continent, each addressing at least a million people. They lived on railway cars, and frequently spoke to ten and fifteen gatherings of citizens in a single day.

The election was a greater victory than that of four years previously. McKinley's plurality, which had been 603,000 in 1896, was 849,000, and his electoral majority, which had been 95, was now 137. Congress was overwhelmingly Republican in both branches.

The summer of this year was notable on account of a singular outbreak in China which involved the United States in a small war. A Chinese society known popularly as "The Boxers," but in Chinese as "The Society of the Clenched Fist," started an antforeign movement in that Empire which grew rapidly and culminated in a series of riots marked by terrible cruelty. It occurred at a time when there were bitter dissensions in the Imperial Cabinet, and naturally enough the Boxer leaders became associated with the conservative or antforeign princes and statesmen of the realm. Several hundred Christian missionaries were slain, and tens of thousands of Christian converts.

The civilized governments dispatched warships and soldiers to Taku, which is the seaport of Tien-tsin. Those who united in this movement were the United States, Great Britain, Germany, France, Austria, Italy, Japan, and Russia. Against the trained and well-equipped soldiery of these Powers the Chinese mob, though vastly their superior in numbers, made but a ridiculous resistance. The Allied fleets shelled the Taku forts on June 17, landed soldiers and marines, and took them at the point of the bayonet.

On June 21 the ships shelled Tien-tsin, and on the 23d they

occupied the Foreign Quarter at Tien-tsin. Then came a pause while the Allies waited for the reinforcements which were en route. These were dispatched from Japan, the Philippines, Hong Kong, British and French India, Vladivostock, and Port Arthur, and by July 12 the forces were ready to move. The Americans, Japanese, French, and English attacked the native or walled city of Tien-tsin on July 13, and after a fierce fight of two days stormed the city and drove the Chinese soldiers out in a river of blood. In this contest the Americans lost Colonel Liscom, who commanded the Ninth United States Infantry. This was the chief battle of the war, the Allies losing 500 in killed and wounded, and the Chinese over 6,000.

The next three weeks passed in clearing the country of Boxer bands and preparing for the onward movement to Peking. This began on August 4. There were 19,000 men in the army, composed of 8,000 Japanese under Lieutenant-General Yamagutchi, 4,800 Russians under Lieutenant-General Linevitch, 3,000 British under Lieutenant Gaselee, 2,500 Americans under Major-General Chaffee, and 800 French under Brigadier-General Frey. Although there were at least 100,000 Chinese in front of them, the Allies encountered but little resistance. There were skirmishes continually, but the Chinese marksmanship was miserable, while the Allies fired with such precision that every attack meant a heavy loss to the Boxers.

On the 14th the Russians reached a station outside the eastern gate of Peking, followed by the Americans the next morning. The Americans promptly scaled the wall of the Chinese capital and planted their colors upon its summit. They opened fire and entered the city. The progress made by the Americans and Russians enabled the British to enter the place at another gate, and these were followed in turn by the remainder of the Allies. At three in the afternoon General Chaffee entered the Imperial City, and the capital of the Yellow Empire had fallen.

The Emperor, Empress-Dowager, and all the court officials were panic-stricken, and fled, leaving behind them nearly all their treasures. Thereafter the war was more a matter of police work than a military campaign. Then came retribution. The uprising had been utilized by every criminal in northeastern China, and throughout Chihli the common people themselves were among the first to seek protection from their own desperadoes. Every Boxer was marked and was shot down at sight. Every official who had been implicated in the murder of missionaries was dispatched promptly, sometimes under the cover of court-martial, but generally with no

unnecessary waste of time. The province was turned into a sea of blood, but without cruelty or vindictiveness. The Allies realized that life would be unsafe thereafter unless the dangerous elements of the Chinese nation should be taught a lesson once and for all, and the lesson was taught. Not until December was peace restored and China permitted to exercise autonomy.

The year 1901 was marked by the steady and swift growth of the nation. Business continued as prosperous as ever, and commerce kept on enlarging. On March 23 Brigadier-General Frederick Funston captured General Aguinaldo, the Philippine Dictator, by a ruse as ingenious as it was reckless. Some correspondence having fallen into the hands of the American soldiers, it was found that Aguinaldo was ordering Tagal troops to be moved to the far north of Luzon, where he was in hiding. General Funston, with the consent of his superior officers, proceeded with a party of Americans and Macabebes, or friendly Filipinos, to Aguinaldo's rebel headquarters.

The Macabebes were disguised as insurgent soldiers, and Funston and his compatriots as American prisoners of war. So skillfully were his plans carried through that the entire detachment arrived in the presence of the Dictator without any suspicion having been aroused. When Aguinaldo was informed that he was a prisoner of war, he stammered, and then said, "Is this a Yankee joke?" Upon learning that it was a serious reality, he broke into tears and yielded himself without the least resistance. He was conveyed to Manila, where he was received with every consideration and treated with all the honors of war.

On June 12 the Cuban Constitutional Convention adopted a Constitution pursuant to the lines indicated by the Government at Washington. The vote showed that the people of the island were in thorough accord with American ideas, and that the only elements of disagreement were those which mark every healthful community in which the members possess ambition and progressive ideas.

On July 4 the military government of the Philippines was transferred to the civil authorities under William H. Taft. According to the official reports, home rule had been established in nearly every district, and prosperity was general. In a few districts, revolutionaries, or brigands masquerading as patriots, kept up a guerilla struggle, of which the main feature was the ruthless taxation of the Pacificos or law-abiding citizens. This was not incidental to the war, being a condition which had prevailed in many parts of the islands from time immemorial. The Malay races always have had a strong ten-

dency toward brigandage and piracy. The former has never been stamped out altogether, and the latter imperiled all navigation in the Far East until it was suppressed in the first half of the nineteenth century by the united navies of Christendom.

On September 6 occurred one of those terrible murders which have become only too familiar to the world since the establishment of the so-called Nihilistic and Anarchistic schools of thought.

President McKinley was fatally shot by Leon Czolgosz, an anarchist, while holding a public reception in the Temple of Music at the Pan-American Exposition at Buffalo, N. Y. The Chief Executive was shaking hands with the people, when the assassin approached with one hand wrapped in a handkerchief in whose folds he held a revolver concealed. As the President smiled and extended his hand to grasp that of the dastard, the latter fired twice, inflicting wounds from which the President died on Saturday, September 14. He had received every aid which medical science could give, but the injuries were beyond mortal skill. He passed away saying,

"God's will be done, not character was a sweetness ours."

THEODORE ROOSEVELT.

His death cast a gloom upon the civilized world, and in the silence of the catastrophe men realized that in the dead President they had lost one of the most amiable characters in American history. The assassination had taken away all political rancor in the same moment that it had taken away life. The public saw then, probably for the first time, that in McKinley's and urbanity, a courtesy

and charity, a purity of thought and action, a patriotism and public spirit which were unmarred by petty, sordid, or improper motives. He went into history as the "Best Beloved" President.

Czolgosz, the assassin, was electrocuted at Auburn, N. Y., October 29.

CHAPTER XXI.

ROOSEVELT AND TAFT ADMINISTRATIONS—1901-1911.

IMMEDIATELY after the death of President McKinley, Vice-President Theodore Roosevelt took the oath of office as President of the United States. In that dark hour he announced that so far as was possible, he would carry out the policy of his predecessor. He asked, moreover, that the members of President McKinley's Cabinet retain their positions. Undoubtedly President Roosevelt intended to limit his important policies to a conservative development along the lines laid down by President McKinley. But the personal equation counts for much in the working out of executive plans, and President Roosevelt was not the type of man to keep his own personality in check. It was not long before he showed an honest and sturdy independence, injecting new aims and new ideals into the administration.

Theodore Roosevelt, the twenty-sixth President of the United States, was born in New York City, October 27, 1858. He was graduated from Harvard in 1880 and took up the study of the law. In 1881 he was elected to the New York Assembly, where he served three terms. He became a member of the United States Civil Service Commission in 1889, and in 1895 was made President of the Police Commission of New York City. In April, 1897, he was appointed Assistant Secretary of the Navy by President McKinley. At the outbreak of the war with Spain he resigned his office, raised a regiment of Rough Riders, and became its Lieutenant Colonel. He distinguished himself during the struggle, more especially at Las Guasimas and San Juan, and rose to be Colonel. Mustered out in September, 1898, he shortly afterward received the Republican nomination for Governor of New York, the party leaders in the State yielding of necessity to the popular clamor in his favor, and was elected. He was nominated for Vice-President and elected in 1900, taking the oath of office on March 4, 1901.

The Administration of President McKinley is the convenient

period from which to date the larger expansion of our country, politically and commercially. Before that time we had in a sense lived unto ourselves, confining our foreign policy principally to the conservative safeguarding of American interests abroad and the upholding of the Monroe Doctrine. But with the acquisition of the Philippines and the great extension of our trade in foreign fields, our interests became necessarily more closely bound up with those of other nations, and the great European Powers began to take a larger notice of us.

It was doubtless with a view to stimulating friendly relations between the United States and Germany that in February, 1902, Prince Henry of Prussia was sent by his brother, Emperor William of Germany, to take part in the launching of the Emperor's yacht *Meteor* in New York Harbor, and to make a tour of the principal cities in the East and Middle West. The Prince's charm and tact made a most favorable impression, and when he sailed away he carried with him the goodwill of the American people. Yet it can hardly be said that his visit did much toward drawing Germany and the United States more closely together.

In May, 1902, a volcanic cataclysm of almost unparalleled horror and devastation occurred in the West Indies. Mt. Pelee, a volcano on the island of Martinique, after several weeks of subterranean activity with rumbling noises and the emission of steam and smoke, gave a tremendous explosion in which a huge fragment of the mountain fell into the abyss, and a stream of lava, ashes, and mud, with burning gases, swept across the fields and over the city of St. Pierre. In a few seconds all life in a large area was extinct, the only human being in St. Pierre who escaped being a man imprisoned in a brick-and-stone cell in the city jail. A similar but feebler eruption occurred nearly at the same time from the volcano La Soufriere on the island of St. Vincent.

All telegraph communication with the islands was cut off, and it was four days before the news of the catastrophe reached the United States. Relief measures were at once begun, Congress giving an appropriation of \$200,000, and private contributions being collected from all over the country. President Orr of the New York Chamber of Commerce secured a cargo of food supplies already *en route* to the West Indies, so that the first food, clothing, and money received by the suffering survivors was sent by the United States.

The most important internal issue raised by President Roosevelt in the first two years of his administration related to the public regulation of the great combinations of capital popularly known as "trusts." Early in his tenure he showed a purpose to enforce the so-called Sherman Anti-Trust law, forbidding combinations in restraint of trade.

On November 13, 1901, the Northern Securities Company was incorporated under the laws of New Jersey. This Company, commonly called a "merger," was designed to effect the combination of the Northern Pacific and Great Northern Railroads. By forming a company to take over the stocks of the two railroads the promoters of the plan thought that they had kept within the letter of the law, but President Roosevelt and Attorney General Knox thought otherwise and began suit against the merger. The United States Circuit Court of Appeals in Minnesota, in April, 1903, gave a decision unanimously upholding the contentions of the Government as opposed to the merger. The case was carried to the Supreme Court of the United States, which in March, 1904, gave its decision that the Northern Securities Company was a "trust" and therefore illegal.

While the Government was thus acting to bring corporations within the laws already existing, Congress was adopting legislation to facilitate the more definite control of the trusts. In the spring of 1903, the Fifty-seventh Congress passed the Elkins Anti-Rebate law, fixing a penalty for the giving or receiving of rebates on interstate commerce. The Nelson amendment to the Department of Commerce and Labor law provided a Bureau of Corporations, to gather statistics as to the workings of corporations.

Meanwhile the demands of organized labor for something more than a living wage were everywhere growing more insistent. By the summer of 1903 the tyranny of the labor unions had become so strong that in some trades work was almost at a standstill, capitalists being afraid to invest in new enterprises. Employers also began to form combinations similar to the labor organizations.

In the spring of 1902 occurred the great strike of the anthracite coal miners, which dragged along for months in spite of many private efforts at settlement. At last President Roosevelt took a hand in the struggle and secured an agreement to submit the issue to a Commission appointed by the President himself. The miners thereupon went back to work. In the following March the Com-

mission, headed by Judge George Gray of Delaware, announced its awards. Miners and employers each gained certain points, and a permanent board of conciliation was established.

The business prosperity which began after the election of President McKinley in 1896 received a check in 1903. Through a great part of the year there was a downward movement in stocks. It was partly, however, a natural readjustment of values which had been greatly inflated during the boom period.

The provisions made by Congress in 1902 for the civil administration of the Philippines included the establishment of popular government as soon as the people should show themselves ready for it. Meanwhile, Judge William H. Taft, who had been President of the Philippine Civil Commission, was appointed governor. He returned to the United States in January, 1904, to become Secretary of War, and Luke E. Wright succeeded him in the governorship of the Philippines. One of the greatest obstacles to peace in the islands related to the possession of certain lands held by bodies of monks who were out of accord with the rest of the people. In December, 1903, Governor Taft made a formal visit to the Papal Court at Rome and effected an amicable arrangement by which these "Friar Lands" were taken over by the Insular government on payment of about eleven millions of dollars, and were afterward offered for sale on easy payments to the Filipinos themselves.

Our Island ward, Cuba, on December 31, 1901, elected as its first President, Senor Estrada Palma. He was inaugurated on May 20, 1902, and on the same date occurred the formal withdrawal of American troops from the Island. We had done our duty by setting up an independent Cuban government and turning over to it the reins of authority.

There remained, however, the obligation of a strong power, which had used intervention in freeing Cuba, to aid the new government through its time of weakness. In the view of the President it would be an act of justice to extend reciprocity to Cuba so that she might find a market for her products in the United States. During the winter of 1902-3 this question was warmly debated. The treaty was delayed by certain constitutional conditions that had to be complied with, as well as by the opposition of congressmen from the States in which beet sugar is manufactured. In December, 1903, the reciprocity treaty went into effect,

giving to Cuban products sent to the United States a reduction of twenty-five per cent. from our regular tariff rates, while American exports to Cuba received reductions of twenty to forty per cent. from the regular Cuban tariff.

The interests of the United States in Cuba, with the acquisition of Porto Rico and the increasing interest in the construction of an Isthmian Canal, greatly increased the strategic importance of the Caribbean Sea to the United States. In 1901 an effort was made to purchase the Danish West Indies, a group of small islands east of Porto Rico. The treaty was finally rejected by the Danish Parliament and the plan was abandoned.

Toward the end of 1903, the relations of Venezuela with European Powers again became very complicated. Great Britain and Germany, despairing of collecting in the ordinary way the money owed them by Venezuela, united in sending an ultimatum to the Venezuelan Government. The demand was rejected and the two Powers thereupon began a so-called "pacific blockade" of the Venezuelan coast. In this they were joined afterward by Italy. Ports were bombarded and Venezuelan gunboats captured or destroyed. As the possibility of a foreign occupation of Venezuela seemed to threaten a violation of the Monroe Doctrine, President Roosevelt took up the matter and urged the submission of the foreign claims against Venezuela to arbitration, a plan which was accepted by all of Venezuela's creditors. The three blockading Powers, however, urged that they ought to be paid before the others, since their blockade, which had been expensive, had hastened the solution of the problem. The other Powers replied that such a precedent would put a premium on the use of force to collect debts. The question was finally submitted to The Hague Tribunal, which in 1904 decreed that the three Powers which joined in the blockade were entitled to preferential payment.

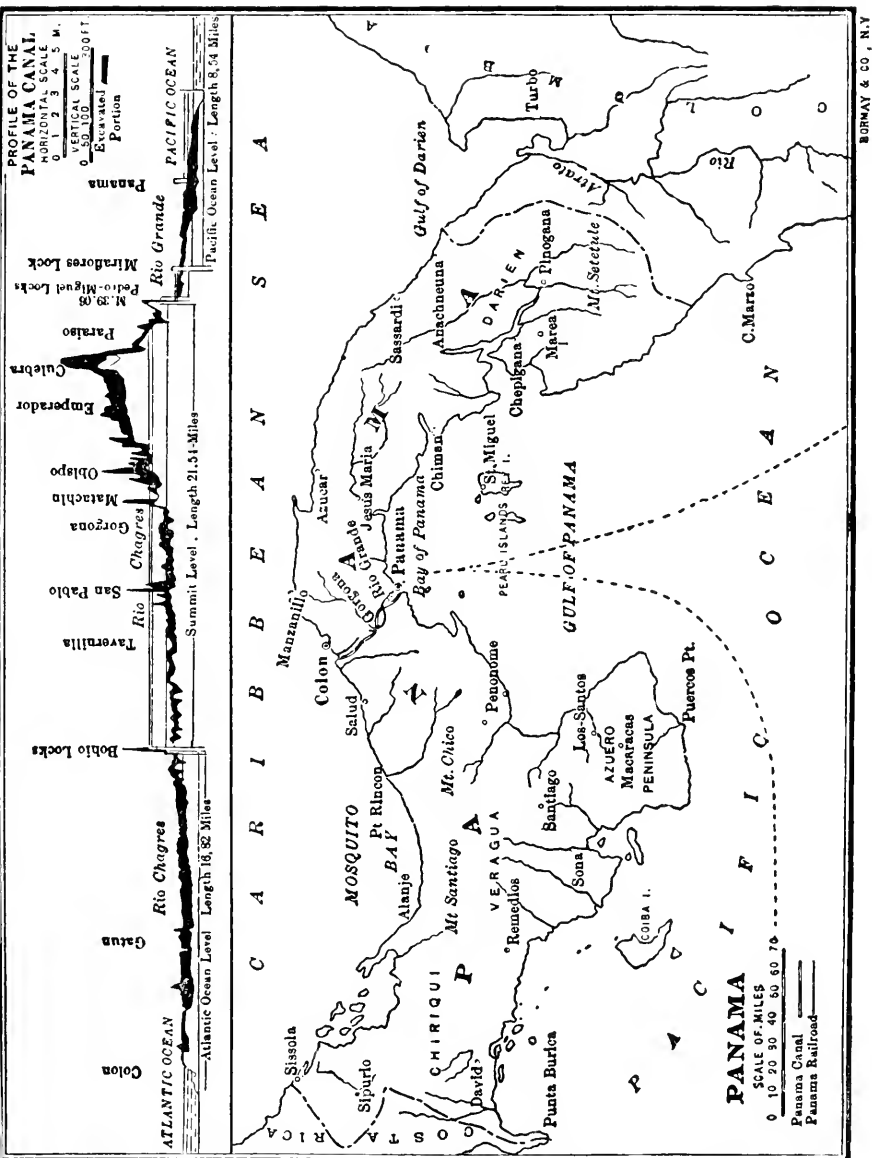

In 1903 a question that had long been a source of irritation between the United States and Canada was brought to settlement. The position of the boundary between Alaska and Canada depended on the interpretation of the Anglo-Russian treaty of 1825, which was made when the geographical knowledge of that region was very limited. The discovery of gold along the Yukon River in 1896 led to a large immigration and greatly increased the commercial importance of the Alaskan territory. During the next few years the boundary disputes grew more and more acute. At last,

in January, 1903, a treaty was signed submitting the questions that had arisen to a Tribunal of three American and three British Commissioners. The decision of this Tribunal, given on October 20, 1903, while it sustained the Canadian claims in one or two points, was chiefly in favor of the United States, giving to this country several of the outer islands and a continuous strip of territory along the coast. In 1906 some further details of the Alaskan boundary were brought to a settlement.

The years 1903-4 saw the definite beginning of an enterprise involving the greatest piece of engineering that was ever attempted by the United States or any other nation. For many years the idea of an Isthmian ship canal to connect the Atlantic and Pacific oceans had been before the world. Various routes had been studied and surveyed, the two that seemed most practicable being that across the narrowest part of the Isthmus near the Panama railroad, and a more northern and longer route through Lake Nicaragua. Under the Clayton-Bulwer treaty of 1850, Great Britain and the United States had once planned a combined effort to build a canal by the Nicaragua route; but the Civil War in America put this project finally out of sight. In 1879 M. de Lesseps of Paris obtained a concession from the United States of Colombia, and organized a company for building a tide-level canal over the Isthmian route, and on January 1, 1880, the first shovelful of earth was turned at Panama. The United States was then asked to guarantee the neutrality of the French-Isthmian Canal. But in a special message to Congress March 8, 1880, President Hayes declared: "The United States cannot consent to the exercise of control [over an interoceanic canal] by any European power. Such a canal would be a great ocean thoroughfare between our Atlantic and Pacific shores, and virtually a part of the coast line of the United States. No other great power would, under similar circumstances, fail to assert a rightful control over a work so closely and vitally affecting its interest and welfare."

For some years the French people subscribed liberally to the De Lesseps Canal, and the general feeling of the United States was that if any canal were to be built by American enterprise it would have to be by the Nicaragua route.

But in 1888 came a financial crash, revealing corruption and mismanagement on the part of the French officials. France was crazed by the revelations, and M. de Lesseps and many of his as-

THE PANAMA CANAL—PROFILE AND GENERAL VIEW.

sociates were imprisoned. For several years the work was at a standstill, though later a new French company was formed which resumed operations for a time.

The temporary failure of the French Canal Company stimulated for a time American interest in the Nicaragua plan. But in 1902 a canal commission was appointed which reported in favor of the Panama route as on the whole more feasible. It was also discovered that the French company was willing to sell its rights in Panama for a reasonable sum, and in January, 1903, a treaty was negotiated between the United States and Colombia for the construction of the Panama Canal by the United States, our government agreeing also to pay the French company forty million dollars for its concessions and the work already done.

By some later pretexts, however, the Colombian Congress failed to ratify this treaty, and the State of Panama, which had its own grievances against the central government of the Colombian Republic, of which it was the most valuable State, and fearing also that the short route through their territory would be abandoned in favor of the Nicaragua route, began to talk of seceding from Colombia and setting up a government of its own.

Colombia now reinforced her garrisons on the Isthmus, and the United States, which had guaranteed by an earlier treaty to keep the Isthmian transit open, sent warships to Colon to protect American interests and to prevent interference with travel over the Panama railroad.

November 3, 1903, the independence of the State of Panama was proclaimed, a Provisional government was formed, and United States marines were landed at Colon and Panama with instructions to protect the railroad. As the Colombian troops could not put down the revolution without opposing the American marines they were finally withdrawn from Panama.

On November 6th the United States recognized the new government of Panama as the *de facto* government, and November 13th the minister of Panama was formally received at Washington. European countries soon followed the lead of the United States. The Colombian government vigorously protested, and General Rafael Reyes was sent to Panama and then to the United States to see if he could not obtain concessions to the Colombian demands. When he became convinced, however, that President

Roosevelt and Secretary Hay considered the Panama incident closed, he gave up his efforts and returned to Colombia.

On February 4, 1904, a new treaty was signed between the United States and the Republic of Panama, by which the latter ceded to the United States in perpetuity a strip of land five miles wide on each side of the projected canal, with all rights of sovereignty over this canal zone. In April Congress organized a temporary government for the Canal Zone, and the President took formal possession of the territory and appointed an Isthmian Canal Commission to take charge of the construction of the canal and the government of the zone. The property rights of the Panama Canal were now transferred to the United States at Paris by the payment from the United States Treasury of the forty million dollars that had been promised to the French Canal Company. Ten million dollars were also given to the Republic of Panama, together with the promise of certain annual payments in gold beginning nine years from the date of ratification.

In October, 1904, the President directed Secretary of War Taft to visit Panama during the following month to reassure the people of the pacific intentions of the United States and settle all questions that had arisen. On December 2d all business matters then pending were settled by friendly negotiations between Secretary Taft and President Amador of Panama.

July 4, 1903, saw the completion of the American cable across the Pacific Ocean to Honolulu and Manila, and thence to Shanghai. President Roosevelt, then at Oyster Bay, New York, sent the first message to Governor Taft at the Philippine Islands. He also sent the first cable message around the world, the time of transmission being twelve minutes.

Since the World's Fair in Chicago in 1893, a number of large expositions have been held in the United States, the largest of these being the Pan-American Exposition of Buffalo in 1901, which was saddened by the assassination of President McKinley on September 6th within the grounds. This exposition had a very unique and varied electrical display and was known as "The Rainbow City." Financially, however, the enterprise was a failure.

Other expositions were held as follows: the Cotton-States Exposition at Atlanta in 1895, to exhibit Southern industries; the Tennessee Centennial Exposition at Nashville in 1897, celebrating the centenary of the admission of Tennessee to the Union; the

Trans-Mississippi Exposition at Omaha in 1898, to show the achievements of the pioneers of the Mississippi Valley; and the South Carolina Interstate and West Indian Exposition at Charleston, 1901-2, where West Indian products formed an important part of the display.

The year 1903 was the one-hundredth anniversary of the purchase of the Louisiana Territory from France. It was fitting that this anniversary of an acquisition which had been considered rather unimportant a hundred years before, but which was now divided into fourteen prosperous States and Territories, should be recognized. Accordingly a great international exposition was planned at St. Louis, Missouri.

It was found impossible to have the exhibition ready in the centennial year, but it was opened with imposing ceremonies April 30, 1904, and continued till December 1st. The grounds of this exposition were very large, covering 1,240 acres, while the World's Fair of 1893 at Chicago had 633 acres, and the Paris Exposition of 1900 had only 336. At the St. Louis Exposition the anthropological exhibit, especially from the Philippine Islands, attracted much attention.

In February, 1904, the United States Senate approved an appropriation of two million dollars in aid of a Lewis and Clark Exposition in Portland, Oregon, to celebrate the centenary of the Oregon explorations. This was held in 1905, and attracted many tourists from the other parts of the country, who thus became acquainted with the important resources of the Pacific States; and unlike most of the preceding expositions of America, this one proved to be a financial success.

At the beginning of the year 1904 serious internal troubles arose in Santo Domingo which lasted for several years. In 1901 the government of Santo Domingo had taken the collection of its customs out of the hands of an Improvement Company in New York, causing many business disputes. Other foreign creditors also made demands, which became so stringent that in 1904 President Roosevelt thought it needful, in support of the Monroe Doctrine and to keep out foreign intervention, that the United States should preserve order in that island. On January 22, the United States recognized officially the provisional government that had been set up, as being the *de facto* government, and on February 6, announced that the United States would assume con-

trol of the custom house of the country and preserve order while guaranteeing territorial integrity. A year later Santo Domingo agreed officially that the United States should for a time collect revenues and apply them to local expenses and the payment of foreign debts. For a time order prevailed, but in 1906 new disturbances arose, resulting in civil war in Santo Domingo. In 1907, however, a new treaty "to assist the United States in the collection and application of the customs revenues of the Dominican Republic," was ratified by the two governments.

In 1904 also an episode occurred which recalled forcibly the events of a century earlier when (in 1804) Decatur's frigate, the *Philadelphia*, was sent to the Barbary Coast to check the ravages of Moorish pirates.

On May 20, 1904, the whole Atlantic squadron was ordered to Tangier, Morocco, to demand the release of an American naturalized citizen named Perdicaris, who with his stepson, Varley, a British subject, had been kidnapped by Arab bandits under a notorious brigand named Raisuli, the intention being to obtain money extortions from the weak and unfortunate Sultan of Morocco. After rejecting certain demands of the brigands, the United States, on June 1st, gave notice to the Moorish authorities that Raisuli was to be held personally responsible for the lives of his captives and that his execution would be demanded if they were put to death. After three weeks' delay Secretary Hay gave instructions to the Consul-General at Tangier to demand either Perdicaris alive or Raisuli dead. This had the desired effect and two days later Pericardis and Varley were returned to Tangier.

During the negotiations on this question the United States had asked the friendly offices of France, which claimed some jurisdiction in Morocco. This led to international discussions, and the outcome of all these events was an International Conference held in 1906 at Algeciras, Spain, and participated in by France, Germany, England, Spain, the United States and delegates from Morocco, at which a general act or treaty was signed that quieted Moorish irregularities, and fixed the relations of the government of Morocco to other powers.

In August, 1904, the American squadron was also sent to Smyrna to protect the rights of American citizens in Turkey. As a result of this demonstration, American schools in Turkey were given government protection and placed on an equal footing with those of other powers.

The new relations to international affairs that had come to the United States with the conclusion of the Spanish War and the acquisition of the Philippine Islands, led Congress and the President to take prompt action in regard to the war which early in 1904 seemed imminent between Russia and Japan. On February 8th, the United States invited England, Germany, and France to unite with America in suggesting to Russia and to Japan the neutralization of China and the restriction of hostilities to a small area. A few days later this invitation of the United States was extended to most of the other European powers. When war was declared on February 11, 1904, President Roosevelt at once issued a proclamation of neutrality, and similar action was taken by most of the States of Europe.

During the summer and fall occurred the long siege and bombardment of Port Arthur, and in September, President Roosevelt suggested to the Inter-parliamentary Union then in session at the Louisiana Purchase Exposition, the advisability of calling a Second Peace Conference at The Hague. To this suggestion the delegates to the Union gave a unanimous assent, requesting the President to take the initiative in this matter. Accordingly in October, Secretary of State John Hay under the instructions of the President, sent a note to all representatives of the United States in foreign countries that had signed the Acts of the Hague Conference of 1899, inviting all these nations to join in a New Peace Conference at The Hague. This was finally carried out in 1907, although for diplomatic reasons the final invitations to this Conference were given by the Czar of Russia.

On January 2, 1905, Port Arthur capitulated to Japan, and on May 27th and 28th, Admiral Togo annihilated the Russian fleet under Admiral Rojestvensky in the Sea of Japan, destroying or capturing all the Russian battleships. On June 9th, President Roosevelt appealed to Japan and Russia for a meeting of the two powers to consider terms of peace, and two days later, the two countries having agreed to such a peace parley, the President suggested the Navy Yard at Portsmouth, N. H., as a convenient place for such a meeting.

In August, 1905, the envoys of the two powers met at Portsmouth, where some of the conditions of peace were soon agreed upon. On certain points, however, a deadlock occurred, and a recess was taken, during which a committee of the envoys sought the friendly aid of the President at Oyster Bay, N. Y. At last, on September 5th, a treaty of peace was signed by which Manchuria was restored to China, and the Japanese obtained control of the external relations of Korea.

Two years later, after the abdication of the Emperor of Korea, Japan assumed control of its internal affairs as well.

The terms of the treaty of Portsmouth were not wholly acceptable to the Japanese people, who thought that more liberal concessions should have been accorded as the result of their great victories, and on September 7th, Tokio was placed under martial law to check the disorders that arose as the result of the popular dissatisfaction. The treaty went into effect, however, and December 10, 1906, President Roosevelt was made the recipient of the Nobel Peace Prize of that year for his aid to the fraternization of nations in thus securing the Peace of Portsmouth. This peace prize (about \$40,000) was given by Roosevelt to the cause of industrial peace as the nucleus of a fund for this purpose to be held by trustees at Washington.

When Cecil Rhodes, the great statesman of South Africa, died at Cape Town in 1902, he left a legacy of \$10,000,000 to create a fund for the support of a certain number of three-year scholarships at Oxford University. By the conditions of the will there might be two recipients from each State and territory of the United States, or one hundred in all, with fifteen from Germany, and from one to nine in each of the British Colonies. In October, 1904, seventy Rhodes scholars were admitted to Oxford, forty-three of these being from America.

The thirtieth Presidential election of the United States occurred in 1904. On June 23d, the Republican National Convention met at Chicago and nominated Theodore Roosevelt for President with Charles Warren Fairbanks of Indiana as Vice-President. On July 9th, the Democratic Convention met at St. Louis and nominated Judge Alton B. Parker of New York for President with Henry G. Davis of West Virginia for Vice-President. Judge Parker at once announced his adherence to the gold standard of currency values, but the minds of the country had turned to other issues, and the relation of the gold and silver standards was not made an important issue in this election.

The campaign was less exciting than usual, and November 8th, Roosevelt and Fairbanks were elected by a large popular majority. On March 4, 1905, they were inaugurated for what was practically Roosevelt's second term, though this was the first time the office had been given him by the vote of the people. During this term there was much public discussion as to whether he might properly be elected again, consistently with the precedents that had virtually denied

to the chief executive more than two terms of office. But on December 11, 1907, the President himself settled this question by announcing that he would not be a candidate for the Presidency in the following year.

The year 1904 saw great advancement in the cause of International Arbitration, in which the United States now began to take a leading part. For many years various organizations in America had been working for peace among the nations, the oldest of these being the American Peace Society, organized in Boston in 1828. Similar organizations existed in European countries, and an Inter-Parliamentary Union for Arbitration composed of members of legislative bodies from many nations had been formed, which soon became the most important single agency for organizing the world for peace.

In January, 1904, a national arbitration conference in Washington brought together a remarkable body of delegates, and one result of this conference was an invitation given by Congress and the President for the Inter-Parliamentary Union to hold its twelfth conference in September, at St. Louis, in connection with the Louisiana Purchase Exposition. The delegates to this Union, about two hundred in number, came as the guests of the government. Congress having appropriated \$50,000 to meet this expense. The meeting was one of great significance and resulted in the President of the United States taking the initiative in proposing to the nations of Europe the Second Peace Conference at The Hague.

In 1904, also, the Lake Mohonk Conference of New York, which meets each summer for the discussion of racial and humanitarian questions, brought together the largest and most influential gathering that had ever been held at that place, to discuss the questions of arbitration and of peace.

Finally in October, 1904, the International Peace Congress, whose executive work is carried on by the International Peace Bureau of Switzerland, was invited to hold its thirteenth annual session in Boston, which resulted in the most remarkable public demonstration in favor of arbitration that had ever been shown. It enrolled more than a thousand members with delegates from seventeen different countries, and the reception given to the welcoming address of Secretary of State Hay, left no longer any room for doubt that the cause of friendship among the nations had won its way to almost universal recognition.

In the two years 1904 and 1905, treaties of arbitration were nego-

tiated by the United States with Great Britain, France, Germany, Austria-Hungary, Norway-Sweden, Switzerland, Portugal and Mexico. These were in exactly the same language and provided that differences of a legal nature or relating to the interpretation of treaties, which cannot be settled by diplomacy, shall be referred to the Permanent Court of Arbitration at The Hague, "provided that they do not affect the vital interests, the independence, or the honor of the two contracting states, and do not concern the interests of other parties." February 11, 1905, the Senate ratified these treaties, but with an amendment requiring that each specific proposal for arbitration should be put into the form of a treaty to be referred to the Senate for approval. The President, however, holding that this amendment vitiated the force of the treaties themselves, decided not to submit them to the countries with which the original papers were signed. So, for the time being, this important movement in behalf of international arbitration received an apparent check, but came to the front again with the assembling of the Second Hague Conference in 1907.

On January 28, 1905, the Senate ratified a treaty with Guatemala, San Salvador, Peru and Honduras for submitting to arbitration at the Hague Tribunal all claims for pecuniary loss or damage that cannot be adjusted by diplomacy, "when these claims are of sufficient importance to warrant the expense of such arbitration." This treaty, which was to be in force for five years, was proclaimed by President Roosevelt on March 24, 1905.

On July 1, 1905, John Hay, who had been Secretary of State during the Spanish War and the period when America was forming new international relationships, died suddenly, and July 6th, Hon. Elihu Root succeeded to this important office. It was chiefly Hay's skilful diplomacy that had adjusted the difficult Alaska Boundary dispute. He also prepared the way for the better relations with China through his memorable "open-door" correspondence, and secured the abrogation of the Clayton-Bulwer treaty, thus gaining for the United States the sole control of the Panama Canal.

An event connected with the Naval Service attracted public interest about this time. In 1792, John Paul Jones, the naval hero of the Revolution, died in Paris, and the records of his burial were lost. In 1905, General Horace Porter, the American Ambassador to France, was directed to investigate the question of the death of Paul Jones and the final disposition of his remains. After long search General Porter found the body of Jones in the old St. Louis Ceme-

tery in a remarkably good state of preservation. A special naval squadron was then sent to bring the body to America, and it was buried with imposing honors at the Naval Academy at Annapolis.

A Statehood bill which occasioned long discussion was passed by Congress in 1905. It provided for the admission of Oklahoma as a State, including the Old Indian Territory, and for Arizona and New Mexico also as a single State. Much opposition arose, especially in regard to the union of New Mexico and Arizona, in consequence of which the act itself became finally void. June 16, 1906, however, the President signed a new Statehood bill admitting Oklahoma as the forty-sixth State of the Union and omitting all reference to the other territories. Finally in 1910, a new bill was passed providing for the admission of New Mexico and Arizona as separate States.

In 1905 the Red Cross Association of America was reorganized on a national basis and incorporated by Congress as the American-National Red Cross Society, with Secretary-of-War Taft as President. This society, which was first organized in 1881 with Clara Barton as the first official president, was an outgrowth of the European Red Cross movement which began with efforts for the relief of soldiers in the Crimean War, and was regularly organized at Geneva in 1863. The American Red Cross had given important relief in many national calamities, its largest and most important service being in the care of the sick and wounded soldiers of the Spanish War, and the relief of Cubans rendered destitute as the results of that war.

The year after its reorganization as a distinctly national society it had a chance to show in a signal way the value of its services to the nation in times of peace.

On the 18th of April, 1906, San Francisco, San José, and other points in California were visited with a destructive earthquake, in which many blocks of buildings were destroyed, many of these being valuable public buildings, including some of the Leland Stanford, Jr. University buildings near Palo Alto. In San Francisco a terrible fire followed, which was not undercontrol until April 20th, and was even more destructive than the earthquake itself. A large part of the city was destroyed. There was much loss of life, and the property loss of the whole California catastrophe was estimated as not less than five hundred millions of dollars.

A San Francisco Relief Society was at once formed, which, co-operating with the National Red Cross Society, took charge of the relief measures, and the funds that were rapidly poured in from all

parts of the United States. In a few months the rebuilding of the city was well under way, and San Francisco was recovering fast from this almost unprecedented calamity.

An irritation that was already beginning to be felt by Japan toward America was increased in the summer of 1906 by the killing in Alaskan waters of certain Japanese who had been poaching on the American seal-fisheries. This feeling was greatly augmented, October 15th, by an action of the San Francisco Board of Education, excluding Japanese pupils from the regular public schools. The nominal excuse for this was that the presence of adult Japanese in the primary schools interfered with the best working of these schools. It was generally believed, however, that the action had its root in a general racial or anti-oriental feeling on the part of the people of the Pacific Coast, who desired the exclusion of Japanese immigrants as well as of immigrants from China.

Various anti-Japanese tumults in California now had to be put down, and this brought to the front the curious relation of the dual governments of State and nation, a situation that Asiatic governments could not easily understand. During the fall and winter the Anti-Japanese feeling had various manifestations in the other Pacific States as well.

The difficulties were smoothed over in a measure by tactful efforts on the part of the Federal government. Secretary Metcalf was sent to the Pacific Coast, and made a report which was embodied in a special message from the President to Congress. In December the school question was adjusted by an arrangement that the Japanese pupils should attend separate schools whenever this seemed desirable. A later result of the agitation was a clause embodied in the Immigration Bill passed by Congress in 1907, requiring that Japan should issue no more passports to laborers to come to the United States. So the agitation temporarily subsided, though it was renewed in a measure in the fall of 1907 by an attack on Japanese eating-houses.

In December, 1908, California and Nevada passed bills extending the Chinese exclusion laws to other Asiatics as well. In Oregon, Washington, Montana and Nebraska also similar legislative bills were presented. The American residents in Japan now complained that this tended to remove the good impression caused by the recent visit of the American fleet to Japan, and that it might result in retaliative measures. The President sent remonstrances to the Pacific States, and Japan gave notice that such legislation would be taken as

a breach of faith. The Japanese, however, exercised a commendable restraint of action, and the Federal government made it clear that most of the American people sympathized with the President in condemning the Anti-Japanese legislation. So nothing very serious happened, although for several years apparently unfounded predictions were sometimes heard regarding the danger of a coming war between Japan and the United States.

In the early part of 1906, disorders arose in the Philippine Islands, and on March 8th, a battle was fought near Jolo between the insurgents and the American troops in which 600 Moros, but not many Americans, were killed. Quiet was soon restored, and on June 11th, public schools were opened in many parts of the islands with a school attendance of half a million pupils.

On July 30, 1907, the election for the first Philippine Assembly was held, although only a small fraction of the legal voting population cast their votes on this occasion. The new government went into effect on October 16th, with a legislature of two houses and a Governor-general at the head. The legislative powers of the Philippine Commission were now transferred to the new government, though 11,000 American troops were still kept at the Islands for the sake of the "moral effect."

In accordance with a promise made while he was governor of the Islands, Secretary Taft (who had been called the Father of the Filipinos) went on to Manila to attend the opening of the Philippine Assembly, and made an address which did much to create confidence and to aid the adjustments of the new government with the United States. He also visited Japan and China, being enthusiastically received in both countries.

An uprising in Cuba which the native government could not suppress, broke out in 1906, and brought again to the front the necessary relation of the United States to Cuban affairs. The legal relations of the two governments had been defined in the Platt Amendment, to the Army Appropriation Bill of 1901, the Cuban Constitutional Convention having accepted the conditions then imposed.

When the insurrectionary movement began on August 20, 1906, a desire for American intervention began to manifest itself in Cuba, and September 8th, President Palma made an appeal to the United States for its friendly offices. September 27th, American intervention was proclaimed. The following day President Palma resigned, and on September 29th, Secretary-of-War Taft, under the authority of the

President, announced himself as the provisional governor of Cuba. On reaching the island he issued a proclamation of amnesty to all persons charged with political offenses. October 6th, Judge Charles E. Magoon was appointed provisional governor in place of Secretary Taft. A disarmament commission headed by Brigadier-General Funston was also appointed, and 2,000 American marines and 5,600 troops were sent over on warships and stationed at strategic points.

Most of the rebels soon laid down their arms and the work of pacification proceeded rapidly. On December 2d, Governor Magoon issued a decree that unseated half of the Cuban Congress, declaring all seats vacant that had been filled at the election of 1905, the belief being that the Cuban government had stifled the voice of the people in that election. A new election was then ordered to fill the vacant seats.

During Magoon's governorship various new disorders in Cuba had to be put down; but in 1908 and election for President in Cuba resulted in the choice of General José Miguel Gomez. On January 28, 1909, he was installed, and soon afterwards the American troops were recalled, with the stipulation on the part of the United States that all United States decrees then in force should continue until legally revoked by Cuba, and that all money obligations of the United States in Cuba should be assumed by the new government. President Gomez agreed to all these requirements, and gave the thanks of the Cuban people to the American people, President Roosevelt and Governor Magoon.

The work on the Panama Canal up to 1906 was mostly by way of preparation, but during this year more definite plans were agreed upon, and the work went on more rapidly. A majority of the consulting engineers had favored a sea-level canal, believing that the foundations could scarcely be made strong enough to support the immense locks that would be required in a canal of the other type. But after a careful investigation the Senate voted, June 21, 1906, in favor of the minority report for a lock canal, and plans began to be laid for its definite construction. It was determined to construct near Gatun a duplicate flight of three locks with a lift and descent from a lake 30 miles long and 164 square miles in area, the object of this reservoir being to receive the floods of the Chagres River. Another lock was to be built at San Pedro on the Pacific side. The deepest cut for the canal was to be at Culebra, where the summit of the natural surface is 325 feet above the sea level,

On November 6, 1906, President Roosevelt started for a personal inspection of the Panama conditions, saying, as he left Washington, "I am going down to see how the ditch is getting on." He landed at Colon, and on November 15th, he was the guest of President Amador at Panama, both of these cities being in the canal zone, but not of it, having been exempted by special treaty from the jurisdiction of the United States. The President's visit to Panama awakened much interest, as this was the first time that a President of the United States had ever passed from under the jurisdiction of the national flag. After three days spent in the inspection of the canal conditions, the President visited Porto Rico, and on November 26th, he arrived again in Washington.

Early in the year 1909 President-elect Taft also sailed for Panama with an advisory board of six consulting engineers for a new inspection of the canal. The lock-type of canal was again approved, the foundations of the Gatun locks were carefully examined, and plans for the building of the Great Dam at Gatun were laid. It was also decided to widen the locks so as to admit vessels of the largest size. A good report on the Canal was given to Congress, which now voted to increase the Panama appropriations up to \$500,000,000 if needed.

Certain business troubles relating to President Castro's administration in Venezuela during the year 1905 grew more or less acute. In 1907 events moved with startling rapidity and in 1908 the situation became critical. Large pecuniary claims of American asphalt companies were presented, which Venezuela refused to submit to arbitration. The Dutch government also made demands which were not complied with. In June, 1908, the United States recalled its minister to Venezuela, and all diplomatic relations were severed between the two countries. President Castro about this time sailed for Europe, ostensibly for surgical treatment, and General Gomez became acting President. In December, 1908, Gomez was proclaimed President. Some months later Castro renounced his claim to the presidency, the disturbances quieted down, and the American asphalt claims have since been settled by a cash payment.

On July 23, 1906, the third great Pan-American Conference of American Republics met at Rio Janeiro. It was opened by an important speech from Secretary-of-State Root, defining the attitude of the United States to other American nations. The proceedings of this Conference marked an important step in the unification of Pan-American interests.

As early as 1826 an attempt had been made by Henry Clay to call a Pan-American Conference, but the effort failed because it was premature. In the winter of 1889-90 such a Conference was held in Washington, largely through the efforts of James G. Blaine, the subjects discussed being the protection of mutual rights, and reciprocity among American nations. Through the action of this Conference there was also established at Washington a "Bureau of American Republics" to gather information in regard to the mutual interests of all American countries.

The Pan-American Exposition of Buffalo helped to cement the growing ties of friendship among American nations, and in 1901-2, a second Pan-American Conference was held in Mexico City, at which one of the important subjects discussed was the construction of a great international railroad from the United States to Brazil. This was made the subject of special reports at the Third Pan-American Conference at Rio Janeiro, and the Bureau of American Republics was instructed to suggest measures to promote the railroad enterprise, and to prepare forms of contracts with connecting lines of steamboats to certain American ports.

The chief subject discussed, however, at the Rio Janeiro Conference was the so-called Calvo or Drago Doctrine, which declares that foreign debts in American countries should not be collected by force, but claimed through the ordinary courts of the debtor country. After much discussion it was decided to refer this matter to the Hague Peace Conference of the following year.

In 1906 the "Bureau of American Republics" at Washington was reorganized under the name "The Pan-American Union" and the scope of its duties was widened. It holds the papers of the Pan-American Conference, and performs the duties laid upon it by these conferences. Its executive office is in a stately marble building in Washington (the gift of Andrew Carnegie) which was dedicated April 26, 1910, in the presence of representatives of twenty-two American republics, and the mission of the Union is "to promote the reign of peace and goodwill and of progress moral and material over the republics of this vast continent."

A fourth General Pan-American Conference was held at Buenos Ayres in 1910, and by these four great gatherings, and the Pan-American Union with which they are connected, much has been done to unify the interests of All-America.

In addition to the four general Pan-American Conferences several

have been held of a more private or semi-official nature, or dealing with more limited areas. As a result of one of these, a Central American Court of Arbitration was established in 1902 at San José, Costa Rica, but it has accomplished little. An important Central American Conference, however, was held at Washington in November, 1907, and resulted in new treaty relations among the Central American States after more than a hundred years of revolution and internal wars.

The second great Peace Conference of Nations was held at The Hague from June 15th to October 18, 1907. The first Hague Conference, held in 1899, had for its chief work the establishment of the "Hague Tribunal" or "Permanent Court of Arbitration" to which international disputes that cannot be settled by diplomacy may be referred. By this Hague Tribunal nine decisions on international questions submitted to it have thus far been rendered, the first of these being the division of a religious bequest (the Pius Fund) between the United States and Mexico; and the ninth (rendered in February, 1911) being the settlement of a case between England and France relating to the extradition of a British prisoner.

The second Hague Conference, which was first proposed at the Inter-Parliamentary Union in St. Louis, in 1904, was convened in 1907 by Queen Wilhelmina, upon the formal invitation of the Czar of Russia. Its sessions were held in the "Hall of Knights," but on July 30th the foundation stone of the new Carnegie "Palace of Peace" was laid, a magnificent building which will be completed about 1913. In addition to the Carnegie Fund of \$1,500,000 given for its erection, other countries have made subscriptions for its adornment, Great Britain having promised the four stained windows for the General Court of the Palace.

The Hague Conference of 1907 had 239 delegates representing forty-six nations, including all the great powers and a large number of the smaller powers of the world. The American delegation included Joseph H. Choate, Ambassador to England; General Horace Porter, former Ambassador to France; David J. Hill of the State Department, and four other members.

At the opening session General Porter announced that the United States reserved the right to introduce the questions of the limitation of armaments and the Drago Doctrine. The long term of the Conference was filled with complicated discussions at which much diplomacy was needed to harmonize conflicting interests.

The work of the Conference was organized in four divisions, dealing with Arbitration, Land War, Maritime War, and "The Geneva Convention" or Red Cross organizations.

Proposals for a "Model Arbitration Treaty" for all nations were submitted from America, and a form was proposed similar to that of the treaties that had been negotiated by the United States in 1904, providing also that all disputes among nations that cannot be settled by other means shall be submitted to the Hague Tribunal. This form of treaty received formal endorsement from the Conference and was definitely accepted by thirty-five powers. But the rule of the Conference being that no measure could be adopted without substantial unity among the nations represented, the "Model Treaty" was defeated by the influence of Germany, which, with several other powers, refused final assent to the measure. Since 1907, however, the work of arbitration, thus left unfinished at The Hague, has been practically accomplished by similar treaties to the proposed Model Treaty, which have been negotiated between most of the nations of the world.

The Drago Doctrine, forbidding armed intervention for the collection of debts, was introduced to the Conference by Dr. Drago of Argentina. It was opposed by some European delegates, but through the efforts of the American delegation a compromise measure was adopted to the effect that foreign debts should not be collected by force *except as a last resort*.

The chief measure, however, to which the American delegates to the Conference were committed, and for which they fought from first to last, was the establishment of two new courts at The Hague, a "Court of Arbitral Justice," with larger powers than those held by the "Permanent Court of Arbitration," and an "International Prize Court," to regulate the capture of vessels in time of war. It was said that the "Permanent Court of Arbitration," in spite of the important service it had rendered, was neither "permanent" nor "a court" but rather a list of judges from whom arbitrators might be chosen. The court has to be created for each specific case, the costs to be borne by the two arbitrating nations; and as the expense is large, the smaller states seem to be practically debarred from submitting their disputes to this tribunal at all.

To obtain a true international court with regular sessions it was proposed (while not doing away with the existing Court of Arbitration) to establish a new "Court of Arbitral Justice," with regular

annual sessions and having fifteen judges, eight of these representing the eight great powers, and the other seven representing the thirty-four smaller powers by a system of rotation. A large sentiment in favor of such a court was manifested, but its actual establishment was prevented by the South American States, under the leadership of Brazil, these contending that the smaller states ought to have permanent representation equal to that of the larger powers.

The United States felt partly recompensed for the failure of the "Court of Arbitral Justice" by the actual establishment of the "International Prize Court," with a similar distribution of judges to that proposed for the "Court of Arbitral Justice," the smaller powers being willing to concede to the great maritime powers a larger representation in regard to captures at sea.

On the question of the new courts, as well as in regard to the "Model Treaty," something nearly equivalent has since been actually established under the leadership of the United States. In 1909 Secretary Knox sent a circular note to a number of the powers suggesting that so far as the consenting states were concerned the Judges of the International Prize Court at The Hague should be invested also with the functions of the proposed "Court of Arbitral Justice," thus making that Court a "chamber" of the new "Prize Court"—the intention being that the larger powers should thus organize the Court among themselves with the hope that the smaller states would later give their adherence to it. This hope has already been in a measure realized. In 1910 it was announced before the Lake Mohonk Conference on the authority of Secretary Knox that such a "Court of Arbitral Justice" in connection with the International Prize Court at The Hague, will probably be established in the near future and that when a third Conference of the Nations shall assemble at The Hague this will already be in successful operation.

On the night of the 13th of August, 1906, the city of Brownsville, Texas, was the scene of a riot in which it was believed that some negro soldiers belonging to the 25th U. S. Infantry regiment quartered in the city had fired at random shots into dwellings, and killed or wounded several citizens. The affair created much controversy, as it was impossible to determine exactly who were the offenders, and any attempt at punishment was held to be a discrimination against the negro race. After considerable investigation President Roosevelt on November 21st, disbanded a whole battalion of the regiment, discharging three companies of negro soldiers "without honor." Many

protests were heard and later investigations were attempted, but little could be absolutely proven; and the President held to his decision, although an arrangement was afterwards made allowing any soldiers who could prove that they were not implicated in the riot, to re-enlist.

Other serious social or industrial disorders occurred near this period. In September, 1906, there were anti-negro riots at Atlanta, which resulted in several lynchings, and the city was for several days under martial law.

Difficulties between labor and capital were also frequent. Between 1881 and 1905, 36,758 strikes in the United States are recorded, with 1,546 "lockouts" of groups of workmen by employers. The largest number of these were in the building trades, but some of the most severe and long continued were among the coal miners. Most of these were "peaceful strikes," the difficulties being finally adjusted by arbitration, or through the "Conciliation Boards" that were established in many of the States. A few, however, were accompanied by serious social disorders.

Conspicuous among the latter were the Cripple Creek riots of Colorado in 1903-4. These occurred in the productive gold region near Pike's Peak, and resulted in armed conflicts between the striking miners and the militia, in which many persons were killed and the whole region was for some time under martial law.

The Chicago teamster's strike of 1905, the street car strike of Columbus, Ohio, in 1910, and the bituminous coal miners' strike of Pennsylvania in the same year, were also accompanied by serious violence. Among the strikes which have most affected the public interests may be named also the great meat packers' strike of 1904, the long printers' strike of 1905, that of the Rapid Transit Company of New York in the same year, and those of the shirt waist makers, the cloak makers and the express company employees of New York in 1910.

Of close relation to the meat packers' strike was the indictment of the "meat packers' trust" and also the "packing house scandal" of 1906, which was begun, or at least intensified by Upton Sinclair's novel "The Jungle," which was believed to disclose the unpleasant secrets of the Chicago packing-houses. A sensational discussion ensued, which was followed by a special message of the President to Congress calling for national inspection of stockyards and packing-houses. The bill was promptly passed, and October 1, 1906, the Federal Meat Inspection Law went into effect.

In 1906, also, Congress passed a Pure Food Law, which went into effect on the first day of January, 1907. It forbids "the manufacture, sale, or transportation of adulterated, misbranded, poisonous, or deleterious foods, drugs or medicines," and while the practical workings of the law have been attended with some inconsistencies or inconveniences, it has done much to insure public health and safety.

In 1906-7 new legislation was directed against the "trusts," and many new suits were instituted. Down to 1906 there had been thirty-two prosecutions under the Sherman anti-trust law, but it was felt that the law was not effective enough, and in most cases the proceedings were dropped.

The application of the word "trust" was also extended to cover railroad systems in which a "merger" had been made. In 1904 Edward H. Harriman, the great railroad promoter, had bought and rebuilt the Union Pacific Railroad, and a little later had combined with this the Southern Pacific system. The Harriman lines and also the Pennsylvania system of coal-carrying railroads were now indicted as illegal combinations. Most of the largest manufacturing and commercial trusts (including the Sugar Trust, the Tobacco Trust, and the Standard Oil Company) had already been indicted, although the largest "trust" in the world (the United States Steel Corporation, with a capital of nearly one and a half billions of dollars)—perhaps because of greater publicity in its methods, and a systematized effort to reduce the watering of its stocks, escaped the general warfare that was being waged upon the corporations. Finally, however, in October, 1911, the United States brought suit for the dissolution of this trust.

In 1906 the Elkins anti-rebate law was amended to make the rebate offense punishable by imprisonment as well as by fines. Under this law many new prosecutions were now begun, both against corporations that had received freight rebates, and the railroads that had given them. The Hepburn railroad bill was also passed, to regulate railroad charges, and enforce the principle that railroads must not discriminate in freight charges to different shippers for the same class of goods.

The specific investigation of these matters was now turned over largely to the Interstate Commerce Commission, established in 1887. The powers of this Commission were also enlarged, the United States Courts decreeing that the Interstate Commerce Commission has power to compel witnesses to testify even against their own cor-

porations, and in November, 1906, John D. Rockefeller and other Standard Oil officials were called as witnesses in a Standard Oil case at Findlay, Ohio.

The railroads grew excited under the pressure that was being placed upon them, and an important conference between the Interstate Commerce Commission and the railroad managers was held in Washington. The railroads also called on the President for reassurance, and in April, 1907, he addressed an assembly of railroad men in Washington in a speech which emphasized the power of the national government to regulate the carriers of interstate commerce. He also made an allusion to Bunyan's "man with the muckrake," which made the address famous as "the President's muckrake speech."

The most celebrated of the lawsuits against the trusts were those directed against the Standard Oil Company, which was driven out from several States as an illegal corporation. A famous decision against the company was given by Judge Landis of Chicago. Under the Elkins law the company had been indicted in several prosecutions with an aggregate of 8,300 counts for accepting railroad rebates, the penalty for each being a fine of from \$1,000 to \$20,000. Conviction followed on 1,462 counts, and the maximum fine of \$29,240,000 was imposed, being the largest fine ever imposed in an American court. The case was carried to the United States Court of Appeals, which reversed the decision, and later attempts for a new trial failed.

Other famous cases were those of the Tobacco Trust and the Sugar Refining Company, the latter of these being heavily fined in the United States Courts. Other trusts indicted were the Ice Trust, the Bath-tub Trust, the Window-glass Trust, the Oyster Trust, the Fertilizer Trust. Altogether, from fifty to sixty corporations were put under fine during the closing years of Roosevelt's administration.

In 1910 the lower courts, having decreed the dissolution of the Standard Oil and Tobacco Trusts, the question came to the United States Supreme Court for final decision. Long hearings were held, and the verdict was delayed by the death of Justice Brewer, but in 1911 the Supreme Court gave its final decree on these long-mooted questions and also gave a final interpretation to certain clauses in the Sherman Anti-trust Law by ordering the dissolution of these trusts into their component parts.

A not unnatural result of the war on corporations was a financial

panic near the close of 1907, which happily was of short duration, and followed by quick recovery. On October 21st, the Knickerbocker Trust Company, a banking corporation which controlled the stock of several other banks, suspended payment. Its president resigned and a few days later committed suicide. A "run" on banks followed, and fifteen New York banks suspended payment. On November 2d, an important conference was held at the house of J. P. Morgan. Consultations were also held at Washington, and on November 17th, the President announced that fifty millions of Panama Canal bonds would be issued, with interest-bearing certificates. The amount of these bonds was later changed to twenty-five millions; but the bonds were quickly taken, and the President and Secretary-of-the-Treasury Cortelyou received many congratulations on this effective means of financial relief.

It is pleasant to turn from the strife between capital and labor, and the war against corporations, to the benefactions that with increasing frequency have been given by men and women of wealth to education, philanthropy and research. Between 1893 and 1906 about nine hundred million dollars were given in America to private individuals to public causes, and in the next four years many millions more were added.

The first of the so-called "Educational Foundations" was the Peabody Fund of three and a half millions, given in 1867 by George Peabody for education in the Southern States. It was followed by the Slater Fund of \$1,000,000, given in 1882 by John F. Slater of Connecticut, "for uplifting the lately emancipated population of the Southern States and their posterity." The Anna T. James Foundation also provided another million for negro education.

The two largest givers have been John D. Rockefeller and Andrew Carnegie, and as these have often conditioned their gifts upon the raising of a like sum by the recipients, the total amounts thus gained for public purposes has been very great.

Rockefeller's largest gifts have been to education. From a financial point of view he is the creator of Chicago University, his total gifts to this institution amounting to \$35,000,000. Rockefeller's largest gift at any one time was one of \$32,000,000 to the General Education Board "to promote education in the United States without distinction of race, sect or creed." Later his gifts to that Board were increased to \$43,000,000. Other Rockefeller benefactions include one of seven millions in 1903 for research in regard to the cause

and cure of tuberculosis; a million in 1909 to fight the hookworm disease in the Southern States; and several millions to the Rockefeller Medical Institute and Hospital in New York. In 1910 the Rockefeller Institute for Research was opened in connection with the Rockefeller Hospital, with an endowment of six and a half millions. In March, 1910, announcement was made of a proposed Rockefeller Foundation "to promote the well-being and advance the civilization of the peoples of the world, to disseminate knowledge and to prevent and relieve suffering." A federal charter for this was asked of Congress, but the highly generalized nature of the objects proposed led to some discussion and the matter was delayed.

Carnegie's earlier gifts were mostly to establish free libraries, and "Carnegie Libraries" may now be seen in all parts of the United States and in many foreign countries. One of the most important of Carnegie's benefactions was the establishment of the "Carnegie Institute" of Washington, with an endowment of ten millions, to which two millions more were added later as "an institution to encourage investigation, research and discovery." He also founded and heavily endowed the "Carnegie Technological School" of Pittsburgh. Other bequests of his are: The Carnegie Hero Fund of five millions, established in 1904, to give rewards to those who have risked their lives for others and to the widows and children of those who have sacrificed their lives in saving others; "a college Professors' Pension Fund of ten millions, given in 1905 and made available for the retiring of aged professors in colleges having no religious bias and maintaining certain standards of scholarship; to this several millions were added later to provide for professors in State universities. The latest of his large benefactions is the Peace Fund of \$10,000,000, given in December, 1910. He also provided for the erection of the "Palace of Peace" at The Hague, and the "Bureau of American Republics' " Building at Washington.

Another Peace Foundation was established a few years ago in Boston for the distribution of peace literature, to which Edwin Ginn gave an endowment of \$1,000,000. Other large givers that may be named are Mrs. Russell Sage, who established the "Russell Sage Foundation," with an endowment of ten millions for varied philanthropic work, especially in promoting the welfare of child life; Mrs. E. H. Harriman, whose gift of 10,000 acres of land and \$1,000,000 for endowment is to create a great State Park along the Palisades of the Hudson River; and John S. Kennedy, who left at his death numerous

large bequests for missionary and philanthropic work, chiefly under Presbyterian auspices. Many other persons might be named, who with perhaps less financial resources have yet made large bequests in aid of human progress.

A large Tercentenary Exposition was held at Jamestown, Virginia, from April to November, 1907, the display being largely of a naval character. On May 13th special exercises to commemorate the 300th anniversary of the landing of the English in America were held at the Exposition grounds.

On December 16th, a fleet of sixteen battleships and ten smaller vessels, the strongest fleet ever assembled under the United States flag, left Hampton Roads under the command of Rear Admiral Evans, for a journey around the world. The general itinerary was by way of Trinidad, Rio Janeiro, the Strait of Magellan, Callao, San Francisco, Hawaii, Samoa, the Philippines, Japan, China, the Suez Canal, and the Mediterranean; back to the United States—a cruise of 13,772 miles, which occupied 135 days. Everywhere the fleet was received with enthusiastic demonstrations, and this display of naval strength in time of peace was held to be of much value in increasing the respect for America among the nations of the East. The returning fleet entered Hampton Roads on February 21, 1909, and on the following day it was reviewed by the President.

At Port Said, however, several of the ships were detached from the fleet for an important relief expedition. On December 28, 1908, an appalling earthquake occurred in Sicily and Italy, in which the cities of Messina and Reggio were almost wholly destroyed; about two hundred thousand (200,000) lives were lost and more than a billion dollars' worth of property destroyed. The sympathies of the world were aroused for the stricken locality; and three battleships and two supply boats of the American fleet just leaving the Suez Canal were detached and ordered to Naples to assist in the rescue work. The American Red Cross ship *Bayern* was also sent to Italy with supplies; and the Celtic, a supply ship about to start from New York to join the returning American fleet with enough navy rations to support on an emergency basis 40,000 people for a month, was ordered to carry its stores to Messina instead. Many private funds were collected and Congress appropriated \$800,000 to aid in the relief measures.

Among the peaceful achievements of 1907 may be noted the accomplishment of the success of wireless telegraphy. A patent on

the process of telegraphy by electro-magnetic waves had been secured by Marconi, an Italian inventor, in 1896, but many improvements had been needed to make the system thoroughly practical. In October, 1907, a regular transatlantic wireless service was established between Ireland and Nova Scotia, and President Roosevelt signalized the event by sending a message from Wellfleet, Massachusetts, to the coast of England. The value of this new mode of telegraphy had been demonstrated in the San Francisco disaster of 1906, when all wires were down and wireless signals were used in summoning relief. Another triumph of wireless telegraphy occurred January 23, 1909, when the White Star steamship Republic was rammed by the Italian liner Florida in a fog off Nantucket Island, and a wireless message of extreme danger brought the White Star steamer Baltic to the aid of the sinking vessel. Among 1,000 lives in peril only six were lost, and these from the collision and not by drowning. On February 16th, the House of Representatives passed a bill providing that all ocean-going ships carrying more than fifty passengers and traveling two hundred or more miles, should be equipped with a wireless instrument and operator.

The so-called "Conservation Movement" was organized June 8, 1908, by the appointment by President Roosevelt of a National Conservation Commission, divided into four sections, of land resources, water resources, forest resources, and mineral resources.

The word "Conservation," and the thing for which it stands, were somewhat new in American politics, since from the beginning of the government until about 1905 the accepted policy of the nation had been to encourage private enterprise by turning over public resources at low rate for private development. For some years, however, a feeling had been growing that more should be done to prevent waste, and turn this national wealth to better account for the public advantage. An important step in this direction was taken in 1881 by the organization of the Forest Division of the Department of Agriculture, later known as the "Forest Service," of which Gifford Pinchot became the head.

Among the various States also organizations were formed for the care of forests, waterways, etc., and in 1907 the President appointed an "Inland Waterways Commission," which was afterwards reorganized as the "National Waterways Commission." Soon after their appointment the members of this Inland Waterways Commission took a trip of inspection on the Mississippi River, and it was then sug-

gested, subject to the President's approval, that they should hold a convention on this subject at Washington. In taking up this matter the President determined to call a convention of governors of all the States to meet the Inland Waterways Commission, and invited all members of Congress also to be present.

One outcome of this important meeting was the National Conservation Commission already mentioned. This Commission organized promptly, choosing for Chairman Gifford Pinchot, who had done more than almost anyone else to call the attention of the government to the need of such conservation measures. The movement spread rapidly and in December, 1908, a great Conservation Congress was held at Washington, at which twenty-two State Conservation Commissions and other organizations formed to co-operate with the National Commission were represented. At a later conference, Canada, Mexico and Newfoundland were also represented in a movement for the general conservation of the natural resources of all North America.

Another national movement somewhat related to the Conservation Movement is known as the Reclamation Service. In 1902 Congress passed a Reclamation Act which provided that the proceeds from the sale of public lands in the arid regions of the United States should be used for the construction of irrigation works. Under this act thirty great projects have been begun, most of these being great masonry dams, the largest ever built in this country. Of those recently finished the most prominent are the Roosevelt Dam on Salt River, Arizona, and the Pathfinder and Shoshone Dams of Wyoming, the last named being the highest dam in the world. In 1910 the Reclamation Act was superseded by an Act of Congress appropriating \$20,000,000 for the completion of those works already under way if not sufficiently provided for by the former Reclamation Act.

The Republican National Convention met at Chicago in June, 1908, and nominated William Howard Taft of Ohio for President, with James S. Sherman of New York as Vice-president. Three weeks later the Democratic Convention met at Denver, where William J. Bryan received for the third time the Democratic nomination for President with John W. Kern of Indiana for Vice-president.

In the Taft-Bryan campaign no issues were very sharply drawn. The questions most prominently before the country related to the revision of the tariff, conservation, and legislation regarding labor

questions and the trusts; and measures regarding these were in some degree favored by both parties.

On November 3d the Republican candidates were elected, and the following March, Taft was inaugurated in a driving snowstorm, this being the first time since Jackson's second inauguration in 1833 when the ceremony had not taken place in the open air. Ex-presi-

WILLIAM H. TAFT

dent Roosevelt now retired to Oyster Bay, N. Y., to get ready for a projected hunting trip in Africa.

William Howard Taft, the twenty-seventh President of the United States, was born at Cincinnati, Ohio, Sept. 15, 1857. After gradu-

ating at Yale College, and the Law School of Cincinnati, he practised law for a time, and from 1887 to 1890 was a Justice in the Superior Court of Ohio. In 1890 he became Solicitor-General of the United States, and was Judge of the Sixth United States Circuit from 1892 to 1900. In March, 1900, he was appointed to organize civil government in the Philippines, and July 4, 1901, became the first civil governor of those islands. In 1903 he returned to America to become Secretary of War under President Roosevelt. In 1904, and again in 1909, he was sent to Panama to investigate questions relating to the canal zone. In 1907 with a congressional delegation he revisited the Philippines, taking part in the opening of the new National Assembly, and also made a tour around the world. In 1908 he was elected President of the United States.

Like his predecessor, President Taft adopted the policy of making long journeys to various parts of the country, where he spoke freely in public, and emphasized the proposed measures of his administration.

In the fall of 1909 he took a 13,000 mile journey through the West and South, and on October 6th he met and exchanged friendly greetings with President Diaz of Mexico on both sides of the Rio Grande—at El Paso, Texas, and Ciudad, Mexico—President Diaz being the first foreign executive to visit the United States, and Taft the second President to ignore the precedents of 117 years in regard to the chief executive stepping outside the national domain.

Almost the first official act of President Taft was the calling of a special session of Congress to revise the McKinley tariff of 1890. For many years the tariff question had been always with us, as an important issue between parties. But in 1909 not only the Democrats but many Republicans as well, owing to the rise in prices of living and other causes, had reached the conclusion that extensive tariff changes should be made, and the promise of such revision was made the chief plank in the Republican platform on which Taft was elected.

Accordingly on March 11, 1909, the 61st Congress assembled and was in session until into August. The tariff bill, introduced into the lower house by Mr. Payne and supported in the Senate with many amendments by Senator Aldrich, occupied most of its attention, and elicited much difference of opinion as to whether the promised revision meant "revision downwards" or merely re-

adjustment. But on August 5th the Payne-Aldrich tariff bill became a law.

The new tariff provided for free trade with the Philippines, and made many specific changes in tariff rates. Its most important provision, however, was that of minimum and maximum tariff rates, the former being supposed to be sufficient for protection, and the latter adding an excess of 25 per cent. *ad valorem* for nations that should maintain tariff distinctions against the United States. This "penalty scale," already in use in some European countries, would in some cases amount to an increase of 50 to 100 per cent. above the normal scale of duties. The question of minimum and maximum rates at once threatened collision with certain foreign powers, especially with Germany; but in February, 1910, an agreement was reached which gave to that country the minimum rates. A controversy also arose with Canada, which had long been in a state of tension regarding trade with the United States. But on March 30, 1910, Canada and Australia, the last countries with which satisfactory arrangements were to be made, were both accorded the minimum tariff, and it was now extended to the entire world.

Discussion as to specific duties, however, gave increasing irritation in the United States itself. Prices continued to rise, and not only Democrats, but many Republicans, claimed that the tariff revision had not given the needed relief, and that, especially on the necessities of life, the customs rates were too high. The high protectionists, however, declared that the high prices had nothing to do with tariffs, but were the natural result of prosperous business conditions, and the large output of gold from the mines of the world. But the tariff questions, conservation, and some other party disputes, brought their legitimate fruits in certain marked political events of the following year.

These party disputes began with the assembling of Congress immediately after President Taft's inauguration, in the form of organized opposition to the House Committee on Rules, and to Joseph G. Cannon, the Speaker of the House. A set of rules for party management, devised by Speaker Reed in 1890, gave to the Committee on Rules (sometimes called the "Steering Committee"), and especially to the Speaker who made the Committee appointments, large powers in determining what legislation should be admitted. The system grew up because it facilitated business,

but a movement in opposition had for some time been growing in the Republican party. The opponents now became known as "Insurgents," though they themselves preferred to be called "progressive Republicans," while the "regular Republicans" who rallied to the support of the Speaker became known as the "Standpatters."

In both Houses of Congress the spirit of opposition rose to unexpected heights, and on March 15, 1910, it culminated in an open attack on Speaker Cannon, in which about forty "Insurgents" voted with the most of the Democrats to overrule a formal decision of the Speaker. Then followed a strenuous contest of four days, ending with a vote that the Committee on Rules should be reorganized and the Speaker left out of it. It was thought that this would be followed by the resignation of the Speaker. Mr. Cannon, however, refused to resign, but intimated his willingness to put a vote for his own removal. But as this would mean the election of a new Speaker, and as the "Insurgents" were not willing to give this office to a Democrat, the motion to declare the chair vacant was lost. During the remaining sessions of the 61st Congress the power of the Speaker and of the House Committee was less in evidence, and the President and his advisers became a larger directing force in securing the admission of subjects of legislation.

During the year 1909 many anniversary observances were celebrated in various parts of the country, most of these being the centenaries of the birth of persons of distinction. If the predictions of old astrologers had any basis, the year 1809 must have been a time of important planetary conjunctions and other celestial phenomena, for an unusually large number of famous lives began during that year.

The most important of these centenaries of 1909 was that of February 12, when the birth of Abraham Lincoln was celebrated all over the country. The most interesting of these Lincoln celebrations, however, was the one at the Lincoln birthplace near Hodgenville, Ky., where the corner-stone of a memorial building (to inclose the original Lincoln log-cabin) was laid by President Roosevelt. On the same day the Darwin centenary that was being celebrated in England was observed in America by the New York Academy of Science, and received notice also at many other places in connection with the Lincoln memorials.

August 12, 1908, the 400th anniversary of the landing of Ponce

de Leon was observed with great demonstrations in Porto Rico. In 1909 also was celebrated the discovery of Lake Champlain in 1609 by the old French navigator. But by far the largest and most imposing of the centennial observances of the year 1909 was the Hudson-Fulton celebration of New York, commemorating both the 300th anniversary of the discovery of the Hudson River, and the 100th anniversary of steam navigation. It opened at New York Sept. 25th, closing two weeks later at Albany and Troy. The spectacular opening of the exhibition was a great naval parade, miles in length, led by reproductions of Hudson's Half-Moon and Fulton's steamboat, the Clermont. These were followed by fifty war vessels, twenty of these being from nine foreign countries. During the two weeks devoted to this celebration there were military and civic parades on shore, with feats of aviation, and illuminated river displays at night; and on September 27th the corner-stone of the Hudson Memorial Building was laid on Spuyten Duyvil Hill by Governor Hughes of New York.

On June 1, 1909, the Alaska-Yukon-Pacific Exposition was opened at Seattle, President Taft giving the signal by pressing a gold key at the White House. Between this date and the close of the exhibition the last of October, many excursions to Alaska were participated in by Americans from all parts of the country.

In the summer of 1908 Commander Robert E. Peary of the United States Navy sailed from Sydney, N. S., on the steamer Roosevelt for his sixth organized expedition for the discovery of the North Pole.

On September 1st, 1909, another Arctic explorer, Dr. Frederick A. Cook from Brooklyn, N. Y., telegraphed from the Shetland Islands to Copenhagen that on April 21, 1908, in company with a party of Esquimaux he had succeeded in reaching the pole. The news excited the liveliest interest all over the world, an interest which was intensified five days later by a telegram sent from Labrador by Lieut. Peary, that on April 6, 1909, accompanied by a negro named Henson and four Esquimaux he had accomplished his life-long quest and "nailed the Stars and Stripes to the North Pole."

Before many days public sentiment had divided itself into two camps on the question of whether to Cook or to Peary should be awarded the credit of being the "Discoverer of the Pole," and statements began to be heard among the Peary adherents that it was impossible that Dr. Cook should have reached the Pole under

the conditions that had been stated. Dr. Cook, however, was received at Copenhagen with the highest honors, and on September 21st a public ovation was given him in New York, to which was added a few days later "the freedom of the city." Doubt, however, was cast on Dr. Cook's statements by the publication of proofs that his earlier claim that he had climbed to the summit of Mount McKinley in Alaska, and left certain records there, was false.

Interest now centered itself on the examination of the records of the two explorers. After much delay Dr. Cook's records were sent to the University of Copenhagen which had refused to waive its rights to a first examination. In a very brief time this Uni-

From the North Pole by Robert E. Peary, copyright, 1910, Frederick A. Stokes Company.

PEARY'S SHIP THE ROOSEVELT AT CAPE SHERIDAN.

versity announced that Dr. Cook had not presented any satisfactory proof that he had really reached the pole. Public confidence was withdrawn, and Dr. Cook himself sailed for Europe and was in retirement for about a year. He afterwards returned to New York, and tried to win sympathy by the confession that he was not absolutely sure whether he reached the pole or not. This confession he has since withdrawn.

Meanwhile Peary's records were examined and approved by the National Geographic Society, and these findings were formally endorsed by official scientific and geographical bodies in London, Paris, Berlin, Vienna, Rome, Brussels, Antwerp, Genoa, Dresden, St. Petersburg, and Edinburgh. He was awarded gold medals by various organizations, and was afterwards given the thanks of Congress and retired from the Navy with the rank of Rear-Admiral.

The scientific results of Peary's expedition were apparently not large, yet established the fact that the pole is located in a field of drifting ice without any land in the vicinity.

The interest felt in the discovery of the North Pole increased the public interest in antarctic exploration as well. In 1909 Lieutenant Ernest Shackleton of England made a courageous dash to a point within 111 miles of the South Pole, an achievement for which he was afterwards knighted by King Edward. In 1910 the Peary Arctic Club of New York, with the National Geographic Society, set on foot an Antarctic Expedition, making use again of Peary's Ship, the *Roosevelt*, under the command of Capt. Bartlett.

During the first session of the 61st Congress in 1909, a new dispute over conservation broke out in an acute form. The new Secretary of the Interior was Richard A. Ballinger, who had been commissioner of public lands during Roosevelt's administration, and had afterwards been counsel for the applicants in certain land claims.

Secretary Ballinger now announced that he should make no decisions personally in disputed land claims, but leave these questions to his subordinates. At this, Gifford Pinchot, the head of the Forest Service, who had been the chief advocate of a strong policy of conservation, openly attacked Secretary Ballinger on the charge that he was opposed to conservation, and was trying to engineer through the land office certain fraudulent or doubtful claims in the Rocky Mountains and in the coal fields of Alaska.

The President at first attempted to mediate between these opponents, or to remain neutral; but when on Jan. 6, 1910, a letter of Pinchot's reflecting severely on Secretary Ballinger was made public, the President at once removed Pinchot from the head of the Forest Service. About the same time Congress provided for an investigation of the Ballinger charges by a joint House and Senate Committee, and a few days later Pinchot was elected pres-

ident of the National Conservation Committee.

After long temporizing a minority of the Investigating Committee reported in September, 1909, that the charges against Ballinger were sustained, but the majority withheld their report until after the fall elections. Meanwhile pressure was put on President Taft for Ballinger's retirement from the secretaryship, but the President refused to dismiss a Cabinet officer against whom no charges had been proven. On December 5th, election being over, the majority report of the Investigating Committee was published, exonerating Ballinger from wrong-doing, but suggesting new provisions for the care of the public resources. Criticisms of Secretary Ballinger's course in regard to conservation continued to be heard, however, from the progressive wing of the Republican party, and at last in March, 1911, Secretary Ballinger resigned his office as Secretary of the Interior and Walter L. Fisher was appointed in his place.

The decision of The Hague Tribunal on the so-called Newfoundland Fisheries' Case, given September 7, 1910, closed a long international controversy and is considered the most important decision ever rendered by The Hague Court of Arbitration. For almost a hundred years the rights of Americans to fish in the Newfoundland waters had been a subject of dispute between the United States and Canada and Newfoundland. The treaty of 1783 between the United States and Great Britain gave this right to America, but it was held that this right was lost by the war of 1812. The treaty of 1818, however, allowed to Americans the right of "deep-sea fisheries," anywhere outside of a "three-mile limit" from the shore, and also of "inshore fisheries," that is, within the three-mile limit on certain coasts. Most of the disputes that arose depended on the interpretation of the "three-mile limit," that is, whether the line was to follow the sinuosities of the coast, or in the case of bays to go from headland to headland, thus shutting off the whole bay, even if parts of it were more than three miles from any shore.

In 1904 certain new elements entered into the controversy, as the Newfoundland government had prescribed rules limiting the modes and the times of taking fish, and insisted that American fishermen should conform to all these British regulations. A temporary "modus vivendi" had sometimes given peace for a time, but only to be followed by new controversies soon afterwards.

In 1908 the United States negotiated an arbitration treaty with Great Britain, in accordance with which this long-standing controversy was submitted to The Hague Tribunal, and a series of seven questions was presented relating to the interpretation of the treaty of 1818. The case was argued at The Hague during the summer of 1910, its most remarkable feature being a notable six days' speech from the leading American Counsel, Hon. Elihu Root.

The decision of the Court gave five points in favor of the United States, and two important points in favor of Great Britain, sustaining the sovereign right of Great Britain to make regulations for the fisheries provided that these did not interfere with any specific treaty rights. The decision was accepted on the whole with satisfaction in both countries, and was considered a striking evidence of the value of The Hague Court in the settlement of international difficulties.

Early in 1909 a Commission was sent from America to investigate the conditions of Liberia. This negro republic, founded by the joint action of the United States government and the American Colonization Society, is settled along the coast by the descendants of free blacks who went there from the United States before 1860, these and the natives whom they have civilized now amounting to about 50,000 persons. But the large "Hinterland," or back country, is occupied by a million and a half of savages; and the inability of the republic to control these aborigines has been the ostensible cause of recurring boundary disputes with Great Britain and France, whose African possessions are contiguous to Liberia.

After losing to these two powers about 150 of her 500 miles of coast line, Liberia in 1908 officially requested the United States to aid her in maintaining her national independence.

The investigating commission sent in 1909 to Liberia reported that "the Liberians had not retrograded in their civilization, and had carried on an orderly government," but that they needed and should receive the aid of the United States to withstand adverse conditions. Recommendations to this effect were made by President Taft and Secretary of State Knox. Little has yet been done, although it is generally conceded that the United States is under obligations to protect Liberia from outside aggression, and to help her develop her natural resources.

Soon after his retirement from the presidency, President

Roosevelt sailed with his son Kermit and several scientists for Mombasa, Africa. From there he penetrated into the interior and spent nearly a year in hunting "big game," sending back many valuable contributions to the National Museum at Washington.

On March 14, 1910, he arrived at Khartoum, Egypt, on his homeward trip, and immediately became again a factor in international affairs. On March 24th he addressed a company of students at Cairo, upholding British rule, and giving some offense to the Egyptian nationalists; and May 31st made a speech at the Guildhall in London in which he commented freely on the British Colonial policy in Egypt.

His advice to foreign officials was taken on the whole in good part, and it was explained later that both of these speeches had been read in advance by statesmen in authority. He made addresses at the Sorbonne, Paris, at Christiana, and at Berlin which attracted wide notice. He was formally received at several foreign courts, but declined an interview with the Pope because the Papal Secretary of State expected from him a pledge that he would not attend a meeting of the Methodist mission at Rome. He was also the special envoy of the United States at the funeral of King Edward VII on May 20th. On June 18th he arrived in New York, where a great public reception awaited him, and then retired to his country home at Oyster Bay, N. Y., to take up his duties as contributing editor of the *Outlook*, and writing up his African experiences.

But it would have been unnatural for him to remain long out of the political field. The failure of the New York Legislature to pass a direct primary law which Governor Hughes was advocating, was interpreted as a rebuff to Roosevelt, who had expressed his approval of the measure. A little later Roosevelt was nominated as the temporary chairman of the New York Republican convention, but Vice-President Sherman was chosen above him. Colonel Roosevelt's friends resented this action, but when on August 31st in a public speech at Ossawatimie, Kan., he advocated "progressive republicanism," and gave expression to certain personal policies, some of the admirers of the ex-President began to say, "The Colonel has gone too far."

The fall election of 1910 showed in a decided manner the formidable split that the tariff, conservation, and other issues had made in the Republican party, the result being a "political land-

slide," in which several States heretofore considered staunchly Republican, elected Democratic governors, while in the election for the 62d Congress the House of Representatives gained a Democratic majority, with a large increase of Democratic representation in the Senate as well.

Nothing aroused more popular interest during the years 1909 and 1910 than the rapid development of the art of aerial navigation.

A few years ago the standard form of apparatus for this kind of locomotion was the lighter-than-air "balloon," having no means of progress except by "air currents." To these were added some years ago the "dirigible balloon," provided with motors and capable of being steered at the will of the operator; the best known of these "dirigibles" being those of the "Zeppelin" type used largely in Germany. In 1908 the United States government purchased its first and only dirigible balloon, of the "Captain Baldwin" make. It

was intended for use in war, but has had no service except for purposes of experiment and spectacular effects.

In October, 1910, Walter Wellman, who had made several attempts to reach the North Pole in a dirigible airship, started from Atlantic City on an adventurous voyage to cross the Atlantic Ocean, having on board also three other persons, including a wireless telegraph operator. In

consequence of a defect in the apparatus, however, the crew soon

lost control of the airship, which was abandoned when three days cut from the shore, the men being picked up by a passing vessel.

But the greatest triumphs in air-navigation were in the newer field of aviation, that is, the art of flying by heavier-than-air machines. Of these also there are several types, known as monoplanes, biplanes, etc.

Experiments in aviation had been made in a desultory manner for many years, but with little practical result, until in 1900 the Wright brothers, of Ohio, developed their new method of "wing-warping," by which stability and control were gained, and after this the art developed with rapid strides.

New "world records" for distance, altitude, sustained periods of flight, passenger-carrying, etc., followed each other with astonishing rapidity. In 1910 more than fifty aviation "meets" were held in America, the most important of these being the one at Belmont Park, Long Island, New York, in October.

Some sad casualties occurred, several of the most daring aviators having lost their lives through accident. But the development of the art and science of flying went on with unabated ardor.

In 1910 much interest was felt in the expected reappearance of Halley's comet, this comet being the first that was known to revolve in an elliptic orbit about the sun, and the first to have its orbit calculated. It was first distinctly recognized by Halley in 1682, and since that time had reappeared regularly at intervals of about 75 years, its last appearance being in 1835-6.

About Jan. 16, 1910, while the scientific world was awaiting with eagerness the coming of Halley's comet, a new cometary body (named Comet A, 1910) appeared, being first seen at Joliannesburg and the Orange River Colony, South Africa, and later becoming visible with fine effects in America as well. Some weeks later Halley's comet duly appeared, the earth passing through the plane of the comet's tail on May 18. There was much cloudy weather during the comet's visit, and while some interesting observations were taken, the general public felt disappointment in regard to the expected spectacular effects.

The 13th decennial census of the United States was taken during the year 1910, the statistics gathered being more full and explicit than had ever before been collected. The enumeration of population showed the total number in the United States proper

to be 91,972,266. Increased by Alaska, Hawaii and Porto Rico, the number was 93,402,151, while the inclusion of the Philippines and all other United States territory gave an estimated total of between 101 and 102 millions of people.

With the publication of the new census figures in December, 1910, the minds of the country naturally turned to a summing up of the changes and results of the first decade of the twentieth century. While the political events were not so cataclysmal as those which marked the first decade of the nineteenth century, when Napoleon was changing the map of Europe, yet the effects of the Boer War, the China-Boxer movement, the Russo-Japan War, and the Turkish Revolution, made large changes in the political relations of the world.

But in less spectacular, yet fully as important fields, the decade was an era of almost unprecedented changes in the life of the civilized world. In scientific progress, in social movements, in the attitude of the thoughts of men toward questions of the deepest human significance, there has never been an era when advancement was more rapid or organized effort so widespread and so successful.

The study of social science, of economics, and new modes of philanthropy showed itself in new efforts for child welfare, juvenile courts, public playgrounds, increase of hospital service, district nursing associations, and new efforts for the suppression of pauperism and of crime.

The discussion of the scientific and the moral bearings of vivisection showed an increased attention to the relations of men with the animal life of the world.

New modes of transportation and the discussion of the racial questions, as well as the general progress of human thought, have been bringing the whole world together into a better understanding of the reciprocal relations of humanity as a whole.

Nothing was more marked than the changes in the public attitude toward bodily health, as shown in the study of preventive medicine, and in efforts to limit the spread of infectious diseases. Public regulations to protect the purity of air, of water and of milk, the medical inspection of schools, the abolition of public drinking cups, laboratory research into the cause and cure of germ diseases, war on the house fly, the mosquito and rats as the carriers of disease, and on insect pests which attack vegetation, new achievements in surgery—in all these fields the conditions of the world had been practically revolutionized within a few years.

Health had become a moral question. A virtual conquest of some of the most deadly diseases seemed nearly assured. Infant mortality had declined and the age limit of life has been perceptibly lengthening. Conservation of the nation's resources had found its highest field in the conservation of humanity itself, and it was a safer world to live in than it was even so recently as the opening of the twentieth century.

The historical view of the decade would be incomplete without some notice of the great events of the religious world. The missionary movement, both interdenominational and international, made great progress during these years, being introduced by a great Ecumenical Missionary Conference in New York in 1900, and culminating in 1910 by a larger World's Missionary Conference in Edinburgh, at which nearly 500 delegates from America were in attendance, representing sixty missionary societies of the United States and Canada. In October, 1910, the American Board of Commissioners for Foreign Missions, the oldest of the great foreign missionary organizations of America, held its centennial anniversary in Boston, and in the Spring of 1911 a large missionary exposition, entitled "The World in Boston," was held in that city. Other evidences of the increasing interest felt in world-wide missions were shown by the organization of the Layman's Missionary Movement, the Student Volunteer Movement, and Brotherhoods established in various churches.

A movement looking toward the union of religious sects was shown by a great Convention for the Federation of Churches, held at Carnegie Hall, New York, in November, 1905, at which thirty denominations united to form the Federal Council of Churches of America.

During the decade the Northern Presbyterian Church and the Cumberland Presbyterian Church came together in organic union, while other efforts for church union, even if not immediately successful, did much to unify the religious sentiments and the relations of the Protestant denominations of America.

A growing feeling that religion should hold closer relations to the cure of bodily ills was shown in various religious or semi-religious organizations based more or less directly upon ideas of mental healing. The use of psychotherapy, "New Thought" philosophies, "The Emmanuel Movement," as well as the founding of various religious bodies preaching doctrines of miraculous

or Divine healing, were all characteristic of the thought of the period.

In 1901 John Alexander Dowie, who some years before had started in Chicago the "Catholic Apostolic Church in Zion" on principles of Divine Healing, organized a religious community at Zion City which grew rapidly in numbers and in material wealth. In 1903 Dowie proclaimed himself as "Elijah the Restorer," and in 1904, he with about 4,000 of his followers undertook a spectacular evangelical campaign in New York City. He failed, however, to gain the support of the metropolis, and this failure marked the beginning of Dowie's decline as a religious leader. In 1906 he was deposed from his leadership in Zion City, on charges of corrupt practices, and with the announcement that he would build a new Zion City elsewhere, he retired to Texas, where he died the next year.

But the most remarkable of these combinations of theology with therapeutics was the movement known as "Christian Science," of which Mrs. Mary Baker Eddy was the "Discoverer and Founder." "The Church of Christ, Scientist" was founded in 1879. In 1906 it had 652 branches of "The Mother Church" making a total of 930 congregations in America and other countries. The textbook of the denomination, entitled "Science and Health, or Key to the Scriptures," first published in 1875, had in 1906 passed through 390 editions of 1,000 copies each. The sales of this book and the other Christian Science publications brought large wealth both to Mrs. Eddy personally and to the church, and a magnificent Christian Science Temple was erected in Boston as headquarters of the denomination. In December, 1910, Mrs. Eddy died at the age of 89, giving the bulk of her large fortune to the church of which she was the founder, and her death was followed by much litigation, based on legal limitations to the amounts that can be given in church bequests. Another notable after-result of her decease was the bodily "demonstration," leading the Directors of the Church in Boston to place for six months an armed guard with telephone connections to watch the place of her sepulture.

In 1909-10 considerable advance was made in the Woman Suffrage Movement in America and in the world. In England the "Suffragettes" adopted militant methods, and a number of women of prominent families were imprisoned on charges of social disorder. In November, 1910, one thousand suffragettes in London

made an attack on Parliament, and 108 of these were arrested. Soon after this, Miss Sylvia Pankhurst, an English suffragette, visited the United States, giving lectures in behalf of the cause. But although new interest in the subject was aroused, the women of America failed to adopt the policy of force that had been tried by their English sisters.

In 1910, however, the State of Washington joined the States of Wyoming, Colorado, Utah and Idaho, in granting full suffrage to women, and constitutional amendments for the same end were submitted to the voters in several other States as well. In April, 1910, the National Association for Woman Suffrage held its Annual Convention in Washington, and, for the first time in its history it was addressed by a President of the United States. At the time of this convention a mammoth petition containing 500,000 signatures was presented to Congress, and although the judiciary committee voted not to report a national suffrage bill, there was everywhere a growing recognition that the claim of women to voting rights was one of the leading public questions of the period.

In the autumn of 1911, after a close contest, California was added to the States in which this fuller form of democracy was established. This suffrage victory at a single stroke practically doubled the number of enfranchised women in the United States, and gave a great impetus to the movement.

Other popular movements of the period tended towards more democratic methods of governmental action. In 1910 the "initiative and referendum" was a part of the law in twelve States, four of these having adopted it during the year. The principle of "recall" for an unpopular official was also operative in a number of American cities and in the State of Oregon. The commission system of municipal government, first adopted in Galveston in 1901, had a rapid extension, and in about a decade was in operation in more than a hundred American cities.

On the third of January, 1911, forty-eight postal savings banks were opened in different parts of the United States, mainly at manufacturing centers, and began at once to receive deposits at 2 per cent annual interest.

Under the Statehood Act of 1910, Arizona and New Mexico became presumptively States of the Union, thus increasing the number of stars in the flag to 48, and bringing all the territory of the United States proper, except the District of Columbia, under State

government. But before they could really assume the functions of statehood they must submit forms of constitution to Congress for approval. The form presented by Arizona embodied "the initiative and referendum," "the recall," woman suffrage, and all the most "progressive" ideas of popular government. It was criticized, however, on the ground that the "recall" should not be applicable to the judiciary, but that these officials ought to be entirely independent of popular or political control. The proposed constitution for New Mexico was also opposed in the Senate and the final assuming of statehood rights by those two territories a little longer delayed.

But by far the most important piece of national legislation to hold the attention of the country during the closing session of the 61st Congress was the proposed reciprocity treaty with Canada, providing for virtual free trade with Canada in certain classes of commodities, especially in the exchange of Canadian foodstuffs and American manufactures. The measure was strongly urged by the President, and was generally supported by the people both in Canada and the United States, but was vigorously opposed by certain business interests, especially among the agriculturists of the north-western States, and some of the manufacturers of New England. The question aroused much interest in England as well as in America, being both advocated and opposed on the apparently groundless supposition that such reciprocity might tend toward the annexation of Canada to the United States (thus disrupting the British Empire) and also that it portended a policy of general free trade on the part of the United States. In February, 1911, the House of Representatives passed the reciprocity bill, most of the Democrats and some of the Republicans voting in its favor, though a majority of the Republicans voted against it. The Senate, however, or some filibustering senators, succeeded in preventing it from coming to a vote before the time for the adjournment on March 4. And within an hour after the 61st Congress came to an end, the President had issued a call for the 62d Congress to assemble in extra session on April 4, to take up anew this important question of reciprocity with Canada. Canada, however, by the results of an election in the fall of this year, rejected the treaty.

Before January, 1910, the United States, under the general provisions of the Hague Conference, had concluded twenty-four limited treaties of arbitration with as many foreign powers, representing all the leading nations except Russia and Germany.

The signing of a new commercial treaty with Japan in February, 1911, was considered a very important act of the Taft administration, and gave much satisfaction to the peace advocates of America, as it contains no provision for Japanese exclusion, although Japan will continue to refuse passports to laborers to come to the United States.

The death of King Edward VII of England, May 6, 1910, coming at a time when there was a strong movement among nations to increase armaments, profoundly affected the Peace sentiments of the world, as it was universally recognized that during his brief reign the king had used his exalted position to promote peace among the nations.

The Carnegie Peace Foundation of \$10,000,000, given on December 14, 1910, was organized under a board of trustees at Washington, its President, Elihu Root, being made a permanent representative of the United States at the Hague Court. The fund is "to be perpetual, and when universal peace is attained, the income is to be devoted to the banishment of the next most degrading evil, or evils, the suppression of which will most advance the progress, elevation, and happiness of man."

Late in 1910 President Taft again paid a visit to the canal zone and spent five days in examining present conditions, expressing himself much pleased with the progress that had been made. It was announced informally during his visit that the canal would be completed before December 1, 1913, or thirteen months earlier than the official date of the opening, which remained as January 1, 1915. Between these two dates ships were to have the privilege of the canal, but at their own risk, the toll of this period to be established at the informal opening in 1913. In February, 1911, a large landslide occurred at Culebra Cut, retarding the progress of the work, but the casualty was considered good evidence of the wisdom of the decision to make this a lock canal, as in the deeper cuttings of a sea-level canal landslides would be more frequent and more damaging.

In the spring of 1911, interest centered itself on the question whether fortifications should be erected at the two entrances of the canal. Many of the peace advocates deprecated this idea, but President Taft, former President Roosevelt and Carnegie, the great peace promoter, all gave their approval to this measure, and in February, 1911, Congress settled the question by including in its appropriations bill a sum of \$3,000,000, to be used in beginning the work of canal fortification.

About the same time a lively public interest was shown in regard to the choice of a locality for a Panama Canal Exposition to celebrate the opening of the canal in 1915. Several cities made overtures for this, New Orleans and San Francisco being the leading candidates for this honor. The question was finally settled by Congress in favor of San Francisco.

In September, 1910, Mexico celebrated the centenary of her national independence, and the whole month was given up to festivity and rejoicing. The United States extended a most particular act of courtesy, a new step in foreign relations, by sending not only a special ambassador, but representatives from the two branches of Congress as well. On December 1, President Diaz, then over eighty years of age, took the oath of office for his eighth term.

Shortly before this, however, an insurrection had broken out in Mexico, which was temporarily suppressed, but broke out again in various provinces, the province of Chihuahua being especially the seat of the disturbances. The insurrectionists found easy escape from arrest by retreating across the border, and arms and men were smuggled across the boundary by filibusters within the United States. After some months the European nations began to take cognizance of the disturbed conditions, and American intervention was advocated in some quarters as well as feared in others, lest it might result in the final annexation of Mexico to the United States.

On the 7th of March, 1911, orders were given for an extraordinary movement of 20,000 American troops to go into camp at San Antonio, Galveston, and near Los Angeles; 2,000 marines were also ordered to Guantanamo; four armored cruisers, carrying 3,800 officers and men, were directed to sail for the same port; transports to Galveston were arranged for 36 companies of coast artillery, and most of the Pacific fleet started for San Pedro and San Diego.

It was officially declared by the President and Secretary of War, and General Leonard Wood of the U. S. army, that the purpose of the movement (the most extensive of its kind ever executed in America in times of peace) was merely to practice maneuvers at the camping points, and to test the power of quick mobilization for the armies of the United States. But this explanation was not accepted without question by the public. There were rumors of the failing health of President Diaz, and complaints to our government by Americans having business interests with large capitalization in Mexico which were endangered by the insurrectionary conditions, both before and after the retirement of President Diaz.

On March 9, however, a semi-official statement was given out by President Taft, declaring that the United States was determined to preserve peace along its own borders, and that the American troops had been sent to form a solid military wall along the Rio Grande to stop filibustering, and to see that there was no further smuggling of arms and men across the boundary.

Friendly messages were exchanged between President Taft and the Mexican government which was assured of American good will. It was believed, however, that the United States had the Monroe Doctrine in mind, and that it would prevent foreign intervention and protect foreign interests in Mexico, if Mexico herself should fail to do so.

In the autumn of 1911 President Taft made an extended tour through the country, speaking in many places on public questions and explaining the policies of the administration.

At the end of October the largest naval demonstration ever undertaken by the United States was held at New York. More than one hundred and fifty vessels representing different departments assembled in the Hudson River and were reviewed by the President and Secretary-of-the-Navy Meyer.

On November 10th Mr. Andrew Carnegie endowed the corporation bearing his name with \$25,000,000. The corporation had received its charter earlier in the year from the New York legislature. The objects of the corporation were stated to be the "receiving and maintaining a fund or funds and applying the income thereof to promote the advancement and diffusion of knowledge and understanding among the people of the United States, by aiding technical schools, institutions of higher learning, libraries, scientific research, hero funds, useful publications and by such other means as shall from time to time be found appropriate therefor."

The second session of the Sixty-Second Congress, sitting from December 4, 1911, to August 26, 1912, was marked by great legislative activity. The two houses were out of harmony with each other on many issues, and when they did agree they were often at odds with President Taft. Two tariff bills were passed, and both were vetoed. Three others were left pigeon-holed in conference. President Taft twice vetoed the Legislative, Executive and Judicial Appropriation Act. Congress finally yielded to his objections and struck out the offending legislation.

Among other acts of consequence passed at the second session were acts regulating traffic through the Panama Canal and pro-

viding for the government of the Canal Zone; regulating radio communication and radio equipment on steamers; increasing pensions; abolishing pension agencies; carrying out the fur seal fisheries convention with Great Britain, Japan and Russia; establishing a legislature in Alaska; taxing the manufacture of white phosphorous matches; creating an army reserve and consolidating the staff corps of the army; regulating salvage at sea; extending the federal eight-hour law, and amending the copyright law.

The prescribed conditions concerning the admission to statehood of Arizona and New Mexico having been complied with, President Taft signed a proclamation announcing the admission of New Mexico into the Union on January 6, 1912, and Arizona on February 14, 1912, thus making permanent the forty-eight stars on our flag.

A change in the Constitution of the United States was made by the addition of the sixteenth amendment which was ratified by the necessary three-fourth of all the States, and became a part of the supreme law of the land, May 13, 1912. It requires that hereafter United States Senators shall be elected directly by the people of the States, not by the Legislatures. Blair Lee, of Maryland, a Democrat, had the distinction of being the first senator to be elected in this fashion.

Ceaseless and desperate war between capital and labor was exemplified by the McNamara case. Two brothers named McNamara, were engaged with others in wholesale destruction of property, culminating in the loss of twenty-one lives by the demolition by dynamite of the Los Angeles "Times" building in October, 1912. These outrages, extending over two years, were not perpetrated because of any personal wrong done the men, but because of the depraved theory that cold-blooded crime was legitimate in what they regarded as war against capital. Happily for the country, this theory is not to any considerable extent shared by labor men or labor unions.

"Labor Unrest" had been a very conspicuous social feature in all countries of Western civilization, both in Europe and America. Generally speaking, the new system which has riveted public attention in the unrest of the wage-earning classes, has been the rise of what is known as "Syndicalism," or a form of trade unionism, under the influence of which has become manifest a further stage of the evolution of ideas and of organized action in the assertion of the claims of labor as opposed to capital.

President Lincoln is sometimes said to have held advanced ideas on the labor question; the actual words which he used, on which this

assertion is usually based, are to be found in his first annual message to Congress (as reprinted in the New York "Evening Post"): "Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration."

The American Federation of Labor, an association of trades unions, started in 1881, reached, in 1914, a membership of nearly two million. Textile strikes at Lawrence, Mass., early in 1912, the cotton-mills operatives' strike at Lowell, Mass., and numerous other uprisings of labor; the rise of an organization called the "Industrial Workers of the World," in direct enmity to the trades unions, all led to increase of labor legislation.

The controversy over the Sherman Anti-Trust Law, as to whether the law, in its present form, fits the labor unions any better than it fits the trusts, is exemplified in the statement that President Taft, in enforcing the Sherman Law, displeased the world of "big business" without satisfying the world of "little business."

The year 1912, red-lettered as it was with such momentous happenings as the establishment of a republic in the ages-old Empire of China; the discovery of the South Pole by Amundsen; the loss of the great ship Titanic with her fifteen hundred souls; the death of the Emperor of Japan, and the outbreak of the Turkish war against the Balkan States, boasted also of the all-absorbing political contest in the United States, where a three-cornered national election gave birth to a new party.

The primary campaign for the presidential nomination of 1912 is worthy of explanation. As delegates to the convention were to be chosen by direct vote in a considerable number of States, and as a presidential preference primary law had been established in twelve of them, the various aspirants of both Republican and Democratic parties showed a deference to public opinion quite unusual at such an early stage in the campaign. To an unprecedented extent they traveled about the country making speeches; enormous quantities of literature were circulated, and money was spent with as much profusion as in the regular election campaigns. Senator LaFollette had come forward in December, 1911, as the Progressive candidate against President Taft; but following his temporary physical collapse in the following February, the governors of seven States united successfully in urging Mr. Roosevelt to accept the Progressive leadership. It was felt that he alone could have good prospect of

defeating the President for the nomination and of saving the party from disaster in the election. By the Democrats and by the conservative Republicans, he was assailed for ignoring the tradition that the presidency should not be held by any man for more than two terms, and he was charged with ignoring a specific pledge (differently interpreted by Mr. Roosevelt and his opponents) made by Mr. Roosevelt in 1904, upon being elected to the presidency, that he would under no circumstances accept a nomination in 1908. That these attacks carried little weight with the people was evident from the fact that Roosevelt secured the great majority of those delegates who were elected directly, and completely outdistanced Taft in the preference vote. In the Democratic party the prominent candidates were Oscar W. Underwood, leader of his party in the House of Representatives; Speaker Champ Clark, a man of great popularity rather than of intellectual distinction; Governor Judson Harmon, of Ohio, and Governor Woodrow Wilson, of New Jersey, formerly president of Princeton University, whose political administration had been characterized by great vigor and independence, and whose reputation as a publicist stood very high.

As the primary campaign proceeded, the public utterances of President Taft and Mr. Roosevelt were marked by increasing vigor, and the irreconcilable differences between these leaders spread to the rank and file of the party. When the Republican Convention met at Chicago, on June 18, 1912, it was evident that everything depended upon the decision of more than two hundred and fifty contests. Mr. Roosevelt denounced as theft the action of the national committee in placing only 19 of his contestants upon the temporary roll. But an appeal to the convention was lost by more than fifty votes; and it was by about the same margin that the selection of Senator Elihu Root as temporary chairman was made. When the committee on credentials decided against the seating of his contesting delegates, Mr. Roosevelt denounced their conduct as fraudulent and advised his followers to take no active part in the proceedings. Accordingly, most of them sat in silent protest while the platform was adopted and the nominations made. President Taft received 561 votes on the first ballot, or twenty-one more than the necessary majority. Vice-President Sherman, who was also renominated, died a few days before the general election.

This disruption of the Republican convention led to the birth of a new party, which took the name of National Progressive and appealed for the support of Democrats and Progressive Republicans

alike. Its convention was held in Chicago early in August. There Mr. Roosevelt made a declaration of his political views, which were received with enthusiasm and embodied in the platform. He was nominated for President, and Governor Hiram Johnson of California for Vice-President.

The national convention of the Democratic party met at Baltimore on June 25. It required forty-six ballots to select the presidential candidate. On the first, Clark had 440½, Wilson 324, Harmon 148, Underwood 117½, Marshall 31, Bryan 1. When, on the tenth ballot, the Tammany-controlled New York delegation transferred its ninety votes from Harmon to Clark, Bryan declared that, as long as that situation lasted, he would withhold his vote from Clark. That declaration had much to do with the final success (on the 46th ballot) of Governor Woodrow Wilson. Governor Marshall of Indiana was nominated for the Vice-Presidency. Among the minor parties, neither the Independence League nor the Populists put a national ticket in the field. The Prohibition party nominated Eugene W. Chafin of Arizona its candidate in 1908, and Aaron S. Watkins of Ohio for Vice-President, the Socialist Labor party, Arthur E. Rheimer of Massachusetts, and August Gilhaus of New York. The Socialist party, Eugene V. Debs of Indiana.

The platforms of the three leading parties held similar views upon a number of points, such as the reform of legal procedure, the establishment of a parcel post, and the maintenance of an adequate navy. But they had, of course, distinctive features. The Republican platform, both by what it omitted and by what it contained, exhibited a conservative spirit. Silent upon the subject of social legislation and the methods of bringing government nearer to the people, it laid emphasis upon the necessity of preserving the integrity and authority of the courts as the protectors of individual and property rights. It reaffirmed belief in a protective tariff high enough to furnish a revenue and give protection to American industries, readjustments to be made in accordance with the findings of an expert commission. With respect to the anti-trust law supplementary legislation should "define as criminal offenses those specific acts which uniformly mark attempts to monopolize trade." In his speech of acceptance, President Taft made it appear that there were two issues in the campaign: the preservation of representative government supported by an independent judiciary, and the encouragement of business expansion through the free use of capital.

The Democrats and Progressives agreed on a number of points:

the physical valuation of railroads, a regular Territorial government for Alaska, trial by jury for indirect contempt of court, limitation upon the use of injunctions, the spread of the direct primary and other instruments of popular rule, etc. But the Democratic program was much less comprehensive and, except for the tariff, much less radical. It insisted upon the old doctrine of State rights, a single term for the President, the abolition of protective duties (but by legislation which "will not injure or destroy legitimate business"), and supplementary legislation to give the Sherman Anti-Trust Law a more definite interpretation.

The most characteristic feature of the Progressive platform was the attention which it gave to the subject of social welfare and industrial justice. It advocated a more expeditious method of amending the Federal Constitution, the recall of judicial decisions, the right of appeal to the Supreme Court in cases where the highest State court should hold laws invalid under the Federal Constitution, and the bringing under effectual national jurisdiction of those problems which have expanded beyond the reach of the States. The proposals with respect to the laboring class included minimum safety and health standards, prohibition of child labor and night work for women, minimum-wage standards for women, and much else. On the tariff, the Progressives differed from the Republicans only in demanding the immediate downward revision of excessive duties. They did, however, take a very different position with respect to the trusts, wishing to place their regulation under an administrative commission. They advocated woman suffrage.

Although Mr. Roosevelt was received with enthusiasm during a speaking tour through the South, he managed to divert very few Democratic votes in the election. The concern expressed through the country when he was shot by a fanatic at Milwaukee on October 24 evidenced his great personal popularity. He addressed a mass meeting for an hour and a half after being wounded. Democratic success in the elections, though foreshadowed by the disruption of the Republican party, was more complete than had been generally expected. Taft won only two States, Utah and Vermont, with eight electoral votes; Roosevelt won California, Michigan, Minnesota, Pennsylvania, South Dakota, and Washington, with eight electoral votes. All the other States went for Wilson, who received 435 electoral votes. Sweeping though the victory was, it seems to have been mainly due to the split in the Republican party. Wilson had a plurality of more than two million over Roosevelt, but he did not have

ley M. Garrison, War; J. C. McReynolds, Attorney-General; A. S. a majority of the popular vote. The new Congress became Democratic in both branches. In the House almost exactly two-thirds of the members were Democrats; and the capture of State legislatures which had previously been Republican insured a small Democratic majority in the Senate. Mr. Wilson was formally inaugurated March 4, 1913.

Early in the year 1913, while still President, Mr. Taft vetoed a bill which Congress had passed, forbidding immigrants to come to the United States unless they could read and write some language. This was the last important act of the Taft administration. Many

THE PEACE PALACE AT THE HAGUE

troublesome and dangerous questions, like the dispute with Great Britain over the Panama Canal tolls, and with Japan over the California land question, were passed on to the Wilson administration.

President Taft, on the expiration of his term of office, retired to New Haven, where he became Professor of International Law in Yale University.

CHAPTER XXII

UNDER WOODROW WILSON

WOODROW WILSON, born in Staunton, Va., December 28, 1856, came from that sturdy Scotch-Irish race, from which many famous men are descended. The staunch independence of both sides of his house, Woodrow and Wilson, was combined in him. His father was a prominent Presbyterian clergyman, as was also his mother's father, Dr. Thomas Woodrow.

There were twenty-seven Presidents before him, but no one of them brought to the White House so rounded an achievement of ambition as Mr. Wilson. No one but Mr. Wilson had felt that the Presidency marked for him the perfecting of a personal ideal. From boyhood his mind was scholarly, and his dreams of a political career when he struck off from his first printing press his cards: "Thomas Woodrow Wilson, United States Senator from Virginia," persisted through all these years.

Mr. Wilson was an educator by virtue of inheritance, with a strong intellectual bent, and a certain elusive reticence, which made retirement congenial. He was educated at Princeton University, attended the University of Virginia Law School, and practiced law at Atlanta, Ga., for a short time. His professional career as a teacher was begun at Bryn Mawr College, and by 1902 he had reached the President's chair at Princeton University. He found this institution a "rich man's college"; he made it democratic, and established the preceptorial system and many other reforms. He was assailed as a "leveler" and a "Socialist." He met much opposition from the trustees, and many complications arose, all turning on this democratic idea of equality that he advocated.

In 1910, when matters at Princeton were in this strained and unpleasant state, the Democratic party of New Jersey nominated

Copyright by Underwood & Underwood, N. Y.

WOODROW WILSON

Mr. Wilson for Governor. He was elected, and achieved a large number of reform measures. His record as governor brought him prominently forward as a candidate for the presidency only two years after his entrance into public life.

The scholar in politics, while governor of New Jersey, sat with doors wide open, exemplifying his idea of democracy, and was surprisingly successful. Throughout his presidential campaign he preached to hundreds of audiences the strange doctrine that wisdom lies in a multitude of counselors. As President, he declared that the bankers should not dictate the regulation of the currency, nor should the manufacturers prescribe the tariff, but he would ask the opinion of men of all sorts. So far as he was humanly able, an entire people, through him, should have access to their government.

Personally he is of a thoughtful cast of mind. There is about him that rigidity, part diffidence, part dignity, which, though it prove a barrier to intimacy and death to good fellowship, may yet be the salvation of a President. The fine air of distinction sits naturally upon him. Excepting Jefferson and Lincoln, we have not had another President who, by some right, human or divine, is, like Mr. Wilson, an artist. Virginia born, the winds of Monticello rocked his cradle, making him also a Democrat in the narrower sense.

At the age of twenty-three, Wilson had published in the *International Review* (August, 1879) the outline of his "Congressional Government" which appeared in book form in 1885. His "The State" (1889) has become a standard work. He wrote besides "Division and Reunion, 1829-1889" (1893), a short volume in a series on United States History; two volumes of essays, "An Old Master" and "Mere Literature" (1893); a *Life of Washington* (1896), and a popular *History of the American People* (1902).

The coming into power of the new administration and a new party was the important event of 1913. The Democracy had been out of power for sixteen years. A new generation of leaders had grown up. The change on March 4th meant new men, new ideals, and new plans.

The new President put the foreign relations of the country into the hands of William J. Bryan, whom he made Secretary of State. It is said of Mr. Bryan that, in spite of occasional absences on lecture engagements, he has spent more hours at his desk in the State Department than any other Secretary of State ever did. The other members of the Cabinet were: William G. McAdoo, Treasury; Lindley M. Garrison, War; J. C. McReynolds, Attorney-General; A. S.

Burleson, Postmaster-General; Josephus Daniels, Navy; F. K. Lane, Interior; D. F. Houston, Agriculture; W. C. Redfield, Commerce; W. B. Wilson, Labor.

On his inauguration on March 4, President Wilson took command as leader of his party, and called Congress to meet in extra session on April 7, 1913. The administration started in with a program full of important reforms. While many activities were going on in the Executive Department, Congress was hard at work on two great changes in the law, the revision of the tariff and a new Currency Bill.

The new tariff made large reductions in the taxes on imported goods, and put many articles on the free list, especially foodstuffs. The change was expected gradually to reduce the cost of living.

The same law included a graduated Income Tax, requiring every person in the United States, and every American citizen abroad, to pay a tax of at least 1 per cent on such of his or her yearly income as exceeds \$3,000. If the income is above \$20,000, the tax is 2 per cent on that part of an income which exceeds \$20,000.

The statutory exemption of \$3,000 (or \$4,000) is allowed for personal living or family expenses. These and other items of gross income, which are exempted by the law, are required to be fully set forth in a return of gross income, made under oath, and delivered to the Commissioner of Internal Revenue. Each taxpayer is to be notified of the amount of tax by June 1 of each year, and is required to make payment by June 30.

There was, of course, a great difference of opinion in Congress and throughout the country, as to whether the Underwood Tariff Bill, as it is called, was wise or unwise. The Democrats affirmed that it would increase the country's prosperity and reduce the cost of living. The Republicans believed that it would be unfavorable to business, and would not materially reduce the cost of living. In the House, the principal speech for the bill was made by its author, Oscar W. Underwood, of Alabama. The chief speaker in opposition was Sereno E. Payne; of New York, author of the Payne tariff, which was displaced by the Underwood law.

Mr. Underwood, in summing up his argument before the House, said that the new tariff would be the lowest the country has had in three-quarters of a century. The taxes which it put on imports average but 26 per cent, while former tariffs have had average rates of 40, 50 or 60 per cent. Mr. Payne, as the spokesman for the Republican party, declared that the Democrats had overestimated the

Photograph, American Press Association

PANORAMIC VIEW OF THE PANAMA CANAL

amount of revenue their new tariff would yield. He predicted that it would not produce enough income to pay the Government's expenses. President Wilson signed the bill on October 4, 1913.

The most important features of the tariff bill relate to sugars, wool, and cotton. Not all of this new Democratic tariff went into effect on its passage; the provision for free raw wool began December 1, 1913; the new rates on manufactured wool January 1, 1914; reduced rates on sugar and molasses March 1, 1914, and changes in rates on denatured alcohol January 1, 1914. Free entry of sugar and molasses are permitted on May 1, 1916.

Were protectionists mistaken? Opponents of the new tariff said that it would "flood the country" with goods from foreign countries. On the contrary, the imports in October and November, 1913, were \$50,000,000 less than in the same months the previous year. Exports also fell off, but by only \$15,000,000. Thus we had a better balance of trade under a low tariff than under a high one. No real test of the new law would be possible, however, until at least a year had elapsed after its passage.

After Congress had passed the Tariff Bill, President Wilson insisted, although the members of Congress were weary and wished to adjourn, that a bill to reform the currency should be the immediate successor of the tariff. He thought that the two should go together, for with a low tariff there would be great peril so long as the banking and currency system remained unreformed.

Congress therefore added three months to its labors, with the result that the Federal Reserve Act, or the Glass-Owen Bill, so called because Senator Owen, of Oklahoma, had charge of it in the Senate, and Representative Glass, of Virginia, in the House, was formulated.

Many senators, representatives and business men stated that this was the most important law that had been passed by Congress since the Civil War. Both Houses divided nearly on party lines; but the Republicans were not solid in their opposition, while every Democratic senator voted for the bill. The new law changed practically the whole banking system of the country.

The new system is governed by a Federal Reserve Board, consisting of the Secretary of the Treasury and six others, appointed by the President. This Board was given very great powers, and is composed of men of high ability. The salary was made \$12,000 for each member. Not less than eight, nor more than twelve, "regional banks" are located in different parts of the country. These are banks for banks; that is, the banks deposit money in the "re-

gional banks" just as individuals deposit in ordinary banks.

The national banks, about 7,500 in number, which existed when the law was passed, were compelled to subscribe to the stock of and to make deposits in the regional banks, under the penalty of losing their Federal charters. The 18,000 State banks then existing were not required to come in, but they were invited to do so.

The most important provision of the plan, the part that is expected to prevent panics, is the "re-discount" provision. When money becomes "tight," or scarce, in any city, the banks of that city may take the "business paper" that they hold—the notes of business men who have borrowed money from the bank—and on turning it over to the regional bank will receive 50 per cent of its face value in new paper money.

These new bank notes are guaranteed not only by the "business paper" and the local bank, but also by the United States. They are to be protected by a gold reserve of 40 per cent. Thus a bank which has good assets will always be able to obtain cash, no matter how "tight" the money market may be. In case there should be a severe shortage of cash in one section of the country, the Federal Reserve Board can cause money and credit bills to be transferred from the regional banks to the regional bank where the shortage is.

The signing of the Currency Bill by President Wilson occurred in the presence of a crowd that thronged the executive offices at the White House. Naturally the President was in a happy mood, for he had worked hard for seven months to get the bill through Congress, and he believed that the country was getting the best Christmas present it had had in a long time. He signed the bill with four gold pens which he gave respectively to Mr. Glass, Senator Owen, Secretary McAdoo, and Senator Chilton, of West Virginia, as souvenirs.

After he had signed, the President made a little speech in which he spoke of the new law as "a constitution of peace." He referred to this and the tariff law as "the first of a series of constructive measures." Several months were consumed by the authorities in Washington in selecting the cities, or "centers," in which reserve banks were to be located and in making appointments of members of the Federal Reserve Board. The centers finally selected were New York, Boston, Richmond, Cleveland, Dallas, Kansas City, Minneapolis, Chicago, Philadelphia, Atlanta, San Francisco, and St. Louis. In the early summer of 1914 the final selections of members of the Board had been made, and it was expected that the banks would be in active operation by August 1st.

On August 24, 1912, President Taft had signed the Panama Canal Act, which was at once made the subject of a protest from Great Britain, leading later to a controversy of considerable international interest.

The Act provided in detail for the general operation of the Canal and the regulation of commerce passing through it, but the point in question was concerned with the tolls. The President was empowered, within his discretion, to impose tolls not exceeding \$1.25 per registered ton on all vessels using the Canal, excepting vessels engaged in the American coastwise trade (restricted by law already to American vessels) on which no tolls at all were to be levied. The British contention, more or less informally conveyed to the American Government while the Act was still under discussion by way of a warning that a formal protest would follow, was that this was a violation of Article III of the Hay-Pauncefote Treaty of 1901, which said that "the Canal shall be free and open to all vessels . . . so that there shall be no discrimination against any nation in respect of the conditions and charges of traffic." It was also intimated on behalf of Great Britain that if the Act was passed, in spite of the objection raised, she would appeal for arbitration as to its legality to the Hague Tribunal under the Treaty of 1911. The result of this was a special message to Congress by President Taft on August 19th, before the bill was finally passed, in which he argued that the exemption of American "coastwise vessels" from tolls was not a violation of the treaty. It may be noted that on December 21, 1911, he had sent an earlier message, dealing with the importance of leaving it to the President, within certain limits, to fix the tolls, and had said, without referring to the Hay-Pauncefote Treaty, that he was "confident that the United States has the power to relieve from the payment of tolls any part of our shipping that Congress deems wise." As, however, distinguished lawyers of the House and Senate and also Great Britain differed with this construction, he recommended that Congress pass a resolution, or add a clause to the bill, distinctly saying that nothing in the bill should be "deemed to repeal any provision of the Hay-Pauncefote Treaty or to affect the judicial construction thereof," and giving a right of action to any foreigner who considered the provisions of the Treaty to be violated to his detriment. This suggestion, however, was not complied with, and so far as Great Britain was concerned was regarded as obviously unsatisfactory. A domestic court of law was not the place for arguing the violation of a treaty right. According to President Taft's con-

tention and the purport of the new Panama Canal Act, the Hay-Pauncefote Treaty was not violated, and the proper place for having that question decided, according to the Arbitration Treaty of 1911, was the Hague Tribunal.

In February, 1914, the Canal Toll question was again an issue. President Wilson asked Congress to repeal the provision of the law exempting American coastwise vessels from tolls. He went straight to the heart of the tolls exemption matter when he said, as to the interpretation of the Hay-Pauncefote Treaty: "It is at least debatable; and if the promises we make in such matters are debatable, I, for one, do not care to debate them. I think the country would prefer to let no question arise as to its whole-hearted purpose to redeem its promises in the light of any reasonable construction of them rather than debate a point of honor."

In his message to Congress on the second day of the second year of his presidency, he said:

"Whatever may be our own differences of opinion concerning this much-debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty; its language we accepted, if we did not originate it; and we are too big, too powerful, too self-respecting a nation to interpret with too strained or refined a reading of words of our own promises just because we have power enough to give us leave to read them as we please."

Then he made this appeal: "I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure."

Within a few months the House of Representatives by a large majority passed a bill repealing the tolls provision. In the Senate the bill with an unimportant amendment was passed early in June, and the House, without conference with the Senate, passed the bill a few days later as amended in the Senate and the President signed it.

On October 10, 1913, almost the last obstruction in the digging of the Panama Canal was removed when President Wilson pressed a button at the White House in Washington and exploded charges of dynamite to blow up the Gamboa Dike. It was the largest blast used in the work on the Canal; more than 1,000 holes had been drilled, and each hole contained 80 to 100 pounds of dynamite. The

world's greatest work of engineering stands not only as a modern "Wonder of the World," but as a monument to American genius and enterprise.

On October 11, water was let into Culebra Cut, marking the completion of the work done by the French in 1882. Slides and much-dreaded but comparatively harmless earthquakes had retarded work on the Canal at this point, but when the dam at Gamboa Dike was removed, the water of Gatun Lake filled the entire Canal.

The completion of the Panama Canal brought to the commercial world the beginning of a period of closer and more certain communication, and gives to the United States promise of a more intimate and sympathetic understanding with South American countries, as well as having an important bearing on the naval situation in this country.

The United States harbor of Guantanamo, with Jamaica in friendly hands, controls the Atlantic entrance to the Canal, while, if the efforts to obtain the Galapagos Islands are successful, the Pacific entrance will be equally secure.

Plans for the celebration of the completion of the Canal at the Exposition in San Francisco in 1915 were greatly furthered during 1913 by the promised official participation of twenty-eight foreign countries and thirty-five States of the Union. It was announced that a grand total of more than \$80,000,000 would be available for the Exposition. President Wilson in March, 1915, was to lead a great international fleet of warships from Hampton Roads to Colon for the official opening of the canal. He was to pass through the canal on the *Oregon*, and then go to San Francisco, still leading this great fleet, to open the Exposition.

The results achieved in sanitation during the building of the Canal were remarkable. The work began with a rigid quarantine, followed by improved municipal engineering, anti-yellow fever and anti-malaria measures. Sanitation is now kept at a high pitch by a system of government supervision of health down to the very details of clean and bright housing, advice with regard to the kinds of food to eat, and free advice and attendance by a corps of competent and enthusiastic physicians.

Colonel William C. Gorgas, Surgeon-General of the United States Army, through his priceless services on the Isthmus, made one of the worst disease spots in the world perfectly safe. Colonel George W. Goethals was appointed first Civil Governor of the Canal Zone, and occupied the position on April 1, 1914.

A noteworthy incident in connection with the equipment at the Canal Zone was the placing, in January, 1914, of an enormous sixteen-inch gun, the most powerful rifle in the world, and capable of doing execution at a distance of more than twenty miles, at the forts near the Pacific end of the Canal.

In March, 1912, revolutionary conditions were still existing in Mexico. The United States Government, through a proclamation by

President Taft, formally forbade the exportation of arms to Mexico under penalty of the law, which provides a \$10,000 fine, or imprisonment for two years. But this decree came too late to have much effect. In May, several prominent Americans were forcibly deported from Mexico for supplying the rebels with arms. The situation became more and more acute, until President Taft was said to have threatened to resort to intervention unless conditions were improved. President Madero, of Mexico, notified the United States that "if a single foreign trooper crossed the border there would be war between the two countries." President Taft, however, denied any

COL. GEORGE WASHINGTON GOETHALS

real intention of active intervention.

Great Britain, Germany, and France meanwhile addressed inquiries to the United States, asking what steps were contemplated for protecting foreign interests in Mexico; and in June, 1912, Mr. Philander C. Knox, then the United States Secretary of State, submitted a plan to create a neutral zone for 15 miles on each side of the Rio Grande River, where any troops of either the Mexican or United

States armies, during times of revolution and riot, might enter to protect the lives and property of their countrymen.

Four of our largest States in area—Texas, New Mexico, Arizona, and California—border on Mexico, with a frontier about two thousand miles in length. The Rio Grande River, which forms a great part of the boundary, is fordable most of the time, and affords peculiar advantages for the concealment of lawless incursions, and there had been some pillaging expeditions from our side into Mexico. For the military protection of that border, our Government incurred considerable expense. There are five or more railroads running from the United States into Mexico, and in recent years several thousand Americans had gone there to engage in mining, business, agriculture, or professional callings, a number of whom, it is pitiful to believe, lost both property and life from the lawlessness accompanying the frequent political revolutions. Not only on their account, but for the sake of the Mexicans themselves, the people of the United States were anxious for a just administration of government in that country.

General Porfirio Diaz, for thirty years continuously and up to 1911, had exercised dictatorial power in Mexico, under the title of President. Quiet prevailed through fear. It was believed that he unduly enriched himself, but it was admitted that under his government the public finances were greatly improved, credit established, useful public works accomplished, and popular education and industrial welfare advanced.

In 1911, the Mexican people, became tired of one-man power, and, rebelling against the Diaz government, elected Francisco I. Madero, a wealthy planter, as President. He desired to have the Constitution obeyed and freedom secured to the people, and discharged his duties faithfully, expecting that his acts would receive the approval of the country; but he lacked, apparently, the tact and forcefulness which the circumstances required, and another revolution was on foot before many months had passed.

This second revolution resulted in the placing of General Victoriano Huerta in the President's chair, in February, 1913. The deposed President, and the deposed Vice-President, José Pino Suarez, were slain on February 22d, on their way to the penitentiary. Although many of the Powers promptly recognized Huerta as head of a *de-facto* government, President Wilson steadily refused to do so. On August 4, 1913, the resignation of Henry Lane Wilson, American Ambassador to Mexico, was accepted, thus leaving

the United States free to follow a policy, with which his acts at the Mexican capital, whence he had been recalled in July for conference, were not consistent. John Lind, the personal representative of President Wilson, was then sent into Mexico to observe and report on the condition of affairs, and to propose informally a plan by which the United States would undertake friendly mediation.

Lind had a conference with Frederico Gamboa, the Mexican For-

attempting to carry out his instructions. He was unsuccessful, and his offers were characterized by Gamboa and the Mexican press in general as humiliating. On October 26 the form of a Presidential Election was gone through with, but the demoralization of the country was so complete that not enough votes were cast to make the election valid, and Huerta remained in power.

Meanwhile, parts of Mexico were in a state of active revolution against Huerta's Government. General Ven-

RAISING THE FLAG OVER VERA CRUZ.

nustiano Carranza, the Constitutional Governor of the State of Coahuila, was generally regarded as the leader of the anti-Huerta forces. His successes against Federal forces in the northern States indicated that he might prove strong enough to overthrow Huerta, and informal negotiations, which proved futile, were held with him by Dr. William Bayard Hale, acting as an unofficial representative of President Wilson.

Steadily refusing either to recognize Huerta or to intervene, as

was demanded from many quarters, the United States Government continued to play a "watching and waiting" game so far as Mexico was concerned. At the same time, large army detachments were held in readiness for use in Texas, and American battleships were kept in Mexican waters. Every American citizen in Mexico who desired to leave the country, as all were advised to do, was given assistance by the United States Government in the transportation of himself and family. President Wilson's message to Congress on

GENERAL FREDERICK FUNSTON AT HIS DESK AT HIS HEADQUARTERS
IN VERA CRUZ.

December 2 reiterated his determination that the "usurper" Huerta must go, and his adherence to a policy of "watchful waiting."

President Wilson took the position that under no circumstances would this Government acquire territory by force of arms. He went further than his predecessors, however, in resisting the tendencies toward possible acquisition. He set about weakening their force. That was the basis of his opposition to the kind of concession

that might give to a foreign government a special reason for interfering in Central America. He desired to insure a "tolerable" condition in Mexico by recognizing only a government legally elected, one which, therefore, had some chance for popular support. He reasoned that if the United States could make it plain that men who came into power by murder can get no benefit from their acts, such methods would cease and a state of affairs nearer "tolerable" will prevail. Mexico had produced but one able dictator in a hundred

THE UNITED STATES BATTLE FLEET IN VERA CRUZ HARBOR.

years, and a class of citizens grew up in northern Mexico which made even his methods impossible.

Thus matters drifted along through the winter and early spring of 1914, the Constitutionals making steady progress southward from their strongholds. President Wilson, however, maintained his firm stand against intervention, his policy being "watchful waiting." A crisis was precipitated early in April, when a paymaster, landing at Tampico from the United States steamship *Dolphin*, in order to get certain supplies for his ship, was arrested by a squad of men from the army of General Huerta. An hour and a half later the paymaster was released with an expression of regret from General Huerta, but Rear-Admiral Mayo, commanding the United States naval force at Tampico, not satisfied with Huerta's atonement for the arrest, demanded that the flag of the United States be saluted with special ceremony.

This demand was replied to, in form and under conditions, that were not satisfactory at Washington, and then an ultimatum was promulgated that, unless an unconditional salute was given before a certain date, an armed force would be employed by the United States. Huerta, failing to yield, a fleet of warships, comprising almost the entire Atlantic fleet, was then dispatched to Mexican waters and a military force to the frontier. Rear-Admiral Fletcher, late in April, landed sailors and marines at Vera Cruz and seized the custom house, meeting with practically no armed opposition. Incidentally, however, and as results of shots from housetops and street corners on that day and afterward, seventeen of his men were killed, or eventually died in this service.

It was now hoped that Huerta might yield, or that he would take to flight. After a few weeks of fruitless waiting it was announced that President Wilson had called in as mediators in the Mexican situation the envoys then in Washington representing three South American republics—Brazil, Argentina and Chile. This act was generally commended. Racially there existed real natural sympathy between the mediators and the afflicted country whose affairs they were to adjust. To the United States this action had further, and probably deeper, significance in that it promised so much in bringing about better relations between us and our sister republics of the south. On May 18th the mediators began their sessions at Niagara Falls, with every hope, and apparently with every prospect, that before the summer far advanced some satisfactory solution of a

tangled situation would have been reached and Mexico once more placed in the enjoyment of the blessings of peace. Another outcome of the work of the mediators was the making of the long-discussed Pan-Americanism a reality rather than a dream.

Increased efficiency in the Federal Government was shown by the fact that the chronic deficit in the Postoffice Department had disappeared, and that Congress was willing to entrust new functions to the department. In 1910, a system of postal savings banks was established, such postoffices as were designated by a board of trustees receiving deposits on which the United States pays 2 per cent on amounts of from \$1 to \$500, and offering in exchange for the deposit receipts in government bonds bearing $2\frac{1}{2}$ per cent interest. The trustees are empowered to place the moneys in State and national banks, under certain proscribed guarantees. Put gradually into operation, the system worked splendidly. It began operations January 3, 1911, and at the beginning of November, 1912, 12,773 postoffices out of a total of 58,133 in the country, representing every State in the Union, were receiving deposits; the depositors numbered 290,000, and the total deposits were \$28,000,000.

In May, 1912, a law providing for a parcel post for rural and city delivery routes was passed and became effective January 1, 1913. The maximum weight was first set at eleven pounds; and the charges, beginning with a minimum of five cents for the first and one cent for each additional pound, increased with the distance. A large discretion in modifying the original regulations was given to the Postmaster-General, under the control of the Interstate Commerce Commission. Agitation for the parcel post had been largely due to what were believed to be excessive charges by the express companies. It proved an immediate success, and subsequent rulings of the Postmaster-General not only reduced the rates charged for some of the distances covered, but increased the limit of weight to twenty and then to fifty pounds, with an indication that the scope of the system will continue to be enlarged.

Early in 1914, following the orders of the Interstate Commerce Commission, the express companies reduced many of their charges so that small packages were carried at graduated rates according to the distances covered. The companies, however, felt the competition of the parcel post severely, so much so, in fact, that the United States Express Company decided to wind up its business affairs and distribute its assets among its shareholders. The contracts of this company were turned over to other companies. These other com-

panies declared their intention to continue in business. The quoted value of their stock fell sharply, however, and they were compelled to reduce the rates of dividends paid from 8 and 10 per cent. to 6.

In view of the attitude taken by the Progressive party in the campaign of 1912, woman suffrage was regarded as one of their important principles. Prior to 1912 women enjoyed a limited suffrage, chiefly in matters pertaining to the schools, in twenty-three States, and full suffrage in California, Colorado, Idaho, Utah, Washington, and Wyoming. In that year proposed constitutional amendments conferring the privilege were defeated in Ohio, Michigan, and Wisconsin, but ratified in Arizona, Kansas, and Oregon. These nine suffrage States cover about a quarter of the entire Union and contain nearly three million women of voting age. In 1913 Illinois granted the suffrage to women for all non constitutional officers, including Presidential electors. The territory of Alaska also granted suffrage to women in the same year.

In June, 1913, an International Suffrage Congress was held in Budapest, Hungary, at which twenty-seven nations were represented. This congress was the most largely attended international congress of any kind ever held in Hungary. There were 2,800 enrolled members present. The governors of Oregon, Washington, and California sent representatives to report the good results which followed the enfranchisement of women in their States.

At the International Peace Congress, held at The Hague, a resolution was unanimously passed demanding that the Council of Berne place on the regular order of business at the next Peace Congress the question of calling upon the various nations to consider the enfranchisement of women, with the view of hastening universal peace.

In New York, the suffragists were greatly encouraged by the fact that many of the executive officers of the municipality elected in November, 1913, were strong suffragists. John Purroy Mitchel, the mayor of New York City, showed his belief that women should perform civic duties, when fitted for them, by the appointment as Commissioner of Correction of Dr. Katharine B. Davis, who, within the first few weeks after her appointment, introduced reforms that corrected long-standing abuses and were generally commended by the public.

In connection with the theory of education, the chief item was the interest aroused by Dr. Marie Montessori's work in Italy, and her visit to the United States in 1913. It was widely felt that, since Froebel, no one had suggested such valuable improvements

in educational methods, and that the "Montessori System" gave an entirely new direction to the whole "Kindergarten" idea.

Alfred Bernhard Nobel, a noted Swedish scientist, and the inventor of dynamite, left at his death, in 1896, an estate worth over \$9,000,000. He directed in his will that this money should constitute a fund the interest of which should be divided into five equal amounts and awarded annually as prizes, "one to the person who, in the domain of physics, has made the most important discovery or invention; one to the person who has made the most important chemical discovery or invention; one to the person who has made the most important discovery in the domain of medicine or physiology; one to the person who in literature has provided the most excellent work of an idealistic tendency, and one to the person who has worked most or best for the fraternization of nations, and the abolition or reduction of standing armies, and the propagation of peace congresses."

In 1906, President Theodore Roosevelt received the prize for Peace; in 1907, Professor A. A. Michaelson, of the University of Chicago, for Physics; in 1912, Dr. Alexis Carrel, of the Rockefeller Institute of New York, for Medicine, and Elihu Root for Peace.

No single event in 1912 could compare, in the intensity of its universal appeal to human emotion, with the awful disaster of the Titanic. At 2:20 A. M., on April 15th, that great White Star liner, the largest steamship then afloat, while on her maiden voyage, from Liverpool to New York, went to the bottom of the Atlantic in about two and three-quarter hours after striking, at full speed, an iceberg, with a loss of 1,513 souls out of 2,224 on board. It had been supposed that this vessel was unsinkable, and the tragedy caused numerous official investigations as to better methods of ship construction, and provision of adequate life-saving equipment. A little more than two years afterwards, in May, 1914, another regular Atlantic liner, the *Princess of Ireland*, during a dense fog at the mouth of the St. Lawrence River, was struck by a Norwegian collier and sank in ninety feet of water, carrying down to their death more than 1,000 men, women and children.

What must undoubtedly go down to history as the greatest destruction wrought by nature during the year 1913, was the life and property loss in the Ohio River valley caused by unprecedented floods during the latter part of March. It is conservatively estimated by the Red Cross Association that through this flood 600 lives were lost.

The loss of property was put at between \$250,000,000 and \$300,000,000.

Fire, starvation, and freezing weather were visited simultaneously with the flood upon the people of Dayton, Ohio, who were the greatest sufferers. As the water swept down the Ohio River, hundreds of thousands of homeless people sought refuge on the higher lands. Calls for financial aid in behalf of the whole devastated area were promptly answered from every quarter; New York City, in less than twenty-four hours, responded with contributions of nearly \$200,000 in cash, and trainloads of supplies were dispatched to the flooded section. President Wilson sent Secretary of War Garrison, accompanied by Major-General Leonard Wood and a staff, to the scene, and the militia in all the States affected were summoned to assist in restoring order and relieving suffering. For weeks the Federal Government supplied rations for thousands of the needy. As the flood waters of the Ohio swept on down toward the Mississippi River, it brought much property destruction to Louisville and other cities nearer its mouth.

Floods in Texas in the fall also caused a great property loss, but on account of early warnings few lives were lost.

During the fortnight prior to the Ohio floods, the Middle West, particularly Nebraska, was swept by cyclonic windstorms, with widespread casualties and property losses. These began on March 14, when towns and cities of five States in the South and in the Mississippi River region were devastated. Throughout the week storms recurred, and on March 21, the worst telephone and telegraph blockade ever contended with in this country separated the East from the West. While Indiana and Iowa suffered greatly, Nebraska bore the brunt of the damage, and in its chief city, Omaha, a part of the residential section was razed to the ground.

In the height of summer, almost the same section, the corn belt of Missouri, Kansas, and Oklahoma, was visited by a hot wave which lasted through the first half of August, withering crops and culminating in a continued drought which resulted in severe suffering throughout the corn belt.

The Great Lakes were the scene of the most violent of the autumn storms. A blizzard which enveloped the whole region from November 9 to November 11, wrecked nearly a dozen vessels, chiefly grain and ore boats, and severely damaged a score more. The loss in lives of sailors was put above one hundred.

What was perhaps the greatest single loss by shipwreck during

the year occurred on March 1, when the small British steamship *Calvados* foundered in a storm in the Sea of Marmora, and 200 persons were drowned. But that calamity was scarcely known to the millions who followed with breathless interest the story of the burning in mid-ocean of the *Volturno*, of the Uranium Line, with a loss of 136 persons, and the gallant work of rescue performed by the international fleet, which rushed to its assistance in response to wireless calls for aid.

THE NEW YORK PUBLIC LIBRARY

One of the world's greatest works of engineering after the Panama Canal, the Ashokan aqueduct tunnel, built to supply New York City with pure water from the Catskill Mountain region, begun in 1904 and having a capacity of 500,000,000 gallons of water every day, was near completion in 1914. Accompany it are reservoirs large enough to hold sufficient water to supply the city for fifty days.

The New York Public Library, one of the most costly and largest libraries in the world, was established by a consolidation of the Astor, Lenox and Tilden libraries on May 23, 1895. The Astor Library, which had been founded in 1840 by John Jacob Astor, consisted of 267,000 rare historical books, pamphlets and manuscripts. To this foundation the Lenox Library, founded by James Lenox in 1870, brought as many more, consisting of a precious Biblical collection and books on American history; and the Tilden Library, founded by Samuel J. Tilden in 1884, a political library of 16,000 volumes and a foundation fund of \$2,000,000.

The corner store of the new building, at Fifth Avenue and Forty-second Street, was laid on November 10, 1902; at the end of November, 1906, the entire building was under roof; and on May 23, 1911, it was formally opened.

The building, in the Renaissance style of architecture, is in the form of a rectangle, 390 feet long and 270 feet deep. The area covered is about 115,000 square feet, and the contents 10,380,000 cubic feet. The material used was largely white Vermont marble, bonded in brick walls. In the reading rooms are seats for 1,760 persons. The main stack room has 334,530 feet of shelving, with a capacity

Courtesy of the New York Central & Hudson River Railroad.

THE GRAND CENTRAL TERMINAL, NEW YORK CITY

for about 2,500,000 volumes. In the special reading rooms are about 70,000 feet of shelving, with capacity for 500,000 volumes. The collection of books in 1913 numbered over 1,126,000 volumes and pamphlets. The building was erected by the City of New York at an approximate cost of \$9,000,000; the ground, which was owned by the city, was valued at \$20,000,000; the estimated value of the library and its contents is \$50,000,000. This building serves as the center of the whole library system of the city, and contains the administrative offices, the main reference collections, a circulation department, the traveling library office, and a library for the blind.

Two other splendid buildings, devoted to public uses, were completed in New York in the period here under review—new terminals for the Pennsylvania and New York Central Railroads. The Pennsylvania Terminal, an enterprise costing tens of millions of dol-

lars, included tunnels under the Hudson and East Rivers and across Manhattan Island, with a grand edifice for a station on Seventh Avenue and Thirty-second and Thirty-third Streets. By means of this improvement, passengers avoid the use of a ferry in going from New York south and west on the Pennsylvania road and in going to Long Island. Moreover, the Pennsylvania has acquired on Long Island ample grounds for the storage and switching of cars, making up of trains, etc.

Following the opening of this terminal came, afterwards, on January 31, 1913, the opening of the new Grand Central Terminal. Some of the features that make this terminal unusual are, the elimination of stairways, accomplished by the use of ramps, or inclined ways; the complete separation of the through from the local traffic by having the waiting-rooms, ticket offices and tracks of the former at on the level beneath, and the advantage of connection by underground passages with the present subway, and arrangements for similar connections with other subways and tunnels not yet opened.

Applied science has made the world a new one to live in. A few years ago there would have been but little to record in regard to radiotelegraphy, or the "wireless," except in the matter of experimental work.

Radiotelegraphy, in its present form, is the work of many hands of different nationalities. Several different systems are at present available. Like the Australian Commonwealth, the United States Government decided not to adopt any one complete system, but to buy whatever was needed in the open market and establish its own system of radiotelegraphy. At the end of 1912 the projected radiotelegraphic stations of the United States Government—some of which had actually been installed—were at Arlington, near Washington, Panama, San Francisco, Honolulu, Guam, Manila, Porto Rico, San Antonio in Texas, Fort Leavenworth in Kansas, Fort Omaha, and Fort Riley. Some of these were established for strategic purposes. The amended Radiotelegraph Act of the United States came into operation on December 13, 1912. It established a system of complete Federal control over all wireless communication, and required all operators to be licensed, amateurs being placed under very severe restrictions and forbidden to transmit messages over more than 750 feet, with the object of preventing them from interfering with the operations of the State and commercial systems.

Mr. Marconi has stated that his hope for wireless was the transmission of two hundred words a minute at one cent a word, and the

general use of wireless telegraphy instead of the mails for a very large proportion of the personal correspondence now passing between America and Europe. In January, 1914, direct wireless communication across the Atlantic was accomplished between Sayville, Long Island, and Nauen, Germany.

The use of the automobile truck has gained steadily in popularity. At the annual show (1913) in Madison Square Garden, New York City, thirty-one different manufacturers exhibited motor trucks, with a carrying capacity of from six hundred pounds to ten tons.

Massachusetts is believed to lead all the States in its percentage of motor-propelled vehicles. More than one-third of its vehicles are motor-driven. On some of the roads near Boston, automobiles furnish more than 60 per cent of the traffic, and during the summer of 1913, 90 per cent of the vehicles using one of the leading State roads were of the self-propelled variety.

Armored automobiles have been adopted by banks and safe deposit companies for the transportation of money and other valuables. Each car is, in effect, a portable safe, lined with steel, and with the only entrance in the front of the vehicle, which carries two armed guards besides the chauffeur. Boston, it is said, has been the leader in displacing the old-fashioned bank messenger, with his satchel in hand, by this new method for transporting money and valuables. The use of horses in city trucking steadily declined in large cities. In Massachusetts during the fourteen years ending in 1914, the number of horse-drawn vehicles declined 20 per cent. In the country in general sixteen cities showed declines.

Though it is now twenty years since R. W. Paul and others first evolved the cinematograph from Edison's kinetoscope, the moving picture remains essentially the same as it was then. The business has developed into an enormous one all over the world, and has reached its highest development in the United States. Every little village has its "picture show," and more than five million people go to see the plays every day, at least \$130,000,000 being taken at the doors in a single year.

Aerology, the new science dealing with the exploration of the upper atmosphere, although still in its infancy, made great strides within the last few years. Within a short space of time the aeronautical engineer, formerly content merely to produce a machine that would fly, has already begun to design aircraft with a given object, which has led to a marked differentiation of types.

Wonderful progress in aviation resulted from advanced aero-

dynamical knowledge, and in lesser degree from the increased skill and experience of aeroplane pilots. Two distinct features marked this development; namely, a vastly increased reliability of the aeroplane motor and the construction of the hydro-aeroplane, an air craft able to rise from and alight upon the surface of water.

The flying machine is a mechanical wonder, but the first man who guided it across a continent is a physical marvel. On November 5, 1911, or five months almost to a day from the day he first learned to fly, C. P. Rogers signed the register at the Hotel Maryland, Pasadena, California, after he had flown across the North American continent from Sheepshead Bay, L. I., New York to Pasadena, California, a distance of 4,231 miles, in 4,924 minutes actually in the air, and in 49 days of elapsed time from start to finish. In making this flight, he crossed three ranges of mountains, two deserts, and the great continental plain; he wrecked and rebuilt his machine four times, and replaced some parts of it eight times; he rode through darkness and wind, rain and lightning, and landed safely after racing with express trains across the continent, mules in Missouri, jack-rabbits and coyotes in Texas, and antelope in Arizona. His engine had blown to pieces while he was 4,000 feet aloft over an inland sea, leaving him to "spiral" six miles to earth. He found the aeroplane a dangerous curiosity, and proved it a practicable vehicle of unlimited radius on land.

This achievement fades before the wonderful development in the use of the aeroplane in military service. In 1912, aviation was definitely adopted as a new means of warfare by the leading nations of the world, and all of them have highly trained corps of aviators.

Early in the year 1913, the United States Senate had the painful duty of impeaching Judge Robert W. Archbald, of the Court of Commerce. He was convicted on five of the thirteen charges made by the House of Representatives, and was removed. He can never again hold any position under the United States.

In New York State politics, the striking feature of 1913 was the impeachment and removal from office of Governor William Sulzer for the misuse of campaign contributions. The impeachment came as Tammany's last shot in a long fight against him as governor, because of his refusal to appoint to office certain candidates suggested by that organization. His trial followed before the High Court for Impeachments, consisting of the State Senate and the justices of the Court of Appeals, presided over by Judge Edgar M. Cullen, and on October 17 he was removed from office by a vote of 43 to 12.

New York City experienced another great revulsion against the vice of the underworld and corruption in the Police Department during the year, as a result of the disclosures following the Rosenthal murder case, in June, 1912. A committee of the Legislature investigated these conditions, the Curran Aldermanic Committee inquired into the police situation, and the John D. Rockefeller, Jr., Committee investigated the white-slave traffic. Four inspectors of police, besides other policemen, were sent to Blackwell's Island, and Charles S. Whitman, district attorney, did conspicuous work in revealing the graft which existed in the Police Department. Later Mr. Whitman's activities were exerted in the direction of unearthing graft in campaign contributions, by which the illegal operations of "bagmen" in collecting money from corporations and contractors were shown.

In May, 1914, Mr. Whitman brought to trial for the second time Charles Becker, ex-Lieutenant of Police, accused of instigating the murder of Herman Rosenthal, a gambler who was about to become a witness for the State against the New York police "system" of graft and extortion. Rosenthal had been murdered in July, 1912. Becker and the four "gunmen" (whom Becker was accused of having employed to do the actual killing of Rosenthal) were tried in the autumn of that year and all found guilty of murder in the first degree and sentenced to death. Early in 1914 the "gunmen," failing to get a new trial, were electrocuted. Becker, however, obtained from the Court of Appeals a new trial. At this trial he was again convicted and sentenced to death. His counsel, meanwhile, set about making an appeal of his case to the higher court.

While matters in Mexico were at about their tensest point—that is, in the spring of 1914—something like a state of civil war broke out in one of the mining districts of Colorado. In vain did the State endeavor to suppress the outbreak with its own troops. So violent became the upheaval, so bitter the striking miners, so ineffective the repressive efforts of the State, that more lives were lost in Colorado than in the landing of our naval force at Vera Cruz. In answer to an appeal from the Governor, President Wilson, late in April, sent a Federal force to the seat of trouble and order was restored, pending a submission of the points in controversy to a board of arbitration.

The remoter consequences of a panic—the one of 1907—were realized severely in a business depression extending through 1913 and well into 1914, but in considerable part superinduced by influences other than the panic. Among these were the Balkan war,

which in its heavy demands on capital, forced the sale of American securities by European holders; the rise in the cost of living, in wages and in raw material, making business less profitable; a new and radical tariff law, making industries affected by it hesitate amid their difficulties in making readjustments; the new Currency Act which, altho changes in our system, dating from the Civil War, had been long demanded, radically altered banking conditions all over the country and the provisions of which did not get into active operation until about the end of the summer of 1914; anti-trust legislation, some of it drastic and threatening to many business interests, bills being before Congress for several months, and some of them finally passing the House overwhelmingly—all these were causes which prolonged the panic's aftermath a full year beyond the experience of the country with other great financial disturbances.

The industry which, to the general public, was understood to have suffered most from these conditions was the railroads. Many old and prosperous lines found it difficult to do more than earn their bare dividends, to say nothing of adding to their surpluses; several had to reduce their dividends; many reduced their expenses drastically, so that trains in considerable numbers were discontinued and thousands of men laid off, the number of idle freight cars reaching the maximum of many years—about 250,000 in June, 1914. In these conditions, Eastern railroads appealed to the Inter-State Commerce Commission for permission to raise their rates on freight five per cent. and hearings before the Commission in Washington were extended over many weeks. It was well on into midsummer when the Commission rendered its decision.. To the financial and industrial world, this decision gave some relief, the early effects of which it was believed would be seen in more stable business conditions. With Congress near the end of its session, its so-called "program" about completed, including the probable passage of some of the anti-trust bills amended so as to be less radical than previously expected, the whole country began to have faith in the coming of better times.

This faith was strengthened by another condition, more important, perhaps, than any of these—the splendid promises of the crops, especially for the yield of wheat, both winter and spring, the total for both crops giving every sign of reaching 900,000,000 bushels, or much the largest wheat crop ever grown.

Coincident with the rate case hearings before the Interstate Commerce Commission, were disclosures made by witnesses, and chiefly by Mr. Mellen, its former president, as to the means by which the

splendid property of the New York, New Haven and Hartford Railroad, within a few years had been brought to the verge of bankruptcy. The stock of this road for many years paid 8 per cent. dividends without difficulty, but now pays nothing, nor is it likely to pay anything in the immediate future. The road in 1913 passed into the hands of other and abler managers, however, and its friends believe it is only a question of time when it will be restored to a condition that could be called prosperous. Some of the discoveries made as to methods pursued by former managers were not short of scandalous. One comment made on them was that Jay Gould "never did anything as bad." The Commission in its report to the Senate declared that the operations of the managers of the New Haven constituted "one of the most glaring instances of maladministration in all the history of American railroading." These managers had caused a loss to the stockholders of \$65,800,000.

The distribution of the stock of great railway and industrial corporations among an increasingly large number of persons, was a notable sign of investment changes in recent years. In 1914 the Pennsylvania railroad had 84,244 stockholders; whereas in 1901 it had only 27,540. The same is true of most of the large roads—for example, the Atchison had 36,340 in 1914 against 13,143 in 1901; the St. Paul 13,700 against 5,340; the Great Northern 19,183 against 1,683; the New Haven 23,968 against 9,667. Women in the same period greatly increased their holdings in these stocks. Figures for 252 corporations show that 130,000 women now have stock in railroads, and that 180,000 have stock in industrial corporations. Nearly one-half the stockholders of the Pennsylvania railroad are women—that is, 40,325; while in the American Telegraph and Telephone Company are 28,188 women stockholders.

The electric light and power companies had reached in 1914 a state of development truly marvelous. Ten years ago they represented investments of \$700,000,000, a formidable sum at that time. Present investments in these properties represent close to \$2,000,000,000, or nearly three times the amount of ten years ago. Eventually, it is predicted that at least 85 per cent. of our industrial power will be supplied from electric stations. Indeed, such progress has been made in transportation by electric power that six electric stations placed at suitable intervals along a line of track across the continent, could now furnish all the power necessary to run trains from McKeesport, Maine, to San Francisco.

The month of July brought to the harbor of New York two of

the world's largest ships, the *Vaterland* from Hamburg, the *Aquitania* from Liverpool, the former the largest ship ever built in any country, the latter the largest British ship. The *Vaterland's* tonnage is 54,500, her length 950 feet, her carrying capacity more than 5,000 persons; the *Aquitania's* tonnage 47,000, her length 901 feet, her carrying capacity 4,250 persons.

The country was estimated to have reached in 1914 a population of 98,781,321—that is, the continent apart from our possessions beyond seas. With the latter included, a total of 109,021,900 people was estimated to be living within our borders. These figures were made up as those which “would be true if the same increase took place after 1910 as took place from 1900 to 1910.” When a new census is taken in 1915, no doubt exists that a continental total of 100,000,000 will be returned. New York City, with its New Jersey and Westchester suburbs included, was estimated to have in 1914 a population of 6,501,000, London's total, including suburbs, being 7,252,901. Following are the 1910 and the estimated 1914 totals for twenty-six leading cities:

<i>Cities</i>	1914	1910
New York	5,333,537	4,766,883
Chicago	2,393,325	2,185,283
Philadelphia	1,657,810	1,549,008
St. Louis	734,667	687,029
Boston	733,802	670,585
Cleveland	639,431	560,663
Baltimore	579,590	558,485
Pittsburg	564,878	533,905
Detroit	537,650	465,766
Buffalo	454,112	423,715
San Francisco	448,502	416,912
Los Angeles	438,914	319,198
Milwaukee	417,054	373,857
Cincinnati	402,175	363,591
Newark, N. J.	389,106	347,469
New Orleans	361,221	339,075
Washington	353,378	331,069
Minneapolis	343,466	214,744
Seattle	313,029	237,194
Jersey City	293,921	267,779
Kansas City	281,911	248,381
Indianapolis	259,413	233,650
Portland, Ore.	250,601	207,214
Atlanta	179,292	154,839
Richmond	134,917	127,628
Dallas	111,986	92,104

With this growth in population and in wealth, has come, however, a great increase in the cost of government. With the expenses of state, municipal, county and town governments added to the cost of

the federal government, our grand total reaches the colossal sum of \$2,500,000,000 per year, an annual outlay nearly three times greater than the present funded debt of the Federal government. Thirty-four years ago (1880) this total cost of government stood at only \$905,897,000. In 1890 it was only \$1,118,999. The increase has been large, even when account is taken of the increase in population, for, while the per-capita cost in 1880 was \$18,042, it is now \$26.05. If an allowance were made for the decrease since 1880 in the interest charge for the Civil War debt, the per-capita for 1880 would be only \$17, so that the increase per capita since then would be \$9, or **about \$45** for each family.

DECLARATION OF INDEPENDENCE.

THE following preamble and specifications, known as the Declaration of Independence accompanied the resolution of Richard Henry Lee, which was adopted by Congress on the 2d day of July, 1776. This declaration was agreed to on the 4th, and the transaction is thus recorded in the Journal for that day.

"Agreeably to the order of the day, the Congress resolved itself into a committee of the whole, to take into their further consideration the Declaration; and, after some time, the president resumed the chair, and Mr. Harrison reported that the committee have agreed to a Declaration, which they desired him to report. The Declaration being read, was agreed to as follows:

A DECLARATION BY THE REPRESENTATIVES OF THE UNITED STATES OF AMERICA, IN CONGRESS ASSEMBLED.

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute a new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present king of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world.

1. He has refused his assent to laws the most wholesome and necessary for the public good.

2. He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operations till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them.

3. He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the Legislature—a right inestimable to them, and formidable to tyrants only.

4. He has called together legislative bodies at places unusual, uncomfortable, and distant from the repository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

5. He has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people.

6. He has refused, for a long time after such dissolutions, to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the State remaining, in the meantime, exposed to all the dangers of invasions from without, and convulsions within.

7. He has endeavored to prevent the population of these States; for that purpose obstructing the laws for the naturalization of foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

8. He has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary powers.

9. He has made judges dependent on his will alone for the tenure of their offices, and the amount and payment of their salaries.

10. He has erected a multitude of new offices, and sent hither swarms of officers to harass our people and eat out their substance.

11. He has kept among us in times of peace, standing armies, without the consent of our Legislatures.

12. He has affected to render the military independent of, and superior to, the civil power.

13. He has combined with others to subject us to a jurisdiction foreign to our constitutions, and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

14. For quartering large bodies of armed troops among us;

15. For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these States;

16. For cutting off our trade with all parts of the world;

17. For imposing taxes on us without our consent;

18. For depriving us, in many cases, of the benefits of trial by jury;

19. For transporting us beyond seas, to be tried for pretended offences;

20. For abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies;

21. For taking away our charters, abolishing our most valuable laws, and altering, fundamentally, the forms of our governments;

22. For suspending our own Legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

23. He has abdicated government here, by declaring us out of his protection, and waging war against us.

24. He has plundered our seas, ravaged our coasts, burned our towns, and destroyed the lives of our people.

25. He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation and tyranny, already begun with circumstances of cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

26. He has constrained our fellow-citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

27. He has excited domestic insurrection among us, and has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in our attentions to our British brethren. We have warned them, from time to time, of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They, too, have been deaf to the voice of justice and consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them as we hold the rest of mankind—enemies in war; in peace, friends.

We, therefore, the representatives of the United States of America, in general Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name and by the authority of the good people of these colonies, solemnly publish and declare that these united colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved, and that, as free and independent States, they have full power to levy war, conclude peace, contract alliances, establish commerce, and do all other acts and things which independent States may of right do. And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

The foregoing declaration was, by order of Congress, engrossed, and signed by the following members:
